Empirical formulations of electron transport properties are presented. Experimental data acquired by several groups over the past few years were gathered and organized. Parametric fits were made to these data so that the following properties of electron transport can be represented by simple functions of atomic number and energy: transmitted electron number, transmitted electron spectra, range, backscatter coefficient, angular distribution, energy deposition, bremsstrahlung intensity and energy spectra, bremsstrahlung angular distribution, and photon attenuation. Though most of the data used to derive the parametric formulas were measured in experiments, some uses were made of results generated using well-developed Monte Carlo techniques. The formulas cover the energy ranges of interest in space-shielding problems (0.1 to 10.0 MeV). These formulas were developed so they could be included in an engineering handbook addressed at the problems of electron radiation in space and its effects. The intent is to provide a simple means of calculating the radiation expected aboard a spacecraft, both on its external surface and behind arbitrary amounts of effective shielding. To satisfy the requirement that the formulas be simple, mathematical rigor based on physical interaction was replaced by convenient fits to thick target data. The formulas are as accurate as these data in most cases and can be easily evaluated without a computer. Procedures for using these formulas in practical situations are suggested. 7 figures. (auth)

54964 (NASA-TM-X-2440, pp 914-21) GAMMA-RAY SHIELDING MEASUREMENTS MADE AT ALTITUDES GREATER THAN 115,000 FEET USING LARGE Ge(Li) DETECTORS. Chapman, G. T. (Oak Ridge National Lab., Tenn.); Cumby, R. P.; Gibbons, J. H.; Macklin, R. L.; Parker, H. W. Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

A series of balloon-flight experiments at altitudes greater than 115,000 feet were conducted to gain information relative to the use of composite shields (passive and/or active) for shielding large-volume, lithium-drifted, germanium (Ge(Li)) detectors used in gamma-ray spectrometers at these altitudes. The measurements were made in the gamma-ray energy region 60 keV to 2 MeV and clearly illustrate the necessity of using a dense gamma-ray shield protected by an active charged-particle shield for effective shielding of these detectors in the primary cosmic-ray environment. Data showing the pulse-height spectra of the environmental gamma radiation as measured at 5.3 and 3.8 g/cm^2 residual atmosphere with an unshielded diode detector is also presented. (auth)

54965 (ORNL-TM-3871(Rev.)) SDT5. STAINLESS-STEEL BROOMSTICK EXPERIMENT: AN EXPERIMENTAL CHECK OF NEUTRON TOTAL CROSS SECTIONS. Maerker, R. E. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 25p. (ENDF-170(Rev.)). Dep. NTIS.

The experimental and calculational details for a CSEWG integral data testing shielding experiment are presented. The experiment was designed to test a given set of neutron total cross sections for a type-310 stainless steel in the range 1.2 to 11 MeV. Separation of neutron- and gamma-induced pulses was made by a modified Forte circuit. The unfolding of the pulse-height distributions was accomplished using the FERDoR code. (M.H.R.)

54966 SPATIAL, ANGULAR, AND ENERGY DISTRIBUTION OF FAST NEUTRONS BEHIND TRIPLE LAYER BARRIERS. Elagin, V. B.; Pekarskii, G. Sh. At. Energ. (USSR); 33: No. 1, 590-1(Jul 1972). (In Russian).

The spatial, energy and angular distributions of fast neutrons from a unidirectional, point source beyond a composite three-layer system of Fe/plastic/Fe and W/Al_2O_3/W were studied as functions of the thickness of the separate layers entering into the composite. The Monte Carlo method was employed with a computer in calculations for 2.5- and 14-MeV neutrons and neutrons from a Po—Be source. (K.S.W.)

54967 CREW RADIATION DOSE FROM A HIGH-IMPULSE GAS-CORE NUCLEAR ROCKET PLUME. Masser, Charles C. (Lewis Research Center, Cleveland). J. Spacecraft Rockets; 9: No. 8, 597-601(Aug 1972).

Analytical calculations are performed to determine the radiation dose rate and total dose to the crew of a gas-core nuclear rocket from the fission fragments located throughout the plume volume. The mission chosen is a manned courier trip to the planet Mars. Four round trip times were picked in which the system was optimized so the initial vehicle mass in Earth orbit was minimized for each trip time. They are 80, 100, 150, and 200 days. For the most probable fission-fragment retention time in the reactor of 100 sec, the unshielded radiation dose to a crew located 100 m from the nozzle exit varies from 170 Rem for the 80-day round trip to 38 Rem for the 200 day round trip. For the 80-day round trip the crew must be protected from the radiation dose. Five centimeters of lead shielding would reduce the radiation dose by two orders of magnitude, thereby protecting the crew. (auth)

54969 (AECL-4130) COMPUTER PROGRAM TO CALCULATE DAMAGE DISTRIBUTIONS IN ION-BOMBARDED TARGETS. **Caillibot, P. F.; Hunt, C. E. L. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). May 1972. 52p. Dep. NTIS (U. S. Sales Only). AECL $1.50.**

Simulation of fission damage by means of ion bombardment eliminates induced radioactivity and reduces experimental time by several orders of magnitude. However, the conditions under which such bombardments are to be done must be carefully determined. The mathematical model developed by Lindhard et al., based on a Thomas–Fermi potential between the atoms, was used. The required calculations are time-consuming; therefore, a computer program, IONR, was written. It calculates the damage profile produced in a target by any projectile. For a range of energies it will calculate the relative bombardment times to approximate a homogeneous damage profile up to the maximum penetration depth. Results are produced both as graphs and tables. An example is presented for argon bombardment of zirconium. (auth)

54970 (CEA-CONF-1890) COMPUTER SIMULATION IN RADIATION DAMAGE STUDIES. Torrens, Ian M. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). 1972. 32p. (CONF-720423-4). Dep. NTIS (U. S. Sales Only).

From first European conference on computational physics; Geneva, Switzerland (10 Apr 1972).

The application of atomistic computer simulation to problems involving radiation damage and lattice defects in crystalline solids is discussed. The different topics include static defect configurational simulations, molecular dynamics of thermal motion, low-energy atomic collision events, high-energy atomic displacement cascades, and the thermal annealing of concentrations of defects in a lattice region. The methods described are criticized from the point of view of the assumed physical models, and their capabilities and limitations are indicated. Emphasis is on techniques used rather than on results obtained. (auth)

Thesis.

Radiative-recombination mechanisms and minority-carrier injection devices are reviewed, and ion implantation is presented as a doping method in order to achieve electroluminescent diodes in a nonstoichiometric material such as ZnTe. The implanted layer is mainly characterized by: the secondary ion-emission microanalyzer to determine the profile of implanted impurities; the hot probe to determine the conductivity type; the photoluminescence to bring out the levels due to impurities; and the sheet-resistivity measurements. All these measurements show that it is possible to get an n-type layer in a boron- or chlorine-implanted ZnTe. For the diodes achieved, current–voltage characteristic and junction capacitance in reverse-bias measurements show that they were p–i–n type. Two assumptions are suggested to explain the presence of an intrinsic layer between the implanted region (n-type) and the substrate (p-type). Finally, the electroluminescence of these diodes showed that the presence of oxygen gives a red light emission at 6750 Å and, when the material is oxygen-free, the light emission is green at 5580 Å with a quantum efficiency of 0.6% at 300°K. (auth)

54972 (COO-2119-2) EXPERIMENTS IN HIGH-VOLTAGE ELECTRON MICROSCOPY. Progress Report, October 31, 1972–July 31, 1973. Mitchell, T. E.; Das, G.; Kenik, E.; Sklad, P. (Case Western Reserve Univ., Cleveland, Ohio. Div. of Metallurgy and Materials Science). 1 Aug 1972. Contract AT(11-1)-2119. 23p. Dep. NTIS.

Experiments using high-voltage electron microscopy are described that take advantage of the high-resolution selected-area diffraction (SAD) and in-situ electron-radiation-damage capabilities. SAD experiments show that the error distance is 30 times better at 650 kV than at 100 kV; the error distance increases in proportion to the cube of the Bragg angle as expected and is better than 1000 Å for Bragg plane spacings greater than 0.5 Å. Electron-irradiation damage was observed in copper, stainless steel, nickel, vanadium, graphite, and quartz as a function of time and temperature. In Cu, stainless steel, and Ni, faulted interstitial loops are formed that grow, unfault, and then either glide out of the foil or form a dislocation network with other prismatic loops. Void formation was observed in Cu and stainless steel after long doses at high temperatures, using a prior low-temperature irradiation. Radiation-induced carbide precipitation also occurs in stainless steel. In quartz black spot defects are formed, after which the irradiated area becomes amorphous. (auth)

54973 (FRNC-TH-210) PRODUCTION OF HIGH DEFECT CONCENTRATIONS IN ALKALI HALIDES BY ELECTRON BOMBARDMENT. **Herrmann, Friedrich (Lyon Univ. (France)). 1971. 80p. (In French). Dep. NTIS (U. S. Sales Only).**
Thesis.

High-defect densities were produced (10^{19} centers/cm^3) by irradiating alkali-metal halide crystals (KCl, KBr, KI, NaCl, and LiF) with electron beams (10 to 50 keV). Optical absorption measurements were used to determine the color-center density. The growth curve represents the variation in the color-center concentration (or optical density) as a function of the radiation dose (or irradiation time). The value of the exponent in the expression linking the electron path to the primary electron energy was determined. It is shown that it is possible to relate the local increase in concentration to an increase in optical density for a nonuniformly colored crystal. The changes in the absorption bands (F, M, and V) in various substances at different temperatures were compared. The growth rate for F centers decreases uniformly during irradiation. A model was developed explaining this decay; this model can be simulated by computer. Some experiments carried out with LiF enabled an upper limit to be established for the threshold energy for the displacement of a cation (1.64 eV). (France)

54974 (LYCEN-7228) CHANNELING OF LIGHT IONS OF 0.5 TO 2 MeV THROUGH A FEW-HUNDRED ANGSTROM-THICK GOLD CRYSTALS. Poizat, J. C.; Remillieux, J. (Lyon Univ. (France). Institut de Physique Nucleaire). May 1972. 37p. (In French). Dep. NTIS (U. S. Sales Only).

A technique to obtain a few hundred-Å-thick self-supporting gold crystals is described. These crystals were used to perform three channeling experiments with 0.5- to 2-MeV light ions: The wide-angle scattering probability as a function of the distance from the crystal surface was studied for an incident beam of particles in the planar and axial directions. The influence of channeling on the light emission from crystal-excited atomic beams was investigated. A strong channeling effect was found on the probability of transmission of a molecular beam of H_2^+ ions through a thin crystal. (France)

54975 (RT/EL-(72)2) MEASURE OF THE PHOTOVOLTAIC EFFECT IN SILICON DIODES OBTAINED THROUGH IMPLANTATION OF IONS. Russo, M.; Sano, A.; Testa, M. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 22 Feb 1972. 77p. (In Italian). Dep. NTIS (U. S. Sales Only).

Results of a study on the photovoltaic effect in Si diodes obtained by the ion implantation technique are reported. The aim of the work was to weigh the possibility of measurement, on the basis of this effect, of some parameters such as the junction depth, minority-carrier diffusion length, etc. Results show that it is possible to measure the diffusion length of minority carriers in the bulk, by means of the near-infrared spectral response. To obtain the other parameters, it is necessary to utilize also different kinds of measurements. This study also showed that, in the bulk, in proximity of the junction, there was a damage not attributable to the implantation technique. (auth)

54976 ION IMPLANTATION FACILITY AT ORSAY. Chaumont, J.; Baran-Marzak, M.; Camplan, J.; Meunier, R.; Sarrouy, J. L. (CNRS, Orsay, France). pp 105-11 of International Colloquium on the Application of Vacuum Techniques to the Semiconductor Industry, Electronic, and Microelectronic Components. Paris; Societe Francaise des Ingenieurs et Techniciens du Vide (1971).

From third international symposium on the application of vacuum techniques in semiconductor industry, electronic components, and microelectronics; Versailles, France (13 Sep 1971). See CONF-710932.

The various parts of the ion implantation facility at Orsay are described. Emphasis is given to the ion source and the beam extraction system. Preliminary results obtained for ion implantation are given. (France)

54977 EXPERIMENTAL ARRANGEMENT FOR INVESTIGATION OF SINGLE CRYSTALS BY MEANS OF FAST IONS. Haan, G.; Flagmeyer, R.; Geist, V.; Mende, A.; Lehmann, D. (Karl Marx Univ., Leipzig). Exp. Tech. Phys.; 20: No. 1, 67-80(1972). (In German).

A detailed description is given of a measuring equipment for channeling and blocking experiments with a brief introduction to these effects. The main part of the work is concerned with the description and the physical reasons of special elements such as collimator, beam current measurement, crystal mounting, cooling device, and so on. Results are given of first experimental tests with a tungsten single crystal. (auth)

54978 PHONON SCATTERING BY VANADIUM IONS IN Al_2O_3. de Goer, A. M.; Devismes, N. (CEN, Grenoble, France). J. Phys. Chem. Solids; 33: No. 9, 1785-93(Sep 1972).

Thermal conductivity measurements were made between 1.3 and 150°K on several vanadium-doped Al_2O_3 single crystals, in their as-received state and after γ irradiation. One Ti-doped sample was also measured. The results are well explained by ascribing the resonant phonon scattering observed to transitions between low-lying energy levels of V^{4+} and Ti^{3+} ions. A good fit of the curves was obtained using Callaway's (1959) method. Resonant scattering is described by an additional phonon relaxation time of the form: $[\tau_2^{-1} = D_1(\omega^4/(\omega^2 - \omega_1^2)^2) + (D_2/D_1)\ (\omega^4/(\omega^2 - \omega_2^2)^2]$ where $\hbar\omega_1 = \delta_1$ and $\hbar\omega_2 = \delta_2$ are known, and D_2/D_1 is kept constant for all V-doped specimens. From these quantitative analysis and coupled EPR measurements, it was possible to estimate that only 1% of the total vanadium content was in the V^{4+} valence state in all as-received samples. Hence the great sensitivity of low-temperature thermal conductivity to the presence of ions subjected to a dynamic Jahn–Teller effect is confirmed in the case of these Kramers d^1 ions. (auth)

54979 OBSERVATION OF DISLOCATION LOOPS IN GADOLINIUM THIN SINGLE CRYSTAL. Srivastva, M. M.; Srivastava, O. N. (Banaras Hindu Univ., India). Jap. J. Appl. Phys.; 11: No. 9, 1237-8(Sep 1972).

Dislocation loops were found to form in hcp Gd thin single-crystal films in an electron microscope. Tiny dot-like features developed, turning into dislocation loops which were often hexagonal-shaped. Stacking fault tetrahedra were also observed. These loops and tetrahedra are due to the aggregation of point defects produced by the bombardment. (D.L.C.)

54980 INTERSTITIAL HALOGEN CENTERS IN X-IRRADIATED CsBr. Chowdari, B. V. R.; Itoh, N. (Nagoya Univ., Japan). J. Phys. Chem. Solids; 33: No. 9, 1773-83(Sep 1972).

Interstitial halogen centers in CsBr produced by x-irradiation at 4.2 and 77°K were studied and assignments of several absorption bands associated with these centers were made. The most prominent bands formed by x irradiation at 4.2°K were the F and H bands. Besides the known two σ-polarized absorption bands associated with the H center, another weakly π-polarized band at 1062 nm was found. The next prominent bands formed at 4.2°K were the α and I bands whose peak positions are at 205 and 236 nm, respectively. X-irradiation at 4.2°K also caused an absorption band at 324 nm due to H^1 center. It is shown that the height of H^1 band is proportional to the square of the height of the H band, suggesting that the centers associated with the H^1 band are di-H-centers. Optical and thermal bleaching of the H bands causes the increase in H^1 band. The study of the thermal annealing properties of H^1 band suggests the composite nature of the band. After the H bands were thermally bleached, three absorption bands at 425, 502 and 1060 nm were found to grow whose source might be the interstitial atom associated with an impurity. X-irradiation at 77°K produced the F and V_4 centers, the latter of which has an absorption band at 276 nm. The V_4 center has ⟨100⟩ orientation. The formation and thermal bleaching properties of the H^1 and V_4 bands are compared. (auth)

54981 FAST-NEUTRON-COMPENSATED n-GERMANIUM AS A MODEL OF AMORPHOUS SEMICONDUCTORS. Gadzhiev, A. R.; Ryvkin, S. M.; Shlimak, I. S. (Ioffe Inst. of Physics, and Tech., Leningrad). JETP Lett. (USSR) (Engl. Transl.); 15: No. 10, 428-31(20 May 1972).

Translated from Zh. Eksp. Teor. Fiz.; Pis'ma Red.; 15: No. 10, 605-8(20 May 1972).

A model of an amorphous semiconductor can be produced by producing a random distribution of point defects. This was investigated by irradiating As-doped n-type Ge with fast neutrons, which produce spherical disordered regions of p-type character. The spatial variation of the potential is discussed, and it is shown that the conductivity mechanism should be tunneling over states closer and closer to the Fermi level. Experimental results confirm expectations: the conductivity decreased and acquired an activation character with irradiation dose, Mott's law is satisfied, and the current-voltage characteristic has a S-shape with a considerable negative differential resistance section. (D.L.C.)

54982 TUNNEL ASSISTED HOPPING IN NEUTRON IRRADIATED GALLIUM ARSENIDE. Coates, R.; Mitchell, E. W. J. (Univ. of Reading, Eng.). J. Phys., C (London); 5: No. 10, L113-18(25 May 1972).

The resistivity against dose curve in neutron-irradiated gallium arsenide shows an anomaly. At doses in excess of 10^{17} n cm^{-2} the resistivity decreases with dose. The temperature dependence of resistivity indicates that the mechanism of conduction at high doses is tunnel-assisted hopping. Since the structural studies reveal that even at the highest dose the material remains substantially crystalline, the tunnel-assisted hopping is considered to occur via defect energy levels. (auth)

54983 COMPARISON OF DEFECT CENTRES FORMED IN OXIDES BY EXPLOSIVE SHOCKING AND HIGH-ENERGY RADIATION. Nelson, R. L. (Atomic Energy Research Establishment, Harwell, Eng.); Hartley, D. B. J. Chem. Soc., Dalton Trans.; No. 15, 1596-1603(1972).

ESR and reflectance spectroscopic techniques were used to compare point defects present in MgO, ZnO, and SiO_2 both after explosive shocking and after irradiation with high-energy γ rays, electrons, and neutrons. A high correlation of shocking with irradiation exists in MgO, none in SiO_2, and ZnO occupies an intermediate position. In MgO, explosive shocking induced ionization with trapping of electrons at existing defects and produced vacancy defects (F^+ and F_2^+) by displacement of lattice ions. In SiO_2 none of these effects were present but there is evidence of contamination with carbon as a result of the explosion. This significant difference in behavior to shocking is reflected in the different physical properties of these oxides, but could also be brought about by a suitable choice of explosion conditions. (auth)

54984 LOCALIZED VIBRATIONAL MODES IN GALLIUM ARSENIDE CONTAINING SILICON AND BORON. Thompson, F.; Newman, R. C. (Univ. of Reading, Eng.). J. Phys., C (London); 5: No. 15, 1999-2010(7 Aug 1972).

A comparison was made between the infrared local-mode absorption spectra of boat-grown and pulled crystals of GaAs : Si. The samples were compensated either by electron or neutron irradiation or by copper diffusion. Boron is present in the pulled material and previously unreported lines are assigned as follows: $^{11}B(Ga)$ (517.0 cm^{-1}), $^{10}B(Ga)$ (540.2 cm^{-1}), B(Ga)–Si(As) pairs (349.0, 570.9, 596.0, 661.0, and 684.8 cm^{-1}). Two further lines at 762.7 and 796.0 cm^{-1} may be due to interstitial boron atoms produced by the irradiations. It is thought that other lines may be due to the center B(Ga)–Si(As)–Si(Ga). (auth)

54985 DIFFUSION OF POINT DEFECTS TO THE FOIL SURFACE DURING IRRADIATION DAMAGE EXPERIMENTS IN THE HIGH VOLTAGE ELECTRON MICROSCOPE. Foreman, A. J. E. (Atomic Energy Research Establishment, Harwell, Eng.). Radiat. Eff.; 14: No. 3-4, 175-9(Jun 1972).

The high-voltage electron microscope can be used to simultaneously produce and observe irradiation damage structures in thin foils of many materials, including in particular the formation of voidage at elevated temperatures. In such experiments some of the vacancies and interstitial atoms produced in the damage process will be lost by diffusion to the foil surface, so that the results may not be characteristic of the bulk material if the foil is too thin. The steady-state point defect concentrations built up in a thin foil were computed as a function of the foil thickness, defect production rate, and vacancy jump frequency, taking into account the effect of the mutual recombination of vacancies and interstitial atoms. The coupled diffusion equations for the point defect concentrations were solved numerically for a thin foil, assuming the foil surfaces to be perfect sinks for the point defects, and the results for any material expressed in terms of a single dimensionless parameter. The computations show that for a foil containing few internal sinks, which is the most demanding case, defect concentrations typical of the bulk material can be achieved within an appreciable fraction of a 0.5-μm thick foil, for temperatures up to about one-half the absolute melting temperature. The loss of point defects to the foil surface is shown to be further reduced when the foil contains a high density of internal sinks (e.g. dislocations, voids, precipitate particles) and there is an additional improvement at very high temperatures due to the effect of thermal vacancies. (auth)

54986 COMPUTER CALCULATIONS OF SHEET RESISTANCE OF n- AND p-TYPE IMPLANTATIONS IN SILICON. Smith, B. J.; Stephen, J. (Atomic Energy Research Establishment, Harwell, Eng.). Radiat. Eff.; 14: No. 3-4, 181-4(Jun 1972).

Computer calculations of sheet resistance of ion-implanted layers are described. For Gaussian doping profiles, the sheet resistance depends on the surface concentration and electrical conductivity of the implanted impurity and the standard deviation in the projected ion range. Universal curves were produced from which the sheet resistance of any implanted silicon layer could be derived, provided these parameters were known, and assuming that all the implanted atoms contribute to the electrical conductivity. (auth)

54987 LOCATION OF DIFFUSION-DOPED GOLD ATOMS IN SILICON BY MEANS OF CHANNELING. Iue, N.; Matsunami, N.; Morita, K.; (and others) (Nagoya Univ., Japan). Radiat. Eff.; 14: No. 3-4, 191-3(Jun 1972).

The lattice location of gold atoms diffused into silicon is determined using the channeling of He$^+$ ions. It is shown that the gold atoms that accumulate at the back surface are located at the hexagonal interstitial sites. (UK)

54988 DECHANNELING OF HEAVY CHARGED PARTICLES IN DIAMOND LATTICES. Morita, K. (Nagoya Univ., Japan). Radiat. Eff.; 14: No. 3-4, 195-202(Jun 1972).

Dechanneling rates of 1.5-MeV protons, deuterons, and helium ions in the (100) axial and (110) planar channels were obtained by analyzing their backscattering energy spectra for the aligned and random directions. The experimental dechanneling rates in the axial channels, inclusive of those in Si, GaP, NaCl, KCl, and KBr single crystals, followed a universal expression for the dechanneling derived using the diffusion model according to Lindhard's theory. Comparing with the theory, the contribution of the electronic collisions to the dechanneling was separated from the contribution of the nuclear collisions. The experimental value of the electronic contribution agreed well with the theoretical value. The experimental value of the nuclear contribution was smaller than the theoretical value by a factor of about 3. The discrepancy between the experimental and the theoretical value of the nuclear contribution is discussed. (auth)

54989 ELECTRICAL RESISTIVITY INCREASE RATES IN Fe–C AND Fe–N SOLID SOLUTIONS DURING NEUTRON IRRADIATION AT 4.5 K. Wagenblast, H.; Schwerer, F. C.; Horak, J. A. (United States Steel Corp., Monroeville, Pa.). Radiat. Eff.; 14: No. 3-4, 203-13(Jun 1972).

A series of α-iron specimens containing carbon and nitrogen in interstitial solid solution were irradiated simultaneously at 4.5°K with fast neutrons to a fluence of 4.7×10^{17} n/cm^2 with $E > 0.1$ MeV. In-situ electrical resistivity measurements during irradiation showed that the apparent damage rates were dependent on the C or N concentration. In particular, the value of the initial resistivity increment per unit flux (δ), passed through a minimum value at 0.1 at. % N and became larger than the value for pure iron above 0.14 at. % N. The results can be explained qualitatively as interstitial impurity-induced differences in production rates and dispersion of defects or semi-quantitatively as defect-induced deviations from Matthiessen's rule. (auth)

54990 ELECTRON RADIATION DAMAGE NEAR THE THRESHOLD ENERGY IN ALUMINIUM. Wolfenden, A. (Oak Ridge National Lab., Tenn.). Radiat. Eff.; 14: No. 3-4, 225-9(Jun 1972).

Foils of high-purity aluminum, both with and without preinjection of about 10 at. ppM helium, were electron-irradiated in the electron microscope operating at voltages in the range 150 to 200 keV. In the helium-doped aluminum, electron damage in the form of black spots was produced at 150 keV after about 90 min irradiation time. They showed contrast effects characteristic of dislocation loops. No such spotlike damage was observed at 150 keV in the uninjected aluminum for bombardment times over 4 hr. Damage was observed in both pre-injected and uninjected specimens at 175 and 200 keV. Possible mechanisms for subthreshold damage are examined to see which account for the electron damage observed below the accepted threshold of about 170 keV for aluminum. (auth)

54991 PROPERTIES OF PROTON-IRRADIATED DIAMOND. Ananthanarayanan, K. P.; Borer, W. J.; Plendl, H. S.; Gielisse, P. J. (Univ. of Rhode Island, Kingston). Radiat. Eff.; 14: No. 3-4, 245-8(Jun 1972).

Properties of type I diamond were investigated before and after irradiation with 17.0- and 18.3-MeV protons. The optical absorption edge is essentially unchanged. The infrared absorption spectrum shows a strong additional peak at 6.92 μm. A Raman line shift of 4 cm^{-1} indicates an increase of 0.0032 Å in the lattice constant. (auth)

54992 INFLUENCE OF ELECTRON IRRADIATION ON CdS THIN FILMS. Spinulescu, I.; Baltateanu, N. (Univ., Bucharest). Radiat. Eff.; 14: No. 3-4, 257-9(Jun 1972).

The effect of 3-MeV electrons on the crystallographic orientation of cadmium sulfide thin films is studied using electron diffraction. (UK)

54993 FLUX EFFECTS ON DAMAGE IN GaAs AS MEASURED BY THE CHANNELLING OF ^{85}Kr. Grant, W. A.; Baruah, J. N. (Univ. of Salford, Eng.). Radiat. Eff.; 14: No. 3-4, 261-2 (Jun 1972).

The ranges of ions implanted into semiconductors has been extensively studied but little attention has been paid to the dose rate used during the implantation. The influence of dose rate of damage to gallium arsenide single crystals using ^{84}Kr and ^{85}Kr ions is studied. It is concluded that the degree of damage is dependent on the dose rate, the dose dependence of damage will influence the distribution profile of implanted ions, and the dechanneling of heavy ions can be used as a measure of damage. (UK)

54994 PRECIPITATION OF PHOSPHOROUS IN ION IMPLANTED SILICON. Seshan, K.; Washburn, J. Radiat. Eff.; 14: No. 3-4, 267-70(Jun 1972).

Electron microscope observations on phosphorous-ion-implanted ρ-silicon after annealing at 800°C are reported. Heating for ½ hour after implantation of 2×10^{14} ions/cm^2 at 20°C was found to produce dislocation loops and rod-like defects similar to those observed in boron-implanted silicon. It was concluded that the rod-shaped defects were associated with phosphorous precipitation. (auth)

54995 NATURE OF ROD-LIKE DEFECTS OBSERVED IN BORON IRRADIATED SILICON. Madden, P. K.; Davidson, S. M. (Oxford Univ.). Radiat. Eff.; 14 No. 3-4, 271-3(Jun 1972).

The rod-like defects appearing in silicon irradiated with 40-keV B$^+$ ions were studied by electron microscopy. It is suggested that the rods can best be explained on a model of an elongated faulted dislocation loop, extrinsic in character with an α/k (100) Burgers vector. (UK)

54996 OPTICAL ABSORPTION BANDS OF COLOR CENTERS IN IRRADIATED ANTHRACENE SINGLE CRYSTALS AT LOW TEMPERATURES. Matsuyama, Tomochika; Yamaoka, Hitoshi; Okamura, Seizo (Kyoto Univ., Osaka). Radiat. Eff.; 14: No. 3-4, 275-6(Jun 1972).

Anthracene single crystals were irradiated at 77°K by ^{60}Co gamma rays and the optical absorption spectrum measured. The effect of warming to 399°K on the absorption spectrum is shown. (UK)

54997 SIMILARITIES OF THE IONIZATION EFFECTS AND ANNEALING IN P-TYPE AND CONVERTED N-TYPE Ge IRRADIATED WITH ELECTRONS AT 85^{0}K. Kraitchinskii, A.; Rzewuski, H.; Suski, J.; Werner, Z. (Inst. of Nuclear Research, Warsaw). Radiat. Eff.; 14: No. 3-4, 277-8(Jun 1972).

The annealing behavior of p-type Ge and n-type Ge converted into p-type by electron irradiation is studied. It is concluded that as both types of Ge show the same trapping effects and annealing behavior, the behavior of irradiated Ge can be attributed to some intrinsic type of defect. (UK)

54998 EFFECTS OF GAMMA RADIATION ON PHOTOCURRENT-VOLTAGE CHARACTERISTICS OF CdS FILMS. Kao, K. C.; Sadhu, A. (Univ. of Manitoba, Winnipeg, Can.). Radiat. Eff.; 14: No. 3-4, 279-80(Jun 1972).

Cadmium sulfide films were irradiated with gamma rays from a ^{60}Co source while illuminated with sodium light. The threshold field for the onset of high-field photocurrent saturation increased and the saturation current decreased with increasing radiation dose. It was also found that for a given dose and applied voltage the change in the photocurrent due to irradiation for CdS films was much greater than for CdS crystals. (UK)

54999 TEMPERATURE DEPENDENCE OF VIBRONIC SPECTRA IN IRRADIATED SILICON. Hare, A. P. G.; Davies, G.; Collins, A. T. (King's Coll., London). J. Phys., C (London); 5: No. 11, 1265-76(12 Jun 1972).

Crucible-grown and high-purity floating-zone silicon specimens were irradiated at room temperature with γ rays. High-resolution cathodoluminescence spectra of the vibronic bands with zero-phonon lines at 0.717, 0.724, 0.790, 0.795, 0.898, and 0.969 eV are given. The widths and energies of these lines, and the intensities of the 0.790, 0.795, and 0.969-eV lines relative to the total intensities of their associated bands, are given in the temperature range 25 to 75°K. These data are discussed in terms of the theory of linear and quadratic electron–phonon coupling in the adiabatic approximation, using Debye spectra of coupled phonons and, for the 0.790, 0.795 and 0.969-eV lines, densities of coupled phonons derived from the emission band shapes. The theory gives a self-consistency between the spectral band shapes and the widths and energies of the zero-phonon lines, but does not satisfactorily fit the temperature dependence of the intensities of the zero-phonon lines. It is not known whether the failure of the theory is due to a Jahn–Teller effect (no absorption at the centers has been detected) or to the coupling by the electron–phonon interaction of electronic states whose energies are not greatly separated compared with the phonon energies involved. (auth)

55000 LIFETIMES OF FAST RECOMBINATION LUMINESCENCE TRANSITIONS IN ALKALI HALIDES. Blair, I. M.; Pooley, D.; Smith, D. (Atomic Energy Research Establishment, Harwell, Eng.). J. Phys., C (London); 5: No. 12, 1537-52(26 Jun 1972).

Measurements were made of the lifetimes of the fast recombination luminescence transitions in alkali metal halides. The luminescence was excited by 2-MeV proton pulses about 2 ns wide and the lifetimes measured by the technique of single photon counting. All alkali metal halides in which fast luminescence occurs were studied at 5 and 77°K. The lifetimes of the major components lie in the range 1 to 4 ns, and in many cases a second component with a lifetime of about 10 to 20 ns is evident. The temperature dependence of luminescence in NaCl, KBr, and KI was measured and compared with the behavior of the slow luminescence in these crystals. A new model for the electronic structure of the excited states involved in recombination luminescence is proposed and compared with the model based on the inert gas molecule. (auth)

55001 VIBRATIONAL AND ELECTRONIC PROPERTIES OF $Co(CN)_6{}^{3-}$ DOPED IN ALKALI HALIDES. Jain, S. C.; Warrier, A. V. R. (Solid State Physics Lab., Delhi). J. Phys., C (London); 5: No. 12, 1511-18(26 Jun 1972).

The ir spectra of solution-grown crystals of NaCl and KCl doped with $Co(CN)_6^{3-}$ show a multiplet in the Γ_6 stretch frequency region of CN^-. Apparently, the multiplet consists of four components in NaCl and three in KCl. However, a detailed examination of the results shows that the multiplet consists of several components due to different site symmetries in which $Co(CN)_6^{3-}$ is present in the crystal. The most probable symmetries are D_{2h} and D_s. On x irradiation the multiplet characteristic of $Co(CN)_6^{3-}$ decreases in intensity and a new multiplet characteristic of $Co(CN)_6^{4-}$ and a single line characteristic of $Co(CN)_6^{5-}$ appear on the low-energy side. On heating the crystals, irreversible changes in the spectra occur. The spectra consist of many lines, but only the line corresponding to NCO^- could be identified. The electronic spectra of the impurity show seven bands in the wavelength region 600 to 200 nm as compared with only three bands observed in the solution in this region. The bands are interpreted as being due to transitions of the split components of crystal field levels in O_h symmetry. Both peak positions and intensities are consistent with the assignment. (auth)

55002 ANALYSIS OF THE EFFECTS OF ELECTRON DAMAGE ON THE BOUND-TO-BOUND EMISSION INTENSITY OF CADMIUM SULPHIDE. Radford, C. J.; Hagston, W. E.; Bryant, F. J. (Univ. of Hull, Eng.). J. Phys., C (London); 5: No. 12, 1526-36(26 Jun 1972).

Observation of the changes produced in donor–acceptor pair cathodoluminescence emission intensities of as-grown, cadmium-fired, and sulfur-fired cadmium sulfide samples by electron radiation damage allows an estimate to be made of the initial donor concentration present and of the fraction of pairs excited. This analysis also shows that an increase in the donor or acceptor concentration need not necessarily result in an enhancement of the donor–acceptor pair luminescence emission intensity and, under certain circumstances, could lead to a reduction in emission intensity. The observations provide confirmation of this effect. (auth)

55003 SURFACE AND DEPTH DISTRIBUTION DAMAGE OF IONS IN SILICON AS SEEN WITH AN ELECTRON MICROSCOPE. Bertolotti, M.; Sette, D.; Stagni, L.; Vitali, G. (Univ., Rome). Radiat. Eff.; 15: No. 1-2, 31-5(Jul 1972).

The localized damage around ion tracks at the surface of an implanted semiconductor is studied by electron microscopy. It is shown that it is possible to see not only the produced damage but also to follow the depth distribution of the damage under the implanted semiconductor surface. (UK)

55004 PROTON AND FAST NEUTRON DAMAGE STUDIES IN Si AND Ge USING CHANNELING. Marcus, Gail H. (Massachusetts Inst. of Tech., Cambridge); Olson, N. Thomas; Ryan, Jean L. Radiat. Eff.; 15: No. 1-2, 51-6(Jul 1972).

The orientation dependence of the backscattering yield (channeling) of 1.0-MeV protons was used to investigate fast-neutron-induced lattice damage in silicon and germanium single crystals. The measurements were made at room temperature and for protons incident in (110) crystal directions. The reactor irradiations were made, using a fast neutron flux $\phi = 3.3 \times 10^{13}$ n/cm^2-sec (>0.1 MeV) at 60°C, to total exposures (ϕt) between 2.1×10^{17} and 3.4×10^{19} n/cm^2. The per cent of lattice atoms displaced was not linear with neutron exposure. The displacements rose rapidly with exposure initially, then assumed a very slow rise having a dependence on neutron exposure of $(\phi t)^{0.1}$. This appears to be some modification of an exponential saturation mechanism. It agrees qualitatively with a thermal annealing mechanism, which predicts a flux-dependent (i.e., rate of defect introduction dependent) saturation value occurring even for room-temperature irradiations. (auth)

55005 CORRELATED RECOVERY KINETICS. Peak, D.; Brosious, P.; Lee, Y. H.; (and others) (State Univ. of New York, Albany). Radiat. Eff.; 15: No. 1-2, 61-72(Jul 1972).

Diffusion-controlled correlated recovery kinetics are compared for the continuum and discrete lattice treatments. Specific results are given for the simple cubic, face-centered cubic, body-centered cubic, and diamond lattices. It is concluded that samples with anisotropic damage distributions created by irradiation in different crystallographic directions will not exhibit substantial differences in their correlated recovery, but it is argued that for small capture volumes and for the treatment of the early recovery times, the discrete treatment is required. (auth)

55006 NEW EPR SPECTRA IN NEUTRON-IRRADIATED SILICON. Lee, Y. H.; Kim, Y. M.; Corbett, J. W. (State Univ. of New York, Albany). Radiat. Eff.; 15: No. 1-2, 77-84(Jul 1972).

Six new EPR spectra reported are apparently due to intrinsic defects created in the neutron irradiation and, in some cases, annealing of silicon. In addition, a spectrum similar to, but distinct from, that due to the vacancy–phosphorus center is reported. Some tentative defect models are discussed to emphasize the features of the spectra, but more detailed studies are required to establish the identity of the defects giving rise to these spectra. (auth)

55007 THEORY OF FLUX PEAKING EFFECT IN CHANNELING. Kumakhov, M. A. (Moscow State Univ.). Radiat. Eff.; 15: No. 1-2, 85-99(Jul 1972).

The redistribution of the axial- and planar-channeled ion flux was examined. General formulae describing the flux peaking effect were obtained and the main factors on which the effect depends were examined. Backscattering experiments were also analyzed. (auth)

55008 INFLUENCE OF THE INCIDENCE ANGLE ON IRON AND COPPER SURFACE MICROTOPOGRAPHY INDUCED BY ION BOMBARDMENT. Teodorescu, I. A.; Vasiliu, F. (Institutul de Fizica, Atomica, Bucharest). Radiat. Eff.; 15: No. 1-2, 101-13(Jul 1972).

The influence of argon-ion bombardment on iron and copper surface microtropography was studied. Thermal etching revealed a regular microtopography with different oriented grain structure. The surface microrelief is characterized by pyramidal growths at the points where the dislocations intersect the iron surface or by terraced microstructures, depending on the crystallographic orientation on the copper surface. A simple model is introduced for the estimation of the bombardment time necessary for complete erosion of the pyramids on the iron surface. (auth)

55009 ELECTRONIC STOPPING MEASUREMENTS OF CHARGED-PARTICLES IN RADIOPHOTOLUMINESCENT GLASS. Arnold, G. W.; Vook, F. L. (Sandia Labs., Albuquerque, N. Mex.). Radiat. Eff.; 14: No. 3-4, 157-63(Jun 1972).

Measurements were made of the radiophotoluminescence generated in silver-activated phosphate glass by the electronic energy losses of 200- to 400-keV ions (H^+, He^+, O^+) incident on the glass. Measurements of luminescence growth as a function of energy into electronic processes per unit volume showed a departure from linearity above ~10^{18} keV/cm^3. For lower deposition values, detailed measurements of the integral depth distribution of luminescence intensity were made as material was removed by vibratory polishing. The measured depth distributions compared favorably to the integral depth distributions of electronic energy losses predicted by LSS theory (He^+ and O^+) and to experimental values of thin film losses (H^+). These comparisons indicated that the luminescent centers were formed in the glass close to (≤10^3 Å) the point of the initial deposition of electronic energy. (auth)

55010 RECOVERY OF ELECTRON-IRRADIATED PLATINUM. 1. STAGE 1 ANNEALING. Dibbert, H. J.; Sonnenberg, K.; Schilling, W.; Dedek, U. (Kernforschungsanlage, Juelich, Ger.). Radiat. Eff.; 15: No. 1-2, 115-27(Jul 1972).

By means of electrical resistivity measurements, the recovery in stage I of electron-irradiated Pt was studied. The effects of irradiation dose, electron energy, radiation doping, and doping with dilute concentrations of Au atoms on the annealing structure were investigated. The recovery in substages I_A, I_B, and I_C was not influenced by irradiation dose and doping agents, in agreement with the model of close Frenkel-pair recombination in these stages. Substage I_E was strongly and substage I_D was moderately modified by variation of radiation dose and the addition of doping agents. This and the equal values of the activation energies confirmed the model of correlated and uncorrelated recovery of free migrating interstitials in these stages. (auth)

55011 RECOVERY OF ELECTRON-IRRADIATED PLATINUM. PART 2. COMPARISON OF STAGE 1 ANNEALING WITH THEORIES FOR 3- AND 1-DIMENSIONAL MIGRATION OF INTERSTITIALS. Sonnenberg, K.; Schilling, W.; Dibbert, H. J.; Mika, K.; Schoeder, K. (Kernforschungsanlage, Juelich, Ger.). Radiat. Eff.; 15: No. 1-2, 129-41(Jul 1972).

The experimental data for the time and dose and energy dependence of the recovery in substage I_D and I_E of electron-irradiated Pt were compared critically with the results of full diffusional treatments of the correlated plus uncorrelated recovery of interstitial—vacancy pairs. Excellent agreement was obtained if in the theoretical treatment three-dimensional migration of interstitials was assumed. In contrast to this, the assumption of one-dimensional interstitial migration (off-line crowdion model) led to serious disagreements with the observed dose dependence of stage I_E. In addition, the strong dependence of the recovery structure in substage I_D and I_E on the energy of the bombarding electrons predicted by the crowdion model was not observed experimentally. (auth)

55012 DESTRUCTION OF A SOLID BY SUPERDENSE EXCITATION OF ITS ELECTRONIC SUBSYSTEM. Vaisburg, D. I.; Balychev, I. N. (Tomsk Polytechnic Inst., USSR). JETP Lett. (USSR) (Engl. Transl.); 15: No. 9, 380-2(5 May 1972).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 15: No. 9, 537-40(5 May 1972).

Various solids were irradiated by an intense electron pulse so that the average excitation energy density reached $W \sim 10^{20}$ to 10^{22} ev/cm^3. Destruction of the solid (rupture of ionic and covalent thin-plate samples, Lichtenberg figures in thick samples, and swelling or erosion of plastic solids) resulted if the energy density absorbed exceeded W_{des} (= 15×10^{20} eV/cm^3 for Ge and 1.1 to 3×10^{20} eV/cm^3 for alkali metal halides). It was determined that the electric charge, thermal gradient, and defects cannot account for the observed effects, which are probably due to the contracting of the electrons and holes into Frankel condensations with equilibrium density 10^{21} to 10^{22} cm^{-3} and W exceeding the binding energy. (D.L.C.)

55013 CHARGE STATE OF DEFECTS IN GERMANIUM CONVERTED INTO p-TYPE BY 1 MeV ELECTRONS. Werner, Zbigniew; Rzewuski, Henryk; Suski, Jan. (Inst. of Nuclear Research, Swierk, Poland). Nukleonika; 17: No. 1-2, 1-9(1972).

The concentration and Hall mobility changes in the reversible isochronal annealing process observed between 100 and 140°K in germanium converted into p-type by 1-MeV electron irradiation at 140°K were measured. It was found that the charge state of minority carrier traps created by 1-MeV electrons oscillates between 0 and +1 for traps populated and ionized, respectively. (auth)

55014 DETERMINATION OF IMPLANTATION PROFILES IN SOLIDS BY SECONDARY-ION MASS SPECTROMETRY. Maul, J.; Schulz, F.; Wittmaack, K. (Gesellschaft fuer Strahlen- und Umweltforschung mbH, Nuremberg). Phys. Lett.; 41A: No. 2, 177-8(11 Sep 1972).

Secondary ion mass spectrometry was applied to a determination of the profile of 22-keV boron ions implanted in amorphous silicon. A Gaussian range distribution is observed with a projected range of 840 Å and a standard deviation of 340 Å. (auth)

55015 THERMALLY STIMULATED CURRENTS AND THERMOLUMINESCENCE OF PARAMAGNETIC CENTERS IN HEXAGONAL BORON NITRIDE. Katzir, A. (Soreq Nuclear Research Centre, Yavne, Israel); Suss, J. T.; Halperin, A. Phys. Lett.; 41A: No. 2, 117-18(11 Sep 1972).

Isochronal annealing of paramagnetic centers in BN showed a correlation between EPR, thermally stimulated currents, and thermoluminescence measurements. It was found that the one- and three-boron centers give rise to two types of traps with activation energies of (0.6 ± 0.1) eV and (1.0 ± 01) eV, respectively. (auth)

55016 EFFECTIVE CROSS SECTIONS OF PROTON AND ALPHA PARTICLE TRACKS IN IONIC CRYSTALS. Vaisburd, D. I.; Vorob'ev, A. A.; Melikyan, L. A. This paper was summarized in At. Energ. (USSR); 30: No. 6, 538(Jun 1971) as paper No. 502/5971. (In Russian).

Full copy of this paper is held by TIC.

Effective transverse sizes of proton (1 to 6 MeV) and alpha-particle (4 to 25 MeV) tracks in NaCl monocrystals were determined from the transformation kinetics of electron color centers. The F_2-center concentration follows the law $n = N[1 - \exp(-\Omega\nu)]$, where N is the saturation level of regenerated centers, Ω is effective track volume, and ν is instantaneous track concentration. The width of the radial distribution of energy transfer per unit volume is 4.5×10^{19} eV/cm^3. The radius of a proton track is 74 ± 5 Å, while an alpha-particle track is 155 ± 15 Å. (D.L.C.)

55017 INVESTIGATION OF STATIC ELECTRON IRRADIATION EFFECTS IN BULK Si AND THIN Si FILMS AT ENERGIES FAR BELOW THRESHOLD. Norris, C. B. (Sandia Labs., Albuquerque, N. Mex.). J. Appl. Phys.; 43: No. 10, 4060-7(Oct 1972).

A study was made of the defect production in Si at electron-irradiation energies far below the theoretically predicted 170-keV bulk-damage threshold. In contrast to published results, the experiments show no permanent resistance changes in bulk samples at fluences as high as 2×10^{18} 20-keV e/cm^2 (78°K). Furthermore, fundamental damage studies using EPR techniques and optical spectroscopy confirm that fewer than 10^{-4} to 10^{-5} atomic displacements occur per 20-keV electron. These results disagree with previous studies of irradiation-induced resistance changes in bulk samples and epitaxial films from which it was indirectly determined that subthreshold atomic displacements appear following ionization of a Si K-shell electron. However, large resistance decreases do occur in p-type Si/spinel films at fluences $\gtrsim 10^{15}$ 20-keV e/cm^2 (300°K) that appear similar to anomalous results in the literature. But the energy and fluence dependences of the resistance change in the experiments are correctly predicted by theory for an irradiation-induced charge accumulation layer localized within <500 Å of the irradiated Si surface. The results do not indicate the presence of a bulk-damage mechanism. The K-shell hypothesis is clearly ruled out since the resistance effect remains at energies well below the K-shell ionization potential. A corresponding irradiation effect in n-type Si/spinel films is not found, which is consistent with the fact that nearly all the previously reported subthreshold irradiation effects have appeared in p-type Si. Results clarify some puzzling aspects of previously reported low-energy electron irradiation effects in Si and also indicate that the unambiguous determination of defect introduction or existing defect modification by subthreshold irradiation of semiconductors requires fundamental techniques that can be rendered immune to surface phenomena. (auth)

55018 THEORETICAL MODEL FOR X-RAY EMISSION AND ABSORPTION, BOND BREAKING, AND POINT-DEFECT PRODUCTION IN SiO_2. Ruffa, A. R. (Naval Research Lab., Washington, D. C.). J. Appl. Phys.; 43: No. 10, 4263-5(Oct 1972).

An analysis of the effects of radiation damage in SiO_2 is made within the framework of the valence-bond approximation. According to this model, the less energetic and intense satellite in the oxygen K_α emission spectrum results from the breaking of an Si—O bond. The calculated energy separation and intensity ratio of the two lines agree favorably with experiment. The model further indicates that the end result of the radiative processes is the production of transient paramagnetic point defects in the pure material and permanent defects in the impure material. In this sense, this model goes a step further than the usual molecular orbital or band pictures in that it provides a different description of the ionized and un-ionized states. Some implications of these conclusions are discussed in detail. (auth)

55019 X-RAY TOPOGRAPHIC DETERMINATION OF THE ABSENCE OF LATERAL STRAINS IN ION-IMPLANTED SILICON.

Tu, K. N.; Chaudhari, P.; Lal, K.; Crowder, B. L.; Tan, S. I. (IBM Watson Research Center, Yorktown Heights, N. Y.). J. Appl. Phys.; 43: No. 10, 4262-3(Oct 1972).

The lattice-to-amorphous transformation of Si caused by implantation of silicon ions results in volumetric expansion. The expansion is primarily in a direction normal to the substrate surface. This is inferred from x-ray topographic analysis where no evidence of plastic flow in the region bounding the implanted volume was detected. By measuring the unidirectional expansion, the average density of the amorphous Si layer is found to be 3.8 to 5.6% smaller than that of crystalline Si. (auth)

55020 X-RAY AND DIELECTRIC STUDIES OF IRRADIATED PEROVSKITE TYPE COMPOUNDS. Solovev, S. P.; Kuzmin, I. I.; Zakurkin, V. V.; Dudarev, V. Ya. J. Phys. (Paris); 33: No. 4, 443-5(Apr 1972).

Polycrystalline samples of $BaTiO_3$, $SrTiO_3$, $PbTiO_3$, $NaNbO_3$, and $PbZrO_3$ were irradiated with fast electrons and gamma radiation from ^{60}Co. Identical reversible changes in their dielectric constants were observed. Fast-neutron in-pile irradiation (up to integrated fluxes of 10^{20} cm^{-2}) of $PbTiO_3$ resulted in crystal structure transformations into an amorphous state, followed by the formation of a $\beta-PbO_2$ phase. The variation of the lattice parameters are similar to those of $BaTiO_3$ and $PbZrO_3$. (France)

55021 MAGNETORESISTANCE OF NEODYMIUM METAL. Nagasawa, H. (Tokyo Univ. of Education). Phys. Lett.; 41A: No. 1, 39-40(28 Aug 1972).

The transverse and longitudinal magnetoresistance on the polycrystalline dhcp Nd was measured at 1.38, 4.2, 13.96, and 20.4°K with applied fields up to 20 kOe. (auth)

55022 HIGH-TEMPERATURE VACUUM EVAPORATION OF ZIRCONIUM CARBIDE + TUNGSTEN COMPOUNDS FROM AN OPEN SURFACE AND THROUGH A TUNGSTEN COATING. Nikol'skaya, T. A.; Vil'k, Yu. N. Sov. Phys.-Tech. Phys. (Engl. Transl.); 17: No. 2, 341-3(Aug 1972).

Translated from Zh. Tekh. Fiz.; 42: No. 2, 429-32(Feb 1972).

The evaporation of ZrC + W compounds (ZrC + 10 wt % W and ZrC + 30 wt % W) from an open surface into a vacuum, and the evaporation of ZrC + 30% W with a tungsten coating at 2600 to 2970°K are investigated. The addition of tungsten reduces the ZrC evaporation by 50%; a tungsten coating reduces it by a further factor of 4 to 4.5. The protection provided by the coating is reduced by keeping the specimen at the same temperature, and this effect increases with increasing temperature. (auth)

55023 ADSORPTION AND DISSOCIATION OF CO ON TUNGSTEN SURFACE STUDIED BY FIELD-EMISSION MICROSCOPY. Senzaki, Kiyoshi; Kawasaki, Koji (Electrotechnical Lab., Tokyo). Jap. J. Appl. Phys.; 11: No. 9, 1363-71(Sep 1972).

The adsorption and desorption of CO for tungsten were studied by a field-emission microscope with a steady-state or pulsed field to make clear the location dependency of binding states of CO adsorbed on tungsten surface, i.e., one weakly held α state and three more strongly held β states which are distinguished by flash desorption measurements. CO in the α state is found on all the planes of tungsten, whereas the β states depend on the surface structure. From observations above 600°C, there seems to be some possibility of dissociation of CO on hot tungsten. (auth)

55024 PHOTOELECTRON SPECTROSCOPIC MEASUREMENTS OF CORE LEVEL BINDING ENERGIES OF YTTRIUM, LANTHANUM, AND CERIUM. Nagakura, Ichiro; Ishii, Takehiko; Sagawa, Takasi (Tohoku Univ., Sendai). J. Phys. Soc. Jap.; 33: No. 3, 754-60(Sep 1972).

X-ray photoelectron spectra were measured on in-situ evaporated films of yttrium, lanthanum, and cerium by the use of an electron-energy analyzer of the parallel-plate-electrode type. The binding energies of electronic core levels were determined. Results are compared with the values cited in typical x-ray atomic energy tables. The binding energies of the $M_4(3d_{3/2})$ and $M_5(3d_{5/2})$ levels of lanthanum and cerium as well as the $N_2(4p_{1/2})$ and $N_3(4p_{3/2})$ levels of lanthanum are all found to be split into two components. Possible origins of the splitting are discussed, although no definite conclusion is drawn. (auth)

55025 PROPERTIES AND INTERACTIONS OF LANTHANIDES: INTERACTIONS WITH EXTERNAL FIELDS. Saxena, K. M. S.; Fraga, S. (Univ. of Alberta, Edmonton). Can. J. Phys.; 50: No. 12, 1411-4(15 Jun 1972).

The values of the diamagnetic susceptibilities and nuclear magnetic shielding constants, calculated from numerical Hartree–Fock functions, are reported for the neutral atoms and the first three positive ions of the lanthanides. (auth)

55026 NEW MAGNETOELASTIC INTERACTION. Liu, S. H. (Univ. of Copenhagen). Phys. Rev. Lett.; 29: No. 12, 793-5(18 Sep 1972).

A mechanism is proposed for the mixing of acoustic magnons and optic phonons propagating along the c axis in terbium observed at 79°K. The interaction involves an intermediate state in which an electron–hole pair is excited virtually by the phonon and subsequently recombines into a magnon. This interaction becomes possible when the spin–orbit coupling is taken into account, and it also explains the mixing of optic magnons and acoustic phonons as seen in terbium at 200°K and dysprosium at 4.7°K. (auth)

55027 INVESTIGATION OF THE THERMAL CONDUCTIVITY, ELECTRICAL RESISTIVITY, AND THERMOELECTRIC POWER OF THORIUM NITRIDE–URANIUM NITRIDE ALLOYS. Weaver, Samuel Cavin. Knoxville, Tenn.; Univ. of Tennessee (1972). 217p. University Microfilms Order No. 72-21,368.

Thesis.

Measurements were made on ThN, (Th–2% U)N, (Th–5% U)N, and UN. Results indicated that ThN behaves very nearly as a pure metal in its transport properties. Thermal conductivities (λ) were high, electrical resistivities (ρ) were low, and thermoelectric power (S) measurements were nearly zero. UN, which is antiferromagnetic below 50°K and has a lower λ, a much higher ρ, and a large positive S. The λ of ThN is much higher than nuclear fuels being considered for LMFBR. At reactor operating temperatures, λ for ThN is approximately 20 times that of UO_2. Even when alloyed with UN, ThN retained a λ greater than any other ceramic fuel being considered. Calculations show the fuel potential of ThN alloyed with UN or PuN as fuels in proposed reactor concepts. The ρ measurements showed ThN and the (Th–U)N alloys to have a linear dependence with temperature above about 100°K. Below 100°K, the slope changed to near zero at 0°K. Small additions of UN to ThN of 2 and 5% caused a very large increase in ρ. This probably resulted because the antiferromagnetic UN exhibits a large ρ. In addition to changing the residual resistivity at 4.2°K, $d\rho/dT$ was reduced by alloying. The S of ThN is very small. However, alloying with UN, which has a large value for S, caused a significant change in the S of (Th–U)N alloys. The data treatment permitted a separation of λ into a lattice conductivity, λ_L, and an electronic contribution to the thermal conductivity, λ_e, and both contributions were significant over the temperature range studied. The separation allowed a prediction of λ at temperatures greatly exceeding the range of actual experimental measurements. The Lorentz function was calculated and found to be very near the Sommerfeld value at temperatures of 300°K and above. In order to make high-quality samples, a zone-melting technique was developed that converted the metal directly into the nitride at a state ~100 times as fast as conventional techniques. The fabricated samples were nearly 100% dense with very large grains of ~0.3 cm dia. (TSS) (Diss. Abstr. Int., B)

55028 1971 DIGESTS OF THE INTERMAG CONFERENCE, DENVER, COLORADO, APRIL 13–16, 1971. 71 C 12-MAG. New York; Institute of Electrical and Electronics Engineers, Inc. (1971). 187p. $4.00. (CONF-710446).

The 214 papers were presented in 33 sessions dealing with: ferrites, domain devices and techniques, magneto-optics, charge transfer devices and magnetic bubbles, recording media and techniques, cobalt rare earth magnets, instruments, video recording, bubble materials, memory devices and systems, electromechanical devices, storage hierarchies, magnetic recording theory, low-coercivity materials, permanent magnets, ferroresonant regulators and power conditioning, bulk storage, garnets, hard materials, recording heads, magnetization processes, plated-wire memory, microwave materials and resonance, and microwave integrated circuits. (D.L.C.)

55029 PARAMAGNETIC RELAXATION INITIATED BY FLUX JUMPING. Griffiths, D. J. (Oregon State Univ., Corvallis). Phys. Lett.; 41A: No. 1, 21-2(28 Aug 1972).

Controlled flux jumping of type-II superconductors was used to produce nonequilibrium spin distributions in Ce^{3+} 1 at.%: CaF_2. The subsequent return to thermal equilibrium was examined by monitoring the magnetic-optical Faraday effect of the cerium ions. (auth)

55030 MAGNETIC SUSCEPTIBILITIES OF NONSTOCHIOMETRIC CERIUM OXIDES. Ariya, S. M.; Balashova, E. P. Vestn. Leningrad. Univ., No. 22, Fiz., Khim.; No. 4, 151-2(Nov 1971). (In Russian).

Magnetic susceptibilities of some nonstoichiometric cerium oxides were measured. Magnetic moments calculated for a Ce(III) atom approach the value of $\mu = \sqrt{J(J + 1)} = 2.56$ μ_B. (auth)

55031 VIBRATIONAL SPECTRA AND STRUCTURES OF RARE EARTH OXIDES IN THE A MODIFICATION. Denning, J. H.; Ross, S. D. (Chelsea Coll. of Science and Tech., London). J. Phys., C (London); 5: No. 11, 1123-33(12 Jun 1972).

Crystallographic studies of La_2O_3 and the oxides isostructural with it failed to decide between the noncentrosymmetric space group D_3^2(P321) and the centrosymmetric space group D_{3d}^3($P\bar{3}m$ 1) for their structure. The infrared and Raman spectra of La_2O_3 and Nd_2O_3 were obtained, and the absence of coincidences between the spectra unequivocally favors the centrosymmetric space group. The vibrational spectra were analyzed using the Wilson FG matrix method and force constants for metal—oxygen and oxygen—oxygen interactions derived, assuming a quadratic central force field. (auth)

55032 SPECTROSCOPY OF RARE EARTH OXIDE SYSTEMS. I. FAR INFRARED SPECTRA OF THE RARE EARTH SESQUIOXIDES, CERIUM DIOXIDE, AND NONSTOICHIOMETRIC PRASEODYMIUM AND TERBIUM OXIDES. Bloor, D.; Dean, J. R. (Queen Mary Coll., London). J. Phys., C (London); 5: No. 11, 1237-52(12 Jun 1972).

The far-infrared spectra of the rare earth sesquioxides, cerium dioxide, and nonstoichiometric praseodymium and terbium oxides were observed over the range 10 to 250 cm^{-1} at liquid helium temperatures. Absorptions due to the excitation of phonons and low-lying electronic states of the rare earth ions occur in this region. The long-wavelength phonons in the sesquioxides involve motions of the rare-earth ions in an effectively rigid oxygen lattice. To a first approximation, the absorptions can be described using the rare-earth-ion site symmetries. This, together with observations of the linewidths and frequencies in mixed crystals, suggests that these phonons have the character of a local resonant mode. Strong interactions between these phonons and the electronic excitations of the rare-earth ions were observed. In general, the observed electronic energies agree with those obtained by less direct methods; however, in a few cases significant differences were found. The spectra of the other oxides indicate the presence of complex or mixed phases. (auth)

55033 MAGNETIC STRUCTURE OF $HoAu_2$. Atoji, Masao. (Argonne National Lab., Ill.). J. Chem. Phys.; 57: No. 6, 2402-6(15 Sep 1972).

Neutron-powder diffraction measurements reveal that $HoAu_2$ (the tetragonal body-centered CaC_2-type structure) becomes an antiferromagnet below $T_N(\alpha)$ = 9.2°K with the onset of an incommensurate moment alignment (α) having a transverse wave modulation. The α magnetization wave with the wavelength, 6.373 Å = 1.229 a, propagates along the a axis and is polarized approximately in the direction of the b axis, all in the face-centered lattice description. At $T_N(\beta)$ = 7.8°K, a commensurate transverse magnetization wave (β) starts to grow. The β wave with the wavelength equal to the a spacing propagates along the a or b axis and is polarized in the direction of the c axis. The composite configuration of the α and β transverse waves may be described as an antiferromagnetic triangular-fan structure. In cooling, the α wave amplitude reaches rapidly to a maximum value of 6.7 μ_B at 6.3°K, then decreases monotonically, and diminishes near 0°K. The β wave moment follows the Brillouin curve and approaches 6.4 μ_B at 0°K. The composite ordered moment rises to a maximum value of 7.8 μ_B at around 5.5°K and declines toward 6.4 μ_B at 0°K. These moment values which are considerably smaller than 10 μ_B of the free Ho^{3+} ion indicate a strong crystal field effect. The phenomenon that the maximum composite moment occurs near the midpoint of the ordered phase is due likely to a strongly anisotropic, competing interaction between the RKKY exchange coupling and the crystal field effect. (auth)

55034 MAGNETIC STRUCTURE OF $ErAu_2$. Atoji, Masao (Argonne National Lab., Ill.). J. Chem. Phys.; 57: No. 6, 2407-9(15 Sep 1972).

The magnetic properties of $ErAu_2$ having the tetragonal body-centered CaC_2-type structure were investigated at temperatures between 297 and 1.8°K by neutron diffraction experiments on powdered specimens. The onset of an incommensurate, transverse wave moment alignment (the α structure) occurs at 6.7°K. The α magnetization wave propagates along the a axis and is polarized in the b direction, all in the face-centered description. The α wavelength is 6.443 Å = 1.248 a and is temperature independent. At 4.0°K, a commensurate antiferromagnetic moment wave (the β structure) appears with the propagation direction parallel to the a axis. The β wavelength is equal to the a spacing. As regards the β moment components, the x || a component is slightly larger than the y || b component and the z || c component is undetectably small. The composite configuration of the α and β waves delineates a distorted-fan modulation. In cooling, the α amplitude develops to 6.7 μ_B at 4°K, then decreases to 5.9 μ_B near 3°K, and retains 5.9 μ_B at 3 > T > 0°K. The β wave moments approximate the Brillouin magnetization with the extrapolated moments of 3.2 and 2.7 μ_B at 0°K for the x and y components, respectively. The maximum composite moment is 9.2 μ_B at 0°K, while the ordered moment of the free Er^{3+} ions is 9.0 μ_B. (auth)

55035 MAGNETIC AND CRYSTAL STRUCTURES OF ErC_2 AT 297 -2°K. Atoji, Masao (Argonne National Lab., Ill.). J. Chem. Phys.; 57: No. 6, 2410-13(15 Sep 1972).

Neutron-powder diffraction measurements show that the tetragonal body-centered ErC_2 becomes antiferromagnetic below 19 ± 2°K. The moment alignment is governed by several narrowly dispersed, incommensurate transverse magnetization waves. The major modulation waves propagate along the a axis and are polarized in the b axis direction. The magnetization wavelengths are 5.78, 5.4, 6.7, and 7.1 Å, and the amplitudes are respectively 6.55, 2.2, 2.1, and 1.6 μ_B at 4.2°K. The ferromagnetic alignment in the plane perpendicular to a is slightly altered by several long-periodicity modulations propagating along the b and c axes. A commensurate, antiferromagnetic wave also participates in the moment alignment below 10 ± 3°K. The commensurate wave is represented by setting the wavelength equal to the a spacing in the incommensurate wave mode. The commensurate moment is 2.5 μ_B at 4.2°K. The root-mean-square value of all the moment amplitudes is 7.8 μ_B at 4.2°K and increases to 7.9 μ_B at 2°K. These features are likely caused by a strong perturbation between the RKKY coupling and the crystal-field effect. The proposed structure is by no means unique, although an exhaustive search for other probable models was fruitless. The crystal structure is characterized by the C—C bonding distance of 1.288 ± 0.006 Å and the Er—C distances of 2.403 ± 0.003 and 2.640 ± 0.001 Å. These distances are indicative of a large 5d—$\pi_0$2p contribution in the conduction-band wavefunction. (auth)

55036 ESR STUDY OF THE PYROLYSIS OF HYDROGEN ON TUNGSTEN. Cochran, Edward L.; Bowers, Vernon A.; Adrian, Frank J. (Johns Hopkins Univ., Silver Spring, Md.). J. Chem. Phys.; 57: No. 6, 2384-8(15 Sep 1972).

Electron spin resonance (ESR) techniques were adapted to the study of the atomization of hydrogen occurring on the surface of heated filaments. The method involves heating an axial metal filament in a circular cavity to temperatures of 1000 to 2000°K and measuring the steady-state atom concentration produced in the gas. Heating is accomplished by dc current pulsed at 6000 pulses/sec with a 15% duty cycle. Under these conditions, the sample space is free a relatively high proportion of the time from current-induced field inhomogeneities. The sensitivity and spectral line shapes observed compare favorably with those observed in control experiments in the same cavity in the absence of the heated filament. The atomization of hydrogen on tungsten filaments can be conveniently studied by ESR at hydrogen pressures between 0.1 and 100 torr; thus, this method complements previously developed techniques that are most useful at lower pressures (10^{-6} to 10^{-2} torr). The observed pressure and temperature dependences of the H atom concentration are interpreted in terms of a mechanism involving the production of hydrogen atoms on the filament, their diffusion into the gas, and recombination on the cavity wall. The surface reaction appears to be complex, changing character at an H_2 pressure somewhere around 0.5 torr. Extrapolation of the ESR data to very low H_2 pressures yields results consistent with previous low pressure studies. At higher H_2 pressures the rate of H atom production decreases due to surface saturation effects. (auth)

55037 INHOMOGENEOUS MAGNETIC SYSTEMS. Neumann, L. (Siemens AG, Erlangen, Ger.). Z. Phys.; 253: No. 5, 404-14(1972). (In German).

Within the molecular-field approximation the Gibbs free energy G is calculated for a system with inhomogeneous distribution of magnetic particles. Some properties of such a system derivable from G are compared with magnetic and calorimetric measurements on $Ce_{1-x}Gd_xRu_2$ alloys. (auth)

55038 ATOMIC POSITIONS IN THORIUM SILICATE: AN X-RAY-DIFFRACTION STUDY. Sinha, Devendra Prasad (Patna Univ., India); Prasad, Rameshwar. Indian J. Phys.; 45: No. 9, 435-7(Sep 1971).

The structural study of thorite (thorium silicate) was extended to the powder method using the Hull—Davey chart. The best agreement of observed and calculated intensities was obtained for the tetragonal system. The space group was found to be D_{4h}^{19}—$I4_{1/amd}$. The bond distances are: Th—4O, 2.51 Å; Th—4O, 2.45 Å; and Si—4O, 1.56 Å. (D.L.C.)

55039 STABILITY OF A TRANSVERSE-WAVE MAGNETIC STRUCTURE AT 1.3 K. Gignoux, D.; Lemaire, R.; Paccard, D. (Laboratoire de Magnetisme, Grenoble, France). Phys. Lett.; 41A: No. 2, 187-8(11 Sep 1972).

Some $TbN_{1-x}Cu_x$ exhibit sinusoidal wave magnetic structures between 1.3°K and T_N. When the crystal-field splitting is preponderant, the ordered moment can be induced by exchange field which explains the stability of these structures down to 0°K. (auth)

55040 INFLUENCE OF PLASTIC DEFORMATION AND RECRYSTALLIZATION UPON PERMEABILITY ANOMALIES IN GADOLINIUM METAL. Milstein, Frederick; Zyvoloski, George (Univ. of California, Santa Barbara). J. Appl. Phys.; 43: No. 10, 4217-25(Oct 1972).

Polycrystalline gadolinium metal was plastically deformed by a cold-rolling technique and measurements were subsequently made of the weak-field ac relative permeability as a function of temperature. The Gd was then subjected to a recrystallization anneal, and the magnetic measurements were repeated as a function of temperature. Results observed are (i) in the annealed state, the permeability passes through an anomalous "hump" in the neighborhood of the Curie temperature; this anomaly is absent in the plastically deformed state, (ii) in a range of temperatures below the Curie temperature, the relative permeability in the work-hardened state is greater than that in the annealed state, and (iii) at a lower temperature (about 240°K), the relative permeability in the annealed state undergoes a further, sharp increase which is much greater than that which occurs at the Curie point; this lower temperature increase in relative permeability is largely suppressed in the work-hardened state. The experimental results are discussed in terms of the influence of the cold-rolling process upon magnetocrystalline anisotropy and in terms of the relative importance of domain rotation and domain-wall movement in the plastically deformed and in the annealed state. (auth)

55041 LIGHT SCATTERING IN SOLIDS. Proceedings of the Second International Conference, Paris, July 19—23, 1971. Balkanski, M. (ed.). Portland, Oreg.; International Scholarly Book Services, Inc. (1971). 529p. $45.00. (CONF-710720).

Approximately 120 papers and abstracts were presented on problems concerning the light scattering by elementary excitations in solids. Subjects covered include: resonant Raman effects, electronic excitations, magnetic excitations, stimulated light scattering, polaritons, phonons, phase transitions, and Brillouin and Rayleigh scattering. Separate abstracts were prepared for two of the papers. Subject and author indexes are included. (D.L.C.)

For abstracts of individual papers see: 55042 and 55043.

55042 BOUND STATE IN EuO. Thorpe, M. F. (Yale Univ., New Haven). pp 161-4 of Light Scattering in Solids. /Balkanski, M. (ed.). Portland, Oreg.; International Scholarly Book Services, Inc. (1971).

From International conference on light scattering from fluids; Paris, France (15 Jul 1971). See CONF-710720.

Techniques for finding the two-magnon states in ferromagnets are used to show that an optically active bound state exists in an fcc Heisenberg ferromagnet with nearest-neighbor exchange. The repulsive interaction between magnons with equal and opposite momentum near the zone boundary does not lead to a bound state in most lattices. However, the magnon dispersion in an fcc lattice is such that there is a logarithmic divergence in the density of states at the largest single magnon energy, which causes a bound state to be split off above the band. These ideas are applied to EuO, which has a transition temperature of 69.3°K and therefore a two-magnon band stretching from 0 to 109 cm^{-1}, if the exchange is entirely nearest neighbor. The bound state is predicted to be above the band by only 0.05 cm^{-1} because of the large spin of the Eu^{2+} ion. Experimentally, one should be able to see a rather sharp peak at the top of the two-magnon band due to the smoothed out logarithmic singularity. (auth)

55043 RAMAN SCATTERING IN THE SEMICONDUCTING AND METALLIC PHASES OF VO$_2$. Chase, L. L.; Srivastava, Ramakant (Indiana Univ., Bloomington). pp 380-4 of Light Scattering in Solids. /Balkanski, M. (ed.). Portland, Oreg.; International Scholarly Book Services, Inc. (1971).

From International conference on light scattering from fluids; Paris, France (15 Jul 1971). See CONF-710720.

The Raman scattering spectrum of VO$_2$ single crystals is studied above and below the semiconducting-to-metal transition at 68°C. In the monoclinic semiconducting phase, only sharp phonon structure is observed in contrast with the isomorphic material, TiO$_2$, which also has broad, intense multiphonon bands. No unusual temperature dependence is observed in the positions or intensities of these lines. In the metallic phase only heavily damped features are observed, a result which clearly distinguishes VO$_2$ from the corundum-structure sesquioxides which exhibit insulator—metal transitions. A reasonable interpretation for the one resolved scattering peak in the metallic phase suggests that the rutile-structure A$_{1g}$ mode softens by about 15% of its value in the semiconducting phase. The implications of this result in understanding both the mechanism for the phase transition and the electron—phonon interactions in the metallic phase are discussed. (auth)

55044 DOPPLER-SHIFTED CYCLOTRON RESONANCE IN CADMIUM. Konstantinov, O. V.; Skobov, V. G.; Lavrova, V. V.; Fisher, L. M.; Yudin, V. A. (Physical-Technical Inst., Moscow). Zh. Eksp. Teor. Fiz.; 63: No. 1, 224-41(Jul 1972). (In Russian).

The Doppler-shifted cyclotron resonance in cadmium in a magnetic field $H \| [0001]$ is studied theoretically and experimentally in the radio-frequency region. The resonance is due to carriers with extreme shifts during the cyclotron period. Dispersion of the dielectric permeability related to the resonance leads to the appearance of weakly damped waves—dopplerons. It is found that beside dopplerons, due to lens electrons, there exist hole dopplerons related to orbits near the central cross section of the monster. Excitation of this type of doppleron in cadmium plates leads to surface-resistance oscillations with amplitudes that appear in weaker magnetic fields than do oscillations of the electron doppleron. The regions of existence of both types of dopplerons are bounded from the weak magnetic field side. The effect of the shape of the Fermi surface on the doppleron spectrum and position of the boundary fields is studied. The shape of the electron lens is determined by comparing the theoretical and experimental results. The value of the derivative of the monster cross section area with respect to momentum derived from oscillation period measurements is in agreement with the monster model employed. (tr-auth)

55045 MAGNETIZATION, VELOCITY OF SOUND, AND SPECIFIC HEAT OF Sc$_3$In. Testardi, L. R.; Holmes, L. M.; Reed, W. A.; Hsu, F. S. L. (Bell Telephone Labs., Murray Hill, N. J.). Phys. Rev., B; 6: No. 9, 3365-70(1 Nov 1972).

The magnetization at 1.5 and 4.2°K and the velocity of sound in zero field of Sc$_3$In from 1.5 to 300°K and in applied fields at 1.5 and 4.2°K are reported. The magnetic behavior exhibits essentially no coercive field, remanence, or hysteresis. A thermodynamic formula is obtained relating the field dependence of the velocity of sound with magnetostriction and magnetic susceptibility. A qualitatively successful comparison is made using the results and the magnetostriction data of Fawcett and Meincke. Specific-heat data at zero field and 1.3 kOe are reported and are related thermodynamically to the magnetization data. (auth)

55046 MAGNETIC SUSCEPTIBILITY OF RHENIUM TRIOXIDE. Greiner, John D.; Shanks, Howard R. (Ames Lab., Iowa). J. Solid State Chem.; 5: No. 2, 262-5(Sep 1972).

Magnetic susceptibility measurements were made on ReO$_3$ as a function of temperature between 77 and 300°K. The results of the measurements show that ReO$_3$ has a temperature-independent paramagnetism of 0.086×10^{-6} emu/g. A separation of the individual contributions to the measured susceptibility is made and the resultant values are compared with data on cubic sodium tungsten bronzes. The agreement indicates strong similarities between the properties of ReO$_3$ and Na$_x$WO$_3$ as x approaches 1. (auth)

55047 LOW-TEMPERATURE HEAT CAPACITY OF LaRu$_2$, CeRu$_2$, AND CeRu$_{2-x}$Pt$_x$. Joseph, R. R.; Gschneidner, K. A. Jr.; Koshimaki, D. C. (Ames Lab., Iowa). Phys. Rev., B; 6: No. 9, 3286-96(1 Nov 1972).

The heat capacity of two samples of CeRu$_2$ and one sample each of CeRu$_{1.9}$Pt$_{0.1}$, CeRu$_{1.8}$Pt$_{0.2}$, and LaRu$_2$ were measured from 1.3 to 9°K (to 20°K for LaRu$_2$). All samples are superconducting, have high γ values (10 to 14 mJ/g atom °K^2), and moderately low Debye temperatures (144—158°K). None of these materials behaves as a BCS-type superconductor. All of these materials exhibit a departure from the normal T^3 behavior at a temperature $\frac{1}{3}$ to $\frac{1}{2}$ of that which might be expected from the Debye theory. The departure is unusual in that the Debye temperature increases with increasing temperature, while other Laves-phase compounds that were recently examined show the opposite and more normal (?) behavior. These different behaviors are explained on the basis of the structural nature of the Laves phase. (auth)

55048 s—d EXCHANGE MODEL OF WEAK FERROMAGNETISM WITH AN APPLICATION TO MnB$_2$. Robinson, J. M.; Erdoes, Paul (Florida State Univ., Tallahassee). Phys. Rev., B; 6: No. 9, 3337-43(1 Nov 1972).

A crystalline solid is considered with two types of exchange interactions: a direct exchange coupling of localized spins and s—d or s—f exchange between localized spins and conduction electrons. The model developed is a generalization of the theory proposed by Kasaya and Hihara to explain the weak ferromagnetism of MnB$_2$. In contrast to the latter theory, the finite spatial extension of the d or f wave functions and the distortion of the electronic energy bands induced in the ordered state by the s—d or s—f interactions are taken into account and significantly affect the criteria for weak ferromagnetism. Comparisons are made to the Zener and Rudermann—Kittel—Kasuya—Yosida theories, which are limiting cases of the theory presented. In particular, the nonlinear response of the conduction electrons to the exchange field is demonstrated, with important implications for first-order magnetic phase transitions. (auth)

55049 CRITICAL DIVERGENCE OF THE THERMAL RESISTIVITY AT THE NEEL POINT OF EUROPIUM. Sze, N. H.; Meaden, G. T. (Univ. of Dalhousie, Hailfax, Nova Scotia). J. Phys., F (London)· 2: No. 4, 693-8(Jul 1972).

The appearance of a λ-shaped peak in the temperature coefficient of the thermal resistivity of europium at its magnetic critical point provides the first experimental evidence for the critical divergence of this transport property in a metallic element. In discussing the results, comparison is made with critical divergences observed for the magnetic heat capacity and the temperature coefficient of the electrical resistivity. (auth)

55050 MAGNETIC TRANSITIONS IN THE RARE EARTH INTERMETALLIC COMPOUNDS R_3Ni AND R_3Co. Primavesi, G. J.; Taylor, K. N. R. (Univ. of Durham, Eng.). J. Phys., F (London); 2: No. 4, 761-70(Jul 1972).

Measurements were made of the magnetic properties of rare earth—transition metal compounds having the Fe_3C structure. Results obtained using a pulsed-field magnetometer are appreciably different from those observed previously in static fields by other workers. It is difficult to decide from these results what type of magnetic order is present in several of the compounds. It is clear, however, that in some cases the observed magnetization is time-dependent. (auth)

55051 PHASE TRANSITION IN SAMARIUM. Bulatov, A. S.; Finkel, V. A. (Physical-Technical Inst., Kiev). Zh. Eksp. Teor. Fiz.; 63: No. 1, 213-16(Jul 1972). (In Russian).

The crystal structure of samarium at 77 to 300°K is studied by the low-temperature x-ray-diffraction technique. It is shown that at T ~ 106°K there is a phase transition of the second kind that is apparently related to the paramagnetism—antiferromagnetism transformation. The discontinuous changes of the linear expansion coefficients at 106°K are pronouncedly anisotropic: $\Delta\alpha_\perp < 0$, $\Delta\alpha_{||} > 0$. With decrease of the temperature below 106°K, the period a of the nine-layer hexagonal compact lattice is found to increase. (tr-auth)

55052 THEORY OF THE VOID LATTICE IN MOLYBDENUM. Tewary, V. K.; Bullough, R. (Atomic Energy Research Establishment, Harwell, Eng.). J. Phys., F (London); 2: No. 4, L69-72(Jul 1972).

A model is proposed for the study of various physical properties associated with the void lattices as recently observed in several metals. The model gives the correct value for the equilibrium void lattice spacing in molybdenum and also explains the stability of the void lattice. (auth)

55053 DIRECT FITTING OF SPIN WAVE ENERGIES TO INTERATOMIC EXCHANGE PARAMETERS IN THE FERROMAGNETIC RARE EARTH METALS. Stevens, W. N. R. (Univ. of Manitoba, Winnipeg). J. Phys., F (London)· 2: No. 4, 797-805(Jul 1972).

The description of wave vector dependence of spin wave energy in the ferromagnetic rare-earth metals in terms of interatomic Heisenberg-exchange parameters is considered. Limitations on the exchange coupling information given by the forms of published inelastic-neutron-scattering measurements are demonstrated. The results of a maximum possible analysis of available data for terbium at 90°K are given. The problem of choosing a set of points in reciprocal space for measurement of spin wave energies to obtain a complete description of the exchange coupling (within the Heisenberg model) to the maximum precision is discussed. In general a broad distribution of points through the volume of the zone is desirable. It is found that the intrasublattice coupling can be fully determined to quite a good precision from a relatively small number of measurements but the intersublattice coupling is not as easily determined. (auth)

55054 CRYSTAL FIELD EFFECT ON THE DIRECTION OF MAGNETIC MOMENTS OF RARE EARTH IONS WITH LOW SYMMETRY SITES ($C2-C_s$). Rossat-Mignod, J.; Tcheou, F. (CEN, Grenoble, France). J. Phys. (Paris); 33: No. 4, 423-8(Apr 1972). (In French)

It is possible to determine the direction of the magnetic moment in rare-earth compounds of low symmetry sites, using a crystal-field calculation in the point-charge model. This method was applied to Tb_2O_3 and different rare-earth perovskites. The results are in good agreement with experimental results. (France)

Moessbauer Effects and NMR

55055 (IS-T-529) MOESSBAUER EFFECT STUDY OF ^{57}Fe IN TRANSITION METAL BORIDES. DeYoung, Donald Bouwman (Ames Lab., Iowa). Aug 1972. Contract W-7405-eng-82. 97p. Dep. NTIS.

Thesis.

The phase characteristics and nuclear hyperfine properties of sixty different transition-metal borides were studied by Moessbauer effect spectroscopy. The prepared mixed iron—transition metal boride phases include MB_2, M_3B_4, MB, M_3B_2, and M_2B types. Transmission experiments with powders were completed in the range 4.2 to 1000°K; additional scattering and 18-kOe applied-field data was collected at 300°K. Measured nuclear hyperfine parameters are discussed in terms of atomic bonding, charge transfer, and spontaneous magnetism in the borides. Isomer-shift data for all phases indicate an electron transfer from boron to the metal 3d band. The effective magnetic field of ferromagnetic monoborides is proportional to the magnetization, and also reveals a possible charge transfer from B to M. Quadrupole coupling results show a strong ionic contribution to the electric field gradient at the ^{57}Fe nucleus in monoborides. A region of ferromagnetism below 173°K was found in ternary $M_2M'B_2$ borides, where M is Mo or W and M' is a 3d transition metal. Moessbauer-effect studies of FeB reveal two distinct modifications, including a defect α phase. (auth)

55056 INTENSITY OF THE QUADRUPOLE STRUCTURE IN THE ^{51}V NMR IN TRANSITION-METAL ALLOYS. Nakajima, H.; Komori, N.; Mori, N. (Hokkaido Univ., Sapporo, Japan). Phys. Lett.; 41A: No. 1, 89-90(28 Aug 1972).

The intensity variation of the quadrupole satellite of the ^{51}V magnetic resonance was studied relative to alloying concentrations in σ-phase V—Co alloys. The nearest-neighbor atoms play the most important role in this fine structure. (auth)

55057 CHARGED STATE OF ^{57}Fe ATOMS FOLLOWING THE DECAY OF ^{57}Co IN SOLID XENON. Micklitz, H.; Barrett, P. H. (Univ. of California, Santa Barbara). Phys. Rev. Lett.; 28: No. 24, 1547-50(12 Jun 1972).

Moessbauer studies with ^{57}Fe atoms following the decay of ^{57}Co in solid Xe find these atoms in two states: the stable Fe $3d^64s^2$ state and an unstable Fe^+ $3d^7$ state. The isomer-shift analysis yields $\Delta R/R = -(8.7 \pm 0.3) \times 10^{-4}$ for the 14.4-keV γ transition in ^{57}Fe. Information is obtained about the charge-transfer mechanism and recombination time of Fe ions in solid xenon. (auth)

55058 STUDY OF BIOLOGICAL MACROMOLECULES USING PERTURBED ANGULAR CORRELATIONS OF GAMMA RADIATION. Meares, Claude F.; Westmoreland, David G. (Stanford Univ., Calif.). Cold Spring Harbor Symp. Quant. Biol.; 36: 511-16(1972).

Preliminary results indicate the potential usefulness of the perturbed angular correlation technique for studies of the motional properties of labeled macromolecules and for in vivo experiments at concentrations of $^{111}In^{3+}$ as low as 10^{-12} M. Exploitation of these advantages is currently hindered by the lack of chemical selectivity of $^{111}In^{3+}$. Applications of this method will be greatly broadened by the development of a labeling reagent which incorporates a strong complexing agent and a reactive group, such as a sulfhydryl reagent. With this reagent, it should be possible to attach indium to interesting regions of biological macromolecules. A program for the synthesis of such a label is currently in progress. (auth)

55059 NMR INVESTIGATIONS ON Y- AND La-DILUTED GdZn. Eckrich, K. (Technische Hochschule, Darmstadt, Ger.); Dormann, E.; Pppelt, A.; Buschow, K. H. J. Phys. Lett.; 41A: No. 1, 23-4(28 Aug 1972).

Gd, La, and Zn zero-field resonances are observed in ferromagnetically ordered $Gd_{1-x}La_xZn$ and $Gd_{1-x}Y_xZn$. Zn satellite lines allow the determination of the contribution of the nearest Gd neighbor shell to the Zn hyperfine field. (auth)

55060 ANGULAR CORRELATION OF A GAMMA CASCADE 329 TO 487 keV IN ^{140}Ce. Georgieva, M. K.; Misheva, M. A.; Tumbev, G. Kh. (Inst. of Physics, Sofia). Compt. Rend. Acad. Bulg. Sci.; 25: No. 2, 181-3(1972). (In Russian).

The cascade gamma transition from 329 to 487 keV in ^{140}Ce is convenient for investigating magnetic fields in various media by the method of perturbed gamma angular correlations. An unsaturated solution of $La(NO_3)_3$ was irradiated with thermal neutrons to produce a source which could be studied with sufficiently high accuracy for parameters of the unperturbed angular correlation of this cascade. (K.S.W.)

55061 MOESSBAUER EXPERIMENTS ON THE LIFETIME OF EXCITED NUCLEI. Kamenov, P. S. (Univ., Sofia). Compt. Rend. Acad. Bulg. Sci.; 25: No. 2, 185-8(1972).

New Moessbauer experiments on the detailed study of the lifetime of excited nuclei in the region of the resonance curve are suggested. The experiments will determine whether the formula of Messiah is the correct one: $\Delta t = (2h/\Gamma_0)\ (\Gamma_0^2/4(E - E_0)^2 + \Gamma_0^2)$. (D.L.C.)

55062 FEASIBILITY OF A γ LASER BASED ON RADIOACTIVE CRYSTALS. Khokhlov, R. V. (Moscow State Univ.). JETP Lett. (USSR) (Engl. Transl.); 15: No. 9, 414-16(5 May 1972). Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 15: No. 9, 580-3(5 May 1972).

The possibility of a γ laser based on Moessbauer radiation is considered. It is shown that, in principle, it is possible to produce a γ laser using long-lived nuclear isomers. (D.L.C.)

55063 THEORY OF THE NUCLEAR QUADRUPOLE INTERACTION IN TERMS OF IRREDUCIBLE TENSORS. Hollingworth, R. W.; Hacobian, S. (Univ. of Sydney). Aust. J. Chem.; 25: No. 4, 683-93(Apr 1972).

Using irreducible tensors throughout, the theory of the interaction of a quadrupolar nucleus surrounded by electrons is presented. The theory is applied both to pure and Zeeman nqr spectra. The relation between the spectroscopic and intrinsic quadrupole moments is derived. (auth)

55064 POSITRON LIFETIMES AND PHASE TRANSITIONS IN SOLIDS. Singh, K. P.; Singru, R. M.; Rao, C. N. R. (Indian Inst. of Tech., Kanpur). J. Phys., C (London); 5: No. 10, 1067-71(25 May 1972).

Lifetimes of positrons annihilating in NH_4Cl and in nitrate glasses were measured as a function of temperature. The observed temperature dependence of τ_2 and I_2 indicates that the I_2 is significantly affected by changes in molar volume accompanying the phase transitions in these solids. I_2 varies in the same direction as the molar volume thus underlining the role of free volume in the positron annihilation process in condensed media. (auth)

Theory

55065 (UCRL-Trans-10643) LONGITUDINAL AND TRANSVERSE EXCITONS IN SEMICONDUCTORS. Denisov, M. M.; Makarov, V. P. (Akademiya Nauk SSSR, Moscow. Fizicheskii Institut). Translated for Univ. of California, Lawrence Livermore Lab. from Preprint No. 78. 15p. Dep. NTIS.

Formulae for the energy of longitudinal excitons in semiconductor crystals with arbitrarily complex band structure are derived from purely microscopic and from phenomenological considerations. The results coincide, as they should. These results are compiled with those of other theoretical studies and with existing experimental data. (auth)

55066 POSITRON CORRELATION ENERGY IN METALS. Bergersen, B.; Carbotte, J. P. (McMaster Univ., Hamilton, Ont.). Can. J. Phys.; 50: No. 12, 1332-6(15 Jun 1972).

The positron correlation energy in an electron gas is calculated in the metallic density region using the random phase dielectric constant. It is found that the positron–plasmon interaction is much more important for the correlation energy than for the annihilation rate, and that the plasmon contribution to the energy is actually larger than the particle–hole contribution. Calculations using the Singwi et al. dielectric constant give essentially the same results as the RPA. It is argued that the ladder approximation need not represent an improvement over linear response theory when computing the correlation energy. (auth)

PHYSICS (THEORETICAL)

55067 (ITF-72-9-E) ON THE SOLUTIONS OF BOGOLYUBOV KINETIC EQUATIONS. QUANTUM STATISTICS. **Petrina, D. Ya. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 24p. Dep. NTIS (U. S. Sales Only).**

The Bogolyubov kinetic equations for quantum statistics are investigated. A method due to Bogolyubov is used to investigate the solutions of kinetic equations in the Banach space composed of a sequence of trace-class operators in the state space. The procedure makes it possible to construct the solutions of kinetic equations in a finite volume by using the physically meaningful initial data. The weak, or smoothed, solutions are constructed in the space of bounded operators. (auth)

55068 (ITF-72-31-P) ASYMPTOTICALLY EXACT SOLUTIONS FOR THE SYSTEMS WITH SINGULAR POTENTIALS. Simenog, I. V. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 22p. (In Russian). Dep. NTIS (U. S. Sales Only).

It is shown that for the quantum-mechanical systems with singular attractive potentials, the Hartree approximation is realized in an asymptotically exact way in the limit of a great number of particles N. The Hartree one-particle solutions are also asymptotically exact for the systems with a bounded monotone potential of interactions. (auth)

55069 (ITF-72-36-E) PRODUCT FORMULA FOR SEMIGROUPS AND ITS APPLICATION TO THE SCHROEDINGER EQUATION WITH SINGULAR POTENTIALS. Semenov, Yu. A. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 22p. Dep. NTIS (U. S. Sales Only).

The class of potentials for which the solution of the Schroedinger equation is representable as the Feynman integrals over a trajectory are investigated. It is proved that in the attractive case all the potentials allowed by the principal postulates of quantum mechanics are such that if a total Hamiltonian of the system is defined by the bilinear form method, then the Feynman integral over a trajectory converges to the propagation. (auth)

55070 (ITF-72-45-P) RELATIONS BETWEEN THE MOMENT FUNCTIONALS OF MEASURES ABSOLUTELY CONTINUOUS WITH RESPECT TO THE GAUSSIAN MEASURE AND THE SOLVABILITY OF SCHWINGER EQUATIONS FOR THE GREEN FUNCTIONS OF A EUCLIDEAN FIELD THEORY. Gonchar, N. S. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 35p. (In Russian). Dep. NTIS (U. S. Sales Only).

The solvability of Schwinger equations for the Green's functions of a Euclidean field theory is investigated for any nonlinear self-interaction bounded from below. First, the "cut off" equations in which all the values are mathematically meaningful are investigated. In this case the representation in terms of a functional integral in some probability measure is obtained for a solution. The vector S_α, which is the solution, belongs to a space $\overline{S}$. Then a "cut off" theory with essentially nonlinear bounded Lagrangians of interaction is investigated. It is shown that in this case the limiting Green's functions coincide with the free Green's functions. (auth)

55071 (LA-4868) DERIVATION OF THE BOLTZMANN DISTRIBUTION LAW WITH ILLUSTRATIONS FROM A HARD-SPHERE MODEL COMPUTER PROGRAM. **Conant, Donald R. (Los Alamos Scientific Lab., N. Mex.). Jun 1972. Contract W-7405-eng-36. 16p. Dep. NTIS.**

The Boltzmann distribution law is derived, and examples illustrating differences among the assumptions of Boltzmann, Bose–Einstein, and Fermi–Dirac statistics are given. The range of applicability of the assumptions and the distortions of molecular systems caused by this limited range are discussed. Results from a hard-sphere model calculated by computer are used to illustrate the distortions and the rather good agreement with the Boltzmann prediction for energies near the average molecular energy even for systems containing only a few molecules. (auth)

55072 APPLICATION OF ORTHOGONAL AND UNITARY GROUP METHODS TO THE N-BODY PROBLEM. Louck, James D. (Los Alamos Scientific Lab., N. Mex.); Galbraith, Harold W. Rev. Mod. Phys.; 44: No. 3, 540-601(Jul 1972).

Methods for constructing states of good total orbital angular momenta of N identical, free, structureless particles through the use of the orthogonal and unitary groups are developed. The first part reviews the existing literature, particularly for the three-particle problem. New results include the discrete symmetry properties of the SU(3) states vectors of the three-particle problem. The general N-particle problem is approached through the use of the subgroup property O (n) ⊂ U (n). An imbedding of O (n) in U (n) is given which greatly simplifies the study of the O (n) subgroup of U (n). Particular applications of this imbedding are: (1) an explicit constructive procedure for obtaining all the single-valued irreducible representations of O (n), and (2) an explicit constructive procedure for obtaining all N-particle states of good angular momenta up through the degree four solid harmonics. (auth)

55073 ASPECTS OF TIME-DEPENDENT PERTURBATION THEORY. Langhoff, P. W. (Harvard Univ., Cambridge, Mass. Indiana Univ., Bloomington); Epstein, S. T.; Karplus, M. Rev. Mod. Phys.; 44: No. 3, 602-43(Jul 1972).

The Dirac variation-of-constants method has long provided a basis for perturbative solution of the time-dependent Schrödinger equation. In spite of its widespread utilization, certain aspects of the method have been discussed only superficially and remain somewhat obscure. The present review attempts to clarify some of these points, particularly those related to secular and normalization terms. Secular terms arise from an overall time-dependent phase in the wave function, while normalization terms preserve the norm of the wave function. A proper treatment of the secular terms is essential in the presence of a physically significant level shift that can produce secular divergences in the time-dependent perturbation functions. The normalization terms are always important, although the formulation of a simple method for including them is of greatest utility in applications requiring higher-order perturbation theory (e.g., nonlinear optical phenomena), where difficulties have arisen in previous treatments. Although the Dirac perturbation technique includes the correct secular and normalization terms when properly executed, it is convenient to reinterpret the perturbation problem so that the secular and normalization terms can be factored from the wave function to all orders. It is shown that an appropriate overall multiplicative, time-dependent normalization and phase factor can be obtained, and that it is simply the amplitude for finding the system in the unperturbed eigenstate at any time t. The regular part of the wave function remaining after this factorization provides a complete description of the physical properties of the system of interest and determines the overall normalization and phase as well. Most important, the regular function and its perturbation expansion satisfy equations which are more convenient for computational applications than are the customary Dirac equations, and, in contrast to the latter, they reduce directly to the familiar time-independent perturbation equations in the static limit. To illustrate the general development, the model problem of a linearly perturbed harmonic oscillator and the static, harmonic, and electromagnetic perturbations of arbitrary quantum-mechanical systems are treated explicitly. In the case of an adiabatically applied static perturbation, the familiar adiabatic theorem is recovered with the overall phase factor giving the perturbed eigenvalue, while in the case of an harmonic perturbation, the overall phase factor obtained includes the system level shift appropriate for a quasiperiodic state. For an electromagnetic perturbation, compact expressions are obtained for various nonlinear optical susceptibilities in forms suitable for computations. Time-dependent Hartree–Fock approximations are treated explicitly to demonstrate that difficulties can arise when normalization and secular terms are not extracted prior to application of the perturbation formalism. Connection is also made with other methods which can be employed to eliminate secular and normalization terms from the wave function; these include a projection procedure and multiple-time-scales perturbation theory. The elimination of secular divergences from the perturbation functions is shown to be important for the construction of a valid Fourier transform. Secular and normalization terms also arise in connection with variational principles for the time-dependent Schrödinger equation. By employing the Frenkel variational principle and an ansatz for the total wave function that explicitly isolates the secular and normalization terms, a computationally convenient variational functional is obtained. This form of the Frenkel principle provides a bound to the system level shift induced by an oscillatory perturbation and is equivalent to the Ritz variational principle in the static limit. Explicit expressions for the variational functional in the Hartree–Fock approximations are derived in forms suitable for computational applications to the interactions of radiation and matter. (auth)

55074 APPROXIMATE METHODS FOR SOLVING SCHROEDINGER EQUATIONS WITH A SINGULAR POTENTIAL. Gogokhiya, V. Sh.; Filippov, A. T. (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 15: No. 6, 1294-1306(Jun 1972). (In Russian).

The theory of renormalizing the Schroedinger equations with a singular (at r → 0) potential is briefly reported. It is shown, that singular potentials are quite naturally divided into renormalizable and nonrenormalizable ones, in this the structure of the series of usual perturbation theory (with cutoff at small distances) is similar to the corresponding one in renormalizable and nonrenormalizable field theories. Approximate methods for Schroedinger equations with the singular potential $g_0V(r)$, that allow to find the wave function and scattering amplitude in the form of a series in $g_0^{\nu}(\ln g_0)_{\nu}^{n}$, where n_{ν} is an integer and ν, in a general case, is a noninteger (a modified series of perturbation theory), are suggested. (auth)

55075 EXCITATION OF A TWO-LEVEL SYSTEM DAMPED BY THE INTERACTION WITH BOSONS. III. TRANSVERSE SUSCEPTIBILITY. Loos, J. (Inst. of Solid State Physics, Prague). Czech. J. Phys.; 22: No. 7, 583-8(1972).

The method developed in the preceding paper is used to determine the mean transverse spin components of a magnetic two-level system. Likewise as previously, the excitation by the monochromatic elliptically polarized hf field and the damping by the interaction with certain boson field is considered. No assumption is made concerning the strength of the hf field and therefore, this solution is valid in the saturation region too. The comparison with the solution of the macroscopic equations of motion is made. (auth)

55076 EXCITATION OF A TWO-LEVEL SYSTEM DAMPED BY THE INTERACTION WITH BOSONS. II. STATIONARY POPULATIONS. Loos, J. (Inst. of Solid State Physics, Prague). Czech. J. Phys.; 22: No. 6, 523-9(1972).

A two-level system excited by a monochromatic h.f. field and damped by an interaction with certain boson field is considered. The aim is to derive the steady-state level populations. The behavior of the system considered between two boson transitions is described by the quantum mechanical solution found in the preceding paper. The stationary populations are deduced by averaging the corresponding quantum mechanical probabilities with respect to the initial conditions. (auth)

55077 SPIN-DEPENDENT OPERATORS IN THE OCCUPATION-BRANCHING NUMBER REPRESENTATION. Gouyet, J. F. (Ecole Polytechnique, Paris). J. Math. Phys. (N. Y.); 13: No. 5, 745-51(May 1972).

In two preceding papers, a general method was given of building up open-shell wavefunctions which are eigenfunctions of the spin operators S^2. This method leads to a second quantization type formalism, where degenerate multiplets are described in what we call the occupation-branching number representation. In Paper II, equivalent monoelectronic and bielectronic operators were defined and a diagrammatic technique was developed. In the present paper, the equivalent spin-dependent operators in the occupation-branching number representation are built up, in the cases of monoelectronic and bielectronic operators. The spin—orbit and the spin—spin coupling are the most important operators of this kind. The associated diagrammatic representation is given. (auth)

55078 CONTINUED-FRACTION METHOD FOR PERTURBATION THEORY. Scofield, D. F. (Aerospace Research Labs., Wright-Patterson AFB, Ohio). Phys. Rev. Lett.; 29: No. 12, 811-14(18 Sep 1972).

A direct operational approach to the solution of the Schrödinger equation has led to an iterative nonperturbative method for its solution. The method, when applied to the Mathieu equation and the anharmonic-oscillator equation, is superior to the perturbation-iteration method and to Rayleigh-Schrödinger perturbation theory both in terms of rate of convergence and range of coupling constant allowed. (auth)

55079 ANALYTIC EXTRAPOLATION FROM BOUNDARY AND INTERIOR POINTS. Nenciu, G. (Inst. of Atomic Physics, Bucharest). Lett. Nuovo Cim.; 4: No. 14, 681-4(5 Aug 1972).

The problem of the analytic extrapolation from boundary and interior points is considered in the framework of the functional-integration approach initiated by Cutkosky. (L.B.S.)

55080 NOTE ON FEYNMAN'S PATH INTEGRALS. Goovaerts, M. J.; Devreese, J. T. (Univ., Antwerp). Physica; 60: No. 1, 97-13(Jul 1972).

Path integrals are introduced using the properties of integral equations of the Fredholm type. This framework seems well adapted for studying the equivalence between the path-integral formalism and other formulations of quantum mechanics, and for examining the relation between path integrals and expansions like the Born series. The study of these integral equations shows how a density matrix is related to a Stieltjes integral. In principle our study reduces the problem of calculating a path integral to a problem of traditional analysis. A series expansion of a transform of the path integral which was introduced recently is shown to satisfy Schroedinger's equation and to be also related to a Liouville-type iteration of an integral equation. The problem of oscillatory integrals in Feynman's formalism is also discussed. (auth)

REACTOR TECHNOLOGY

Power Reactor Development

Refer also to abstracts 53107 and 53191–53193.

55081 (AECL–4162) AECL ANNUAL REPORT, 1971–1972. (Atomic Energy of Canada Ltd., Chalk River (Ontario)). 48p. Dep. NTIS (U. S. Sales Only).

The activities of the Atomic Energy of Canada Limited for the year ending March 31, 1972, are summarized. Highlights of developments in nuclear power, radiation and radioisotopes, heavy water production, and research are included. (H.D.R.)

55082 (EIR–215) MOLTEN CHLORIDES FAST BREEDER REACTOR PROBLEMS AND POSSIBILITIES. Taube, M.; Ligou, J. (Eidgenoessisches Institut fuer Reaktorforschung, Wuerenlingen (Switzerland)). Jun 1972. 75p. Dep. NTIS (U. S. Sales Only).

A fast breeder reactor of 2000 MW(t) output using molten chlorides as fuel and coolant is discussed. Some of the most significant characteristics are: the fuel contains only $PuCl_3/NaCl$; the coolant is $UCl_3/NaCl$ and also forms the fertile material along with the blanket, again $UCl_3/NaCl$; and the fuel circulates through the core by forced convection. The thermal stability of the reactor is very good. Power excursions of fuel temperature transients are quickly damped by the phenomena of fuel expansion pushing part of the fissile material out of the critical zone. The balance of fission products including free chlorine seems to be stabilized when some of the semi-noble metals (Ru, Rh, Pd and some Mo) are present in the elementary form. Corrosion effects form the most difficult problem. Thermodynamic studies suggest the use of molybdenum alloys as structural materials. Separation of the fuel component from the fertile component UCl_3 helps to overcome some of the corrosion problems. A reprocessing system based on a salt-metal-transport process seems to be attractive from the point of view of the economics of the plant as a whole. The possibility of using a dissociating gas as a secondary working agent in the turbine for example Al_2Cl_6 and N_2O_4 is discussed. (auth)

55083 (EURFNR–1001) FAST REACTOR PROGRAMME. Fourth Quarter 1971 Progress Report. Hoekstra, E. K. (comp.) (Reactor Centrum Nederland, Petten). Mar 1972. 78p. (RCN–168). Dep. NTIS (U. S. Sales Only).

Work performed under United States–Euratom Fast Reactor Exchange Program.

The RCN programme comprises reactor physics, fuel irradiations, advanced fuels, radiation damage in canning materials, analysis of impurities in sodium, aerosol research and heat transfer and hydraulics. (9 references) (auth)

55084 (INIS-mf–212) ATOM 71. Progress Report, April 1, 1970–March 31, 1971. (United Kingdom Atomic Energy Authority, London (England)). 1971. 23p. INIS.

The nuclear power program undertaken by the UKAEA during 1970–71 is surveyed. The exploitation of the Authority's accumulated expertise and resources for the benefit of industry outside the nuclear power field by means of applied nuclear projects and also non-nuclear applications is presented. The aims of the fusion research program are considered. (U.K.)

55085 NEW ENERGY TECHNOLOGY: SOME FACTS AND ASSESSMENTS. Hottell, H. C.; Howard, J. B. Cambridge, Mass.; Massachusetts Institute of Technology Press (1971). 373p. $2.95.

Past, present, and future US energy production is summarized. Background for assessment of new energy technology is given. Fossil fuel-to-fuel conversion, nuclear power, central station power from fossil fuel, utilization related energy problems, and special energy conversion systems of secondary importance are discussed. (M.C.G.)

55086 OPTIONS IN POWER GENERATION AND TRANSMISSION. Baron, S. Pub. Util. Fortn.; 90: No. 2, 22-31(20 Jul 1972).

Possible alternatives in power generation and transmission available around 1980 and 1990 are discussed and generating costs compared with those for 1970. Topics covered include: fossil fuel costs and air pollution control, thermal effects, fresh-water sources, seawater sources, dry towers, offshore sites, extra-high voltage with hydro or mine-mouth generation, fast-breeder reactors, high-temperature gas turbines, magnetohydrodynamics, fuel cells, and aesthetics. (M.C.G.)

55087 BRITAIN'S NUCLEAR OPTIONS. Kenward, Michael. New Sci.; 55: No. 809, 332-5(17 Aug 1972).

The economic and technical difficulties encountered by designers and engineers in the various programs for production of power with AGR, HTGR, LWR, SGHWR, and LMFBR are reviewed. Britains experience and possible future use of the various systems are discussed. The growth in electricity demand and methods whereby the CEGB could meet it are presented. (UK)

55088 OUTLOOK FOR NUCLEAR POWER GENERATION. Catchpole, S. (Central Electricity Generating Board, London). Chem. Ind. (London)· No. 15, 592-7(5 Aug 1972).

Some of the most important factors determining the growth of nuclear power in the UK are discussed under the following headings: estimates of demand and plant requirements; future availability of competing fuels; availability of nuclear plant and future reactor choice. Uncertainties and conflicting requirements are emphasized. (UK)

55089 NUCLEAR POWER IN JAPAN. Greenhalgh, G. H. London: British Nuclear Forum (1971). 50p.

A report is presented based on a visit to Japan, May 19 to June 3, 1971, and on published information. The subject is covered in sections: the structure of the nuclear industry in Japan (the electrical utilities; the manufacturing industry; government organizations; Japan Atomic Industrial Forum; finance; the public; collaboration with overseas companies in U.S.A., France, Germany, and U.K.); reactor systems in Japan (light water reactors; the gas cooled reactor; the advanced thermal reactor; fast reactors; nuclear ships); the fuel cycle; Japanese nuclear power program. (UK)

55090 CONCEPTION ON NUCLEAR ENERGY TILL 2000 A.D. Data Compiled. Tokyo; Japan Atomic Industrial Forum, Inc. (1971). vp. (In Japanese).

Separate abstracts were prepared for each of 4 papers presented. (M.C.G.)

For abstracts of individual papers see: 55091–55094.

55091 FUTURE VIEW OF ECONOMIC SOCIETY AND ELECTRIC POWER DEMAND. pp 1-18 of Conception on Nuclear Energy Till 2000 A.D. Tokyo; Japan Atomic Industrial Forum, Inc. (1971). (In Japanese).

Adjustment and renovation in the 1970s, de-industrialization in the 1980s, and higher internationalization in the 1990s are predicted. The growth rate will slow under the action of restricting factors in the 1980s and the growth rate will slow to 4 to 5% in the 1990s. Features of the industrial structure in each period are predicted. Expansion of petroleum demand will continue but the demand structure will change due to pollution countermeasures. The development of nuclear energy is predicted as necessary for production of electricity. In the 2000s, the total energy demand converted to petroleum is predicted as 1800 million kl, and its composition will be 56% for industries, 15% for transport, 25% for people's livelihood, and 4% for other. Electricity consumption for one home will be 8000 kWh in the 1980s and 15000 kWh in the 1990s. Total electric power demand will be 2400 billion kWh in 2000s. Its composition will be 26% for lighting, 14.2% for service, 57.4% for industries, and 2.4% for electric vehicles. (Japan)

55092 EXAMINATION OF SCALE OF DEVELOPMENT FOR NUCLEAR POWER GENERATION. pp 21-48 of Conception on Nuclear Energy Till 2000 A.D. Tokyo; Japan Atomic Industrial Forum, Inc. (1971). (In Japanese).

To meet power demand, power generation facilities of nine electric power companies will be 169 million kW in 1980, 286 million kW in 1990, and 440 million kW in 2000. In Japan, most of the primary energy resources depend on oversea countries. Therefore more emphasis may be placed on nuclear power generation in Japan. Maximum effort must be exerted to reduce the sulfur content of oil and this affects fuel cost adversely. On the other hand, the cost of nuclear fuel may be lowered by improvement of fuel design, expansion of fuel cycle industries, and effect of mass production. The fuel cost for 1 million kW LWRs is estimated as 0.56 to 0.68 yen/kWh. Most economically usable hydraulic power has been developed already, and only pumping-up power plants will be developed in the future. Lands suitable for the location of nuclear power plants were surveyed in 1967, and most of them are in northern Japan. Construction cost and power generation cost of the nuclear power plants were estimated and compared with those of thermal power plants. The scale of development of nuclear power generation will be 27, 110, and 220 million kW in 1980, 1990, and 2000, respectively, in view of economy. These values are equivalent to 16, 39, and 50% of the total power generation in each year. (Japan)

55093 DATA FOR CALCULATING VALUES ON NUCLEAR FUEL CYCLES. pp 51-75 of Conception on Nuclear Energy Till 2000 A.D. Tokyo; Japan Atomic Industrial Forum, Inc. (1971). (In Japanese).

It was assumed that the scale of nuclear power generation will be 27 million kW in 1980, 110 million kW in 1990, and 220 million kW in 2000. Types of reactors examined were PWRs, BWRs, AGRs, ATRs, HTGRs, and FBRs. Basic combination pattern of the reactors is LWRs + FBRs and LWRs + ATRs + FBRs. Unit capacity will be 1.5 million kW for LWRs and 1 million kW for ATRs and FBRs. The ATRs will start operation from 1981 and the FBRs from 1986. SIRIUS-NIP-A, FULAM-4 and -5, MITIEN, and NURAN-3 codes were employed for the calculations, and the results were compared and examined. The required amount of U_3O_8 is 8000 to 9000 ST in 1980, 16000 to 21000 ST in 1990, and 15000 to 20000 ST in 2000 according to the proportion of employment of the ATRs. The required amount of enrichment is 4000 to 5000 MT SWU in 1980, 8000 to 14000 MT in 1990, and 9000 to 15000 MT in 2000. The required amount of forming and fabrication is 1200 to 1400 MT U in 1980, 3200 to 4500 MT in 1990, and 3300 to 4900 MT in 2000. The amount of reprocessing is 500 MT U in 1980, 2000 to 3300 MT in 1990, and 3500 to 5100 MT in 2000. The amount of fissionable plutonium is 7 MT in 1980, –3 to 50 MT in 1990, and –180 to 65 MT in 2000. Finally, the required amount of heavy water is 0 MT in 1980, 0 to 1500 MT in 1990, and 0 to 200 MT in 2000. (Japan)

55094 FUTURE VIEW OF INDUSTRIES SUPPLIED WITH ATOMIC ENERGY. pp 79-111 of Conception on Nuclear Energy Till 2000 A.D. Tokyo; Japan Atomic Industrial Forum, Inc. (1971). (In Japanese).

The nuclear energy supply industry supplies equipments, material, fuel, and service proper to nuclear energy in various fields of peaceful uses, such as nuclear power generation, nuclear ships, multipurpose utilization of reactors, and use of radioisotopes and radiation. Investment, turnover, number of employees, and results of introduction of foreign techniques show slow but steady development of the industry. In 1969, the investment was 1,103 million yen, the turnover was 71,475 million yen, and 8,264 engineers, researchers, clerks, and workers were employed. In Japan, engineering for nuclear plants is carried out by the plant makers, and the proportion of domestically produced machinery and equipments increases gradually. Domestic production of uranium fuel was 29,706 kg U in 1971. Major export of machinery for nuclear power generation was 4 pressure vessels, 2 containment vessels, 1 set of turbine and generator, and 5 sets of LP section and LP rotor of turbine. Development of the nuclear power generation in the world was surveyed for the purpose of examining export prospects. Expected domestic demand for reactors will be 11 million kW in 1990 and 16 million kW in 2000, and that for turbines and generators will be 16 million kW in 1990, and 25 million kW in 2000. Annual production capacity for nuclear fuel in 1980, 1990, and 2000 is estimated for LWR and FBR plants and for LWR, ATR, and FBR plants. (Japan)

55095 TENDENCIES IN THE DEVELOPMENT OF FAST BREEDER REACTORS. Haefele, W. (Kernforschungszentrum, Karlsruhe, Ger.). Atomwirt. Atomtech.; 17: No. 7, 378-84 (Jul 1972). (In German).

The German-Benelux project SNR 300, together with the corresponding British and French projects, can be considered as part of a dynamic European fast breeder development. The French and British projects, however, will become operational several years earlier than SNR 300. As an advantage, the initial design of the SNR already took into account all aspects for development of future commercial breeder power plants. Further coordinated development should be centered around extensive irradiation experiments for optimizing burnup, need for a special large test reactor, safety experiments, and efforts to achieve initially low fabrication costs for plutonium fuel elements. (tr-auth)

55096 PROTOTYPE NUCLEAR POWER PLANT SNR 300. Brandstetter, A.; Guthmann, E. (INTERATOM, Bensberg, Ger.). Atomwirt. Atomtech.; 17: No. 7, 368-71(Jul 1972). (In German).

The SNR 300 is described with respect to system groups of the installation such as reactor, fuel element handling and storage, sodium heat exchanger, support systems, steam power system, and electrotechnical installations. Also described are the total layout and the buildings. The reactor building consists of the internal and external containment with rectangular floor plan. The primary system is designed according to the loop concept in which tubings connect the separately placed reactor vessel, pumps, and heat exchanger. The concept permits more freedom with respect to layout of the plant and placement of shielding. In addition, the components are more easily accessible and the prototype permits easier extrapolation to large-scale unit. (tr-auth)

55097 ORGANIZATION AND ECONOMIC SIGNIFICANCE OF BREEDER DEVELOPMENT. Scheuten, G. H. (Schnell-Brueter-Kernkraftwerksgesellschaft mbH, Essen). Atomwirt. Atomtech.; 17: No. 7, 366-8(Jul 1972). (In German).

The SNR 300, representing a joint German–Benelux project, is only an introductory step toward development of commercial fast breeders, which must be coordinated internationally to an even higher degree. Only when economic competitiveness is achieved will breeders exert their great advantages with respect to fuel supply, high efficiency, and decreased environmental hazards. Expenses for breeder development appear justified as a solution to future energy problems. Discussed are preparatory work and present status of the SNR 300 project, enlargement of international cooperation, and economic significance of fast breeder development. (H.B.G.)

55098 PROJECT SNR: GOVERNMENTAL SUPPORT AND INTERNATIONAL COOPERATION. Daeunert, U.; Schmidt-Kuester, W. J. (Bundesministerium fuer Bildung und Wissenschaft, Bonn). Atomwirt. Atomtech.; 17: No. 7, 363-6(Jul 1972). (In German).

Development of fast breeders belongs to the large-scale projects which transcend not only the capabilities of private industry but also of single nations. Therefore, in the BRD, the development is undertaken with governmental support as an international project together with the Benelux countries. In the spring of 1972, the first decisive phase of the project SNR 300 was concluded with government agreements, a letter of intent, and the designation of an upper price limit. Projected is construction of a 280 MW(e) prototype nuclear power plant with a sodium-cooled fast breeder reactor (SNR 300) at Kalkar on the lower Rhine River. (H.B.G.)

55099 (AD–738874) SOLUTION OF A NUCLEAR-REACTOR PARAMETER-IDENTIFICATION PROBLEM. Canepa, Oscar Eduardo Brain (Naval Postgraduate School, Monterey, Calif.). Jun 1971. 87p. NTIS.

Thesis.

A continuous identification of parameters is performed on a simulated fast breeder nuclear reactor system using hybrid computation and applying techniques of statistical regression analysis and exponentially-mapped-past functions. Output states which are not directly measurable are estimated by use of a Kalman filter. The method developed in this study is applied to a numerical example which demonstrates that unknown parameters can be identified within 3% of their actual value, with signal noise ratios as low as 10 : 1 in the measured states. The example also demonstrates that convergence occurs in a reasonably short time. (auth)

55100 (BARC/I–148) PHYSICS DESIGN OF HEAVY WATER MODERATED REACTORS. Srinivasan, K. R. (Bhabha Atomic Research Centre, Bombay (India)). 1971. 215p. INIS.

A collection of lectures given at a course arranged at the Bhabha Atomic Research Centre, Bombay, for theoretical physicists to familiarize them with physics aspects and design characteristics of heavy water moderated reactors is presented. The conventional method using the four factor formula is discussed for calculating lattice parameters and long term reactivity change. Some aspects of fuel management are covered. The reactor theory underlying the calculational methods is described in detail. (INIS)

55101 (CISE-R–203) EXPERIMENTAL INVESTIGATIONS ON U–D_2O LATTICES. Accinni, F.; Mangialajo, M.; Taddei, F. (Centro Informazioni Studi Esperienze, Milan (Italy)); Ciuffolotti, L. (Societa Ricerche Impianti Nucleari, Saluggia (Italy)). Dec 1967. 53p. (In Italian). INIS.

Experimental investigations on D_2O-moderated natural uranium fueled lattices have been carried out. The experimental parameters δ^{28}, ρ^{28}, ICR, intracell neutron density distribution and spectral indices were determined. The results are presented with some comments on the precision and the interpretation of measurements. (INIS)

55102 (CISE-R–239) PRELIMINARY REPORT ON THE MEASUREMENT OF CELL PARAMETERS IN THE RB-1 REACTOR. Accinni, F.; Mangialajo, M. (Centro Informazioni Studi Esperienze, Milan (Italy)); Baccolini, A.; Casali, F.; Corberi, A.; Zappellini, G. (Comitato Nazionale per l'Energia Nucleare, Bologna (Italy). Centro di Calcolo); Ciuffolotti, L. (Societa Ricerche

Impianti Nucleari, Saluggia (Italy)). Jan 1968. 56p. (In Italian). INIS.

Experiments carried out in RB-1 Reactor of Montecuccolino (Bologna) in the framework of CIRENE Program, for UO_2/D_2O lattices are described. The work done in preparation for these experiments is also illustrated. (INIS)

55103 (CISE-R-242) MOICANO-1 CODE FOR REACTIVITY AND TWO-GROUP FLUX CALCULATION OF A FOG-COOLED REACTOR, TAKING INTO ACCOUNT THE TRUE COOLANT DISTRIBUTION AND THE EQUILIBRIUM XENON POISONING. Bruschi, C.; Foresti, G.; Pierini, G.; Rubbia, S. (Centro Informazioni Studi Esperienze, Milan (Italy)). Nov 1967. 19p. INIS.

The Moicano-1 code is described, which provides a rapid tool for survey calculation of CIRENE-type reactors, once material composition and geometrical configuration have been given. The basic features of the core are: a two-group energy treatment of neutron flux, which is spatially used in the approximate mono-separable form; a simplified calculation of the coupling between thermal power and coolant density, which is strongly dependent on the axial coordinate along the power channel; the power level fixed by limiting the power in any point of the reactor core, which has never exceeded a fixed value (given as an input to the code). The FORTRAN IV version of the code exhibits a running time of about 4 minutes on the IBM-7040 computer. (INIS)

55104 (CISE-R-246) TERMO: DIGITAL CODE TO EVALUATE THE STEADY STATE PARAMETERS OF A CIRENE TYPE REACTOR. Goldaniga, G.; Grassi, G. P.; Muscettola, M.; Pedrocchi, F. (Centro Informazioni Studi Esperienze, Milan (Italy)). Oct 1967. 65p. (In Italian). INIS.

The digital program TERMO is presented which has been set up to compute the stationary thermohydraulic parameters of a CIRENE-type reactor, as depending on preassigned geometry, power distribution, feedwater, enthalpy and plant pressure. (INIS)

55105 (CISE-R-258) NEUTRON MEASUREMENTS AT ZERO POWER ON A CIRENE FUEL ELEMENT IN THE ESSOR REACTOR. Accinni, F.; Mangialajo, M.; Morandi, G.; Morselli, M. (Centro Informazioni Studi Esperienze, Milan (Italy)). Dec 1967. 13p. (In Italian). INIS.

Results on neutron physics measurements performed at zero power on a CIRENE fuel element in the ESSOR reactor—Ispra Center—are reported. These experiments were carried out, in the framework of CART plant achievement, in order to obtain an experimental examination of the flux situation to which the CIRENE element will be exposed during the irradiation program for which the CART plant was built. (INIS)

55106 (CISE-R-283) BUCKLING MEASUREMENTS IN ECO WITH FEW CIRENE FUEL ELEMENTS. Accinni, F.; Mangialajo, M.; Taddei, F. (Centro Informazioni Studi Esperienze, Milan (Italy)); Casini, G.; Hettinger, H.; Hohmann, H.; Paillon, M.; Toselli, F. (European Atomic Energy Community, Ispra (Italy). Joint Nuclear Research Center). Oct 1968. 21p. INIS.

Buckling measurements for UO_2/D_2O lattice configurations considered in the framework of the CIRENE project have been performed in the ECO reactor at Ispra. The experimental results and their analysis with homogeneous and heterogeneous (source-sink) methods are presented. (INIS)

55107 (CONF-720901-(Bks.1 and 2), pp 3-22) PHYSICS OF PWR REACTORS. Hellens, R. L. (Combustion Engineering, Inc., Windsor, Conn.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The physics of pressurized water reactors is reviewed. The main emphasis is placed on some observations drawn from core design and plant follow experience. The degree of success in explaining reactor physics data taken from four operating reactors that have had active measurement programs is discussed. 15 references. (auth)

55108 (CONF-720901-(Bks.1 and 2), pp 23-32) PHYSICS OF GAS COOLED REACTORS. Dahlberg, Richard C. (Gulf General Atomic Co., San Diego, Calif.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The temperature coefficient of the HTGR is composed of a strong negative Doppler coefficient and a positive moderator coefficient, the net effect being about -10×10^{-5}/°C at room temperature and -2×10^{-5}/°C at operating temperature. The positive moderator coefficient is a result of the absence of significant density coefficients and the nuclear characteristics of ^{233}U. In addition, selected fission products, principally ^{135}Xe, contribute positive components to the temperature coefficient. Current estimates of the value of the temperature coefficient in the HTGR are presented along with recent experimental data pertinent to the subject. 11 references. (auth)

55109 (CONF-720901-(Bks.1 and 2), pp 33-54) PHYSICS OF HIGH TEMPERATURE REACTORS AT THE COMMISSARIAT A L'ENERGIE ATOMIQUE. Laponche, B. (CEN, Saclay, France); Morier, F. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The experimental program on High Temperature Reactor Physics achieved at the Commissariat à l'Energie Atomique is presented. The main studies are based on the low enriched uranium cycle and the tubular interacting fuel element. A first phase, already completed, deals with buckling, k_∞, and reaction rate measurements, in MARIUS, at room temperature: buckling was measured by flux mapping and progressive replacement on a 3.5% enriched UO_2 particulate fuel lattice; k_∞ was measured by the null reactivity method (PCTR technique) on a 1% enriched UO_2 particulate fuel lattice; spectrum indices and relative conversion ratio were also measured in both lattices. Data analysis was performed using the APOLLO code, as part of a general comparison between calculation and experiment covering a variety of uranium fuel types and the three main moderators. The conclusions of this study are also given. A second phase of experimentation (1973) deals with temperature coefficient measurement in CESAR (from 20 to 450°C) on the same lattice and oscillation measurement of UO_2-PuO_2 particulate samples. A third phase, part of a tri-partitate program (UKAEA-DRAGON Project-CEA) is based on irradiated fuel studies: chemical and isotopic analysis of fuels irradiated in the DRAGON Reactor and oscillation of irradiated samples. In cooperation with KFA Jülich, a critical experiment took place in CESAR in 1972. Fluxes, reaction rates and control rod worth were measured at room temperature in a central zone of the reactor, loaded with balls (3.5% enriched UO_2 particulate fuel). 16 references. (auth)

55110 (CONF-720901-(Bks.1 and 2), pp 55-67) SOME PROBLEMS IN THE PHYSICS OF HIGH TEMPERATURE REACTORS. Tyror, J. G.; Askew, J. R.; Johnstone, I. (Atomic Energy Establishment, Winfrith, Eng.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

To meet the accuracies required for design calculations on HTR systems, rather detailed theoretical models have been developed and validated by comparison with the results of an extensive program of specially designed experiments. The general philosophy is illustrated for 2 problem areas: resonance capture in granular fuel and within-block power distribution. While some problems still remain in the areas so far studied, the confirmation of the reactivity time predictions at high irradiation is identified as the most significant outstanding question. 14 references. (auth)

55111 (CONF-720901-(Bks.1 and 2), pp 68-80) METHODS FOR THREE-DIMENSIONAL FUEL MANAGEMENT STUDIES ON HIGH TEMPERATURE REACTORS. Askew, J. R.; Anderson, D. W.; Pearson, K. G. (Atomic Energy Establishment, Winfrith, Eng.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Methods for studying fuel management in high temperature reactors have been developed in the U.K. by extending techniques already applied to the earlier AGR systems. The more severe modelling problems of the new system have demanded innovations to retain the desired accuracy, and improved coarse mesh finite difference algorithms, spectrum models for data condensation to few groups and novel iterative strategies for solving for control rod positions are described. Together they give a rapid 3-dimensional power solution of acceptable accuracy. (auth)

55112 (CONF-720901-(Bks.1 and 2), pp 114-40) PHYSICS OF BWR's. Crowther, R. L. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The status of the physics of BWR's is summarized with emphasis on new developments and information gained from operating power reactors. 18 references. (auth)

55113 (CONF-720901-(Bks.1 and 2), pp 211-28) STUDIES OF METHODS FOR FAST NEUTRON MULTIGROUP CROSS SECTION GENERATION AND THEIR EFFECT UPON THE NEUTRONICS PROPERTIES OF LMFBR CRITICAL ASSEMBLIES. Stacey, W. M. Jr.; Henryson II, H.; Zolotar, B. A.; Hwang, R. N.; Toppel, B. J.; Stenberg, C. G.; Pennington, E. M. (Argonne National Lab., Ill.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The sensitivity of the integral neutronics properties of several

LMFBR critical assemblies to multigroup cross section generation methods is investigated with particular emphasis upon comparison of newly developed and routinely used methods. These studies include resonance algorithms, use of an intermediate group library, the effect of spatial nonuniformity, use of consistent B_1 or inconsistent P_1 formulations, and the use of different fine-group structures in the averaging of ultrafine group constants. 12 references. (auth)

55114 (CONF-720901-(Bks.1 and 2), pp 724-38) GE NUCLEAR DESIGN AND BENCHMARK CRITICAL EXPERIMENT PLAN FOR THE LMFBR DEMONSTRATION PLANT. Bailey, H. S.; Stewart, S. L. (General Electric Co., Sunnyvale, Calif.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The background planning related to the General Electric LMFBR Demonstration Plant design that provides the basis for the configuration and experiments planned for ZPPR-3 is presented. The specified experimental configurations and plans are summarized and some details of the experimental plan for each of the phases are presented. (auth)

55115 (CONF-720901-(Bks.1 and 2), pp 771-88) REVIEW OF FBR PHYSICS. Avery, R. (Argonne National Lab., Ill.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A qualitative review is made of FBR physics in which primary focus is put on the physics problems facing the fast reactor designer with particular emphasis on current outstanding problems. Some of the problems considered include the central worth discrepancy, Doppler and sodium coefficients, control rod effects, and long term effects related to the fuel cycle. Also discussed is the role and status of the critical experiment program in supplying a base of integral data on large dilute plutonium systems as well as providing specific information on the above items and others. The role and status of differential cross section knowledge is discussed relative to fast reactor needs with emphasis being given to the significant uncertainties that still exist in some of the primary fissile and fertile isotope cross sections. The status of some of the major code development activities in the areas of cross section processing, neutron diffusion, and space-dependent kinetics is discussed relative to fast reactor design needs. (auth)

55116 (CONF-720901-(Bks.1 and 2), pp 789-808) DEMONSTRATION REACTOR BENCHMARK PROGRAM. Davey, W. G. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The critical studies comprising the benchmark program for the Liquid Metal Fast Breeder Reactor demonstration plant are described. The configurations examined and measurements performed on the Zero Power Plutonium Reactor and the ZPR-6 assemblies are discussed. (H.D.R.)

55117 (CONF-720901-(Bks.1 and 2), pp 809-21) SPATIALLY DEPENDENT BENCHMARK PARAMETERS IN THE INITIAL DEMONSTRATION PLANT CRITICAL ASSEMBLY. Amundson, P. I.; Davey, W. G.; Palmer, R. G.; (and others). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The features of the Zero Power Plutonium Reactor Assembly 2 are described. The use of this assembly in benchmark measurements of Liquid Metal Fast Breeder Reactor physics parameters is discussed. (H.D.R.)

55118 (CONF-720901-(Bks.1 and 2), pp 822-38) REACTOR PHYSICS AND FAST POWER BREEDERS: MASURCA CORE R-Z PROGRAM. Barre, J. Y.; Boyer, J.; Mougniot, J. C.; Sicard, B. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The directions of the current CEA program of fast reactor physics are described, focusing on the MASURCA fast critical facility studies. These experiments concern mainly relative variation versus enrichment of characteristics of lattices fuelled either with plutonium (cores Z) or uranium (cores R) with the same diluent. The major results obtained for asymptotic mode neutron balance parameters (material buckling and spectral indices) and for engineering parameters (power distributions, blankets and control rods) are compared with an analysis made using CADARACHE reference data. Conclusions drawn from this analysis are then applied to the main PHENIX predicted parameters. 9 references. (auth)

55119 (CONF-720901-(Bks.1 and 2), pp 888-904) EXPERIMENTAL STUDY OF BURN-UP IN FAST BREEDER REACTORS. Bouchard, J. (CEN, Fontenay-aux-Roses, France); Chavardes, D.; Darrouzet, M.; Gourdon, J.; Robin, M. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Fuel burnup studies using the RAPSODIE reactor are described. These studies include: (1) Determination of burnup. (2) Changes in the core composition, or more precisely in the fuel composition in the part of the core where the neutron distribution is in equilibrium. (3) Changes in the breeding blanket composition. (H.D.R.)

55120 (CONF-720901-(Bks.1 and 2), pp 905-27) EBR-II IRRADIATION PHYSICS. Meneghetti, D.; Loewenstein, W. B. (Argonne National Lab., Ill.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The use of EBR-II as a fast fuel irradiation facility illustrates its versatility for physics measurements. Its potentials are unique relative to those of the zero-power criticals especially in those areas where at-power conditions are important. For example, power reactivity components, gamma deposition, deep penetration of neutrons and gammas, feedback components, burnup, fission-product productions, and interaction problems of neutronics, gamma, coolant flow, and heat transfer. 35 references. (auth)

55121 (CONF-720901-(Bks.1 and 2), pp 928-39) SIGNIFICANCE OF INTEGRAL PARAMETERS IN THE DESIGN AND PERFORMANCE OF FAST BREEDER REACTORS. Greebler, P.; Hutchins, B. A. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The use of integral parameters from critical experiments in support of fast reactor design and operation is discussed. The incentives for additional integral experiments is examined. (H.D.R.)

55122 (CONF-720901-(Bks.1 and 2), pp 959-72) PROTON-RECOIL PROPORTIONAL COUNTER SPECTROMETRY FOR REACTOR SPECTRUM MEASUREMENTS. Verbinski, V. V.; Young, J. C.; Neill, J. M.; Gionvannini, R.; Houston, D. H. (Gulf Radiation Tech., San Diego, Calif.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The factors that limit the accuracy of a proton-recoil proportional counter in measuring neutron spectra in reactors are discussed in light of detector response measurements and associated calibrations, reactor spectrum measurements with two different counter geometries, unscrambling experience with several different approaches, and comparisons with calculations and time-of-flight measurements. A critical analysis of proton-recoil spectrometry is attempted in that the approximations and omissions of each method are pointed out and improvements in both method and counter design suggested. 16 references. (auth)

55123 (CONF-720901-(Bks.1 and 2), pp 986-1005) SEFOR: VERIFICATION OF THE DOPPLER TRANSIENT SHUTDOWN CAPABILITY OF LMFBR's. Freeman, D. D.; Greebler, P.; Noble, L. D.; Pflasterer, G. R. (General Electric Co., Sunnyvale, Calif.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The SEFOR experimental program was undertaken to demonstrate and to measure the Doppler reactivity feedback in neutron spectra and at fuel temperatures and crystalline states representative of an operating LMFBR. Tests involving both static power reactivity measurements and rapid super-prompt-critical reactivity insertion from power (up to 1.3$ in 0.1 sec.) gave good agreement for the Doppler constant (Tdk/dT) in each of two cores. The first core contained six volume per cent BeO and gave a Doppler constant, Tdk/dT of -.0081. In the second core, in which the BeO was replaced by stainless steel to harden the neutron spectrum, a Doppler constant, Tdk/dT, of -.0060 was obtained. The overall experimental uncertainty on Tdk/dT is estimated to be ±10%, exclusive of uncertainties in delayed neutron parameters. Normalization of Doppler calculations to the SEFOR results can provide significant reductions in the uncertainty in transient power and energy calculations of interest in LMFBR accident analysis. A major achievement of the SEFOR experimental program was the successful completion of the super prompt transient tests. They give convincing confirmation of the soundness of the Doppler theory being applied to LMFBR's and demonstrate the inherent safety and stability of this type of reactor. In addition, the good agreement between pre-experiment analysis and experimental results points up the predictable transient neutronics behavior of oxide fueled LMFBR's. 11 references. (auth)

55124 (CONF-720901--(Bks.1 and 2), pp 1016-32) PULSED-ACTIVATION TECHNIQUES FOR THE MEASUREMENT OF DOPPLER EFFECTS. Foell, W. K.; Russell, G. J.; Lucoff, D. M.; Bhattacharyya, S. K. (Univ. of Wisconsin, Madison). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The pulsed activation Doppler (PAD) technique offers an experimental approach appropriate for the measurement of Doppler effects at high temperatures. The experimental methods, data handling techniques, and methods of interpretation presented gave satisfactory results when applied to uranium metal and UO_2 pellets at low and medium energy depositions, but appear to require some improvements for very high energy depositions. Specifically, it is necessary to determine the relative thermal flux depression more accurately in pellets of high enrichment. A feasibility study was carried out for the extension of the PAD technique to fast spectra. SEFOR was used as the model spectra for this study. The SEFOR transient time-shape function was used in computer calculations to obtain the time-dependent energy deposition and the resulting time-dependent temperature rise for PAD samples. At these temperatures and at each time step, self-shielded cross sections were calculated and then integrated with the fluence to yield a Doppler ratio. The results indicate that high effective temperatures could be achieved in PAD measurements with pellets having enrichments slightly higher than nominal LMFBR values. 17 references. (auth)

55125 (CONF-720901--(Bks.1 and 2), pp 1033-47) BENCHMARK TESTING OF NUCLEAR DATA FOR FAST REACTORS. Alter, Harry (Atomics International, Canoga Park, Calif.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Integral parameters for a series of fast reactor benchmark assemblies, covering a wide range of energy spectra, were calculated with the reference cross section set ENDF/B-3. Multigroup constants relative to each assembly were generated and used in S_n transport and/or diffusion theory calculations to obtain the parameters. The calculated parameters include k_{eff}, spectral indices (activation ratios), and central reactivity worths. Results of the several calculations indicate a significant improvement in the cross section data of the version 3 reference set over that contained in ENDF/B-2. (auth)

55126 (KFK-1577) ANISOTROPIC DIFFUSION IN GAS COOLED FAST BREEDER REACTOR. Eisemann, E. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Mar 1972. 146p. (In German). Dep. NTIS (U. S. Sales Only).

The calculation of anisotropic diffusion effects (streaming effects) in gas cooled fast reactor lattices is presented. For this purpose, expressions have been derived for the components of a homogenized direction dependent cell diffusion coefficient. This was done in a multi-group formalism taking into account the anisotropy of the elastic scattering cross sections up to the first moment. Expressions for the components of the direction dependent diffusion coefficient have been developed which can be evaluated numerically. To demonstrate the influence of this diffusion coefficient calculations have been performed to determine the effective multiplication factor and the criticality change due to coolant variations for certain reactor concepts. 33 references. (auth)

55127 (KFK-1579) REST: PROGRAM FOR CALCULATION OF FISSION PRODUCT ACTIVITY AND DECAY CONSTANT AFTER VARIABLE REACTOR HISTORY IN TWO COUPLED SYSTEMS WITH RESPECT TO FISSION PRODUCT EMISSION. Waibel, E. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). Apr 1972. 38p. (In German). Dep. NTIS (U. S. Sales Only).

The FORTRAN programs REST 1, REST 2, and REST 3 were developed for the calculation of the fission product decay heat source within a nuclear reactor. REST 3 considers a distribution of the heat source by calculating fission product escape out of the fuel, as might be expected by accidental overheating of the core. The time dependency of the heat source within and outside the fuel is shown. A description and a user's guide for the programs is given. A BWR was used as a model for the calculations. 12 references. (auth)

55128 INSTALLATION FOR OBSERVING THE POSITION OF A STRUCTURE INSIDE A NUCLEAR REACTOR. Debergh, Philippe; Lagrange, Maurice (to Commissariat a l'Energie Atomique). French Patent 2,091,902. 21 Jan 1972. Filed 10 Apr 1970. (In French).

An installation for positioning the core-supporting structure of a reactor (e.g. sodium-cooled fast reactor) is presented. The installation consists of a closed tube containing an appropriately illuminated sighting system at one of its ends and a window at the other end. This tube, which is supported by the structure to be positioned, is elastically held in a fixed outer sheathing; an observation tube penetrates the sheathing from the other side; this tube is provided with a mirror system and a viewing telescope at its upper end. Any vertical displacement of the supporting structure is transmitted to the closed tube and any lateral displacement shifts the position of the tube in the sheathing. Both types of displacement can be observed through the telescope system. (France)

55129 FAST BREEDER REACTOR. Spenke, H. (to Siemens AG). German Patent 1,614,404. 17 Feb 1972. (In German).

A description is given of a technical way to decrease the coolant void coefficient by an appropriate design of the reactor core of steam-cooled or liquid-metal-cooled fast breeder reactors. The amount of fissionable fuel is decreasing within the cylindrically shaped reactor core in radial direction, as related to the axis of symmetry of the core. This decrease may be realized either steadily or in several stages. (GF)

55130 LIGHT-WATER BREEDER REACTOR. Beaudoin, Benoit R.; Cohen, Joseph D.; Jones, David H.; Marier, Lester J. Jr.; Raab, Harry F. (to United States Atomic Energy Commission). U. S. Patent 3,671,392. 20 Jun 1972. Filed 15 Mar 1971.

Described is a light-water-moderated and -cooled nuclear breeder reactor of the seed—blanket type characterized by core modules comprising loosely packed blanket zones enriched with fissile fuel and axial zoning in the seed and blanket regions within each core module. Reactivity control over lifetime is achieved by axial displacement of movable seed zones without the use of poison rods in the embodiment illustrated. The seed is further characterized by a hydrogen-to-uranium-233 atom ratio in the range 10 to 200 and a uranium-233-to-thorium-232 atom ratio ranging from 0.012 to 0.200. The seed occupies from 10 to 35 percent of the core volume in the form of one or more individual islands or annuli. (Official Gazette)

55131 REACTOR WITH SPHERICAL FUEL ELEMENTS. Ritz, H. L. (to Kernforschungszentrum). German Patent 1,302,274. 10 Feb 1972. (In German).

A description is given of configurations of spherical fuel elements, arranged in regular and uniform packings in such a manner that they will form an approximately spherical core. The purpose of this arrangement is to improve the coolant circulation in order to optimize the heat transfer and to obtain a nearly uniform temperature at all fuel elements. (GF)

Control and Instrumentation

55132 (ANL/EBR-63) DATA-PROCESSING SYSTEM FOR INSTRUMENT MAINTENANCE AND CALIBRATION AT EBR-II. Moriarty, K. J.; Ringquist, J. M. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). Jun 1972. Contract W-31-109-eng-38. 51p. Dep. NTIS.

Early in the operation of EBR-II, it was recognized that a computer program was required for the periodic calibration and maintenance of the more than 1600 instruments in service. Computer Program No. I, set up in 1964, evolved into Computer Program No. II by addition of updated scheduling, history cards, and a new computer to execute the program. Computer Program II, combined with the required procedures, has been operative for about one year. The operation of Computer Program II is described. (auth)

55133 (CISE-R-268) EXPERIMENTAL RESULTS ON THE OPERATION OF THE REACTIVITY FAST CONTROL SYSTEM OF THE CIRENE REACTOR. Marcandalli, R.; Possa, G. (Centro Informazioni Studi Esperienze, Milan (Italy)). May 1968. 43p. (In Italian). INIS.

The reactivity fast control system of the CIRENE reactor is envisioned to be accomplished by fluid rods: reactivity is varied through changes of a two-phase mixture of gas and poisoned light water flowing in separate tubes in the core. An out-of-pile experimental loop has been built at CISE for the hydraulic and dynamic tests. The results of the first complete set of measurements are presented and found to be in agreement with theoretical predictions. Minor modifications to the system are suggested. The hydraulic and dynamic performances match design specifications. (INIS)

55134 (CONF-720901--(Bks.1 and 2), pp 579-98) BORON AND TANTALUM CONTROL ROD STUDIES AND ABSOLUTE GAMMA RAY ABSORBED DOSES IN A LMFBR CRITICAL. Carpenter, S. G.; Simons, G. G.; Olson, A. P.; Goin, R. W.; Plummer, J. P. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A set of measurements was taken on a typical LMFBR mockup (ZPPR Core 2) which provides data against which the components of control rod calculations can be compared for both B and Ta. The small sample control materials are in disagreement with the calculations in about the same amount as the fuel materials. The mockup rods calculations are actually closer to the measurement, which may indicate additional problems. The axial and radial distributions are well calculated. These distributions are not strong functions of rod size or poison material. The interactions between two rods separated by a typical distance are not large and are poorly calculated with diffusion theory. Absorbed gamma radiation dose distributions were measured with ^{7}LiF thermoluminescent dosimeters throughout Core 2. Deviations between calculation and experiment were found to exceed ±10% only at the outer limits of the reactor, where the absolute dose had fallen at least 2 orders of magnitude. For the central mockup control rod cases, the gamma radiation dose in B_4C and Ta was well calculated. 9 references. (auth)

55135 (DUN-SA-169) REDUCING THE EFFECT OF GROUNDS ON CRITICAL REACTOR CONTROL CIRCUITS. Neumayer, E. C. (Douglas United Nuclear, Inc., Richland, Wash.). 29 Jul 1971. 18p. Dep. NTIS.

The sensitivity of the ground detector may be increased as can the input resistance by increasing the resistance of the series resistors and selecting the proper meter sensitivity for them. Provisions for external annunciation and alarm may be utilized by using a meter-relay movement with adjustable alarm contacts. While the discussion deals with dc circuits, the principles can be applied to ac circuits also. (auth)

55136 (DUN-SA-186) APPLICATION OF COMPUTERS TO CONTROL AND MONITORING OF NUCLEAR REACTORS. Worster, L. D. (Douglas United Nuclear, Inc., Richland, Wash.). [nd]. 10p. Dep. NTIS.

A multi-channel system designed to satisfy the IEEE 279 Criteria For Nuclear Power Plant Protective Systems demonstrates how minicomputers dedicated to specific functions can satisfy the failure criteria and provide multiple data processing and control functions. The comprehensive data analysis capability of computers provides potential for power system performance improvement and cost reduction through application of computers in control and monitoring systems. (auth)

55137 (JAERI-Memo-3893) FLUX DISTRIBUTION MEASUREMENT NEAR STRONG ABSORBER USING VISTA METHOD. Takeuchi, Eiji; Takeda, Renzo; Fukumura, Nobuo; Sakata, Hajime (Japan Atomic Energy Research Inst., Tokyo). Feb 1970. (In Japanese). NTIS (U. S. Sales Only).

Calculations on a cruciform control rod have been made as a part of the JP-II final design studies. Experiments were carried out using VISTA method. This method is an experimental physics technique, and by enlarging the system dimension, makes the phenomena easy to be observed. In the VISTA-SHE experiments, a boral absorber slab is substituted for the cruciformed control rod. The space dependency of the flux distribution, fine flux profile very near the absorber and the energy dependency of the neutron spectra were measured. Mn, Au, In and depleted uranium foils were activated with and without Cd cover. (auth)

55138 (ORNL-TM-729(Pt.2B)) MSRE DESIGN AND OPERATIONS REPORT. PART IIB. NUCLEAR AND PROCESS INSTRUMENTATION. Moore, R. L. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 439p. Dep. NTIS.

A detailed design is presented for the MSRE control systems, operating instrumentation, safety instrumentation, and circuitry. Included are layouts and schematic diagrams. (J.M.J.)

Containment Systems, Waste Processing, and Radiation Protection

55139 (ANL-7911(Suppl.1)) COMPARISON OF A TWO-DIMENSIONAL HYDRODYNAMICS CODE (REXCO) TO EXCURSION EXPERIMENTS FOR FAST REACTOR CONTAINMENT. Ash, J. E.; Chang, Y. W.; Julke, R. T. (Argonne National Lab., Ill.). Jul 1972. Contract W-31-109-eng-38. 18p. Dep. NTIS.

The Reactor Excursion Containment Code System (REXCO) is a tool that was developed to predict the effects of excursions originating at the core upon the components and on the containment system of Liquid Metal Fast Breeder Reactors. The codes include hydrodynamic and inelastic material behavior depending on the magnitude of the excursion treated. The physical phenomena computed by the codes involve the shock wave, the sodium momentum, and the early stages of the gas bubble. Experimental excursion data are compared with REXCO computations, with emphasis upon the deformations produced by the pressure loads. The results of these comparisons verify the capability of the REXCO Code System to predict the response of containment structures and of the primary system components to the excursion pressure waves. Computations of the deformation of the containment vessel wall caused by pressure loads generated by high-explosive charges are compared with the experiments. The computation of deformations in the upper vessel region resulting from coolant slug impact is verified by comparison with the SL-1 accident data. 11 references. (auth)

55140 (CONF-720901-(Bks.1 and 2), pp 295-315) MEASUREMENT AND EVALUATION OF CROSS SECTIONS. Orphan, V. J. (Gulf Radiation Tech., San Diego, Calif.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The following types of neutron interaction cross sections which are important in reactor shielding are discussed: total, scattering (particularly angular distributions), capture and the photon energy spectra from nonelastic reactions. Examples are discussed for each of these cross-section types which typify the progress made in the development of new cross-section measurement techniques. Also, a few examples are given of advances made in the theoretical methods used in evaluations to predict the cross sections in the absence of experimental data. 40 references. (auth)

55141 (CONF-720901-(Bks.1 and 2), pp 316-24) DEVELOPMENT OF ENDF/B SHIELDING DATA PROCESSING CODES, AND INTEGRAL TESTS. LaBauve, R. J.; Seamon, R. E.; Weisbin, C. R.; Harris, D. R.; Muir, D. W. (Los Alamos Scientific Lab., N. Mex.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The national Evaluated Nuclear Data File (ENDF/B) now contains twelve materials important for shielding applications; these evaluations include data for neutron-induced photon production. During fiscal year 1973, photon production data for at least ten more important materials will become available, and six new photon production evaluations will be undertaken. Existing processing codes are being extended and improved, and new codes are being written to fully exploit the extensive data included in the ENDF/B. A comprehensive data testing program under the direction of the Cross Section Evaluation Working Group (CSEWG) is under way to uncover data deficiencies and suggest areas for improvement. Thus the ENDF/B is rapidly becoming the principal and most up-to-date source of data for shielding calculations. 29 references. (auth)

55142 (CONF-720901-(Bks.1 and 2), pp 418-30) ORNL SODIUM BENCHMARK EXPERIMENT. Maerker, R. E.; Muckenthaler, F. J.; Clifford, C. E. (Oak Ridge National Lab., Tenn.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The description of an experiment performed at the Tower Shielding Facility is presented which serves as a benchmark for deep neutron penetration through up to 15 ft of sodium. Results of calculations of the experiment are also described, using the MORSE multigroup Monte Carlo code and a preliminary version of the ENDF/B-III cross-section set for sodium. Comparison of the calculations with experiment indicate that the total neutron leakage above thermal energies penetrating 15 ft of sodium can be calculated to within 30% and neutrons penetrating up to 10 ft of sodium to within 10%. 12 references. (auth)

55143 (CONF-720901-(Bks.1 and 2), pp 459-70) DIFFUSION THEORY ANALYSES FOR FAST REACTOR SHIELD DESIGN. Boulette, E. T.; Marr, D. R. (Hanford Engineering Development Lab., Richland, Wash.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Comparisons of diffusion theory analyses with transport theory results indicate that diffusion theory adequately calculates integral quantities upon which fast reactor shield design criteria are based. Multi-dimensional analyses of fast reactor shield experiments support this conclusion and also demonstrate that the neutron cross section library may be adequately represented in fewer than 50 energy groups. 20 references. (auth)

55144 (CONF-720901-(Bks.1 and 2), pp 480-98) FAST REACTOR SHIELDING METHODS DEVELOPMENT. Mynatt, F. R.; Gritzner, M. L. (Oak Ridge National Lab., Tenn.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The elements of a shielding program based on a fundamental approach are discussed with a brief evaluation of the status of the technology. A procedure is presented for utilizing the best features of Monte Carlo, discrete ordinates, and diffusion theory in coupled calculations providing good accuracy at minimum expense. As an example, results are presented from a four-step coupled two-dimensional discrete ordinates calculation for determination of the neutron and secondary gamma-ray dose rates in the FTR head compartment. An assessment of computational methods development plans is presented. 39 references. (auth)

55145 (GEAP-13822-1) LMFBR SHIELDING DESIGN EXPERIMENTS AND METHODS EVALUATION. First Quarterly Progress Report, January–March 1972. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Dept.). Apr 1972. Contract AT(04-3)-189. 26p. Dep. NTIS.

Both experimental and analytical work on axial and radial shields are being conducted, with the experimental part being performed at the ORNL Tower Shielding Facility. Activities and technical progress for the period January through March 1972 are reported. The major topics include program definition and scheduling, test assembly design and fabrication, analytical studies, and quality assurance. (auth)

55146 COLLECTION OF RADIOACTIVE IODINE BY FILTERING SYSTEM. Murata, T. (Hitachi Ltd., Tokyo). Kuki Seijo; 8: No. 7, 49-53(Mar 1971). (In Japanese).

Filtering system consisting of a charcoal filter to collect gaseous radioactive iodine and air filters to collect radioactive iodine particles is provided in emergency off-gas system of reactors. The air filters usually include a prefilter and a high efficiency air filter, and sometimes include further silver-plated copper mesh to reduce temperature rise of the charcoal filter due to decay heat of the radioactive iodine and demister. The iodine collection performance of the filtering system as a whole is described on the basis of test results in foreign countries and those obtained by experimentation. It became evident that iodine introduced into the filtering system is mostly collected by the air filters installed in front of the charcoal filter. This indicates that most of the iodine in the passing gas exists in the form of particles. There is a fairly large deviation in individual filter efficiency, reasons for which are: existence of organic iodine, possible change of its concentration, and incompleteness of the sampling system to measure efficiency. The high efficiency filter has good collection efficiency of the iodine at low temperature, for instance 60% at 25°C compared with about 5% at and above 70°C. This is mainly because of formation of waterdrops at the lower temperature, which helps the iodine collection with the high efficiency air filter. This is ascertained also by the fact that when the relative humidity is not less than 80%, the filter efficiency reaches 60%. Thus, the integrated filtering system efficiency for collecting the radioactive iodine is over 99%, and the filtering system seems to be sufficiently effective. (Japan)

Coolant System

55147 (AI-AEC-Memo-12736) HNPF RETIREMENT: DISPOSITION OF SODIUM. Boardman, T. J.; Paulett, T. A. (Atomics International, Canoga Park, Calif.). 30 Sep 1968. Contract AT(04-3)-701. 137p. Dep. NTIS.

A detailed description is given of the planning, procedures, and actual removal of the sodium from the dismantled Hallam Power Reactor. The dismantling, draining, decontamination, and disposition of piping, pumps, tanks, and other components are discussed. Procedures for heating, cleaning, and pumping of the sodium are included. 10 references. (J.M.J.)

55148 (CISE-R-270) STEADY STATE AND TRANSIENT MEASUREMENTS ON A SCALED-DOWN MODEL OF A POWER CHANNEL OF THE CIRENE REACTOR PROTOTYPE. Peterlongo, G.; Possa, G. (Centro Informazioni Studi Esperienze, Milan (Italy)); Valli, G. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). Jun 1968. 41p. (In Italian). INIS.

A scaled down model (1 : 14) of a single power channel of the CIRENE prototype reactor, including a partial simulation of the steam drum, steam pipes and turbine, has been built and tested. A number of steady states of the system have been investigated, with the main purpose of defining stable paths for the start-up procedure. Measurements have been performed also for the study of coolant pressure dynamics with the following transient inputs: step variation of the heat input to the power channel, step variation of the stem position of the turbine valve, sinusoidal variation of the input of heat to the power channel. (INIS)

55149 (CONF-710548) SPECIALISTS' MEETING ON SODIUM-WATER REACTIONS SPONSORED BY THE INTERNATIONAL ATOMIC ENERGY AGENCY, INTERNATIONAL WORKING GROUP ON FAST REACTORS, 18–21 MAY 1971, MELEKESS, USSR. Summary Report and Papers. (International Atomic Energy Agency, Vienna (Austria)). Jul 1972. 263p. Dep. NTIS.

Twelve papers were presented and are abstracted separately. (J.M.J.)

For abstracts of individual papers see: 55150–55161.

55150 (CONF-710548–, pp 1-16) PRESENTATION MADE TO MEETING OF SODIUM-WATER REACTION SPECIALISTS. Lions, N.; Lacroix, A.; Schwab, B.; Lafon, A.; Trimouille, C. (Atomic Energy Commission, Cadarache, France). Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

Tests on the Phenix Reactor steam generator confirmed the possibility of limiting the consequences of large-scale sodium–water reactions to insignificant damage to the steam generator. Rupture of one tube does not necessarily rupture adjacent tubes. Calculational methods were verified experimentally, so that simulation studies can be made with confidence. The safety of the Phenix steam generator was established. (J.M.J.)

55151 (CONF-710548–, pp 17-38) LARGE LEAK TESTS IN A MODEL OF A STRAIGHT-TUBE STEAM GENERATOR. Dumm, K. (INTERATOM, Bensberg, Ger.). Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The text of the paper is not given. Captions for slides are presented, followed by the slides, which contain schematics of the equipment tested, comparative data between the test model and the SNR design equipment, test parameters, and curves of measured results. (J.M.J.)

55152 (CONF-710548–, pp 39-56) EXPERIMENTAL STUDY OF THE INTERACTION OF WATER WITH SODIUM DURING SMALL LEAKS OF WATER INTO SODIUM. Andreev, P. A.; Borishanskii, V. M.; Zhokhov, K. A.; Belen'kii, M. Ya. Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The results of an experimental study of processes arising from a small leakage of water into sodium are presented. At low flow rates of liquid metal coolant (up to 1.5 m/sec) increased temperatures and pressures were observed in the region of the leak; the actual values depended on the magnitude of the leak. At small leak rates (10–100 g/hr) no increase in temperature or pressure was detected. Besides an increase in the temperature and pressure of the sodium coolant, the interaction of sodium with water gave rise to an environment which was corrosive towards the steam-generator pipework. The present work studies the possibility of corrosion damage to pipes in the case of an extremely small leakage of water into sodium (15–100 g/hr). The effects on the corrosion rate, of the magnitude of the leak, the location of the pipework relative to microcracks and the nature of the pipe material, were noted. 5 references. (auth)

55153 (CONF-710548–, pp 57-104) STUDY OF Na AND H_2O INTERACTION IN A ONE-MEGAWATT MODULAR STEAM GENERATOR. Kul'pin, B. V.; Mazanov, A. S.; Masnyi, V. F.; Gavrilin, A. I. (Scientific Research Inst. of Atomic Reactors, Melekess, USSR). Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

An experimental study of a modular sodium–water steam generator of Czechoslovak design is described. A description of the test stand, data on the thermal balance of the steam generator in different regimes, and the design of a device to produce microleaks of water into sodium to simulate dissolution of the tube bundle of the steam generator and an emergency system for determining the time of the appearance of the leak and preventing breakdown of the steam generator are presented. Results of metallographic analysis of the tube bundle material in the breakdown zone and at a distance from it are presented. 7 references. (auth)

55154 (CONF-710548–, pp 105-28) METHODS OF INDICATION, OPERATION OF A STEAM GENERATOR AND SECONDARY CIRCUIT IN THE CASE OF SLIGHT LEAKAGE OF WATER INTO SODIUM. Kozlov, F. A. Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

A study of the problems associated with the ingress of water to sodium through boiler leakage is presented. Expressions are adduced for the solubilities of hydrogen, oxygen, products of the interaction of water and sodium, and sodium hydroxide in sodium; the rate constants have been determined for the reactions of sodium with hydrogen and with sodium hydroxide over the temperature range 300–450°C; the results of corrosion tests of a Cr–Mo steel in the vicinity of the leak are presented; the development of a system for monitoring the leakage of water into sodium is described together with preliminary experimental results of an acoustic method for detecting a leak; problems of purifying sodium from its reaction products with water are discussed. 5 references. (auth)

55155 (CONF-710548–, pp 129-54) OUTLINE OF PNC'S ACTIVITIES IN THE FIELD OF SODIUM-WATER REACTION. Hori, Masao; Sato, Minoru; Nei, Hiromichi; Tanaka, Toshikazu; Hishida, Makoto Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The Japanese sodium–water reaction project (SWAT), carried out to develop safe, reliable steam generators for the Monju fast breeder reactor, is described. The test equipment and the computer codes used are listed. Tests carried out are described. Schematic diagrams of equipment and test parameters are presented. 12 references. (J.M.J.)

55156 (CONF-710548–, pp 155-70) DETECTION OF SMALL-LEAK SODIUM-WATER REACTION IN THE PROTOTYPE LMFBR STEAM GENERATOR BY IN-SODIUM TYPE HYDROGEN DETECTOR. Ikemoto, Ichiro; Hori, Masao. Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The large-leak sodium–water reaction accident in steam generator may occur following the "wastage" of tubes because of a small leak. The possibility of the accident propagation and the required sensitivity of an in-sodium hydrogen detector are examined in the case of the prototype LMFBR steam generator. The hydrogen detector is found out to be highly effective for the detection of very small leaks (5×10^{-3} lb/sec), and the required sensitivity here is less than 0.1 ppm hydrogen concentration. In the very severe case, however, development of detectors which have no delay time, such as an acoustic detector, will be required. (auth)

55157 (CONF-710548–, pp 171-86) ANALYSES OF THE SODIUM-WATER REACTION PRESSURE AND ITS PROPAGATION IN THE SODIUM SYSTEM. Sakano, Kosuke; Tanaka, Yoshihisa; Mochizuki, Hirozi (Kawasaki Heavy Industries, Ltd., Tokyo). Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

One dimensional sodium–water reaction code SOWACS that assumes sodium and water to be compressible in order to calculate the propagation of pressure wave was developed and tested. The initial peak pressure calculated at the reaction point was different from the experimental one. In order to improve the accuracy of the calculation of the peak pressure at the reaction point, it will be better to change the model of sodium flow at the beginning of the reaction to the spherical model. Comparing with the pressure (126 ata) at the faulted evaporator, the pressure at the adjacent components and piping becomes lower during it propagates in the secondary sodium system, for example 47 ata at the adjacent evaporators, 25 ata at the super heaters and reheaters and 18 ata at the piping. (auth)

55158 (CONF-710548–, pp 187-205) SOME NOTES ON SODIUM/WATER REACTION WORK. Bray, J. A. (Dounreay Experimental Reactor Establishment, Thurso, Scotland). Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The Super–NOAH rig, for studying large scale sodium–water reactions, is described. Parameters of the experiments are given. Reaction products, which settled to the bottom of the reaction vessel, are described. The design for the Prototype Fast Reactor heat exchanger is presented schematically. (J.M.J.)

55159 (CONF-710548–, pp 206-12) REQUIREMENTS FOR STEAM GENERATOR DESIGN AND SYSTEMS TO ENSURE SAFETY IN THE CASE OF FAILURES IN THE TUBES OF HEAT EXCHANGE SURFACES. Titov, V. F.; Bogdanovich, P. N.; Poplavskii, V. M.; Bagdasarov, Yu. E. Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

Experience indicates that the proposed designs ensure the necessary degree of control and safety for sodium steam generators on failure of the heat exchange tubes. However, the safety systems adopted for the designs in question do not eliminate the need for further investigation and development work to improve the reliability in service of sodium steam generators. (auth)

55160 (CONF-710548–, pp 213-20) STATUS OF THE SODIUM-WATER REACTION STUDIES IN ITALY. Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The sodium–water reaction study program in Italy is described very briefly. Historical information is mentioned, and future plans are considered. (J.M.J.)

55161 (CONF-710548–, pp 221-42) ANALYTICAL AND EXPERIMENTAL STUDY OF A REACTING WATER-SODIUM FLOW. Kul'pin, B. V.; Mazanov, A. S. (Scientific Research Inst. of Atomic Reactors, Melekess, USSR). Jul 1972.

From Specialists' meeting on sodium–water reactions; Melekess, USSR (18 May 1971).

The rates of breakdown of 1Kh18N9T austenitic steel in the zone of interaction between sodium and water at small leaks were studied. The results of a determination of the weight loss of a target of this field in the interaction zone are presented and curves showing the burn-through time of the targets as a function of the sodium temperature from 350 through 600°C and the distance from the point of the leak are given. Also given are the results of a study of the temperature field of targets located in the reaction zone and the results of a determination of the burn-through time as a function of the thickness of the target. 5 references. (auth)

55162 (CONF-710959–, Paper 2) OBSERVATIONS ON THE BEHAVIOR OF RADIOACTIVE PRODUCTS ON RAPSODIE. De Fremont, R. (CEN, Cadarache, France). 12p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

During an extensive shutdown for modification, after 3 years of operation, all accessible parts of the primary cooling system of the Rapsodie Reactor were inspected. One failed fuel pin was found, permitting direct contact between the fuel material and the liquid sodium coolant. Measurements of ^{137}Cs levels are given. Radioactivity levels were measured throughout the primary coolant loop. (J.M.J.)

55163 (CONF-710959–, Paper 3) DECONTAMINATION EXPERIENCE ON RAPSODIE. De Fremont, R. (CEN, Cadarache, France). 2p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

Decontamination of the Rapsodie primary coolant loop and pumps is described. Decontamination factors for the primary radionuclides are given. (J.M.J.)

55164 (CONF-710959–, Paper 8) RADIOACTIVE MATERIAL TRANSPORT IN FLOWING SODIUM SYSTEMS. Brehm, W. F.; Koehmstedt, P. L.; Kovacevich, E. A.; Shannon, D. W. (Battelle-Northwest Labs., Richland, Wash.). 17p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The transport of activated corrosion products in liquid sodium was studied. It was found that fluid boundary-layer resistance to deposition of species exists for many isotopes; deposited activity can either release from the deposition site and migrate through the loop, or diffuse into the base metal; and deposited crud activity can create reactor maintenance problems. The release, transport, and deposition is not yet fully understood. 12 references. (J.M.J.)

55165 (CONF-710959–, Paper 9) CORROSION AND DEPOSITION OF IRRADIATED STAINLESS STEEL IN SODIUM. Brehm, W. F.; Kovacevich, E. A.; Shannon, D. W. (Battelle-Northwest Labs., Richland, Wash.). 21p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

Studies were made of the corrosion in flowing liquid sodium of 300 series stainless steels. At 1200°F, 25 ft per sec sodium velocity, and 10 ppM oxygen in the sodium, the rate of metal loss was 0.0013 cm per year, an acceptable rate. The problem of radioisotopes included in the corrosion products is considered. The radioisotopes involved are identified. 8 references. (J.M.J.)

55166 (CONF-710959–, Paper 10) FISSION AND CORROSION PRODUCT BEHAVIOUR IN PRIMARY SYSTEMS OF LMFBR's: A BRIEF REVIEW OF CURRENT STATUS OF WORK BEING CARRIED OUT IN UK. Thorley, A. 11p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

Techniques were developed to study the behavior of radioactive materials in sodium systems. Studies are being made in the Dounreay Fast Reactor and in out-of-pile loops. The release, transport, and deposition of corrosion products in flowing sodium are studied using tracer techniques. Mass transport of materials in sodium at various temperatures, velocities, and impurity levels was studied. The effect of imposed stresses on cladding materials in a corrosive, carburizing environment was examined. The effects of corrosion and deposition on the performance of a sodium loop was considered. 10 references. (J.M.J.)

55167 (CONF-710959--, Paper 11) BEHAVIOUR OF RADIOACTIVE IMPURITIES IN DFR PRIMARY LIQUID METAL COOLANT. Davies, R. A.; Drummond, J. L. (Dounreay Experimental Reactor Establishment, Scotland). 22p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The main oxide-forming fission products are present as a suspension of fine insoluble particles in the NaK which tend to deposit on metal surfaces. This suspension also contains fissile material formed by corrosion of uranium metal and disintegration of experimental oxide fuel from failed pins. It is difficult to obtain representative samples of NaK for fission product and fissile material analysis. There is no evidence in DFR that cesium is deposited on either the pipework or in the cold trap. The major part of the activity on components discharged from DFR can be removed by a water wash. 4 references. (auth)

55168 (CONF-710959--, Paper 12) CORROSION MASS TRANSFER IN PRIMARY SYSTEMS OF LMFBR'S. Menken, H. G. (INTERATOM, Bensberg, Ger.). 27p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

Estimates of corrosion problems in the SNR were made based on corrosion loop studies. The SNR mockup corrosion loop is described. A corrosion and deposition model was formulated. Results calculated from the model were compared with those obtained experimentally. (J.M.J.)

55169 (CONF-710959--, Paper 13) SURVEY ABOUT CALCULATION METHODS FOR THE ACTIVITY INVENTORY IN THE PRIMARY SYSTEM OF SNR. Merkel, A. (INTERATOM, Bensberg, Ger.). 8p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The sources of activity release to the coolant are summarized. Boundary conditions for the fission product release during normal operation are given and used for the design of the SNR power plant. For abnormal reactor operation of the SNR, that is for accident conditions, among the various improbable malfunctions, the activity release is only discussed for the hypothetical design basis accident which is taken for the laying out of the primary system. (auth)

55170 (CONF-710959--, Paper 14) ANALYTICAL DETERMINATION OF IMPURITIES IN SODIUM OF LMFBR. Schillings, K. L. (INTERATOM, Bensberg, Ger.). 13p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The status of analysis of trace impurities in sodium at INTERATOM is given. The analytical methods for the most important elements were reviewed. The results obtained by the vacuum distillation and its following procedures indicate the excellent precision of less than ±1 ppM under the conditions that the impurities are within 10 ppM. This accuracy is valid for the elements C, O, Cl, H, and some metals. New studies for determining the radioactive trace impurities were discussed. (auth)

55171 (CONF-710959--, Paper 15) IMPURITIES IN COVER GAS SYSTEMS: SOME ASPECTS OF THEIR EFFECTS ON THE DESIGN OF LMFBR's. Webster, J. M. 7p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

Sodium present as vapor and aerosols need to be considered as an impurity of fast reactor cover gas systems. Effective processes are required for its removal in order that recycled cover gas can be used as a purge for mechanisms and penetrations susceptible to sodium deposition or as a preliminary stage in a cover gas fission product removal plant, should this be required. Although the liquid metal coolant will act as a getter for the reactive constituents of air and moisture which could be introduced into the system during in flask and maintenance operations, problems due to deposition could arise. The build up of nitrogen could result in metallurgical features and measures may be required for removal from the cover gas. Cover gas activity caused by reactor operation with defective fuel in the core is expected to arise mainly from the fission gases. (auth)

55172 (CONF-710959--, Paper 16) BRIEF OUTLINE OF RADIATION AND REPAIR ENGINEERING PROGRAM PLAN. Brehm, W. F. (Hanford Engineering Development Lab., Richland, Wash.). 8p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The possibility of unfavorably high radiation levels in the FFTF heat transport system maintenance cells, arising from deposited corrosion product radionuclides, has been identified. The Radiation and Repair Engineering Program has been set up to find methods of reducing or coping with the radioactivity burden. The specific factors that contribute to the radiation levels, and the feasibility of reducing or accommodating each one are described graphically. A brief outline of overall program objectives is given. (auth)

55173 (CONF-710959--, Paper 17) CORROSION AND DEPOSITION BEHAVIOUR OF STEEL MATERIAL IN SODIUM SYSTEMS. Thorley, A. 11p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The corrosion and deposition of ferrous materials in simple liquid sodium loops were studied. Mass transport of materials in sodium at various temperatures, flow velocities, and impurity levels were considered. The effect of imposed stresses on cladding materials under corrosive and carburizing conditions was measured. The pattern of corrosion and deposition of corrosion products at various points in a non-isothermal sodium loop was studied. (J.M.J.)

55174 (EURFNR-986) PRESSURE DROP FOR ISOTHERMAL, INCOMPRESSIBLE TURBULENT FLOW IN ROD BUNDLES WITH HEXAGONALLY ARRANGED RODS. Rehme, K. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Translation of report KFK-1427. 45p. Dep. NTIS.

Work Performed under United States-Euratom Fast Reactor Exchange Program.

Systematic investigations were carried out on the pressure drop for an incompressible, isothermal, fully developed turbulent flow in rod bundles with hexagonal arrangement of rods. The results of measurements of the pressure drop over a range of Reynolds numbers $\text{Re} = 6 \times 10^2 \div 2 \times 10^5$ in test sections are reported. The rods with rod distance ratios of $P/D = 1.025 \div 2.324$ were surrounded by hexagonal channels. The number of rods was 7, 19, 37, and 61 respectively. On the basis of a critical survey of data from the literature and of the new measured results it was possible to give a generally valid statement about the pressure drop in rod bundles which is in contrast to numerous experimental and theoretical results by other authors. The pressure drop coefficient quickly rises from approximately 60% of the circular tube value for closely packed rods ($P/D = 1.0$) to the value for circular tubes for $P/D \approx 1.08$. For even higher rod distance ratios, the pressure drop coefficients rise but a little to about 10% above the values for circular tubes at $P/D = 2.0$. The number of rods in the rod bundle has no measurable effect on the pressure drop coefficient. 59 references. (auth)

55175 (GEAP-10207-26) REACTOR PRIMARY COOLANT SYSTEM RUPTURE STUDY. Progress Report No. 26, October 1971-March 1972. (General Electric Co., San Jose, Calif. Atomic Power Equipment Dept.). Apr 1972. Contract AT(04-3)-189. 77p. Dep. NTIS.

Testing was completed on a series of three 550°F, stainless-steel, butt-weld specimens and on the first cyclic pressure plus cyclic bending, stainless steel elbow specimen. Fatigue specimen notch root strains have been calculated with an elastic-plastic finite element computer program. Peak strains during cyclic loading have been measured with miniature strain gages. The Dresden 1 test loop has accumulated over 3900 hours of operation at test conditions (510°F, 1040 psig). A total of 81 of the 149 fatigue specimens being cyclically loaded in the loop have failed: 36 of 71 Type-304 stainless steel specimens, 15 of 28 Type-304L stainless steel specimens, 3 of 23 Inconel-600 specimens, and all of the 27 carbon steel specimens. (auth)

55176 (KFK-1548) PHENOMENOLOGICAL INVESTIGATION OF THE FLOW DISTRIBUTION BEHIND LOCAL COOLANT CHEMICAL BLOCKAGE IN ROD BUNDLES. Basmer, P.; Kirsch, D.; Schultheiss, G. F. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). Jan 1972. 32p. (In German). Dep. NTIS (U. S. Sales Only).

A hexagonal SNR-subassembly has been bisected between two corners. Closing this part by a plexiglas plate, it was possible to observe the flow behavior. Experiments have been performed with water and air bubbles as flow indicators. In all experiments, a coherent region of 41% of the flow area was completely or partially blocked. For different positions of the blockage, the influence of the spacer grid, the pin bundle, and the wall structure of the plexiglas upon the wake downstream of the blockage have been investigated for two Reynolds numbers. A reduced fluid flow rate within the blocked region has been arranged by drilling narrow holes through the blockage. It is concluded that the dimensions of the wake are practically independent from the Reynolds number within the investigated range. Even in a pin bundle, a distinct recirculation flow develops in the wake. A flow within the blocked region of about 15% of the whole flow rate destroys the recirculation zone in the wake behind the blockage. (auth)

55177 (ORNL-TM-3344) EXPERIENCE WITH SODIUM FLUOROBORATE CIRCULATION IN AN MSRE-SCALE FACILITY. Smith, A. N. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 132p. Dep. NTIS.

A eutectic mixture of sodium fluoroborate and sodium fluoride was circulated isothermally at a rate of about 800 gpm for 11,567 hr in a 4-in.-IPS Inconel test loop as part of the program to evaluate the fluoroborate salt for use as a secondary coolant for the Molten-Salt Breeder Reactor. Except for brief periods at 900, 1150, and 1275°F, the bulk salt temperature was controlled at 1025°F. The objective of the experiment was to obtain general experience in the handling and circulation of the fluoroborate salts, with emphasis on the pumping characteristics and on the design and operation of the gas system as it related to handling BF_3 and controlling the salt composition. The test results indicated that water test data may be used to predict the performance of molten-salt pumps with the fluoroborate salt, that reliable performance may be obtained from systems handling BF_3 gas if precautions are taken to exclude water and water-related impurities, that control of the salt composition should not be a problem, and that the thermal conductivity of the gas phase above the salt surface may be used as an indicator for monitoring the salt composition. Preliminary tests were made to examine the feasibility of protecting reactor heat transfer surfaces by preferential deposition of corrosion products in a cold trap. Further work is recommended in this area. The test work indicated that flow restrictions in the off-gas line can be eliminated by pretreatment of the salt to remove volatile impurities and by the use of a hot-mist trap and a cold filter in the off-gas line at the pump bowl outlet. 13 references. 55178 (RD/B/N-2364) IGNITION OF LIQUID METAL: PEROXIDE MIXTURES. Newman, R. N.; Smith, C. A. (Central Electricity Generating Board, Berkeley (England). Berkeley Nuclear Labs.). Jun 1972. 6p. Dep. NTIS (U. S. Sales Only).

Mixtures of sodium metal and sodium peroxide were ignited both in air and under inert atmospheres. The burning rate and spectra from the flash were recorded. The relevance of this type of reaction in relation to hazards involved in the use of liquid sodium and NaK in civil fast reactors is discussed. (auth)

55179 (TID-25887) BOILING CRISIS AND CRITICAL HEAT FLUX. Tong, L. S. (Westinghouse Electric Corp., Pittsburgh, Pa.). 1972. Contract AT(11-1)-2189. 89p. Dep. NTIS.

The ratio of the predicted critical heat flux (CHF) to the reactor heat flux is used as an index of the power capability of water reactors. Numerous boiling heat-transfer and two-phase-flow studies over the past 15 years have put emphasis on exploring the boiling-crisis mechanisms and on perfecting the CHF predictions. Unfortunately, the problem is more complicated than was thought. Thus far no overall analytical solution has been obtained, and the design equations for CHF predictions are empirical. In this review various types of boiling crisis are categorized according to four major flow patterns: pool boiling, bubbly flow, and normal flow across a cylinder. The physical mechanisms of these boiling crises are described. Experimental observations are summarized and used for verifying various analyses. The missing links in the analyses are identified, and future work is recommended. 123 references. (auth)

55180 EXPERIMENTS ON THE FLOW PAST SPHERES AT VERY HIGH REYNOLDS NUMBERS. Achenbach, E. (Kernforschungsanlage, Juelich, Ger.). J. Fluid Mech.; 54: No. 3, 565-75(8 Aug 1972).

In the Nuclear Research Laboratories at Juelich a gas-cooled high temperature reactor working with spherical fuel elements is being developed. The spheres, which have a diameter of 0.06 m, are transported pneumatically through tubes (diameter $d_t = 0.065$ m) under the conditions of the primary cooling gas, i.e., helium at 40 bars and 250°C. Because of the high pressure of the system large Reynolds numbers are to be expected. It was supposed that, during the transporting process, flow around the sphere could reach the critical state, which is characterized by a low drag coefficient and unsteady flow conditions. Work is reported concerning the flow past spheres in the Reynolds number range 5×10^4 Re 6×10^6. Results are reported for the case of a smooth surface. The total drag, the local static pressure and the local skin friction distribution were measured at a turbulence level of about 0.45%. The present results are compared with other available data as far as possible. Information is obtained from the local flow parameters on the positions of boundary-layer transition from laminar to turbulent flow and of boundary-layer separation. Finally the dependence of friction forces on Reynolds number is pointed out. (auth)

55181 WHAT RESEARCHERS LEARNED ABOUT VALVE PERFORMANCE IN REACTOR HEAT TRANSPORT SYSTEMS. Can. Contr. Instrum.; 11: No. 4, 29-31(Apr 1972).

The economics of Canada's reactor operations place stringent demands on valve performance. Low leakage, dependability and maintainability are of key importance. Most commercial types have weaknesses in one area or the other and a test program at AECL identified problem areas. The work has uncovered new technology which is now being applied to existing reactor valve problems. (auth)

55182 STUDY AND TESTS OF SMALL COMPONENTS OF SECONDARY CIRCUITS OF FAST Na COOLED REACTORS. Beaufrere, J.; de Montardy, A.; Nedelec, J. (Electricite de France, Ecuelles). Energ. Nucl. (Paris); 14: No. 1, 17-28 (1972). (In French).

In fast Na cooled reactors, it is necessary to interpose an intermediate Na circuit between the Na circuit cooling the core and the water vapor circuit feeding the turbine. The construction of the auxiliary equipment of the circuit is indicated: valves and taps, safety membranes, and sealed joints. (France)

Fuels and Fuel Elements

55183 (ANCR-1038) EVALUATION OF FILAMENT-TYPE ELECTRIC HEATER ROD AS EMPLOYED IN SINGLE-LOOP SEMISCALE TO SIMULATE UO_2 FUEL RODS. Ewers, D.; Larson, J. R. (Aerojet Nuclear Co., Idaho Falls, Idaho). May 1972. Contract AT(10-1)-1375. 40p. Dep. NTIS.

This analysis compares the thermal response, during the blowdown phase of a loss-of-coolant accident, of the electrically heated filament-type heater rods used in the single-loop semiscale system with the thermal response of uranium dioxide fuel rods typically used in a light-water reactor. The analysis was conducted to determine how well the heater rod would simulate a UO_2 fuel rod, to optimize the method of power control to the heaters in the single-loop semiscale test series, and to guide future design of heater rods to be used in later test series. The analysis was accomplished using the HEAT-1 computer code. The results of this analysis indicate that comparable surface temperatures and surface heat fluxes for the two types of rods are very difficult to obtain, primarily because of the greater amount of heat stored in the uranium dioxide fuel rod. Maintaining the initial steady state power generation rate during the transient appears to be the best method for simulating the UO_2 fuel rod thermal response in the early, transient portion of an LOCA. 5 references. (auth)

55184 (ANL/EBR-57) XENON-TAGGING OF EBR-II DRIVER FUEL. EBR-II Project. Madson, A. A.; Laug, M. T. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). Feb 1972. Contract W-31-109-Eng-38. 24p. Dep. NTIS.

Twenty partially bonded EBR-II driver-fuel elements for an experiment were xenon-tagged with an evacuate-cryogenic transfer method. The xenon was frozen into the element plenum by immersing, in liquid argon, the sodium-loaded jacket complete with the fuel pin. More than 3 cm^3 (STP) of xenon were transferred in order to deliberately increase the plenum pressure so that release of tag upon cladding failure would be ensured. The equipment and procedures used are described, and the method is evaluated. 5 references. (auth)

55185 (CONF-710959-, Paper 1) TEMPETE TEST: IN PILE EXPERIMENT ON THE TRANSFER OF FISSION GASES. De Fremont R. (CEN, Cadarache, France). 5p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The feasibility of using rare gas tracers to locate failed fuel elements in Rapsodie and Phenix reactors was demonstrated. The transport of rare gases in a reactor core under real reactor operating conditions was studied. (J.M.J.)

55186 (EURFNR–985) TREATMENT OF THE MECHANICAL AND THERMAL BEHAVIOR OF FUEL RODS IN SATURN 1. Kaempf, H.; Elbel, H.; Depisch, F. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Material und Festkoerperforschung). Translation of report KFK–1477. 48p. Dep. NTIS.

Work Performed under United States–Euratom Fast Reactor Exchange Program.

In SATURN 1 the time history of a fuel pin concerning the radial distributions of temperature, stress, porosity and geometry changes is calculated. The operating fuel pin conditions such as linear rod power, outside temperature of the cladding and outside pressure are time dependent input data, so steady state and cyclic conditions are taken into account. The following material phenomena essential for the mechanical and thermal behavior are interconnected in SATURN 1: creep of fuel and clad, swelling of fuel and clad, thermal expansion, crack formation, fission gas release, porosity migration, and heat transfer fuel-clad. Three thermal-mechanical states are distinguished: a) fuel and clad in mechanical interaction, b) freestanding fuel and clad stressed by gas and coolant pressure, and c) freestanding stressed clad in contact or not in contact with cracked fuel assumed to be free of stresses. Three fuel zones are distinguished especially with view to different mechanical behavior. To demonstrate the manifold possibilities of SATURN 1 several illustrative applications are given. (6 references) (auth)

55187 (EURFNR–989) IN-PILE COMPATIBILITY OF OXIDE FUEL. Goetzmann, Odo (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Material und Festkoerperforschung). 26 Jan 1972. 14p. Dep. NTIS.

Work performed under United States–Euratom Fast Reactor Exchange Program.

Radiation effects in reactor fuel elements during burnup, affecting the compatibility of the fuel material with the stainless steel cladding, are considered. While these materials are initially compatible, the formation of fission products, plus the liberation of oxygen from the oxide fuel materials, can become critical factors in the compatibility. In particular, tellurium and cesium have proven to be critical. The effects of temperature are considered. (J.M.J.)

55188 (EURFNR–1020) FRICTION FACTORS OF A CLUSTER OF 19 ROUGH RODS. Savatteri, C. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Apr 1972. 24p. (EUR–4728; KFK–1588). Dep. NTIS (U. S. Sales Only).

Work performed under United States–Euratom Fast Reactor Exchange Program.

On the basis of the laws applicable to velocity distribution on smooth and roughened surfaces, as obtained for simple geometries (circular tubes, annular gap), a method is indicated which allows the calculation of friction coefficients and flow distribution in artificially roughened rod bundles. Using this method of calculation, the results of measurements found for a rod bundle of 19 roughened rods in hexagonal arrangement and with a smooth channel wall yielded a parameter $R(h^+)$ which is in good agreement with values applicable to simpler geometries. (15 references) (auth)

55189 (GEAP–10028-39) SODIUM-COOLED REACTORS FAST CERAMIC REACTOR DEVELOPMENT PROGRAM. Thirty-Ninth Quarterly Report, May–July 1971. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Dept.). Aug 1971. Contract AT(04-3)-189. 99p. Dep. NTIS.

EXPERIMENTAL BREEDER REACTOR-2 — fuel irradiation testing in, status of mixed oxide
FAST CERAMIC REACTOR — fuel elements for, development during May to July 1971
— core for, design and kinetics analysis of
— safety of, transient overpower and coolant flow loss effects on
INCOLOY 800 — radiation effects on swelling and mechanical properties of, fast neutron, (E)
LIQUID METAL FAST BREEDER REACTOR — fuel elements for, development of stainless steel clad plutonium oxide (PuO_2) – uranium oxide (UO_2)
NEUTRONS, FAST — effects on Incoloy 800 and stainless steels Type 316, Type 321, and Type 347
PLUTONIUM OXIDES, PuO_2 — $PuO_2 - UO_2$, radiation effects testing of fuels of
— $PuO_2 - UO_2$, properties of fuels of, mechanical, physical, and thermal, (E)
REACTOR FUEL ELEMENTS — performance of defected mixed plutonium oxide (PuO_2) – uranium oxide (UO_2) fast, in flowing liquid sodium
— cladding for mixed plutonium oxide (PuO_2) – uranium oxide (UO_2) fast, development and testing of stainless steel
— radiation effects testing of mixed plutonium oxide (PuO_2) – uranium oxide (UO_2) fast
STAINLESS STEEL — radiation effects on swelling and mechanical properties of Type 316, Type 321, and Type 347, fast neutron, (E)
URANIUM OXIDES, UO_2 — $PuO_2 - UO_2$, radiation effects testing of fuels of
— $PuO_2 - UO_2$, properties of fuels of, mechanical, physical, and thermal, (E) (J.M.J.)

— cladding for mixed plutonium oxide (PuO_2) – uranium oxide (UO_2) fast, development and testing of stainless steel
STAINLESS STEEL — radiation effects on swelling and mechanical properties of Type 304, Type 316, Type 321 and Type 321-H (J.M.J.)

55191 (ORNL-TM–3656) FINAL SYSTEMS DESIGN DESCRIPTION OF THE FAILED FUEL MOCKUP (FFM) OF THE LIQUID-METAL FAST BREEDER REACTOR. Grindell, A. G.; MacPherson, R. E. (comps.) (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 187p. Dep. NTIS.

The Failed Fuel Mockup (FFM) is an electrically heated, air-cooled sodium test facility in which a wide variety of out-of-pile testing can be performed with electric cartridge heaters that simulate the fuel pins in a portion of a liquid-metal fast breeder reactor (LMFBR) fuel assembly. In experiments carried out in the FFM, the behavior of the simulated partial subassembly under blockage and other test conditions of LMFBR interest can be studied, and information on thermal and hydraulic characteristics of various subassembly configurations may be obtained. The test section, which contains the electric heaters, is designed for 100 psi at 1300°F. The FFM can supply 442 kW of power to the test section, which consists initially of 19 electric cartridge heaters. The test section is conveniently removable from the facility to change the type or location of the flow blockage and also the configuration of the test section or instrumentation. The variable-speed sodium pump is capable of supplying up to 100 gpm of sodium to the test section and simultaneously as much as 200 gpm to the test section bypass line. An electronic data acquisition system is used to record pertinent test measurements on magnetic tape for computer processing. The facility is equipped with automatic equipment to permit unattended operation. The final design description of the several systems that make up the FFM is presented: the sodium circulation, cooling, and purifications systems; the test section; the electrical power system; the inert-gas system, and the unattended operation system. (auth)

55192 (ORNL-TM–3761) PRELIMINARY COOLANT TEMPERATURE OSCILLATION MEASUREMENTS AT THE FUEL-FAILURE MOCKUP. Fry, D. N.; Kerlin, T. W. (Oak Ridge National Lab., Tenn.). Aug 1972. Contract W-7405-eng-26. 23p. Dep. NTIS.

A feasibility study was conducted at the Fuel-Failure Mockup to determine if fluctuations in coolant temperature can be used to study flow and heat transfer mechanisms in a simulated Liquid-Metal Fast Breeder Reactor (LMFBR) fuel rod assembly. Thermocouple signals were cross correlated to obtain the gain and phase lag between thermocouple locations. The results of gain and phase measurements between wire-wrap thermocouples in bundle

1A show that the effect of wire wraps on the crossflow is experimentally observable. Also, these results, obtained at a frequency of 2 Hz, suggest that the crossflow might be proportional to the 0.8 power of the bulk flow. (auth)

Auxiliary Systems and Engineered Safeguards

55193 (BAW–10016) ANALYSIS OF ANTICIPATED TRANSIENTS WITHOUT TRIP. Scott, J. F.; Galan, V. J.; Cartin, L. R.; Heidenbrand, W. R.; Penland, J. R. (Babcock and Wilcox Co., Lynchburg, Va. (USA). Nuclear Power Generation Div.). Sep 1972. 98p.

A study was conducted to determine the consequences of anticipated transients without trip and to evaluate the probability of occurrence for these transients. The study was performed on a typical 177-fuel assembly plant at a rated power of 2772 MW(t). It is concluded that there is no significant potential for system damage due to anticipated transients without trip. (13 references) (auth)

55194 CONVEYING TUBE FOR THE PNEUMATIC TRANSFER OF SPHERICAL ELEMENTS. Mauersberger, R.; Faber, R.; Rausch, W.; (and others) (to Hochtemperatur-Reaktorbau GmbH). German Patent 2,060,673. (In German).

The tube is characterized in that it has at least three longitudinally running internal ribs which will prevent contact of the spherical fuel elements with the tube wall itself. The number, height, and arrangement of the ribs have been calculated so that even spheres with smaller diameters will not touch the wall of the tube. (GF)

55195 (AECL–4254) CANADA'S NUCLEAR POWER PROGRAM IN CONTEXT WITH THAT OF THE WORLD. Mooradian, A. J. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). Jun 1972. 10p. Dep. NTIS (U. S. Sales Only). AECL $0.50.

Canadian nuclear capacity is based on the CANDU concept, which is a unique product of the Canadian Nuclear Power Program. With the success of the Pickering Generating Station and promising results from boiling light-water and organically cooled reactors, the future of the Canadian concept as a highly competitive reactor system is assured. (auth)

55196 (CISE-R–241) MOBIDIC: A CODE FOR A SIMPLIFIED EVALUATION OF SOME CONTINUOUS AXIAL REFUELLING SCHEMES. Bruschi, C.; Foresti, G.; Pierini, G. (Centro Informazioni Studi Esperienze, Milan (Italy)). Oct 1967. 27p. INIS.

A method is described for a simplified evaluation of three continuous schemes of axial refueling: one-directional, counter-directional and bi-directional refueling. The starting point is the axial one-group diffusion equation, where radial leakage is simulated by a constant buckling. The code needs a table of one-group constants versus irradiation and reflector properties, to be given as input data; it has to be noticed that the only variation with position in the lattice cell proprieties is the one associated with irradiation (e.g., no effects due to coolant density profile are included). The discharge burnup of the fuel and the axial flux distribution are obtained by solving an integral equation iteratively until the core height is matched. The code MOBIDIC, written for the IBM 7040 computer, displays a running time of about 5 sec for the three cycles. (INIS)

55197 (ORNL–4794, pp 96-7) REACTOR EVALUATION STUDIES. Aug 1972.

In Chemical Technology Division annual progress report for period ending March 31, 1972.

Research is reported on: probabilistic simulation of power systems, power systems integration model, and fuel cycle cost code. (D.H.M.)

Some problems of analyzing the loss of coolant accident conditions in pressurized water power reactors are described. Inaccuracies caused by excessive simplification of the models in analysis of loss of coolant accidents are discussed. 5 references. (auth)

55200 (COO–2152-4) INVESTIGATION OF PRESSURE DROPS AND HEAT TRANSFER COEFFICIENTS FOR LOSS OF COOLANT EVALUATIONS. Quarterly Progress Report [for] Period Ending June 30, 1972. (Cincinnati Univ., Ohio. Dept. of Chemical and Nuclear Engineering). 1972. Contract AT(11-1)-2152. 11p. Dep. NTIS.

Progress in three areas of water cooled reactor loss of coolant accident evaluations is reported, including: transient pressure drop investigation; two-phase pressure drop and flow pattern study; and transition boiling and reflooding heat transfer tests. (H.D.R.)

55201 (DUN-SA–168) DEVELOPMENT AND IMPLEMENTATION OF EQUIPMENT MAINTENANCE STANDARDS FOR NUCLEAR REACTORS. Clement, T. M. (Douglas United Nuclear, Inc., Richland, Wash.). 13 May 1971. 8p. Dep. NTIS.

A formal system of maintenance standards is necessary to provide the nuclear power industry with factual, quantitative risk evaluations that will guide us in developing simpler and more reliable energy systems. These facts will also help dispel many of the allegations concerning the safety and environmental effects of nuclear power plants. (auth)

55202 (IRS-F–10) REPORT OF RESEARCH ORDERED BY THE FEDERAL MINISTRY FOR CONSTRUCTION AND RESEARCH IN THE FIELD OF REACTOR SAFETY. Quarterly Progress Report, January 1–March 31, 1972. (Technischer Ueberwachungs-Verein e. V., Cologne (West Germany). Institut fuer Reaktorsicherheit). 90p. (In German). Dep. NTIS (U. S. Sales Only).

Short administrative summaries of the various projects related to reactor safety in the Federal Republic of Germany are presented. Project accountability information is included. (J.M.J.)

55203 (JAERI-M–4473) ANALYSIS OF PRESSURE WAVE PROPAGATION IN PIPE RUPTURE ACCIDENTS OF LIGHT-WATER COOLED REACTORS BY USE OF THE BURST CODE. I. WAVE PROPAGATION THROUGH A SINGLE-PHASE FLUID. Shinoda, Wataru; Imaoka, T.; Kawabe, R.; Ishikawa, Michio (Japan Atomic Energy Research Inst., Tokyo). Jun 1971. 106p. (In Japanese). NTIS (U. S. Sales Only).

The pressure wave propagations in various types of flow systems have been studied by using the computational program BURST to obtain information on the applicability and operational techniques of the program. A range of flow systems is covered: a simple cylinder, a pipe with variable flow area (an adapter), an open end, and a simulated boiling water reactor with a flow restrictor in the main steam line. The system is assumed to be filled with single-phase fluid, subcooled water or superheated steam. From this analysis the following was revealed: (1) the calculated results agree well with theoretical predictions for the systems with simple geometries, thus confirming the mathematical model of the program. (2) The shape of the transmitted pressure wave may be distorted while traveling through an adapter with a length comparable with or greater than that of the wave front. (3) The steam flow rate could be limited by the critical phenomenon within the flow restrictor. (auth)

55204 (JAERI-M–4535) STUDY ON THE WORKS OF ENGINEERING REACTOR-SAFETY. Shimamune, Hiroji; Ishikawa, Michio; Sako, Kiyoshi; Shiba, Masayoshi; Tomii, Kakuzo (Japan Atomic Energy Research Inst., Tokyo). Aug 1971. 41p. (In Japanese). NTIS (U. S. Sales Only).

To carry out reactor-safety research works effectively, accident phenomena must be understood systematically in a realistic manner. For this purpose, trees which indicate the sequences of phenomena are made for important credible accidents. Studies are made on the accident trees to have the state of art in safety research experiments and safety analysis codes. Based on these results, the NSRR program being planned in JAERI is re-studied as part of the safety research works. (auth)

55205 (JAERI-Memo–4041) AN EXPERIMENTAL FACILITY TO SIMULATE THE LOSS-OF-COOLANT ACCIDENT OF LIGHT-WATER REACTORS. PART 5. Ikutame, Ken; Ishiguro, Misako (Japan Atomic Energy Research Inst., Tokyo). 1970. 76p. (In Japanese and English). Dep. NTIS (U. S. Sales Only).

Data sheets were assembled to present some of the details of the instrumentation used at the experimental installation built to simulate accidents arising from the loss of reactor coolant. The experimental equipment is described; the 36 tables and figures cover the detection system, auxiliary devices, flow diagrams and charts and operational characteristics. The detection transducer, primary amplifiers, d-c amplifiers used for matching, integrating digital voltmeters, electromagnetic oscilloscope, desk-top recorder and synchroscope, wave-shape generator, automatic voltage regulator, digital data coder, and analog data coder are described more closely, outlining also the operation of thermocouples with the differential amplifier, the quartz pressure transducer, resistance line pressure transducer and the dynamic resistance line strain gage. The off-line equipment mentioned includes the DATAC-2000 and FACOM-230/60 used for electronic data processing. (TTT)

55206 (KFK-1580) CALCULATION OF THE TIME DEPENDENT FISSION PRODUCT HEAT SOURCE STRENGTH IN TWO COUPLED SYSTEMS WITH CONSIDERATION OF FISSION PRODUCT ESCAPE. Henzel, N.; Simon-Weidner, J.; Waibel, E. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). Apr 1972. 188p. (In German). Dep. NTIS (U. S. Sales Only).

The fission product heat source within the oxide fuel of a LWR after a MCA with malfunction of the ECC system is investigated. The calculation of the time dependent heat source includes both radioactive decay and individual escape of fission products which is related to temperature and therefore the structure or the physical state of the fuel. A theoretical investigation of fission product escape coefficients for the elements Se to Eu is described. Results of a literature search on the experimental investigation of fission products escape coefficients are tabulated. An escape model including the necessary escape coefficients is presented. BWR Brunsbüttel and PWR BASF Mitte are used as an example to calculate fission product inventory and decay heat source without and with fission product escape after 1000 days of full power and shutdown. Given are the single nuclides, the chemical elements and the totals. Escaped fission products are released into a second system (outside the fuel), and their decay and increase is calculated separately. The model gives a maximum reduction of the heat source within the fuel by escape of fission products up to 50% of the momentary value. This maximum reduction occurs shortly after fuel melting. Special consideration was given to the time dependent contribution of the single chemical elements (total of the nuclides with the same atomic number) to the heat source. It was found that after more than 6 min after the assumed accident (cladding failure will occur at this time) only Nb, I, La and, after 2 days, Pr will contribute more than 10% to the total decay heat source. The results of the calculations are interpreted and recommendations are given for an experimental program aimed at the investigation of the fission product escape model where it is important to the rest-heat source problem. (auth)

55207 (ORNL-TM-3900) ORNL NUCLEAR SAFETY RESEARCH AND DEVELOPMENT PROGRAM BIMONTHLY REPORT FOR MAY-JUNE 1972. Cottrell, Wm. B. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 144p. Dep. NTIS.

The accomplishments during the months of May and June in the research and development program are summarized. Much of this work is in general support of water-cooled power reactor technology, including LOFT and industry programs, and reflects current safety problems, such as blow-down heat transfer studies. Several projects are also conducted in support of the high-temperature gas-cooled reactor (HTGR) and the liquid-metal fast breeder reactor (LMFBR) programs. Other major projects include experimental investigations of the attachment of nozzles to shells and the implementation of joint AEC-PVRC programs on heavy-section steel technology and nuclear piping, pumps, and valves. Seismic considerations of particular significance in nuclear plant design are evaluated in the seismic program. Several of the above projects are also directly related to another major undertaking, the AEC's standards program, which entails development of engineering safeguards and the establishment of codes and standards for government-owned or -sponsored reactor facilities. The recent activities of NSIC and the Nuclear Safety journal in behalf of the nuclear community are also discussed. Of particular interest in both of these activities is the recent emphasis on environmental effects. (auth)

55208 (RDT-F-9-1-T(8-72)) REQUIREMENTS FOR NUCLEAR COMPONENTS AT ELEVATED TEMPERATURES (SUPPLEMENT TO ASME ELEVATED TEMPERATURE CODE CASE 1331). (Division of Reactor Development and Technology (AEC), Washington, D. C.). Aug 1972. 36p. RSO.

Supplementary information is presented concerning standards for high temperature requirements of Class 1 components for nuclear reactors. (D.C.C.)

55209 (RISO-M-1500) RELY 4: A MONTE CARLO COMPUTER PROGRAM FOR SYSTEM RELIABILITY ANALYSIS. Kongsoe, H. E. (Danish Atomic Energy Commission, Risoe. Research Establishment). 6 Jun 1972. 78p. Dep. NTIS (U. S. Sales Only).

A computer program for calculation of reliability and availability of systems is described. The program is written in B6700 ALGOL. The program can be used for reliability analysis of both mechanical, electric and electronic systems, also systems containing standby units. The description consists of a summary, block diagrams and complete listings of the four versions of the program in addition to examples of input and output. There are four versions of the program with different distribution functions for the times to failure and repair times. Two of the versions use variance reduction—importance sampling—and the others, direct simulation. The basic theories and concepts are outlined. 9 references. (auth)

55210 RADIATION SAFETY OF NUCLEAR POWER PLANTS. Melichar, Zdenek; Hladky, Eduard. Jad. Energ.; 18: No. 7, 217-24(Jul 1972). (In Czech).

The problems of radiation safety in connection with atomic electric power stations were examined. For the proposed development of Czech nuclear energy a general program of research and development was developed. The necessity of a complex approach to a solution of radiation safety of nuclear power plants is emphasized, and basic fields of application of the results are demonstrated. (tr-auth)

55211 NUCLEAR POWER STATIONS. THE DIFFERENT TYPES OF REACTOR. THE PRINCIPAL TYPES OF ACCIDENT WHICH CAN OCCUR DURING OPERATION. Teste du Bailler, A. (Electricite de France, Saint-Denis). Bull. Inform. A.T.E.N. (Ass. Tech. Energ. Nucl.); No. 91, 13-17(Sep 1971). (In French).

Reactors are classified in terms of the nature of the fuel-moderator system. The laws concerning the compatibility of the two materials are physical (neutronic-thermal), physicochemical (corrosion), and technological or economic (costs-supplies). The existing different types of reactor are reviewed: CGR, AGR, HTR, HWR, PWR, BWR (light water) and fast reactors. A classification of accidents (or serious incidents) according to their causes is proposed: power excursions, accidents involving fuel, and accidents affecting the structures. (France)

Steam and Power Conversion System

55212 (CONF-720925-2) URBAN UTILIZATION OF EXTRACTED HEAT AND WASTE HEAT FROM CENTRAL STATION POWER PLANTS. Beall, Sam E. Jr.; Miller, Arthur J. (Oak Ridge National Lab., Tenn.). [nd]. 20p. Dep. NTIS.

From seventh intersociety energy conversion engineering conference; San Diego, CA. (25 Sep 1972).

An analysis is presented of the feasibility of providing thermal energy as well as electricity to urban areas from central station steam-electric power plants. Consideration is given to the use of thermal energy for applications such as industrial processes, building space heating, air conditioning, sewage treatment, agriculture, and aquaculture. The analysis shows that the use of dual-purpose plants significantly reduces the consumption of fuel and lessens the environmental impact of providing energy as compared to conventional systems. Areas of multifamily dwellings and other multistoried buildings could be served in new cities, or renewed old cities, at costs comparable to those incurred with more conventional separate systems. However, it would require more planning of facilities and coordination of diverse organizations than we normally employ. The costs and dislocations associated with retrofitting existing cities would cause each city to be a separate case. (9 references) (auth)

Commercial Power Reactors

55213 (FIND-50390(8-72)) FIND: WATTS BAR NUCLEAR PLANT, UNITS 1 AND 2. Smith, James G. (ed.) (Technical Information Center (AEC), Oak Ridge, Tenn.). 31 Aug 1972. 18p. (FIND-50391(8-72)). Dep. NTIS.

An index to microfiche issuances of safety analysis reports is provided. Subject citations are to specific frames on the microfiche. (J.M.J.)

55214 (WASH-1208(9-72)) STATUS OF CENTRAL STATION NUCLEAR POWER REACTORS SIGNIFICANT MILESTONES.

(Division of Reactor Development and Technology (AEC), Washington, D. C.). 1 Sep 1972. 9p. Dep. NTIS.

A table listing all constructed, contracted, and planned nuclear power plants in the U.S. is presented. Included in the table are the names and location of the reactors, electric output, type of reactor, steam system suppliers and architect–engineers, and pertinent dates. (J.M.J.)

55215 GANGES OF THE DESERT: RAJASTAN ATOMIC POWER PROJECT. Gupta, Veerendrakumar (Rajastan Atomic Power Project, Kota, India). Vaigyanik; 3: No. 1, 5-7; 21(Mar 1971). (In Hindi).

The Rajastan Atomic Power Plant will be put into operation at Rawatbhata about 40 miles from Kota in Rajasthan. It will have two Candu-type 200-MW reactors, using heavy water as moderator and coolant. The main reactor dome is a 4 ft thick concrete wall and can stand a pressure of 6 lb/in^2 inside the dome. The major reactor equipment such as calandria, dump tank, shield tank, coolant channel assemblies, and auxiliary reactor equipment such as the fueling machine carriage, dousing water tank, etc., will be housed inside the dome. The turbogenerator set and instrumentation and control equipment will be installed in a separate building. Gaseous radioactive wastes will be disposed of through a 300 ft. high stack. Every precaution was taken to reduce accidents to an absolute minimum. (INIS)

55216 SPEEDY ADVANCE OF CONSTRUCTION IN ATUCHA. Gerwin, R. Deut. Forschungsdienst, Sonderber. Kernenerg.; 15: No. 15, 77-8(1970). (In German).

A report is given about the status of construction work on the Atucha reactor followed by a preview of future work. The shell construction by 1970 and operational tests are due to begin in mid 1972. (INIS)

Control and Instrumentation

55217 (BAW-10047(Rev.1)) STUDY OF DISCONTINUITIES IN CONTROL ROD DRIVE MOTOR TUBE EXTENSIONS. Johnson, T. O.; Ayres, P. S.; Echelbarger, G. J.; Lawrie, W. E. (Babcock and Wilcox Co., Lynchburg, Va. (USA). Nuclear Power Generation Div.). Aug 1972. 77p.

Some control rod drive motor tube extensions have exhibited variations in wall thickness and discontinuities on the inner surface of the tube. An extensive investigation of these conditions is discussed. A program for resolving the findings is described. (auth)

55218 (EURFNR–976) CLADDING CONTROL ON NUCLEAR REACTOR FUEL ELEMENTS. Jacobi, S.; Tradowsky, K. (Kernforschungszentrum, Karlsruhe (West Germany). Labor fuer Elektronik und Messtechnik). Translation of report KFK–1452. 11p. Dep. NTIS.

Work performed under United States–Euratom Fast Reactor Exchange Program.

The problem of release of fission products and of fuel material into the coolant is discussed. The operation of failed fuel element detection devices is explained. For water-cooled reactors, the method of precipitation of solid fission products is described. In sodium-cooled reactors, the relative low activity of the fission products must be discriminated from the very high activity of the sodium. This is possible by measuring the delayed neutron emission of some fission products. (12 references) (auth)

55219 (RDT-C-7-18-T(8-72)) THERMOWELL SYSTEMS FOR LIQUID METAL SERVICE. (Division of Reactor Development and Technology (AEC), Washington, D. C.). Aug 1972. 22p. RSO.

This standard covers design and fabrication requirements for thermowell systems for installation in piping or vessels in liquid metal systems. These thermowell systems include a thermocouple or a resistance temperature detector (RTD), a thermowell, tip, extension tube, and connection head. (auth)

Containment Systems, Waste Processing, and Radiation Protection

55220 (BNL–16965) REACTOR EFFLUENTS: AS LOW AS PRACTICABLE OR AS LOW AS REASONABLE. Hull, Andrew P. (Brookhaven National Lab., Upton, N. Y.). 1972. 25p. (CONF-720614–1). Dep. NTIS.

From 17th annual meeting of the Health Physics Society; Las Vegas, NV. (12 Jun 1972).

Recent amendments proposed by the U.S. Atomic Energy Commission to 10CFR50, set forth numerical guides to keep radioactivity in light-water-cooled nuclear power reactors as low as practicable. These are intended to restrict the exposures of nearby persons to 1% or less of the current limits to individuals in the general public. For the most part the amendments contain ''across the board'' concentration limits, primarily based on their technical practicability. These are radiologically questionable, insofar as they are not related to a projected dose to an individual with reference to specific nuclides, and they are not detectable by straightforward environmental sampling and analysis techniques. The proposed 1% limits in radiation exposures from power reactor effluents are lacking in scientific warrant insofar as the calculated risk related to current reactor effluents is insignificant, relative to other sources of exposure and other kinds of environmental hazards. If adopted, they would occasion a projected expenditure of from $\$3 \times 10^4$ to $\$1 \times 10^6$ per man-rem saved, which is shown to be excessive on several cost-benefit comparisons. Design guides for reactor effluent releases based on 10% of current standards would appear adequate to achieve the AEC's intent. To remove public misunderstanding of the possible total population exposure from the operation of nuclear reactors, a population dose limit of 0.017 rem/year to be specifically apportioned to such operation and related activities is also proposed. (auth)

55221 (NP–19338(Vol.1)) IN-SERVICE INSPECTION PROGRAM FOR NUCLEAR REACTOR VESSELS. [VOLUME] I. Biannual Progress Report No. 6, March 1, 1971–September 1, 1971. (Southwest Research Inst., San Antonio, Tex.). 7 Jan 1972. 159p.

Technical Report to Steering Committee, EEI Project RP 79, Edison Electric Institute/Tennessee Valley Authority.

Progress is reported on the development of methods for in-service inspection of power reactor pressure vessels. Electric utility experience with pressure boundary inspection regarding service condition, defect detection capability, defect size, and defect orientation is reviewed. A facility for the evaluation of a nondestructive test method is described. An acoustic emission system for continuous monitoring for defects is evaluated. (J.M.J.)

55222 (NP–19338(Vol.2)) IN-SERVICE INSPECTION PROGRAM FOR NUCLEAR REACTOR VESSELS. [VOLUME] 2. Biannual Progress Report No. 6, March 1, 1971–September 1, 1971. (Southwest Research Inst., San Antonio, Tex.). 7 Jan 1972. 202p.

Technical Report to Steering Committee, EEI Project RP 79, Edison Electric Institute/Tennessee Valley Authority.

Progress is reported on the development of methods for in-service inspection of power reactor pressure vessels. Areas covered in Vol. 2, a continuation of Vol. 1 (abstracted separately) include improvement in reliability and reproducibility of conventional ultrasonic systems, and investigation of ultrasonic halography for visualization of flaws in thick-walled pressure vessels. (auth)

55223 (WCAP–7870) NEUTRON SHIELDING PADS. Kraus, S. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Energy Systems Div.). May 1972. 44p.

As part of the continuing effort to simplify the core support structure and save construction and assembly time, a design study was conducted to investigate the possibility of replacing the thermal shield with locally positioned plate members, called neutron shielding pads. The plot of the circumferential fluence distribution on the vessel, which is very localized, indicated that this was a practical approach. The design study described in this report established the feasibility of replacing the thermal shield with a series of plate members of equivalent thickness attached to the core barrel by pins and bolts. Both analytical and experimental methods were utilized to determine design adequacy. (auth)

55224 LAYOUT AND FABRICATION OF STEEL REACTOR PRESSURE VESSELS. Bonka, H. Aachen; Technische Hochschule (1971). 25p. (In German).

Thesis.

A brief survey is given of the layout of pressure vessel for 1,200-MW(e) LWRs, selection of materials, permissible strains, wall thickness, and welding methods for the fabrication process. (GF)

Coolant System

55225 (BAW–10050) EVALUATION OF OCONEE REACTOR COMPONENT FAILURE. (Babcock and Wilcox Co., Lynchburg, Va. (USA). Nuclear Power Generation Div.). Sep 1972. 41p.

An investigation was conducted to evaluate the failure of certain Oconee 1 reactor components during hot functional tests in early 1972. (auth)

55226 (CONF-710959–, Paper 4) CLEANUP SYSTEM FOR PRIMARY COVER GAS OF LMFBR. Barulli, L.; Bruzzi, L.; Cicognani, G. (CNEN, Bologna). 15p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

The technical feasibility of a Clean-up System for the cover gas primary system of a LMFBR model similar to FERMI Fast Breeder Reactor is shown. From an economic stand point this type of clean up system is feasible because its estimated cost is only about 1% of the total plant cost. (auth)

55227 (EURFNR–1000) RESULTS OF HEAT TRANSFER AND PRESSURE LOSS MEASUREMENTS WITH HELIUM ON A SIXTEEN-TUBE BUNDLE. Marek, J.; Maulbach, K. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Translation of report KFK–1549. 43p. Dep. NTIS.

Work Performed under United States–Euratom Fast Reactor Exchange Program.

Measurements of pressure drop and heat transfer of helium at a pressure of 43 atm flowing through a bundle of 16 tubes in a square arrangement are reported. The tubes were heated directly by dc; the heating power was between 110 and 295 kW corresponding to a power of 40–105 W/cm at the heating tube. The tubes were smooth and arranged in a smooth square channel at a distance ratio of p/d = 1.283. The Reynolds numbers ranged between $1.5 \cdot 10^4$ and $1.4 \cdot 10^5$. Wall temperatures up to 550°C have been measured. The isothermal friction coefficients of the entire bundle, including the channel wall, were determined to be about 2% higher than that of the circular tube. The Nusselt numbers for the central channel are slightly smaller than the comparable values of circular tubes. (14 references) (auth)

55228 (JAERI-Memo–4016) RESULTS OF CYCLIC PRESSURE LOADING TEST DUE TO JPDR PRESSURE VESSEL MODEL NO. 2. **Fujimura, Tadato; Miyazono, Shohachiro; Ueda, Shuzo; Namatame, Hiroshi; Sakamoto, Fumio; Kadaira, Tsuneo; Shibata, Katsuyuki; Oba, Toshihito; Suzuki, Komei (Japan Atomic Energy Research Inst., Tokyo). May 1970. (In Japanese). NTIS (U. S. Sales Only).**

The test program on JPDR pressure vessel model 2 was performed to investigate propagation through base metal for the case where the cladding cracks occur at the location of highest stress in the vessel, that is the nozzles for forced circulation. Strain distribution was measured around nozzles without and with artificial notches. After static strain measurements, the model was loaded by cyclic pressure and investigated for fatigue crack propagation from artificial notch tips. (auth)

Fuels and Fuel Elements

55229 (EURFNR–975) CRITERIA FOR DIFFERENTIATING FUEL AND PLENUM FAULTS ON REACTOR FUEL ELEMENTS WITH VIBROCOMPACTED FUEL. Golly, W.; Jacobi, S. (Kernforschungszentrum, Karlsruhe (West Germany). Labor fuer Elektronik und Messtechnik). Translation of report KFK–1348. 44p. Dep. NTIS.

Work performed under United States–Euratom Fast Reactor Exchange Program.

For research with failed fuel elements the HSD-Loop was installed at the FR 2. The operation with two pins of the HDR-type is described. The pins were failed in the fuel region and at the plenum resp. Criteria are specified to discriminate these two types of defect by means of a precipitator. (10 references) (auth)

Auxiliary Systems and Engineered Safeguards

55230 INCIDENT OF OCTOBER 17, 1969 WITH SAINT-LAURENT-1. POLLUTION OF THE REACTOR AND THE MODIFICATION OF THE FEDAL SYSTEM. Grauvogel, M. A.; Le Noc, J. F. (Electricite de France, Saint-Laurent-des-Eaux). Bull. Inform. A.T.E.N. (Ass. Tech. Energ. Nucl.); No. 92, 23-38 (Nov 1971). (In French).

The essential problems which arose with the FEDAL system when the Saint-Laurent-1 reactor was restarted after the incident of October 17, 1969 are examined. The effect of the contaminating uranium dusts on the failed element detection system (FEDAL) are discussed. The various tests, analyses, and experimental measurements performed in order to estimate the quantity of uranium dispersed inside the core are presented. The modifications introduced into the FEDAL system (addition of an individualized FEDAL system to the existing system) and the new programming and data processing systems are described. The results obtained since the restart of the reactor and the subsequent operational difficulties are reviewed. (France)

55254 (DOCKET-50265-115) QUAD-CITIES STATION, UNIT 2. Seven Valves Failed to Test Properly on Routine Inspection. (Commonwealth Edison Co., Cordova, Ill.). 6 Sep 1972. 3p. Dep. NTIS.

The failure of seven suppression chamber to drywell vacuum breaker valves to operate during a routine inspection test is described. Corrective actions are discussed. (D.C.C.)

55255 (DOCKET-50271-100) VERMONT YANKEE NUCLEAR POWER STATION. Offsite Environmental Radiological Monitoring Report, January 1, 1972-June 30, 1972. (Vermont Yankee Nuclear Power Corp., Rutland). 6 Sep 1972. 13p. Dep. NTIS.

55256 (DOCKET-50271-101) VERMONT YANKEE NUCLEAR POWER STATION. Facility Operating License DPR-28, Amendment 2 (Temporary Operating License). (Directorate of Licensing (AEC), Washington, D. C.). 8 Sep 1972. 12p. Dep. NTIS.

55257 (DOCKET-50280-83) SURRY POWER STATION, UNIT 2. Returned to Service on September 3, 1972. (Virginia Electric and Power Co., Richmond). 5 Sep 1972. 2p. Dep. NTIS.

55258 (DOCKET-50282-74) PRAIRIE ISLAND NUCLEAR GENERATING PLANT, UNIT 1. Interim Report on Deficient Motor Operated Valve Torque Switches. (Northern States Power Co., Minneapolis, Minn.). 30 Jun 1972. 2p. Dep. NTIS.

55259 (DOCKET-50333-53) JAMES A. FITZPATRICK NUCLEAR POWER PLANT. Amended and Substituted Application for Licenses, Amendment 12. (Power Authority of the State of New York). 6 Sep 1972. 109p. Dep. NTIS.

Financial data on the owners of the James A. Fitzpatrick Power Reactor are presented. The 1971 Annual Reports for the Power Authority of the State of New York and the Niagara Mohawk Power Corporation are included. (D.C.C.)

55260 (DOCKET-50382-36) WATERFORD STEAM ELECTRIC STATION, UNIT 3. Preliminary Safety Analysis Report, Amendment 22. (Louisiana Power and Light Co., New Orleans). 28 Aug 1972. 100p. Dep. NTIS.

Financial data on the owners of the Waterford Power Reactor Unit 3 are presented. The 1970 and 1971 Annual Reports for the Louisiana Power and Light Company are included. (D.C.C.)

55261 (DOCKET-50397-27) HANFORD NO. 2 NUCLEAR POWER PLANT. Preliminary Safety Analysis Report, Amendment 13. (Washington Public Power Supply System, Richland). 14 Sep 1972. 5p. Dep. NTIS.

Revised information is presented concerning construction costs for the Hanford Power Reactor Unit 2. (D.C.C.)

55262 (DOCKET-50400-23) SHEARON HARRIS NUCLEAR POWER PLANT, UNITS 1, 2, 3, AND 4. License Application, Amendment 14. (Carolina Power and Light Co., Raleigh, N. C.). 31 Aug 1972. 62p. (DOCKET-50401-23; DOCKET-50402-23; DOCKET-50403-23). Dep. NTIS.

Financial data on the owners of the Shearon Harris Power Reactor Units 1, 2, 3, and 4 are presented. The 1971 Annual Report for the Carolina Power and Light Company is included. (D.C.C.)

55263 (DOCKET-50404-24) NORTH ANNA POWER STATION, UNITS 3 AND 4. License Application, Amendment 9. (Virginia Electric and Power Co., Richmond). 13 Sep 1972. 78p. (DOCKET-50405-24). Dep. NTIS.

Financial data on the owners of the North Anna Power Reactor Units 3 and 4 are presented. The 1971 Annual Report of the Virginia Electric and Power Company is included. (D.C.C.)

55264 (JAERI-Memo-4083) NUCLEAR FUEL BALANCE CALCULATION AT JPDR. Ezure, H.; (and others) (Japan Atomic Energy Research Inst., Tokyo). Jul 1970. (In Japanese). NTIS (U. S. Sales Only).

The material balance of the nuclear fuel of JPDR is calculated during the operation time from the initial start-up to JPDR-I operation end using a three-dimensional boiling water reactor simulator code FLARE and a newly coded three-dimensional burn-up code TERA. An outline of the calculations is presented. (auth)

55265 (ORNL-TM-3743) ORCOST: A COMPUTER CODE FOR SUMMARY CAPITAL COST ESTIMATES OF STEAM-ELECTRIC POWER PLANTS. USER'S MANUAL. Fuller, L. C.; Sweet, C. A.; Bowers, H. I. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 83p. Dep. NTIS.

ORCOST is a digital computer program for estimating direct and indirect capital costs of nuclear and fossil-fueled steam-electric power plants. The costs are calculated using base cost models which are included in the program for each of the following types of plants: PWR, BWR, HTGR, coal, gas, and oil. The code follows the guidelines of AEC Report NUS-531. The computer output includes a summary of input data and the calculated costs. (4 references) (auth)

55266 (RD/B/N-2261) RELP VERSION C: A REACTOR ECONOMICS LINEAR PROGRAM FOR THE IBM 360/85 COMPUTER. Draper, J. M.; Jones, P. (Central Electricity Generating Board, Berkeley (England). Berkeley Nuclear Labs.). Jun 1972. 31p. Dep. NTIS (U. S. Sales Only).

A users' guide is provided to the computer code RELIP which uses a linear programming technique to calculate the optimum mix of station types in a nuclear generating system in order to minimize the total system cost. The code was written to study, for example, the consequences of design changes of the fuel rating or burn-up on the fabrication, reprocessing, separative work and ore requirements of the system. Details of the input requirements are given together with an outline of the costing calculations and a sample run. (auth)

55267 (WASH-1139(Rev.1)) GROWTH OF NUCLEAR POWER, 1972-1985. (Office of Planning and Analysis (AEC), Washington, D. C.). Dec 1971. 18p. Dep. GPO $0.30.

An updated forecast of nuclear power growth in the United States and the rest of the free world is presented principally for use in AEC production planning. This forecast updates information provided in WASH-1139, the AEC's 1970 forecast, and reflects current consideration of domestic and foreign nuclear power growth, foreign enrichment capabilities in the future and the timing of the application of plutonium recycle technology. The nuclear generating capacities in this forecast have been translated into demands for uranium feed and separative work by use of the known and expected characteristics of nuclear reactors. (auth)

55268 GENTILLY GEARS FOR FULL NUCLEAR POWER. Mod. Power Eng.; 66: No. 5, 66-7(May 1972).

The prototype CANDU (natural-uranium fuelled, heavy-water moderated) reactor at Gentilly, Quebec, is the first of its kind to be cooled by boiling light water. The Gentilly reactor was built by Hydro-Quebec, who will eventually buy it from Atomic Energy of Canada Limited. During the commissioning period following criticality in November 1970, there was trouble with tilting of the axis of neutron flux, necessitating restriction of power to 50% of the maximum 250 MW, and care in the use of enriched booster fuel rods. In the spring of 1972, power was at 75% of capacity, before increase to full power in the summer. During a shutdown in May 1971, repairs were done to the coolant system, and in

February 1972, shutdown-initiating devices for protection against "tilt" were installed. A dual digital computer system is used for acquisition, display, and logging of data, and for controlling power, steam-drum levels, moderator level, and the fueling machine. (Canada)

55269 WYLFA NUCLEAR POWER STATION. Nucl. Eng. Int.; 17: No. 193, 479-80(Jun 1972).

The successful operation of Wylfa Nuclear Station during the first 18 months is briefly outlined. Notable achievements were high stability of control of the boilers, exceptional fuel performance, and success of the more compact on-line computer control system. The extreme dryness of the gas circuit is especially significant in relation to the maximum temperature imposed as a result of CO_2 corrosion problems in earlier reactors, and there is reasonable expectation that eventually the full design power of 1100 MW(e) will be achieved. (UK)

55270 SPECIAL PROJECTS TEAM AT OLDBURY. Elec. Times; 161: No. 25, 43-4(22 Jun 1972).

Examples are given of the work performed by the special project team formed to modify and develop the nuclear station at Oldbury, to give improved availability. Factors contributing to the original low availability and the steps taken that caused an improvement from 61 to 86% between 1968 and 1971 are discussed. (UK)

55342 (DOCKET-50390-23) WATTS BAR NUCLEAR PLANT, UNITS 1 AND 2. Preliminary Safety Analysis Report, Amendment 15. (Tennessee Valley Authority, Chattanooga). 22 Aug 1972. 47p. (DOCKET-50391–23). Dep. NTIS.

The preliminary safety analysis report for the Watts Bar Power Reactor, Units 1 and 2 is amended by the submission of revised and additional information. (H.D.R.)

55343 (DOCKET-50390–24) WATTS BAR NUCLEAR PLANT, UNITS 1 AND 2. Preliminary Safety Analysis Report, Amendment 16. (Tennessee Valley Authority, Chattanooga). 12 Sep 1972. 7p. (DOCKET-50391–24). Dep. NTIS.

The preliminary safety analysis report for the Watts Bar Power Reactor, Units 1 and 2 is amended by the submission of revised information. (H.D.R.)

55344 (DOCKET-50395–28) VIRGIL C. SUMMER NUCLEAR STATION, UNIT 1. Preliminary Safety Analysis Report, Amendment 16. (South Carolina Electric and Gas Co., Columbia). 12 Sep 1972. 223p. Dep. NTIS.

Revised and additional data are presented concerning reactor site, structures, engineered safeguards, containment system, auxiliary systems, power conversion system, and instrumentation. (D.C.C.)

55345 (DOCKET-50397–28) HANFORD NO. 2 NUCLEAR POWER PLANT. Preliminary Safety Analysis Report, Amendment 12. (Washington Public Power Supply System, Richland). 31 Aug 1972. 103p. Dep. NTIS.

Requested and revised data are presented concerning the site; cooling system; containment system; electrical system; auxiliary systems; and structures. (D.C.C.)

55346 (DOCKET-50397–32) HANFORD NO. 2 NUCLEAR POWER PLANT. Preliminary Safety Analysis Report, Amendment 12. (Washington Public Power Supply System, Richland). 31 Aug 1972. 103p. Dep. NTIS.

Requested and revised data are presented concerning auxiliary systems, reactor site, cooling system, containment system, electrical systems, power conversion system, and mechanical structures. (D.C.C.)

55347 (DOCKET-50398–18) MENDOCINO POWER PLANT, UNITS 1 AND 2. Preliminary Safety Analysis Report, Amendment 11. (Pacific Gas and Electric Co., San Francisco, Calif.). 1 Sep 1972. 137p. (DOCKET-50399–18). Dep. NTIS.

Requested and revised information is presented concerning the containment system; radioactive waste disposal; fire protection system; auxiliary systems; Class 1 structures; engineered safeguards; instrumentation; valves; support structures; piping systems; pumps; and power conversion system. (D.C.C.)

55348 (DOCKET-50398–19) MENDOCINO POWER PLANT, UNITS 1 AND 2. Environmental Report, Supplement, Volume 3. (Pacific Gas and Electric Co., San Francisco, Calif.). 11 Sep 1972. 347p. (DOCKET-50399–19). Dep. NTIS.

The environmental aspects of transmission line construction are described for the Mendocino Power Reactor, Units 1 and 2. (H.D.R.)

55349 (DOCKET-50404–22) NORTH ANNA POWER STATION, UNITS 3 AND 4. Preliminary Safety Analysis Report, Amendment 8. (Virginia Electric and Power Co., Richmond). 2 Sep 1972. 55p. (DOCKET-50405–22). Dep. NTIS.

Revised and additional data are presented on the following topics: earthquake stress limits for Class 1 equipment; mechanical properties of stainless steel pipes; quality assurance program; accident analysis; service water reservoir; and containment depressurization system. (D.C.C.)

55350 (DOCKET-50409–13) LA CROSSE BOILING WATER REACTOR. Valve Wall Thickness. (Directorate of Regulatory Operations (AEC), Glen Ellyn, Ill. Region III). 13 Sep 1972. 7p. Dep. NTIS.

55351 (DOCKET-50410–10) NINE MILE POINT NUCLEAR STATION, UNIT 2. Environmental Report, Supplement 1. (Niagara Mohawk Power Corp., Syracuse, N. Y.). 28 Aug 1972. 128p. Dep. NTIS.

Additional information is presented concerning alternate sites and power transmission lines. (D.C.C.)

55352 (INIS-mf–205) FORSMARK'S NUCLEAR POWER STATION. The Distribution of Cooling Water in Oeregrundsgrepen. Report on Experiments with Models, April–June 1971. (Swedish State Power Board, Alvkarleby. Hydraulic Lab.). Jul 1971. 198p. (In Swedish). INIS.

Model experiments are described for finding the most suitable performance and location of the paths of cooling water at the planned nuclear power station at Forsmark in Sweden. The purpose was to obtain a solution which permitted building of an extensible plant with the smallest possible temperature increase in the surroundings. Fifty-five experiments were performed in scale 1 : 350 (horizontal) and 1 : 50 (vertical). (INIS)

55353 (NEDO–10527) ROD DROP ACCIDENT ANALYSIS FOR LARGE BOILING WATER REACTORS. Paone, C. J.; Stirn, R. C.; Woolley, J. A. (General Electric Co., San Jose, Calif. Atomic Power Equipment Dept.). Mar 1972. 74p. (72-NED–18).

The analysis of super-prompt critical nuclear excursions in large water-moderated reactors is described. The technical analysis tools used in studying hypothetical nuclear transients are described herein, without considering the probability of such an occurrence. The rod drop accident has been reanalyzed generically using the improved methods, and the results of these analyses are presented. In addition, detailed sensitivity studies have been performed to evaluate the effects of initial reactor conditions, control rod worth, rod drop velocity, and scram insertion rate on the resultant peak fuel enthalpy. 38 references. 55354 RADIOPROTECTION DURING THE INTERVENTIONS AT SAINT-LAURENT-DES-EAUX. Grand, J.; Hurtiger, J. (Electricite de France, Saint-Laurent-des-Eaux). Bull. Inform. A.T.E.N. (Ass. Tech. Energ. Nucl.): No. 91, 38-53(Sep 1971). (In French).

The careful preparation of interventions and the development of an efficient radioprotection system enabled repairs to be successfully carried out on the Saint-Laurent-des-Eaux 1 reactor after the accident of 17 October 1969, without injury to the participating personnel. The work involved the localization of U debris, its recovery, and the trapping of inaccessible pieces. The operation was accomplished by establishing two large work yards in which the work was carried out over a period of several months: one on the upper plug of the reactor, and the other inside the reactor vessel. The measures taken to adapt the workers to the radioactive environment (the training of the workers, and their special equipment) are discussed. The toxicity and contamination risks run by the personnel involved in the intervention are considered. (France)

55355 U.S. REACTOR LICENSING RECENT DEVELOPMENTS. Nucl. Eng. Int.; 17: No. 193, 468-71(Jun 1972).

Legislative changes and proposals resulting from the growing opposition to nuclear energy on environmental grounds are described. These include suitable amendments to the Atomic Energy Act concerning interim licensing for plant operation; major changes in structure of AEC regulating functions and staff; new guidelines for release of radioactivity; and a program for improvement of water quality. The effect of NEPA, the National Environmental Policy Act of 1969, is discussed and future changes including proposed alterations for safety and reliability reports are considered. (UK)

55356 (CONF-720901–(Bks.1 and 2), pp 471-9) CNSG: NUCLEAR SHIP OXYGEN ACTIVATION CALCULATIONAL METHOD WITH EXPERIMENTAL COMPARISON. Anderson, F. N. (Babcock and Wilcox, Lynchburg, Va.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The Consolidated Nuclear Steam Generator (CNSG) reactor is being considered for maritime application. In this design the compactness of the reactor system permits the steam generator to be located inside the pressure vessel. Consequently, the secondary coolant is exposed to a high-energy neutron flux field which activates the oxygen. This creates a radiation exposure hazard to personnel since the transit time of the activated secondary coolant outside the biological shield is small relative to the half-life of the activated oxygen. A method is outlined for calculating the oxygen activation and the dose rate associated with the decay gamma rays. This method was used to analyze the oxygen activation in the German Nuclear ship OTTO HAHN, which utilizes an earlier version of the CNSG design. Calculated and estimated dose rates are 0.003 and 0.01 mR/h, respectively. 15 references. (auth)

55357 (DOCKET-50238–92) N. S. SAVANNAH. Action Taken with Respect to Noncompliance Items of March 1972 Inspection. (Directorate of Regulatory Operations (AEC), Washington, D. C.). 1 Sep 1972. 3p. Dep. NTIS.

55358 (N–72–18051) BLEED-CYCLE PROPELLANT PUMPING IN A GAS-CORE NUCLEAR ROCKET ENGINE SYSTEM. Kascak, Albert F.; Easley, Annie J. (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). Mar 1972. 76p. (NASA-TM-X–2517; E–6639). NTIS.

The performance of ideal and real staged primary propellant pumps and bleed-powered turbines was calculated for gas-core nuclear rocket engines over a range of operating pressures from 500 to 5000 atm. This study showed that for a required engine operating pressure of 1000 atm the pump work was about 0.8 hp/(lb/sec), the specific impulse penalty resulting from the turbine propellant bleed flow as about 10 percent; and the heat required to preheat the propellant was about 7.8 MN/(lb/sec). For a specific impulse above 2400 sec, there is an excess of energy available in the moderator due to the gamma and neutron heating that occurs there. Possible alternative pumping cycles are the Rankine or Brayton cycles. (auth) (STAR)

55359 (NASA-TM-X–2440, pp 2-12) SPACE NUCLEAR PROPULSION SYSTEMS AND APPLICATIONS. Schwenk, Francis C. (Space Nuclear Systems Office, Washington, D. C.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The basic principles of the operation of a nuclear rocket engine are reviewed along with a summary of the early history. In addition, the technology status in the nuclear rocket program for development of the flight-rated NERVA engine is described, and applications for this 75,000-pound-thrust engine and the results of nuclear stage studies are presented. Advanced research and supporting technology activities in the nuclear rocket program are also summarized. (auth)

55360 (NASA-TM-X–2440, pp 84-91) SNAP-8 POST-SHUTDOWN GAMMA-RADIATION APPROXIMATIONS. Byrn, N. R. (Teledyne Brown Eng., Huntsville, Ala); Smith, H. T.; Manning, H. S. Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

An evaluation was made of an approximate method for calculating the dose rate resulting from fission product gamma radiation after reactor shutdown. Safety analyses for advanced nuclear missions in space have used this technique for determining radiologically safe operations. This method assumes that the dose rate, $D_1(r,t)$, received from a shutdown reactor is directly proportional to the residual gamma power level at that time. To check the validity of this "power ratio" assumption, energy-dependent detector responses were calculated for normalized sources in the Perkins and King energy group structure for a SNAP 8 power system on a NASA space station. Gamma decay rates were then calculated by using an expanded, updated list of isotopic decay data, and from these, actual detector responses $D_2(r,t)$ were found for the SNAP 8 system. The two detector responses, D_1 and D_2, were then compared at several times after shutdown and at detector positions around the space station. An error of several thousand percent was found for many detectors at times greater than one year; it was also found that an increase in material attenuation produced an increase in error and that energy-dependent detector response, such as dose rates, showed greater discrepancy between D_1 and D_2 than did the energy flux. It was concluded that these discrepancies were caused by a decrease in the proportion of high-energy gammas released at longer shutdown times. This softening of the decay gamma spectrum with time caused an increased attenuation of decay gamma energy; invalidating the power ratio assumption. Because of the complexity of the space station geometry, these conclusions were checked and verified by a point source in infinite water calculation. The results indicate that energy-dependent calculations must be made to determine decay gamma dose rates for actual reactor configurations. A simplified method for making these calculations has been devised. (auth)

55361 (NASA-TM-X–2440, pp 257-63) RADIATION ENVIRONMENT FOR RENDEZVOUS AND DOCKING WITH NUCLEAR ROCKETS. Rogers, D. R.; Warman, E. A.; Lindsey, B. A. (Aerojet Nuclear Systems Co., Sacramento, Calif.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

Planning for operations such as rendezvous and docking of a vehicle powered by a nuclear rocket engine with a space station requires consideration of the radiation environment produced by the engine in addition to the natural space radiation environment. Radiation environment data for the NERVA engine are provided which may be utilized in estimating radiation exposures associated with various space maneuvers. Spatial distributions of neutron and gamma tissue kerma rates produced during full thrust operation of the engine are presented. The corresponding biological dose rates will be due predominantly to neutron contributions except within the region in space which is shadowed by the liquid hydrogen propellant. Forward of the vehicle, dose rates will depend on the characteristics of the propellant module and payload as well as those of the engine and will vary during a mission as propellant is consumed. Final rendezvous with an orbiting space station would be achieved subsequent to full thrust operation during a period of 10 or more hours duration in which impulse is delivered by the propellant used for removal of decay heat. Consequently, post operation radiation levels are of prime importance in estimating space station exposures. Maps of gamma kerma rates around the engine are provided for decay times of 4 and 24 hours after a representative firing. Typical decay curves illustrating the dependence of post operation kerma rates on decay time and operating history are included. Examples of the kerma distributions around the engine which result from integration over specific exposure periods are shown. (auth)

55362 (NASA-TM-X–2440, pp 264-9) RADIATION EXPOSURE TO THE ORBITING LUNAR STATION AND LUNAR SURFACE RELATED TO REUSABLE NUCLEAR SHUTTLE OPERATIONS. Hutchinson, Paul I. (Lockheed Missiles and Space Co., Sunnyvale, Calif.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The radiation environment created by the Reusable Nuclear Vehicle (RNS) in performing its normal mission functions while in the lunar vicinity and the impact of that environment on the Orbiting Lunar Station (OLS) and/or the lunar surface are examined. Trajectory data, representative of nominal lunar arrival and departure maneuvers, reflecting the unique operating characteristics of the nuclear engine, provide the basic geometry model for the evaluation of the radiation exposures. Other factors included in the evaluation are the operating source term (neutron and gamma radiation), shutdown source term (fission point gamma radiation), view angle (shielding effects of stage and engine hardware), separation distance, exposure interval, time after shutdown, and prior reactor operating history. To permit recovery of the impulse available from the coolant flow required by the high decay heat rates at reactor shutdown, the main engine LOI burn is terminated with the RNS in elliptical orbit and the coolant impulse used to circularize the orbit and complete OLS rendezvous. This circularization maneuver may take up to 40 hours or more, depending on the percent of cooldown impulse recovery planned. Radiation exposures at the OLS were evaluated for two conditions: (1) final orbit insertion 10 km ahead of the OLS, and (2) 10 km behind the OLS assuming a 90-percent cooldown impulse recovery about 12 hours of cooling. Radiation exposures to the OLS during the lunar orbit departure burn (TEI) were evaluated for RNS startup 10 km behind the OLS and 10 km and 20 nm ahead of the OLS. Exposures received at the OLS for these cases are higher than for the LOI burn, since the reactor operation occurs much closer to the OLS, indicating greater initial separations will normally be desirable. Lunar surface exposures from the operating reactor were evaluated for both the arrival and departure burns and while there is little probability that manned bases would lie along the paths in which measurable exposures would be recorded, the analyses do indicate the need to consider this possibility in planning such operations. Conclusions supported by the analyses and recommended operational constraints for the RNS are presented. (auth)

55363 (NASA-TM-X–2440, pp 270-6) INTEGRAL DOSE DURING CONSTANT-VELOCITY MOTION NEAR A SPACE POWER REACTOR. Manning, H. S. (Marshall Space Flight Center, Huntsville, Ala.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The dose rate in a rotationally-symmetric radiation field near a space power reactor is assumed to be inversely proportional to separation distance squared and directly proportional either to a constant or a constant times the sine-cubed of a polar angle. Constant velocity motion (constant speed and direction) is examined in both cases in both two- and three-dimensional geometries. The two-dimensional geometry occurs when the line of motion and the field axis of symmetry are co-planar. The dose integral in the sine-cubed region may be integrated directly, but a more useful form is obtained after a change of variable. A coordinate system rotation greatly simplifies the results. The three-dimensional problem is integrated after a change of variable. Finally, tables of normalized functions are presented and discussed. (auth)

55364 (NASA-TM-X–2440, pp 292-8) NUCLEAR RADIATION PROBLEMS, UNMANNED THERMIONIC REACTOR ION PROPULSION SPACECRAFT. Mondt, J. F.; Sawyer, C. D.; Nakashima, A. (California Inst. of Tech., Pasadena). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

A nuclear thermionic reactor as the electric power source for an electric propulsion spacecraft introduces a nuclear radiation environment. The radiation environment affects the spacecraft configuration, the use and location of electrical insulators and the science experiments. The spacecraft is conceptually configured to minimize the nuclear shield weight by (1) a large length to diameter spacecraft, (2) eliminating piping penetrations through the shield, and (3) using the mercury propellant as gamma shield. The alumina material is damaged by the high nuclear radiation environment in the reactor. For the more ambitious (250 kW(e) 30 to 40,000 hour) electric propulsion missions it is desirable to locate the alumina insulator outside the reflector or develop a more radiation resistant insulator. The net spacecraft nuclear environment is being investigated to determine if there is a problem. It appears some experiments may require local radiation shielding. (auth)

55365 (NASA-TM-X-2440, pp 299-306) THERMIONIC REACTOR POWER SYSTEM: EFFECTS OF RADIATION ON INTEGRATION WITH MANNED SPACE STATION. Gietzen, A. J.; Heath, C. A.; Perry, L. W. (Gulf General Atomic Co., San Diego, Calif.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The application of a thermionic reactor power system to the modular space station is described. The nominal net power is 40 kW(e), with the power system designed to be applicable over the power range from 25 to 60 kW(e). The power system is designed to be launched by the space shuttle. The lifetime goal is 5 years. Radiation protection is provided by LiH neutron shielding and W gamma shielding in a shaped 4π configuration, i.e., the reactor is shielded on all sides but not to equal extent. Isodose contours are presented for the region around the modular space station. Levels and spectral distribution of radiation are given for later evaluation of effects on space station experiments. Parametric data on the effects of separation distance on power system mass are presented. An alternate concept in which a reactor system is connected to the Space Station by a tether at a distance of 1 to 2.5 miles is discussed. The effect upon power system performance and shielding requirements of the tethered concept are presented. (auth)

55366 (NASA-TM-X-2440, pp 392-6) CARPET PLOT DATA FORMAT. O'Byrne, Joseph M. (Univ. of Massachusetts, Amherst). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

Analysis and interpretation of data is the crucial phase of the decision making process. The interplay between variables must be considered as to their relative significance upon the final result, and sometimes time-sensitive decisions must be made when actual events deviate from predicted information, such as Apollo 13. As the number of variables increases past say four, the traditional method of cross-plotting tends to break down, and digital/analog results cannot present a sharply defined method of analysis. A graphical system named "carpet plot," (since it covers anything), is suggested in which an unlimited number of complicated relationships of variables can be evaluated. (auth)

55367 (NASA-TM-X-2440, pp 440-8) EXTERNAL GAMMA RADIATION ENVIRONMENT FROM THE KIWI, PHOEBUS, AND PEWEE REACTORS. Malenfant, Richard E. (Los Alamos Scientific Lab., N. Mex.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

Ground tests of high-powered propulsion-prototype reactors have provided several opportunities to observe the external radiation environment. Although the data may not be directly applicable to the evaluation of radiation levels for flight systems, they do provide an extensive set of results for comparison with calculations on systems similar to those which may be flown. In addition, the experience with reactor radiation fields covering square miles is considered unique. Reactor tests have been conducted in free air (the Kiwi B4D and B4E reactors) and inside of open well shields (the Phoebus 1-B, Phoebus 2-A, and Pewee 1 reactors). Measurements were taken over distances ranging from contact with the pressure vessel out to greater than 5000 feet both during operation and after shutdown. Separate assessments of the effects of direct beam, scatter, capture, and activation were attempted. Some measurements characteristic of each of the systems named will be presented and compared with results of calculations. (auth)

55368 (NASA-TM-X-2440, pp 449-59) APPLICATION OF TRANSPORT TECHNIQUES TO THE ANALYSIS OF NERVA SHADOW SHIELDS. Capo, M. A.; Anderson, S. L. (Westinghouse Electric Corp., Large, Pa.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

To design a minimum weight shield internal to the NERVA Nuclear Subsystem, the capabilities and limitations of the analytical techniques must be clearly understood. To further this understanding, an in-depth study was performed in which both one and two dimensional discrete ordinate techniques were applied to the analysis of several shadow shield experiments. These experiments were performed on the PAX reactor which was modified to simulate the R-1 reactor, an upgraded version of the NRX nuclear rocket technology series of reactors tested at Nevada during the past six years. Two significantly different shield mockups were analyzed. In one experiment, the internal shield material called BATH (a composite mixture of boron carbide, aluminum and titanium hydride) was mocked up by alternating thin sheets of titanium, Boral, aluminum and polyethylene. In another experiment a borated steel-liquid hydrogen shield was mocked up by alternating layers of borated steel and polyethylene. The two-dimensional discrete ordinates code, DOT-11W, was employed to calculate 16 group (11 fast and 5 thermal) neutron fluxes internal to the shield mockups. These fluxes were processed by the NAGS code to obtain photon sources throughout the assembly. Photon flux distributions were obtained by employing these sources in fixed source, thirteen group, DOT calculations. An S_8 angular quadrature was employed. Approximately 8000 mesh cells were utilized to describe the two-dimensional geometry. One-dimensional analysis was accomplished by means of the ANISN code. Briefly, this technique employed 29 (16 neutron and 13 photon) energy groups simultaneously in one problem with the photon source generation process treated as a downscattering interaction from one of the neutron groups to one of the photon groups. Two approximations to account for transverse leakage were investigated: (1) the addition of a DB^2 correction to the energy-dependent absorption cross section, and, (2) a "void" streaming correction for geometrical regions containing no material. (auth)

55369 (NASA-TM-X-2440, pp 460-5) RADIATION HEATING IN SELECTED NERVA ENGINE COMPONENTS. Courtney, J. C.; Hertelendy, N. A.; Lindsey, B. A. (Aerojet Nuclear Systems Co., Sacramento, Calif.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The role of heating from nuclear radiation in design of the NERVA engine is treated. Generally, radiation heating is more restrictive in design than material degradation considerations. Some components are subjected to very high gamma heating rates in excess of 0.5 Btu/in^3-sec in steel in the primary nozzle or 0.25 Btu/in^3-sec in aluminum in the pressure vessel. These components must be cooled by a fraction of the liquid hydrogen propellant before it is passed through the core, heated, and expanded out the nozzle as a gas. Other components that are subjected to lower heating rates such as the thrust structure and the disk shield are designed so that they would not require liquid hydrogen cooling. Typical gamma and neutron heating rates, resulting temperatures, and their design consequences are covered. The calculational techniques used in the nuclear and thermal analyses of the NERVA engine are briefly treated. (auth)

55370 (NASA-TM-X-2440, pp 471-5) RADIATION HARDENING OF COMPONENTS AND SYSTEMS FOR NUCLEAR ROCKET VEHICLE APPLICATIONS. Greenhow, William A.; Cheever, Paul R. (Convair Aerospace Div., Fort Worth, Tex.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The results of the analysis of the S-II and S-IVB components, although incomplete, indicate that many Saturn V components and subsystems, e.g., pumps, valves, etc., can be radiation hardened to meet nuclear rocket vehicle (NRV) requirements by material substitution and minor design modifications. Results of these analyses include: (1) recommended radiation tolerance limits for over 100 material applications, (2) design data which describes the components of each system which can be employed on the NRV and the modifications necessary to radiation harden other components, (3) presentation of radiation hardening examples of systems which will provide guidance to component designers, and (4) designing radiation effects tests to supply data for selecting materials with confidence. (auth)

55371 (NASA-TM-X-2440, pp 681-6) DISCRETE ORDINATES—MONTE CARLO COUPLING: A COMPARISON OF TECHNIQUES IN NERVA RADIATION ANALYSIS. Lindstrom, D. G.; Normand, E.; Wilcox, A. D. (Aerojet Nuclear Systems Co., Sacramento, Calif.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

In the radiation analysis of the NERVA Nuclear Rocket System, two-dimensional discrete ordinates calculations are sufficient to provide detail in the pressure vessel and reactor assembly. Other parts of the system, however, require three-dimensional Monte Carlo analyses. To use these two methods in a single analysis, a means of coupling was developed whereby the results of a discrete ordinates calculation can be used to produce source data for a Monte Carlo calculation. Several techniques for producing source detail were investigated. Results of calculations on the NERVA system are compared and limitations and advantages of the coupling techniques discussed. (auth)

55372 (NASA-TM-X-2440, pp 692-6) APPLICATION OF MORSE TO RADIATION ANALYSIS OF NUCLEAR FLIGHT PROPULSION MODULES. Woolson, W. A. (Aerojet Nuclear Systems Co., Sacramento, Calif.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

Several modifications and additions were made to the multigroup Monte Carlo code MORSE to implement its use in a computational procedure for performing radiation analyses of NERVA Nuclear Flight Propulsion Modules. These changes include the incorporation of a new general geometry module; the inclusion of an expectation tracklength estimator; and the option to obtain source information from two dimensional Discrete Ordinates calculations. Computations comparing MORSE and a point cross section Monte Carlo code, COHORT, were made in which a coupled Discrete Ordinates/Monte Carlo procedure was used to calculate the gamma dose rate at tank top locations of a typical propulsion module. The dose rates obtained from the MORSE computation agreed with the dose rates obtained from the COHORT computation to within the limits of the statistical accuracy of the calculations. (auth)

55373 (NASA-TM-X-2440, pp 1016-20) VENTING OF FISSION PRODUCTS AND SHIELDING IN THERMIONIC NUCLEAR REACTOR SYSTEMS. Salmi, E. W. (Los Alamos Scientific Lab., N. Mex.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

Most thermionic reactors are designed to allow the fission gases to escape out of the emitter. There exist several design variations to allow the gas to escape from the reactor core. The final disposition of the gas has several interesting problems. If the gas is put into a chamber, its volume is too large to be contained in the shield. Fortunately the fission gases do not pose a radiation problem at 100 ft. Because of the long half-life the fission gases could prevent any close approach to the reactor after it has been shut down. The fission gases could instead be stored in an absorption trap. An absorption trap is usually assumed to require very low temperatures, however, experimental data indicate that reservoirs at several hundred degrees C can be useful. Another scheme is to simply allow the fission gases to escape. Again, because of the low activity of the fission products, this method should pose no radiation hazards. (auth)

55374 (PREAS-4041-R-4) FRONT ISLAND SHIELD THERMAL DISPLACEMENTS. Tajirian, G. (Allstates Design and Development Co., Inc., Trenton, N. J. (USA)). 16 Mar 1961. Contract AT(11-1)-171. 51p. Dep. NTIS.

55375 (INIS-mf-172) METROPOLITAN SITING OF NUCLEAR HEATING PLANTS. Beranek, J. (Ceskoslovenska Komise pro Atomovou Energii, Prague). 1970. (CONF-690565-1). INIS.

From Nuclear heating symposium; Tatranska Lomnica, Czechoslovakia (13 May 1969).

Acceptable hazards are discussed to individuals and population around nuclear heating plants constructed inside urban areas, arising from fission products released into the environment during normal operation or in the event of accident. The maximum permissible doses to the thyroid and to the whole body are in Czechoslovakia set at 100 Rems and 25 Rads, respectively. A new limiting factor is discussed concerning the population living in the neighborhood of the projected heating plants in Prague and in Brno—the integral population dose. The question of technical safeguards is dealt with in detail. A combination of all possible types of technical safeguards is required to prevent or minimize damage to safety barriers (emergency cooling system) and to prevent or minimize the release of fission products (various types of containment, containment spray system, filtering system, stack height). Examples of safeguard systems are discussed in relation to the requirements for safety of nuclear power or heating plants sited within conurbations. (INIS)

55376 (INIS-mf-172, pp 7-13) DISTRICT HEATING IN CZECHOSLOVAKIA AND POSSIBILITY OF USING NUCLEAR POWER REACTORS FOR THIS PURPOSE. Vlach, J. (Vyzkumny Ustav Energeticky, Prague (Czechoslovakia)). 1970. (CONF-690565-8). INIS.

From Nuclear heating symposium; Tatranska Lomnica; Czechoslovakia (13 May 1969).

The problems of centralized and decentralized heating in Czechoslovakia are briefly outlined and considerations are presented leading to the orientation to nuclear heating and power plants. To calculate the full heat supply, the overall heat output is divided in nuclear base load and peak load parts. Peak load plants use fossil fuels and also serve as a stand-by. The ratio of nuclear heat to the total output, in addition to fuel prices, depends mainly on duration of the peak load heat demand τ and on the type of the turbine used. For $\tau \geq 5{,}000$ hrs/yr, back-pressure turbines are suitable; smaller τ require condensing bleeder turbines. A distribution of the load among several nuclear reactors may be considered for large plants with high τ. This makes it possible to site nuclear heating and power plants at shorter distances from each other and thus to reduce the cost of the heat distribution system. Further development depends heavily on the cost of nuclear equipment. (INIS)

55377 PROCESS HEAT FROM HIGH TEMPERATURE REACTORS. Bode, K. H.; Schloesser, J. BCC-Nach.; 53: No. 9-10, 259-66(1971). (In German).

A review on the energy market in the Federal Republic of Germany and its estimated further development is followed by a description of various processes for the conversion of fossil raw materials by means of heat from high temperature reactors and the subsequent utilization of these conversion products in some branches of the basic industry. Outlines are given of special reactor engineering problems that have to be solved as they are vital for the utilization of nuclear process heat. (INIS)

55378 (AI-AEC-12951) VIM-1: A NON-MULTIGROUP MONTE CARLO CODE FOR ANALYSIS OF FAST CRITICAL ASSEMBLIES. Levitt, L. B.; Lewis, R. C. (Atomics International, Canoga Park, Calif.). 15 May 1970. Contract AT(04-3)-701. 90p. Dep. NTIS.

VIM-1 is the first of a series of Monte Carlo codes designed for analysis of fast critical experiments and fast reactor design. It has been expressly prepared for the analysis of fast critical assemblies of the plate-drawer type. It is written in Fortran, for use on either CDC or IBM computers of the 6600 or 360-75 and up class. Special versions for handling bare and reflected spheres and reflected cylinders are also available, primarily for performing comparisons of heterogeneous and homogeneous calculations. The library uses point cross-section data, rather than multi-group constants. Angular data is in the form of cumulative distribution functions, at energies tailored to the needs of each isotope. Computation times range from three minutes to one hour on the CDC 6600 (depending on the size and spectrum of the assembly) to obtain probable statistical errors in the eigenvalue of less than 0.5%, thus providing a powerful tool for reactor design and experimental analysis at a reasonable cost. 6 references. (auth)

55379 (ANCR-1085) ETR POWER: VARIATION ANALYSIS. Burdick, E. E.; Liebenthal, J. L. (Aerojet Nuclear Co., Idaho Falls, Idaho). Aug 1972. Contract AT(10-1)-1375. 62p. Dep. NTIS.

Between June and December 1971, small (nominally ±0.5% amplitude), intermittent power variations of unknown origin were witnessed at the Engineering Test Reactor. The results of the investigative program carried out to determine the cause of the variations are reported. Included in the report are diagnostics, inspections, and analyses. 11 references. (auth)

55380 (CEA-N-1211) T424 FACILITY FOR DISPLACING FUEL UNDER IRRADIATION. Descamps, Jean-Marie (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). Jul 1972. 18p. (In French). Dep. NTIS (U. S. Sales Only).

The T424 facility was designed for experimental fuel irradiations in swimming-pool reactors. The amount of nuclear power released in the fuel is either manually controlled or servo-controlled by an experimental parameter. OSIRIS currently uses three facilities of this nature. (auth)

55381 (CONF-710959--, Paper 6) SODIUM INPILE LOOP. Inagaki, H. 5p.

From Meeting on fission and corrosion product behaviour in primary systems of LMFBR's; Bensberg, Germany (20 Sep 1971).

An inpile liquid sodium loop, for use in the JPR-2 Reactor at JAERI, is described. Results of inpile and out-of-pile performance testing are summarized. (J.M.J.)

55382 (CONF-720901--(Bks.1 and 2), pp 431-41) FFTF PIPE CHASE STREAMING EXPERIMENT. McGregor, B. J.; Muckenthaler, F. J. (Oak Ridge National Lab., Tenn.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The FFTF reactor design includes sodium inlet and outlet pipes which penetrate the 4-ft-thick reactor cavity wall at a height of approximately 19 ft above the top of the core. Most neutrons enter these pipe chases at a slant angle and streaming subsequent to scattering in the chase contributes an important source of neutrons to the heat exchanger vaults. Streaming of neutrons can take place along the sodium in the pipes as well as along the clearance gaps and along the low-density insulation surrounding the pipes. Experiments were designed to validate analytical methods which will be used to predict the flux levels in the heat exchanger vault and piping. The experimental calculation reported was a steel-lined concrete pipe chase and sodium-filled pipe mockup placed in a collimated neutron beam at an angle of 60 deg. (auth)

55383 (CONF-720901--(Bks.1 and 2), pp 445-58) STATUS OF THE FTR SHIELDING DESIGN ANALYSIS AND METHODS. Rathbun, J. L.; Fox, P. F. (Westinghouse Electric Corp., Madison, Pa.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A summary is presented of the calculation methods and the relationship to the actual shielding design of the Fast Test Reactor (FTR). Particularly difficult shielding analysis areas are described. These areas are the reactor head bulk penetration and streaming problems, the reactor cavity source problem and streaming into adjacent pipeways and main heat transport cells. The methods of resolution of these problem areas are presented. (auth)

55384 (CONF-720901--(Bks.1 and 2), pp 613-22) USE OF CFRMF INTEGRAL DATA IN CROSS SECTION EVALUATIONS. Harker, Y. D.; Turk, E. H. (Aerojet Nuclear Co., Idaho Falls, Idaho). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The Coupled Fast Reactivity Measurement Facility (CRFMF) is being used in evaluating neutron cross section data files for the neutron energy range from 1 keV to 1 MeV. The main materials being studied are fission product isotopes where little or no differential data are available. Two methods of measurement are used, capture measurements and reactivity measurements. The results are combined with semi-empirical model calculations to produce evaluated files of differential cross section values. The evaluation methods described are expected to reduce overall uncertainties in fission product cross sections from 40% to less than 10%. This reduction would result in significant reductions in the uncertainties of the important parameters of a Liquid Metal Fast Breeder Reactor and the final overall uncertainties would fall within the acceptable limits as established in literature. 10 references. (auth)

55385 (CONF-720901--(Bks.1 and 2), pp 623-35) EVALUATION AND INTERPRETATION OF INTEGRAL EXPERIMENTS IN FAST CRITICALS. Kiefhaber, Edgar (Kernforschungszentrum, Karlsruhe, Ger.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Clean integral experiments are examined because they are of general interest and use compared to the rather limited applicability of mock-up experiments. The different approaches to using the information obtained from integral experiments are indicated. The activities at Karlsruhe to improve the nuclear data and methods of calculation are described, with special emphasis on some of the more recent results. First, the improvements in the group constant sets are considered; this is followed by studies of more specific problems, such as the influence of the energy dependence of the fission neutron spectrum, or the difficulties encountered in calculating the reactivity coefficients of reactor materials. 21 references. (auth)

55386 (CONF-720901--(Bks.1 and 2), pp 636-44) MONTE CARLO CALCULATIONS FOR THE CRITICAL EXPERIMENT OF THE GERMAN INCORE THERMIONIC REACTOR. Schmidt, F. A. R.; Bernnat, W.; Dagbjartsson, S. (Institut fuer Kernenergetik, Stuttgart). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A critical facility for the German Incore Thermionic Reactor (ITR) was established at the Jülich Nuclear Research Center. Various measurements were performed at this facility. Partly they have to be analyzed by Monte Carlo. This is done using the multigroup Monte Carlo Code MORSE-K. A short description of this code is given. Among the tasks which had to be solved were the investigation of various cross section libraries, the discussion of geometrical details necessary to describe the facility in calculations and the determination of reactivity worths of different materials at different positions in the reactor. The principal approaches to solve these problems are described. First results are given and discussed. (auth)

55387 (CONF-720901--(Bks.1 and 2), pp 645-59) EXPERIMENTAL RESULTS FROM TWO Pu-FUELED FAST CRITICAL ASSEMBLIES. Boehme, R.; Fischer, E. A.; Mc Grath, P. E.; Scholtyssek, W. (Kernforschungszentrum, Karlsruhe, Ger.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Two Pu-fueled fast critical assemblies of different enrichment were studied in the Karlsruhe Fast Critical Facility SNEAK to test cross section data and calculational methods. The measurements suitable for this purpose are central reaction rates and reactivity worths. In addition, measurement of the core material buckling, which characterizes the core material independent of its geometry and surroundings, was also included. The measurement procedures employed are described in some detail. The evaluation of these measurements was done with the most recent cross section sets and computer codes available at Karlsruhe. A portion of the experiments were also calculated with a cross section set based on ENDF/B data. 8 references. (auth)

55388 (CONF-720901--(Bks.1 and 2), pp 660-86) IMPACT OF THE NEW LASL DELAYED NEUTRON DATA ON FTR DESIGN. Ramchandran, S.; Birney, K. R. (Westinghouse Advanced Reactors Div., Madison, Pa.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Three different sets of delayed neutron parameters were used for evaluating β_{eff} and the Ihs to %Δk/k conversion factor in FTR and its criticals. The impact of using different delayed neutron data in the analysis of critical experiments and FTR design is discussed. The new delayed neutron parameters have particular significance in determining the ^{10}B poison loading in FTR control rods resulting in a potential improvement in the lifetime characteristics of the poison assemblies. 18 references. (auth)

55389 (CONF-720901--(Bks. 1 and 2), pp 700-12) MEASUREMENT OF β_{eff} IN Pu-FUELED FAST CRITICAL ASSEMBLIES. Boehme, R.; Fisher, E. A.; McGrath, P. E. (Kernforschungszentrum, Karlsruhe, Ger.).

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The effective delayed neutron fraction, β_{eff}, and the normalization integral were measured in two mixed-oxide fueled fast critical assemblies, using the apparent reactivity of a ^{252}Cf-source, and traverses of reaction rates. In addition, ratios of β_{eff} values of different isotopes were measured by studying effect of the transport of delayed neutron precursors with a pile oscillator. The evaluation of these measurements was done with the most recent cross section sets available at Karlsruhe. The experiments give larger β_{eff} values than those calculated with Keepin's data, and indicate that the difference is mainly due to β of ^{239}Pu and, to a lesser extent, to β of ^{238}U. 9 references. (auth)

55390 (CONF-720901--(Bks.1 and 2), pp 739-67) ANALYSIS OF SODIUM-VOID EXPERIMENTS IN THE FTR ENGINEERING MOCKUP CRITICAL ASSEMBLY. Travelli, A.; Beitel, J. C. (Argonne National Lab., Ill.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A series of sodium-void experiments in the engineering mockup critical assembly of the FTR (FTR-EMC) is analyzed. The computational model is based on X-Y diffusion perturbation theory with ENDF/B-I data. The analytical procedure yields results in excellent agreement with the experiments and provides a demonstrated tool for the prediction of other sodium-void effects. In addition, the results indicate that the gross heterogeneities of the FTR core, including control rods, sodium channels and test loops, exert an overwhelming influence on the spatial distribution of the sodium-void coefficient throughout the FTR core. 13 references. (auth)

55391 (CONF-720901–(Bks.1 and 2), pp 839-87) FTR NEUTRONICS: STATUS, PROBLEMS, AND DEVELOPMENT PROGRAMS. Hofmann, P. L. (Hanford Engineering Development Lab., Richland, Wash.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The nuclear design features of the FTR and the more significant nuclear problem areas are discussed. A description of the nuclear development programs is given and their impact on FFTF design decisions is assessed. Finally, a brief discussion of the plans for nuclear startup and for the Irradiation Test Program is presented. 93 references. (auth)

55392 (CONF-720901–(Bks.1 and 2), pp 973-85) SODIUM VOID STUDIES AND RELATED HETEROGENEITY EFFECTS IN ZPPR-2, THE BENCHMARK DEMONSTRATION ASSEMBLY. Palmer, R. G.; Davey, W. G.; Collins, P. J.; Amundson, P. I.; Kaiser, R. E.; Beck, C. L. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Sodium reactivity experiments in the ZPPR-2 critical assembly are described. The problems in relating the measurements to a large power reactor are discussed from the aspect of differences in heterogeneity in the cores. (H.D.R.)

55393 (CONF-720901–(Bks.1 and 2), pp 1006-15) EFFECT OF CORE CONFIGURATION ON ^{238}U DOPPLER MEASUREMENTS IN ZPPR ASSEMBLY 2. Kaiser, R. E.; Gasidlo, J. M. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

From the data on the sodium-void comparisons and the heterogeneity comparisons on natural UO_2 samples in ZPPR-2, it would appear that the effects of both can be calculated reasonably well, and that the heterogeneity effect is small. The Doppler reactivities, however, are calculated with two to three times the accuracy of the gross sample worths and the ^{238}U small-sample measurements. There are at least two possible factors to explain this phenomenon; (1) the discrepancy in the gross worth calculation is due to a non-resonance component of the cross-section, (2) the hot-cold interaction between the sample and the surrounding core leads to a slight distortion of the measurements. 8 references. (auth)

55394 (CONF-720901–3) FFTF PIPE CHASE STREAMING EXPERIMENT. McGregor, B. J.; Muckenthaler, F. J. (Oak Ridge National Lab., Tenn.). 1972. 12p. Dep. NTIS.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The present FFTF reactor design includes sodium inlet and outlet pipes which penetrate the 4-ft-thick reactor cavity wall at a height of approximately 19 ft above the top of the core. Most neutrons enter these pipe chases at a slant angle and streaming subsequent to scattering in the chase contributes an important source of neutrons to the heat exchanger vaults. Streaming of neutrons can take place along the sodium in the pipes as well as along the clearance gaps and along the low-density insulation surrounding the pipes. Experiments were designed to validate analytical methods which will be used to predict the flux levels in the heat exchanger vault and piping. The experimental calculation reported on was a steel-lined concrete pipe chase and sodium-filled pipe mockup placed in a collimated neutron beam at an angle of 60 deg. (auth)

55395 (CONF-720901–12) SUMMARY OF ANALYSES OF PLATE VS. PIN MEASUREMENTS EMPHASIZING REACTIVITY AND SODIUM VOID EFFECTS. Pitterle, T. A.; Paik, N. C. (Westinghouse Electric Corp., Madison, Pa. Advanced Reactors Div.). 1972. Contract AT(11-1)-3045. 31p. Dep. NTIS.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Analyses of measurements performed in pin and plate environments of nearly identical composition in critical assemblies ZPPR-2 and ZPR-6-7 are presented. Plate environment of critical assemblies introduces heterogeneity effects which differ significantly from that of an LMFBR which is comprised of fuel pins typically about $^1/_4$ inch in diameter. Consequently, the recent pin versus plate measurements are an important contribution to removing uncertainties in the extrapolation from plate critical measurements and analyses to the LMFBR pin environment. (13 references) (auth)

55396 (EURFNR–1014) CALCULATION OF HETEROGENEOUS FLUXES, REACTION RATES, AND REACTIVITY WORTHS IN THE PLATE STRUCTURE OF ZERO POWER FAST CRITICAL ASSEMBLIES. McGrath, P. E.; Fischer, E. A. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Angewandte Reaktorphysik). Mar 1972. 64p. (KFK–1557). Dep. NTIS (U. S. Sales Only).

Work performed under United States–Euratom Fast Reactor Exchange Program.

The methods utilized in the computer program KAPER (Karlsruhe Perturbation Evaluation Routine) are presented. The program is a multigroup cell code for the calculation of cross sections, fluxes, reaction rates, and small-sample reactivity worths in the plate geometry of zero power critical assemblies. The methods in the program are based on integral transport theory in the collision probability formulation. The resonance self-shielding of the cross sections in the multiregion cells is calculated with a formulation based on the f-factor concept. The program has the unique feature of treating local perturbations in the normal unit cell in which the local properties of the cell have been changed as a result of the experiments. Small-sample reactivity worths are found with perturbation theory in which the perturbed flux in the sample and environment is used. Application of the program in the analysis of measurements performed in the zero power critical facility SNEAK at Karlsruhe is described. The measurements include reaction rates and small-sample reactivity worths. (17 references). (auth)

55397 (EURFNR–1016) KFKINR-SET OF GROUP CONSTANTS; NUCLEAR DATA BASIS AND FIRST RESULTS OF ITS APPLICATION TO THE RECALCULATION OF FAST ZERO-POWER REACTORS. Kiefhaber, E. (comp.) (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Mar 1972. 81p. (KFK–1572). Dep. NTIS (U. S. Sales Only).

Work performed under United States–Euratom Fast Reactor Exchange Program.

The preparation of the MOXTOT-set in 1969 was a first step in the desired direction of improving the group constants used for nuclear calculations of fast reactors. Using this data-set, it was possible to predict the criticality of all zero-power reactor-assemblies studied as test cases at that time within an uncertainty limit of ±2% Further improvements superseding the MOXTOT-set have been necessary in order to reduce the uncertainty range for the criticality prediction and to improve the prediction of other important quantities besides criticality, e.g., reaction rates which are important for the breeding properties of fast power reactors. For the test of the improved set of group constants, named KFKINR-set, the same critical assemblies which were taken for the test of the preceding MOXTOT-set are used. The important changes in the group constants with respect to the MOXTOT-set, which was used as starting point, concern mainly the heavy isotopes which are important for fast breeder reactors, especially Pu239, U238, U235, and Pu240. For the determination of the group constants for the elastic downscattering we have used as the weighting spectrum the collision density of a typical sodium cooled fast reactor, namely that of the SNR. The complete nuclear data basis of the improved group constants is described. First results for the recalculation of fast critical assemblies are presented. Some essential characteristics of the new set of group constants and the results obtained by its first test applications are summarized. (69 references) (auth)

55398 (EURFNR–1029) PHYSICS INVESTIGATIONS OF SODIUM COOLED FAST REACTORS SNEAK-ASSEMBLIES 6A/6B. Jourdan, G.; Plum, F.; Reichel, H. (Kernforschungszentrum, Karlsruhe (West Germany)). Jun 1972. 99p. (KFK–1612). Dep. NTIS (U. S. Sales Only).

Work performed under United States–Euratom Fast Reactor Exchange Program.

SNEAK Assembly 6 was aimed at measuring physics parameters of a fast sodium cooled breeder core having a number of features typical for the prototype SNR. Whereas in SNEAK-Assembly 2 /1/ particular attention was given to a close simulation of the radial geometry, in SNEAK-Assembly 6 the axial behavior of the prototype SNR was simulated and studied. SNEAK-Assembly 6 had three modifications SNEAK-6A, SNEAK-6B and SNEAK-6D. SNEAK-6A has three zones, an inner Pu-zone with SNEAK material, a buffer zone composed of MASURCA rod material and the outer uranium zone. SNEAK-6B had the same zones without the buffer zone; in both assemblies some identical experiments were performed for studying the influence of the buffer zone. SNEAK-6D was a core with an inner Pu-zone with MASURCA material, a buffer zone, and a uranium driver zone. In this case, the buffer zone was composed of SNEAK-material. The influence of the material geometry on some experiments was studied by comparing the results of these experiments in SNEAK-6A and 6D. The experimental results were compared to detailed calculations. (19 references) (auth)

55399 (IKF–27) EXPOSURE OF PERSONS AFTER WATER LOSS IN THE TANK OF THE FRF2 REACTOR. Wensel, A. (Frankfurt Univ. (West Germany). Institut fuer Kernphysik). Apr 1972. 19p. (In German). Dep. NTIS (U. S. Sales Only).

Water level in the FRF2 tank as a function of time after damage to a primary coolant pipe is calculated. The core is bared after 25 sec. Dose rate on the surface of the upper shield plug (50 cm Fe) 25 sec after shutdown is 40 m Rem/h. If the shield plug is not in place exposure of persons is possible by backscattering at the reactor hall ceiling. Calculations using the Chilton–Huddleston formula for exposure albedo indicate that the dose rate at a lateral distance of 1 m from the tank is 2.5 Rem/h. Results of measurements of exposure albedo using a ^{60}Co source agree with calculated data. 6 references. (auth)

55400 (JAERI-M–4630) OPERATION REPORT ON THE LOW TEMPERATURE FISSIOCHEMICAL LOOP (JTFL). I. TEST OPERATIONS DURING THE PERIOD OF APRIL 1969 TO MARCH 1970. Sato, Shoichi; Moriyama, Noboru; Danno, Akibumi; Sukegawa, Tomohide; Oshima, K. (Japan Atomic Energy Research Inst., Tokyo). Nov 1971. 17p. (In Japanese). NTIS (U. S. Sales Only).

The Low Temperature Fissiochemical Loop (LTFL) has been operated seven times for out-pile and in-pile tests, during F.Y. 1969–1970. Operational characteristics of the loop were measured, evaluated and compared with the design calculations, including pressure loss and temperature distribution along the helium coolant piping, performance of the instruments, and thermal effects of reactor radiation on the capsule and in-pile plug of the loop. It was found that the loop can be operated with sufficient safety for the irradiation of chemical reaction systems in the presence of fissionable materials as designed. (auth)

55401 (JAERI-Memo–3891) CRITICAL EXPERIMENTS ON FCA I-6. Nakano, Masafumi; Hiraoka, Toru; Nakamura, Tomoo (Japan Atomic Energy Research Inst., Tokyo). Jan 1970. (In Japanese). NTIS (U. S. Sales Only).

Critical experiments were carried out on a 20% enriched uranium metal core with a graphite reflector of 25 cm thickness named FCA I-6. This core was built as one of the assemblies at which a series of pulsed neutron experiments was performed to study the kinetics of two-region fast systems. The critical mass of the assembly is 78 ± 1 kg of ^{235}U. This value is about 10% less than that of FCA I-1, a 20% EU core with 30 cm natural uranium metal blanket. The values of fission ratios at the core center show little discrepancy to those of a 20% EU bare system, FCA I-5. The neutron spectrum at the center of the 20% EU core is almost independent of the kind of reflectors. From the results of the reaction rate traverse by the detectors of different energy response, it became clear that the neutron spectrum in the reflector was quite different from that in the core. However, only a small variation in the neutron spectrum is observed in the central zone of each region. (Japan)

55402 (JAERI-Memo–4002) CONSTRUCTION OF THE JRR-1. (Japan Atomic Energy Research Inst., Tokyo). 1 May 1970. (In Japanese). NTIS (U. S. Sales Only).

JRR-1 was the first reactor to be constructed in Japan; it went critical on Aug. 27, 1957. The reactor was made by Atomics International in the United States. The procedure leading to the completion of JRR-1, including the construction works performed, is described. (auth)

55403 (JAERI-Memo–4004) SEMI-EXPERIMENTAL MEASUREMENT OF EFFECTIVE DELAYED NEUTRON FRACTION OF A FAST REACTOR SYSTEM BY APPLICATION OF PULSED NEUTRON TECHNIQUE. Hiraoka, Toru; Nakano, Masafumi; Konishi, Toshio (Japan Atomic Energy Research Inst., Tokyo). Apr 1970. (In Japanese). NTIS (U. S. Sales Only).

The effective delayed neutron fraction of FCA I-5 was measured by applying the pulsed neutron technique and the eigenvalue calculation checked by the critical experiments. The reactivity change due to the distribution of small voids in the core was measured. The distribution of small voids causes the change of the leakage characteristics. The reactivity change was estimated in the unit of $\Delta K/K$ by eigenvalue calculations. From the ratio between them, it is possible to compute the β_{eff} directly. The effective delayed neutron fraction of FCA I-5 thus obtained is $(7.09 \pm 0.12) \times 10^{-3}$. (auth)

55404 (JAERI-Memo–4052) SUMMARY OF THE JRR-2 IN-CORE IRRADIATION FACILITY AND IRRADIATION EXPERIENCES. (Japan Atomic Energy Research Inst., Tokyo). 31 May 1970. (In Japanese). NTIS (U. S. Sales Only).

A summary of the JRR-2 in-core irradiation facility and irradiation experiences for the past years is presented. The JRR-2 core consists of 22 MTR type fuel (^{235}U content 195 gr/element) and 2 cylindrical fuel elements (^{235}U content 120 gr/assembly). Dimensions of in-core irradiation capsule are 34 mm dia. × about 700 mm long. The capsule is inserted into center hole in cylindrical fuel element. (auth)

55405 (JAPFNR–43) PRELIMINARY CONCEPTUAL DESIGN OF JOYO MK-II IRRADIATION APPARATUS. (Tokyo Shibaura Electric Co. Ltd., Kawasaki, Kanagawa Prefecture (Japan)). Translation of report PNC-N-141-72-1-13. 12p. Dep. NTIS (U. S. Sales Only).

For Power Reactor and Nuclear Fuel Development Corp., Tokyo (Japan).

PNC has a plan to set up the irradiation facilities in the experimental fast reactor JOYO around 1978 as one of the important programs of JOYO MK-II Project. The preliminary conceptual design is described. (auth)

55406 (NASA-TM-X–2440, pp 618-19) SPACE RADIATION STUDIES AT THE WHITE SANDS MISSILE RANGE FAST BURST REACTOR. De La Paz, A. (Army Missile Test and Evaluation, White Sands Missile Range, N. Mex.). Jan 1972.

From Symposium on natural and manmade radiation in space; Las Vegas, Nev. (1 Mar 1971).

The operation of the White Sands Missile Range Fast Burst Reactor is discussed. Space radiation studies in radiobiology, dosimetry, and transient radiation effects on electronic systems and components are described. Proposed modifications to increase the capability of the facility are discussed. (auth)

55407 (ORNL-TM–3769) STUDY OF REACTIVITY BALANCE DURING STARTUP OF THE HFIR. Allen, J. W.; Sides, W. H. Jr. (Oak Ridge National Lab., Tenn.). Aug 1972. Contract W-7405-eng-26. 16p. Dep. NTIS.

The reactivity balance during startup in the High Flux Isotope Reactor calculated by a mathematical model on a CDC 1700 online computer was studied. The balance was improved by postulating a new reactivity term due to a power coefficient (temperature feedback) and one due to the burn-out of a target poison, ^{135}Xe. (auth)

55408 (ORNL-TM–3949) BULK SHIELDING FACILITY QUARTERLY REPORT, APRIL, MAY, AND JUNE OF 1972. Tabor, W. H.; Hurt III, S. S.; Lance, E. D. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 23p. Dep. NTIS.

The BSR operated at an average power level of 1879 kW for 38.9% of the time during April, May, and June. Water-quality control in both the reactor primary and secondary cooling systems was satisfactory. There were no unscheduled shutdowns during the quarter. The BSR was operated at low and variable power during this quarter for 51.6 hrs to provide training for nuclear engineering students. The PCA was operated 11 days during this quarter. (auth)

55409 (RD/B/N–2272) ZERO ENERGY REACTOR FACILITY AT B.N.L., 1972. Clarke, R. W.; Heaven, S. H.; Staniland, R. J.; Walsh, M. (Central Electricity Generating Board, Berkeley (England). Berkeley Nuclear Labs.). May 1972. 26p. (BNLSC–63). Dep. NTIS (U. S. Sales Only).

A zero energy reactor facility at the Berkeley Nuclear Laboratories is capable of accommodating a graphite moderated reactor, fueled with low enrichment uranium (<7% ^{235}U) in the form of the Mk. I, Mk. II or Mk. III G.C.R. concept. Provision is also available for handling low enrichment plutonium bearing ceramic fuel. The first Mk. III type reactor constructed in the facility is described in detail, including the automatic and administrative controls which, while preserving normal safety procedures, were planned to meet the flexibility of core design required for a variety of experiments. Improvements made to make the facility suitable for the new program were: a greatly extended control system; the ability to handle plutonium bearing ceramic fuels; changes in control logic for more flexibility; and improve ergonomic design of the control room layout. (auth)

55410 HIGH FLUX FRANCO–GERMAN REACTOR. CIVIL ENGINEERING AND CONFINEMENT OF THE REACTOR BUILDING. Levet, R. (CEN de Saclay, Gif-sur-Yvette, France). Bull. Inform. Sci. Tech. (Paris); No. 165, 77-85(Dec 1971). (In French).

The civil engineering aspects of the plant are dependent upon the characteristics of site, which were determined by meteorology, soil structure investigations, hydrology and seismology. The HFR building is designed to house the reactor and its installations, to provide a containment in relation to the exterior, and to provide an internal containment affording the appropriate degree of protection at the different levels, and for the different uses of the reactor. Calculations indicate that the inner concrete envelope is capable of supporting an internal pressure overload in excess of that which would be produced by the maximum accident (120mbar). The gas leak rate towards the outside is considerably reduced by the double concentric envelope within which fresh air is maintained at a pressure in excess of that likely to be produced in the inner envelope in the case of an accident, the rapid shutting off of the valves isolating the ventilation system. The waste evacuated by the chimney, after crossing the filters and vacuum traps, varies with the radioactivity of confined air. Internally, the places subjected to tritium contamination risks are isolated by pressure differences such that these areas are protected from any contamination arising in the operation area. (France)

55411 HIGH FLUX FRANCO–GERMAN REACTOR. SAFETY ASPECTS. Bureau du Colombier, J. (CEN de Saclay, Gif-sur-Yvette, France); Reutler, H. Bull. Inform. Sci. Tech. (Paris); No. 165, 87-93(Dec 1971). (In French).

A classical material, whose characteristics under similar conditions were known, was chosen for the construction of the reactor. In the transition region, the power evacuation from the core of the reactor is assured with a minimum margin of 1.25 (1.5 in operation) in relation to the flow redistribution phenomenon in the fuel element cooling channel. The primary circuit and the associated equipment are designed so that under no circumstances can the reflector be emptied and the core left exposed. The double confinement avoids any possible contact between the air and the deuterium of the cold source in the case of the failure of one of the walls. A double enclosure with an interspace containing He under pressure prevents any contact between the water and graphite of the hot source. The swimming pool walls are capable of undergoing a plastic deformation sufficient to absorb most of the mechanical energy generated during a major accident. The reactor confinement vessel also has a double envelope (concrete inner protection wall, stainless steel outer wall, an excess pressure maintained in the space between the walls). (France)

55412 HIGH FLUX FRANCO–GERMAN REACTOR. PRESENTATION OF THE REACTOR AND ITS PRINCIPAL CHARACTERISTICS. Chatoux, J. (CEN de Grenoble, France). Bull. Inform. Sci. Tech. (Paris); No. 165, 9-26(Dec 1971). (In French).

The importance of neutron experiments is recalled and their possible applications are reviewed. A survey of the performance required from a high flux reactor acting as a neutron source is presented together with the principal characteristics. (France)

55413 SIGNALING SYSTEM FOR PNEUMATIC INSTALLATIONS IN NUCLEAR REACTORS. Dieck, Enoui Leopold (to Kernforschungsanlage). U. S. Patent 3,681,194. 1 Aug 1972. Priority date 9 Mar 1968, Germany.

A pneumatic-tube installation for positioning a sample in the flux of a reactor is provided with a metallic tube extending from a stop for the sample. An electro-acoustical transducer, preferably a microphone, is disposed along the tube at a location outside the reactor core to detect the sound wave transmitted along the tube upon engagement of the sample with the stop. The output of the transducer is applied through a variable-threshold (amplitude comparator) trigger circuit (Schmitt trigger) to a switching device whose output, in turn, can initiate a timing cycle. An optical detector ahead of the microphone is connected through an AND-gate designed to enable the switching device so that the system responds only at the sound of impact with the stop. (Official Gazette)

55414 HIGH FLUX FRANCO–GERMAN REACTOR. THE COLD NEUTRON SOURCE OF THE HIGH FLUX REACTOR. Ageron, P. (Institut Max von Laue–Paul Langevin, Grenoble, France); Astruc, J. M.; Geipel, H.; Verdier, J. Bull. Inform. Sci. Tech. (Paris); No. 166: 17-22(Jan 1972). (In French).

The reasons why a liquid deuterium source was chosen as a very low energy neutron source are analyzed. A description of the main elements of this cold source is then given: dueterium circuit containing 8 kg D_2 (4 kg of which are liquefied); helium refrigerator having a power of 10 kW between 18.6 and 24.5K; control panels. The working principle of the cold source, which has a very simple design ensuring maximum reliability, is examined. (France)

55415 HIGH FLUX FRANCO–GERMAN REACTOR. COOLING CIRCUITS AND DETRITIATION INSTALLATION. Chazalon, M.; Lecuyer, Y. (CEN de Saclay, Gif-sur-Yvette, France). Bull. Inform. Sci. Tech. (Paris); No. 165, 57-66(Dec 1971). (In French).

The principle of the cooling circuits is as follows: a primary circuit which is completely contained in a containment vessel transfers power directly, using classical exchangers, to a secondary circuit. The primary circuit contains heavy water for the core circuits, and demineralized water for the swimming pool and channel circuits. The secondary circuit is an open circuit using water pumped from and evacuated back into the Drac River. A complete diagram is given for these circuits. The utilization of the different parts of the cycle is discussed: the power region, the stopping region, and the natural convection region. The different equipment is also described: exchanger pumps, isolating valves, taps, tubing and materials. The detritiating installation purifies the heavy water. It is capable of eliminating 160 liters of light water/year from water having a hydrogen molar content of 0.004. A tritium diminution of 2.78 for the heavy water is assured, thus enabling an equilibrium activity of 3Ci/liter instead of 80 Ci/liter (without detritiation) to be obtained. A production of 6.87 Nml/h is obtained with a 0.99 ratio. The equipment consists of two principal parts, operating a catalytic exchange and a fractional distillation respectively. (France)

Reactor Components, Fuels, and Accessories

55416 (BNWL–1522-5) AEC REACTOR DEVELOPMENT AND TECHNOLOGY PROGRAMS. Technical Activities Report, October–December 1971; January–March 1972. (Battelle Pacific Northwest Labs., Richland, Wash.). May 1972. Contract AT(45-1)-1830. 66p. Dep. NTIS.

The high temperature Lattice Test Reactor, successfully operated for 4 years in support of high-temperature gas-cooled and molten-salt breeder reactor development, has been defueled and is now in standby status. The reactivity effect of 25 μ PuO_2 particles relative to homogenous fuel, has been calculated. Radiolytic measurements in H_2O and CO were made. A fuel heat-transfer model was developed for inclusion in the COBRA-3B computer program. It was shown that in multi-rod bundles, velocity profile, intensity, and scale were nearly independent of Reynolds number over the range 50,000 to 200,000. Results and analyses are presented on measurements of critical parameters in PuO_2–polystyrene lattices. Correlations of experimental critical data for high burnup Pu solutions were made. ENDF/B cross section data have been checked against integral experiments for a number of fast critical assemblies. (36 references) (J.M.J.)

55417 (CONF-710959) SPECIALISTS' MEETING ON "FISSION AND CORROSION PRODUCT BEHAVIOUR IN PRIMARY SYSTEMS OF LMFBR'S SEPTEMBER 20–22, 1971, BENSBERG/FRG. Summary Report. (International Atomic Energy Agency, Vienna (Austria)). 1971. 232p.

Eighteen papers were presented at the conference. A separate abstract was prepared for each of seventeen papers. It is suggested that cesium is the major contributor to long-term activity. This does not appear to deposit in quantity, but more studies are required to substantiate its behavior and whether it can be cold trapped. There is a lack of information in the release fraction and behavior of iodine and tellurium. (J.M.J.)

For abstracts of individual papers see: 52895, 53121, 55162–55173, 55185, 55226, and 55381.

55418 (GEAP–13788) BEHAVE-2: OXIDE FUEL PERFORMANCE CODE IN TWO SPATIAL DIMENSIONS AND TIME. Oldberg, S. Jr. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Dept.). Feb 1972. Contract AT(04-3)-189. 84p. Dep. NTIS.

BEHAVE-2 is a FORTRAN 4 computer program written for the GE-635 computer. The program calculates the position in space of cladding, fuel, and voidage in an operating oxide fuel pin with unfailed cladding. Axial symmetry is assumed throughout the program. Also calculated are stress, strain, displacement, and temperature fields. Influential processes simulated include cracking of fuel, dilatation of fuel and cladding due to irradiation effects and thermal expansion, fuel densification by stress and diffusion controlled processes, axial slippage or locking at the fuel-cladding interface, and axial flow of fuel. 49 references. (auth)

55419 REACTOR FUEL ELEMENT. Rolf-Woltje (to Gessellschaft fuer Kernenergieverwertung). German Patent 1,464,645. 27 Apr 1972. (In German).

The special feature of this fuel element with high negative fuel temperature coefficient of the reactivity, containing a solid fuel and a solid moderator in one casing, is a thermal insulating layer which separates fuel and moderator from the casing. The thermal insulating layer may be a slit, the moderator may be a metal hydride, moderator and fuel may be contained in a homogeneous internal region either as a mixture or as a chemical compound. (GF)

55420 (AREAEE-141) PIBIMUG: A CODE FOR MULTI-GROUP SLOWING DOWN SPECTRUM CALCULATION IN THE P-1 AND B-1 APPROXIMATIONS FOR THE IBM-1130. El-Cherif, A. I.; Gaafer, M. A.; Nassar, S. F. (Atomic Energy Establishment, Cairo (Egypt). Reactor and Neutron Physics Dept.). 1972. 20p. Dep. NTIS (U. S. Sales Only).

PIBIMUG is a multigroup code for hydrogenous moderated reactors based on P-1 and B-1 approximations. The code is written in a FORTRAN II language suited for the IBM-1130 to provide a powerful nuclear design computing tool equivalent to IBM-704 computer program MUFT-4 and PHILCO-2000 computer program MUFT-5. 4 references. (auth)

55421 (BNWL-CC-2274) USER'S MANUAL FOR DASQHE. Traver, T. M. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab.). 15 Sep 1969. 12p. Dep. NTIS.

An improved technique has been developed to calculate the Dancoff correction for an infinite array of circular rods in square or hexagonal lattices. This technique is coded in a FORTRAN-IV and is called DASQHE. This method has been adopted for use in the thermal reactor analytical physics work. The DASQHE code was modified and coded in FORTRAN-V for use on the UNIVAC-1108 computer. 4 references. (auth)

55422 (CISE-R-243) ANALYTICAL SOLUTION OF THE TWO-SEPARABLE VARIATIONAL SYNTHESIS APPROACH FOR THE TWO-GROUP DIFFUSION r,z EQUATIONS. Bruschi, C.; Pierini, G. (Centro Informazioni Studi Esperienze, Milan (Italy)). Feb 1969. 81p. INIS.

A code is presented which synthesizes the two-dimensional two-group flux of a cylindrical reactor out of one-dimensional solutions of the diffusion equation. The two-separable approximation $\Phi_k(r,z) = u_k^{(1)}(r)\ v_k^{(1)}(z) + u_k^{(2)}(r)v_k^{(2)}(z)$ (k = 1.2) is made where $u_k^{(n)}(r)$'s are trial functions and the $v_k^{(n)}(z)$'s are weight functions. The latter ones are obtained by solving an equivalent four-group diffusion problem in the axial direction with a block-diagonal diffusion matrix. The criticality eigenvalue is that obtained from a run of the MONOS code which is fully included in the new code. The one-dimensional solutions of the two-group (radial and axial) and of the four-group (axial) diffusion problems are obtained by an analytical method. (INIS)

55423 (CISE-R-273) ITERATIVE SOLUTION OF HETEROGENEOUS EQUATIONS IN A FINITE CYLINDRICAL SYSTEM. METHOD OF HARMONICS. Bruschi, C.; Pedretti, F. (Centro Informazioni Studi Esperienze, Milan (Italy)). Sep 1968. 23p. (In Italian). INIS.

A possible approach to the solution of heterogeneous equations in a finite cylindrical system with axial dependence is presented. These equations consider a description in three groups (fast-resonance-thermal) of slowing down and account for absorptions in the epithermal group in addition to fission and thermal absorptions. Moreover the migration properties of the system are properly accounted for through a suitable scheme which interprets the heterogeneous parameters. The method of solution is that of harmonics for the treatment of the z axis. The equations can easily be extended to a multigroup scheme because of their recurrent nature. A possible iterative scheme for the solution of these equations on a digital computer is presented. (INIS)

55424 (CONF-720901-(Bks.1 and 2)) NATIONAL TOPICAL MEETING ON NEW DEVELOPMENTS IN REACTOR PHYSICS AND SHIELDING, SEPT. 12-15, 1972, KIAMESHA LAKE, NY. (American Nuclear Society (USA). Northeastern New York Section). 1972. 1207p. Dep. NTIS $15.00.

Included are 78 papers on calculation and measurement methods for use in reactor shielding and physics analyses. A separate abstract was prepared for each paper. (H.D.R.)

For abstracts of individual papers see: 53252, 54472—54480, 54523, 54566, 54597, 54653—54655, 54676, 54826, 54872, 54937—54942, 55107—55125, 55134, 55140—55144, 55356, 55382—55393, and 55425—55439.

55425 (CONF-720901-(Bks.1 and 2), pp 108-13) EFFECT OF PARTICLE SIZE ON RESONANCE CAPTURE. Goldstein, Rubin (Combustion Engineering, Inc., Windsor, Conn.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The effect that particle size has on the reactivity of a system depends mainly on the size of the particles, the volume fraction of the absorber and the dilution of the lattice. With some restrictions, the resonance integral decreases approximately linearly with increasing particle size. An analytic expression is used that permits a rapid calculation of the effect of particle size on resonance absorption. The mathematical formulation for particularized resonance integrals gives results which are in excellent agreement with experiments performed on gold particles. For the plutonium-fuel compositions and lattice dilutions considered, resonance integrals decreased by more than 10% and the overall reactivity of ESADA criticals decreased by as much as 0.4% for 25 micron particles. (auth)

55426 (CONF-720901-(Bks.1 and 2), pp 162-7) DEVELOPMENTS IN VARIATIONAL THEORY AND PERTURBATION METHODS. Lewins, Jeffery (University Coll., London). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The present usage of variational and perturbation methods in reactor physics is surveyed. (auth)

55427 (CONF-720901-(Bks.1 and 2), pp 168-78) ADVANCES AND CURRENT PROBLEMS IN REACTOR KINETICS. Ott, Karl O. (Purdue Univ., Lafayette, Ind.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Advances and current problems in fast reactor dynamics are surveyed. The general problems are reviewed first in order to provide a framework for the discussion of the recent advances. Further, some results of methodological interest are presented and discussed. 16 references. (auth)

55428 (CONF-720901-(Bks.1 and 2), pp 179-94) GREEN'S FUNCTION COUPLING METHOD FOR TIME-DEPENDENT NEUTRON SLOWING DOWN IN HEAVY MEDIA. Conn, Robert; Sawan, Mohamed (Univ. of Wisconsin, Madison). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A new approach based upon the coupling together via Green's functions of distinctly different calculational methods for different time-energy regimes was developed to calculate the time-dependent neutron flux slowing down in a pulsed, heavy medium. In the approach, different methods are used to solve the slowing down problem in the energy ranges where the chosen method is both advantageous and valid. The slowing down energy range (typically, 14 MeV to thermal when the standard D(t,n) He reaction is used as source) is divided into three different energy regimes where the slowing down mechanisms are distinctly different. The problem in each regime is solved differently and a Green's function approach is used to couple the solutions together. 20 references. (auth)

55429 (CONF-720901-(Bks.1 and 2), pp 195-206) MANY-RESONANCE APPROXIMATION FOR THE NEUTRON ENERGY SPECTRUM. Segev, M. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A study of the effect of a resonance ensemble on the reactor neutron spectrum, based on the properties of the ensemble as a whole, is summarized. The sections present: (a) a qualitative argument for the approximation, (b) the basic formulas, (c) conditions for negligible oscillations in the collision density, (d) a series solution for ν, where exp $(-\nu)$ is the relative change in the collision density per unit lethargy, (e) the generalization of the formulas for slowly varying average resonance parameters, (f) numerical tests of the approximation. (auth)

55430 (CONF-720901-(Bks.1 and 2), pp 207-10) PREDETERMINING STATISTICAL ERRORS IN MONTE CARLO TRANSPORT CALCULATIONS. Amster, Harvey J. (Univ. of California, Berkeley). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The use of ordinary adjoint transport codes to provide statistical error estimates of problems to be run on contemplated Monte Carlo codes is discussed. This would allow the accuracy of a Monte Carlo calculation to be estimated before a code is developed. (H.D.R.)

55431 (CONF-720901-(Bks.1 and 2), pp 229-39) ZERO VARIANCE ESTIMATOR FOR REACTOR CRITICALITY. Kalos, M. H. (New York Univ., N. Y.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A scheme is proposed for biasing in the Monte Carlo solution of reactor criticality problems. Under ideal conditions which require knowledge and correct use of an "adjoint fission neutron distribution" it leads to zero variance estimates of the reactor eigenvalue and other quantities. Also discussed are practical ways of obtaining and representing numerical information about this adjoint function. Of particular interest is the fact that estimates of the needed information for biassing can be obtained as a by-product in the course of an ordinary or biassed calculation. As the biassing is improved, the efficiency with which such estimates are made can be made arbitrarily high. Numerical results from the Monte Carlo solution of a simplified problem are presented to support the anticipation that computing time can be significantly reduced even when perfect biassing is not used. (auth)

55432 (CONF-720901--(Bks.1 and 2), pp 240-51) DETERMINATION OF OPTIMAL K-INFINITY MISMATCH CURVES VIA MODERN CONTROL THEORY. Terney, William B.; Wade, David C. (Knolls Atomic Power Lab., Schenectady, N. Y.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The problem of determining the burnup dependence of k_∞ in the loading zones of a reactor core so as to yield the best reactor performance throughout life is treated as an optimal control problem. An iterative solution scheme based on a gradient approach is derived for solving the resulting two point boundary value equations. Results from sample calculations on realistic design models demonstrate the validity and usefulness of the approach. (auth)

55433 (CONF-720901--(Bks.1 and 2), pp 253-65) SIMULTANEOUS LINE OVER-RELAXATION (SLOR) IN HEXAGONAL LATTICE. Honeck, H. C.; Stewart, J. W. (Savannah River Lab., Aiken, S. C.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A Simultaneous Line Over-Relaxation (SLOR) method was developed for the solution of the one-group difference form of the neutron diffusion equation in regular hexagonal lattices. This method was successfully implemented as a part of a hex-z geometry, multigroup diffusion theory module in the Generalized Reactor Analysis Sub-System (GRASS) of JOSHUA. The theory and equations for this SLOR method and some results are presented. (auth)

55434 (CONF-720901--(Bks.1 and 2), pp 266-74) OPTIMUM ANGULAR SEGMENTATIONS IN NEUTRON TRANSPORT ANALYSIS. Harms, A. A.; Garland, W. J. (McMaster Univ., Hamilton, Ont.). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The problem of specifying optimum angular segmentations in neutron transport analysis is considered. A new directional-group representation using partial-range Legendre polynomials is introduced for this purpose. It is found that this solution formalism can be used to specify angular segmentations which minimize the error of certain neutron transport parameters for a given order of approximation. 9 references. (auth)

55435 (CONF-720901--(Bks.1 and 2), pp 275-92) IMPROVED S_N INNER ITERATION CONVERGENCE CRITERION. Atkinson, Gerald L. (Pentagon, Washington, D. C.); Kerr, William; Dunderstadt, James J. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

The angular flux form of the S_N equations in plane geometry is formulated within a mathematical framework which allows an insight into the mechanics of the convergence process. The infinity-norm of the S_N iteration matrix is explicitly calculated for a problem with a homogeneous isotropically scattering medium. This event allows the calculation of an improved convergence criterion compared to the conventional criterion. This new criterion, along with the demonstrated convergence properties of the S_N algorithm, guarantees that the fractional iterative error is arbitrarily small. (auth)

55436 (CONF-720901--(Bks.1 and 2), pp 599-612) USE OF DATA FROM FAST ASSEMBLIES FOR ADJUSTMENTS OF NEUTRON DATA. Haeggblom, H. (Aktiebolaget Atomenergi, Studsvik, Sweden). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A series of calculations was made for obtaining adjusted neutron data by a simultaneous consideration of a large number of integral data from fast reactors. In the first stage, sensitivities of k_{eff} and reaction rate ratios to changes in neutron data were calculated. The second stage consisted of a least-squares fit of calculated integral data to experimental results. The errors in the integral data and in the energy-dependent data were assumed to follow Gaussian distributions. Correlation factors were introduced between a number of energy-dependent data. The calculations were based upon 57 integral data from 31 different assemblies and give corrections for 31 neutron data divided into 6 energy groups. The Swedish neutron data library was used as the starting point, but comparisons were made between the most important data in this library and ENDF/B-II and UKNDL. The results included standard errors of the adjusted energy-dependent data, the remaining discrepancy between measured and calculated integral quantities, and the corresponding standard errors. The adjusted neutron data were compared with adjusted data obtained in Winfrith, UK. In most cases, a satisfactory agreement between the results from both laboratories was established. The most interesting result was that the adjusted fission cross section in ^{235}U and the capture cross section in ^{238}U were significantly lower than the data in ENDF/B-II over the most important part of the energy region for fast reactors. 9 references. (auth)

55437 (CONF-720901--(Bks.1 and 2), pp 713-23) VERIFICATION OF A NEW METHOD FOR CALCULATING AND MEASURING GENERATION TIME IN A SUBCRITICAL FAST REACTOR. Buhl, A. R. (Oak Ridge National Lab., Tenn.); Robinson, J. C. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

A new method is discussed for calculating and measuring the generation time (Λ) in a subcritical fast reactor using a recently developed transfer and scattering kinetics scheme (TASK). The method is an extrapolation of a four-node fluctuations theory in which the generation time in a thermal reactor was shown to be equal to the slope of the tangent of the phase angle from the power spectra between a high-energy-sensitive and low-energy-sensitive detector. The TASK method directly computes the prompt die-away time constant and the Λ based on the tangent method. To substantiate TASK calculations, Λ was compared with the experimental value at critical and computed Λ using the standard lambda (λ) mode and omega (ω) mode definitions for critical and for three subcritical states of the Fast Test Reactor. 10 references. 55438 (CONF-720901--(Bks.1 and 2), pp 943-58) REVIEW OF FAST NEUTRON SPECTRUM MEASUREMENTS. Preskitt, C. A. (Gulf Radiation Tech., San Diego, Calif.); Malaviya, B. K.; Bennett, E. F. 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

Rapid advancement has taken place in the experimental technology for determining fast neutron spectra. In reactor systems, the most important techniques are neutron time-of-flight and proton-recoil proportional chambers. For certain shielding applications, other integral spectrometers are important. A wealth of experimental data is available, and most of this has been analyzed in varying degrees by the laboratories responsible for the measurements. However, the full value of the available data will only be realized when it has been widely distributed, and is analyzed using current cross sections by a larger number of groups, especially those involved in reactor design. 34 references. 55439 (CONF-720901--(Bks.1 and 2), pp 1183-91) GROUP CONSTANT GENERATION FOR THE RESOLVED RESONANCE REGION. Ruehle, R.; Emendoerfer, D.; Gulden, W.; Lutz, D. (Univ., Stuttgart). 1972.

From Meeting on new developments in reactor physics and shielding calculations; Kiamesha Lake, NY. (12 Sep 1972).

In order to check different methods for group cross section generation in the resolved resonance region, the computer code RESAB was developed. RESAB solves the slowing down Boltzmann equation in micro energy-group representation by exact first flight collision probabilities for multiregion cells with white cell boundaries. The input cross sections for RESAB are calculated as functions of energy and temperature from ENDF/B II resonance parameters and smooth data from ENDRES. Based on the same ENDF/B II cross section set, group constants were evaluated with the generally available multigroup cross section code GGC-4 in the case of a PWR pin cell. The results of RESAB- and GGC-4- calculations are discussed from a physical point of view. (auth)

55440 (INIS-mf--195) MULTIGROUP NEUTRON TRANSPORT THEORY IN PLANE GEOMETRY. Clancy, B. E. (Wollongong Univ. Coll. (Australia)). Oct 1970. 178p. NTIS. Thesis.

The multigroup form of the transport equation describing the steady state population of neutrons in a plane geometry is studied. The existing techniques of finding numerical solutions to the transport equation in the discrete ordinate approximation are considered in relation to the deep penetration problem of reactor shielding theory. Some of the computational difficulties are examined and a major one found to be the excessive time used in iterating the equation over a large number of mesh points. A review is given of Chandrasekhar's reflection function method for finding solutions to an astrophysical problem equivalent to the one group form of the deep penetration problem in finite and semi-infinite homogeneous media. After generalizing the method it is shown how accurate solutions may be obtained for realistic multigroup problems in semi-infinite media without the need for spatial iterations. For many deep penetration problems in finite heterogeneous slabs only certain integrals of the angular neutron fluxes emerging from the slabs are of interest. A variational principle is devised with the aid of which solutions to appropriately chosen semi-infinite medium problems can be used to calculate directly approximations to any integral of these emerging angular fluxes. From the results obtained with a computer program embodying these methods it is found that the significant savings in computing time can be achieved when a number of survey calculations need to be performed. Some possible applications of the reflection function method to other problems in neutron transport theory are examined briefly. (auth) (INIS)

55441 (LA-DC-72-660) REACTOR POWER TRANSIENT STUDIES. Stratton, W. R.; Engle, L. B.; Peterson, D. M. (Los Alamos Scientific Lab., N. Mex.). 2 Jun 1972. 14p. (CONF-721006-1). Dep. NTIS.

From International conference on engineering of fast reactors for safe and reliable operation; Karlsruhe, Germany (9 Oct 1972).

The Pajarito Dynamics (PAD) code is described in general terms. Its use for reactor power transient calculations, especially its ability of describing not only total fission energy release, but also a measure of the conversion of thermal energy to explosive energy during the power transient, is evaluated. (J.M.J.)

55442 (RT/FI-(72)11) REACTOR NEUTRON NOISE ANALYSIS: STATE OF THE ART, 1971. Pacilio, N. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 21 Mar 1972. 33p. Dep. NTIS (U. S. Sales Only).

A short presentation is given of reactor-noise time-analysis techniques. Instead of the traditional exposition of theoretical, computational and experimental problems implied in this nuclear reactor physics branch, a documentary approach is tried. The subject is treated according to the following perspectives: (1) what is noise?'', (2) prehistory of reactor-noise analysis, (3) an example of general theory, (4) some considerations on time-analysis methods, (5) recent advancements, (6) present and future directions, and (7) reactor-noise in power systems. (auth)

55443 (RT/FI-(72)13) 259 REFERENCES IN REACTOR NOISE TIME ANALYSIS. Pacilio, N. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 7 Apr 1972. 96p. Dep. NTIS (U. S. Sales Only).

An extensive reference list is given of reports, articles and books covering the matter of reactor-noise analysis in the time-domain. The comprehensive bibliography is divided into six main sections, which are entitled: monographies, surveys and general introductions; stochastic and kinetic theory; correlation analysis among neutron detection pulses; analysis of the moments of neutron distribution; analysis of the probability of a neutron detection; and correlation analysis among the signs of the power level fluctuations. Two minor sections are dedicated to gamma noise and information theory. The list is assembled according to two other criteria. First, a chronological year-after-year disposition of the various works is presented; second, an alphabetical list of authors is given and the scientific production is summarized for each of them. (auth)

55444 (TRG-2189) SPECTRA OF ENERGY RELEASED BY THERMAL NEUTRON CAPTURE. Sidebotham, E. W. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group). 1972. 8p. INIS.

Neutron capture gamma spectra are required to determine the true heat generation in reactors and its distribution over the core materials. It was observed that experimentally determined spectra although accurately determined in fine detail rarely equate to the binding energy because of a continuum of energies in the middle range. A method was devised to allocate the gamma energy spectra, corrected to the binding energy, to certain kernel energies which are of importance in determining the heating distribution in reactor core materials. Tables of thermal neutron capture gamma and radioactive decay energy spectra cover elements, compounds, alloys and fission product groups more frequently present in reactor cores. (auth) (INIS)

55445 (Y-KC-96) RELIABILITY OF CRITICALITY SAFETY CALCULATIONS USING THE NEW CODES CSC AND KENO. Crume, E. C. Jr. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 21 Apr 1967. Contract W-7405-eng-26. 14p. Dep. NTIS.

The present state of the reliability of criticality safety calculations using the two Monte Carlo codes CSC and KENO is discussed. It is concluded that reliable system criticality calculations can be made for systems of a number of compositions of general interest in criticality safety in which the only fissile isotope is ^{235}U at high enrichment. 15 references. (auth)

55446 CONSISTENT APPROACH OF HETEROGENEOUS THEORY LEADING TO A DIPOLAR FORMULATION. I. FORMULATION. Berna, Ph. (SERMA, Gif-sur-Yvette, France). J. Nucl. Energy; 26: No. 6, 303-17(Jun 1972).

Starting from a theorem established in transport theory, a new dipolar heterogeneous formulation was developed where channels were characterized by parameters depending on the environment only through cross-sections. The formulas for these parameters could be calculated in less than 0.3 sec (by channel type) on an IBM 360/91. The FODITH code based on this formulation gave an acceptable value for the experimental reactivity of a reactor having 3 narrow zones of different scattering properties (deviation lower than 200 pcm). The code therefore gave results in better agreement with the experiment than other codes based on diffusion or source-sink theory. The new formulation appears as the extension of the ABH method initially developed for cell calculations to heterogeneous reactor calculations. (auth)

55447 CONSISTENT APPROACH OF HETEROGENEOUS THEORY LEADING TO A DIPOLAR FORMULATION. II. CALCULATION OF HETEROGENEOUS PARAMETERS. Berna, Ph. (SERMA. Gif-sur-Yvette, France). J. Nucl. Energy; 26: No. 6, 319-31(Jun 1972).

The detailed calculation of the polar and dipolar parameters used in a new consistent formulation for heterogeneous theory is presented. For the sake of simplicity it is assumed that the channel contains only two concentric media, a central fuel rod and an annular cavity, and that collisions are isotopic. (auth)

55448 IMPROVED COMPUTER METHOD FOR POLARITY CROSS CORRELATION. Cohn, C. E. (Argonne National Lab., Ill.). Nucl. Instrum. Methods; 103: No. 2, 257-9(1972).

An improved computer method for polarity-correlation noise analysis yields increased throughput and provides for monitoring of discriminator bias. (1 figure) (auth)

Core Thermal Hydraulics

55449 (KFK-1503) LAMINAR FLOW IN ROD BUNDLES. Rehme, K. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Sep 1971. 5p. INIS.

Values for the geometrical parameter, K, in the expression lambda × Fe = K (pressure-drop law) were calculated for incompressible, isothermal, perfect laminar flow along hexagonal and square bundles of rods enclosed in hexagonal and square conduits respectively. The pressure drop in bundles consisting of a large number of rods can be calculated with the aid of K values obtained for the subchannels by numerical integration of the Navier–Stokes equation. Investigations covered a large range of rod spacings and wall separations. The result obtained are compared with data given in the literature. On the basis of the results, the pressure drop for flow in rod bundles can be calculated sufficiently accurately in all likely cases. (INIS)

55454 (NP-19412) RADIATION HEALTH AND SAFETY. Annual Report for the Year Ended 31st December 1971. (New South Wales Univ., Kensington (Australia)). 17p. Dep. NTIS (U. S. Sales Only).

Aspects of radiation health and safety under the auspices of the radiation protection officer are reviewed for the year 1971. These include personnel monitoring, disposal of radioactive waste, radiation incidents, radiation insurance, purchase and transfer of radioactive sources, investigations and reports on school projects and research on electrostatic collection of particular fission products and their contribution to a scintillation detector signal. (Australia)

55455 (OSU-CISRC-TR-72-8) PATTERN RECOGNITION BY RETINA-LIKE DEVICES. Weiman, Carl F. R.; Rothstein, Jerome (Ohio State Univ., Columbus. Computer and Information Science Research Center). Jul 1972. 154p.

55456 (SZS-136) 10 YEARS NATIONAL CENTER FOR RADIATION PROTECTION OF THE GERMAN DEMOCRATIC REPUBLIC. (Staatliche Zentrale fuer Strahlenschutz, Berlin (East Germany)). Aug 1972. 72p. (In German). Dep. NTIS (U. S. Sales Only).

The organization, technical and personnel conditions established in the GDR to fulfill the medical tasks in radiation protection are described. These include precautions and protective measures at the level of the individual user, as well as on a national scale, i.e., in the Division of Radiation Protection Medicine of the National Center for Radiation Protection. The necessity of close cooperation between the medical supervisors of radiation workers and the specialized clinical diagnostic installation of the Division of Radiation Protection Medicine is shown. The described system of medical supervision of persons working with radiation seems to be an appropriate countermeasure against all imaginable hazards caused by ionizing radiation to man. (G.F.)

55457 (TID-26141) APPLICATIONS OF COMPUTERS AND DIGITAL TECHNIQUES IN CLINICAL AND INVESTIGATIVE NUCLEAR MEDICINE. Erickson, Jon Jay (Vanderbilt Univ., Nashville, Tenn.). May 1972. 311p. Dep. NTIS.

Thesis.

An integrated hardware/software system for computer collection and analysis of scintillation camera radionuclide imaging data in a clinical and research oriented nuclear medicine laboratory is described. (auth)

55458 STATE OF ENFORCEMENT OF RADIATION INJURY PREVENTION LAW IN 1970. Genshiryoku Iinkai Geppo; 16: No. 10, 12-18(Oct 1971). (In Japanese).

Recently, the use of radioisotopes and radiation generating equipment has increased steadily and has become diversified in private businesses, medical treatment, research, and education. Accordingly, enforcement of the law concerning prevention of radiation injuries due to the use of radioisotopes and other radiation sources is very important. In March 1971, the number of business establishments using radiation was 2,091, an increase of 256 over the previous year. This is due to a rapid increase in the use of gas chromatography equipment and sulfur analyzers for pollution prevention measures. The establishments include 39.2% private businesses, 29.5% medical institutions, 20.4% research institutions, 7.6% educational facilities, and 3.3% others. Expansion in the private businesses is especially conspicuous. The establishments are distributed all over Japan, but ⅓ of them concentrate in Tokyo, Kanagawa, and Osaka. The number of the establishments for sale was 77, and that for waste disposal was six, in March 1971. The utilization of radioisotopes and other radiation sources will increase more and more hereafter, especially in the private businesses. It is predicted that radiation equipment such as thickness gauges, level gauges, and sulfur analyzers will be employed on a full scale for the purpose of production control, product control, and labor saving. The number of qualified chief radiation technicians was 8,156 in March 1971, distributed mainly in large enterprises and research institutions. Since April 1958, spot inspection was carried out in 3,690 cases according to the law. 2,887 applications and notifications were received in 1970 concerning radiation injury prevention. (Japan)

55459 REVISION OF THE LAWS AND REGULATIONS CONCERNING INDEMNITY FOR DAMAGE DUE TO ATOMIC ENERGY AND ATTENDANT REVISION OF ATOMIC ENERGY INSURANCE. Hokaku, Nobuyoshi (Nippon Fire and Marine Insurance Co. Ltd., Tokyo). FAPIG (Tokyo); No. 63, 169-72(Nov 1971).

The system of indemnity for damage due to atomic energy in Japan consists of two laws, the law concerning the indemnity for damage due to atomic energy and the law concerning compensation contract in the indemnity for damage due to atomic energy. Since the establishment of this system in 1961, more than nine years have elapsed. Conspicuous development has been achieved in the field of atomic energy during that period, and various problems to be examined arose on the content and administration of this system. Also, international treaties were adopted in order to unify the indemnity system. The Japanese government established a special committee for the examination of the indemnity system for damage due to atomic energy in 1969, and the examination was carried out. As a result, a revision of the laws was enforced in Oct. 1971. The gist of the idemnity system lies in faultless responsibility of and concentration of the responsibility on atomic energy enterprises, compulsion of indemnity measures for the damage, and aid by the government. Main items of the revision are limitation of right demanding compensation of the atomic energy enterprises, raise of indemnity amount for the damage, treatment at the time of nuclear fuel transportation between atomic energy enterprises, and treatment of nuclear ships. Revision of atomic energy insurances was minimized because of a small revision of the laws. It was enforced on Oct. 1, 1971. The revised insurances are indemnity responsibility insurance in atomic energy facilities, indemnity responsibility insurance in atomic energy transportation, and atomic energy property insurance. A newly established insurance is indemnity responsibility insurance for damage of nuclear ship operators. (Japan)

55490 (COO–1495-17) CALCIUM AND STRONTIUM TRANSPORT TO PLANT ROOTS. Elgawhary, S. M.; Malzer, G. L.; Barber, S. A. (Purdue Univ., Lafayette, Ind. Dept. of Agronomy). 1972. Contract AT(11-1)-1495. 32p. Dep. NTIS.

55491 (COO–1562-17) CANAVANINE DEATH AND THE MECHANISM OF DNA REPLICATION IN E. COLI. Progress Report, August 1, 1971–August 1, 1972. Rogers, Palmer (Minnesota Univ., Minneapolis. Dept. of Microbiology). Aug 1972. Contract AT(11-1)-1562. 5p. Dep. NTIS.

55492 (COO–1585-22) RESEARCH ON ATMOSPHERIC DIFFUSION AND TURBULENCE. Final Report. Kao, S. K. (Utah Univ., Salt Lake City. Dept. of Meteorology). Jul 1972. Contract AT(11-1)-1585. 142p. Dep. NTIS.

55493 (COO–1599-58) METABOLISM OF DISSOLVED AND PARTICULATE DETRITAL CARBON IN A TEMPERATE HARDWATER LAKE. Wetzel, Robert G.; Rich, P. H.; Miller, M. C.; Allen, H. L. (Michigan State Univ., Hickory Corners. W. K. Kellogg Biological Station). [nd]. Contract AT(11-1)-1599. 106p. (CONF-720546–1). Dep. NTIS.

From Symposium on detritus and its ecological role in aquatic ecosystems; Pallanza, Italy (May 1972).

55494 (COO–1599-63) INTERACTION OF YELLOW ORGANIC ACIDS WITH CALCIUM CARBONATE IN FRESHWATER. Otsuki, Akira; Wetzel, Robert G. (Michigan State Univ., Hickory Corners. W. K. Kellogg Biological Station). 1972. Contract AT(11-1)-1599. 8p. Dep. NTIS.

55495 (COO–1627-22) PHOTO-INITIATED PROCESSES IN VISION. Technical Progress Report for the Period November 15, 1971–November 14, 1972. Guzzo, Anthony V. (Wyoming Univ., Laramie. Dept. of Chemistry). [nd]. Contract AT(11-1)-1627. 4p. Dep. NTIS.

55496 (COO–1627-23) PHOTO INITIATED PROCESSES IN VISION. Three Year Report for the Period November 15, 1969–November 14, 1972. Guzzo, Anthony V. (Wyoming Univ., Laramie. Dept. of Chemistry). [nd]. Contract AT(11-1)-1627. 22p. Dep. NTIS.

55497 (COO–1630-29) METABOLISM OF THE RARE EARTHS FOLLOWING INHALATION: PATHOLOGIC AND BIOCHEMICAL RESPONSE IN THE LUNG AND OTHER ORGANS. Final Report for Period to September 15, 1972. Berke, Harry L. (Wayne State Univ., Detroit, Mich.). 1972. Contract AT(11-1)-1630. 21p. Dep. NTIS.

55498 (COO–1668-46) MECHANISMS OF CALCIUM TRANSPORT IN SMALL INTESTINE. Overall Review of the Contract, January 1, 1970–September 1, 1972. DeLuca, H. F. (Wisconsin Univ., Madison). 1972. Contract AT(11-1)-1668. 24p. Dep. NTIS.

55499 (COO–2003-17) NUTRIENT ENRICHMENT AND EUTROPHICATION OF LAKE MICHIGAN. Progress Report for the Period November 1, 1968–July 31, 1972. Schelske, Claire L. (Michigan Univ., Ann Arbor. Great Lakes Research Div.). Jul 1972. Contract AT(11-1)-2003. 26p. Dep. NTIS.

55500 (COO–2048-7) BASIS FOR DESIGN ON ALLOWABLE PLASTIC STRAIN. Spretnak, Joseph W.; Tilton, Earl M. (Ohio State Univ., Columbus). 1971. 35p. (CONF-710903–32). Dep. NTIS.

From first international conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

55501 (COO–2118-35) ANALYSIS OF TEXTURE. McCormick, B. H.; Jayaramamurthy, S. N. (Illinois Univ., Urbana. Dept. of Computer Science). Jul 1972. Contract AT(11-1)-2118. 91p. (UIUCDCS-R–72-531). Dep. NTIS.

55502 (COO–2126-7) [STUDY OF VIBRATIONAL EXCITATIONS IN AMORPHOUS AND CRYSTALLINE SOLIDS]. Technical Progress Report, December 1, 1971–August 30, 1972. (Chicago Univ., Ill.). [nd]. Contract AT(11-1)-2126. 5p. Dep. NTIS.

55503 (COO–2208-1) STUDY TO DETERMINE THE SIZE AND SHAPE OF THE AVAILABLE SPACE IN THE INTRATHORACIC AND INTRAABDOMINAL CAVITY FOR A TOTALLY IMPLANTABLE CARDIAC PROSTHESIS. Interim Progress Report, February 15–May 1, 1972. (Cleveland Clinic Foundation, Ohio (USA). Dept. of Artificial Organs). 1972. Contract AT(11-1)-2208. 34p. Dep. NTIS.

55504 (COO–2223-1) SPIN LABELED MEMBRANES. Progress Report, November 1, 1971–August 8, 1972. Keith, Alec D. (Pennsylvania State Univ., University Park. Dept. of Biophysics). [nd]. 11p. Dep. NTIS.

55505 (COO–3012-21) IMMUNOCHEMICAL STUDIES WITH THE CARCINOEMBRYONIC ANTIGEN. Reif, Arnold E.; Robinson, Cynthia M.; Naeim, Faramarz; de la Maza, Luis M. (Tufts Univ., Boston, Mass. Dept. of Surgery. Boston City Hospital, Mass. (USA). Mallory Inst. of Pathology). [nd]. Contract AT(11-1)-3012. 15p. (CONF-720208–3). Dep. NTIS.

From second conference on embryonic and fetal antigens in cancer; Oak Ridge, TN. (14 Feb 1972).

55506 (COO–3120-2) EFFECT OF SPATIAL COHERENCE ON THE PHOTOELECTRIC COUNTING STATISTICS OF GAUSSIAN LIGHT. Technical Report No. 13. Cantrell, C D ; Fields, , John R. (Princeton Univ., N. J. Joseph Henry Labs.). 3 Apr 1972. Contract AT(11-1)-3120. 90p. Dep. NTIS.

55507 (COO–3150-6) THERMAL RESISTIVITY AND THERMAL MAGNETORESISTIVITY OF POTASSIUM. Newrock, R. S.; Maxfield, B. W. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jul 1972. 12p. Dep. NTIS.

55508 (COO–3151-4) FAR INFRARED SURFACE RESISTANCE OF Cu:Fe; DYNAMICS OF A KONDO SYSTEM. Braendli, G.; Derbenwick, S. R.; Murata, K. K.; Sievers, A. J.; Wilkins, J. W. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jul 1972. 13p. Dep. NTIS.

55509 (COO–3151-5) HYDROSTATIC PRESSURE STUDY OF THE AFMR IN $FeCl_2$. Johnson, K. C.; Sievers, A. J. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jul 1972. 13p. Dep. NTIS.

55510 (COO–3151-6) EXPERIMENTAL EVIDENCE FOR EXCHANGE POLARIZATION IN SUPEREXCHANGE INTERACTIONS. Johnson, K. C.; Sievers, A. J. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jul 1972. 9p. Dep. NTIS.

55511 (COO–3151-8) RESONANT SCATTERING. Pohl, R. O. (Cornell Univ., Ithaca, N. Y. Dept. of Physics). [nd]. Contract AT(11-1)-3151. 3p. Dep. NTIS.

55512 (COO–3151-139) PHONON GENERATION IN $KCl{:}Li^+$ AND $KCl{:}OH^-$ WITH PULSED ELECTRIC FIELDS. Goubau, W. M. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). 28 Jun 1972. Contract AT(11-1)-3151. 25p. Dep. NTIS.

55513 (COO–3158-10) COMMENTS ON THE RANGE OF APPLICABILITY OF THE GRAIN BOUNDARY (SECONDARY) DISLOCATION MODEL TO HIGH ANGLE GRAIN BOUNDARIES. Balluffi, R. W.; Tan, T. Y. (Cornell Univ., Ithaca, N. Y. Dept. of Materials Science and Engineering). 1972. Contract AT-(11-1)-3158. 9p. Dep. NTIS.

55514 (COO–3158-11) CALCULATION OF CORRELATION EFFECTS FOR GRAIN-BOUNDARY AND DISLOCATION-PIPE SELF-DIFFUSION. Robinson, J. T.; Peterson, N. L. (Cornell Univ., Ithaca, N. Y. Materials Science Center). Jul 1972. 18p. Dep. NTIS.

55515 (COO–3161-3) APPROXIMATE PHONON FREQUENCY DISTRIBUTIONS FOR FCC LENNARD–JONES HARMONIC CRYSTALS. Pollock, E. L. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). May 1972. 34p. Dep. NTIS.

55516 (COO–3161-4) PAIR POTENTIAL IN LIQUIDS FROM THE EXACT BORN-GREEN EQUATION: I. MODEL TESTING. Wang, Shein-shion (Guelph Univ. (Ontario). Dept. of Physics); Krumhansl, J. A. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jun 1972. 21p. Dep. NTIS.

55534 (ITF-72-27-P) VIBRONIC ABSORPTION SPECTRUM OF MOLECULAR DIMERS. Semenets, T. I. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 16p. (In Russian). Dep. NTIS (U. S. Sales Only).

55535 (ITF-72-29-P) ON THE KINETICS OF THE WEAKLY INHOMOGENEOUS STATES IN THE "FLUID-GAS" TYPE SYSTEM. Prikhod'ko, V. I. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 19p. (In Russian). Dep. NTIS (U. S. Sales Only).

The related hydrodynamic and kinetic equations taking into account both the self-consistent field effects and the effects resulting from the collisions of the particles of "gas with those of fluid" are obtained for an inhomogeneous system of the type "fluid-gas". These effects are expressed in terms of the exact correlation functions of the "gas–fluid" interaction kernel. The consideration of the kinetics of inhomogeneous states in the given system is based on some limiting ergodic relations for the density matrix. These relations reflect, in a natural way, the fact that in the evolution process of a macroscopic system, the description of its state is simplified; as a result, the possibility arises to give a macroscopic description of the system in terms of a small number of variables. (auth)

55536 (ITF-72-32-P) THEORY OF BETHE AND DAVYDOV MAGNETIC SPLITTINGS IN A CUBIC ANTIFERRODIELECTRIC. Petrov, E. G.; Kharkyanen, V. N. (Akademiya Nauk Ukrainskoi SSR, Kiev. Institut Teoreticheskoi Fiziki). 1972. 68p. (In Russian). Dep. NTIS (U. S. Sales Only).

55572 (NYO-3823-12) MOESSBAUER EFFECT MEASUREMENTS ON ^{57}Fe IN A NICKEL HOST NEAR THE CURIE POINT. Benski, H. Claudio (Brandeis Univ., Waltham, Mass. Dept. of Physics). Oct 1971. Contract AT(30-1)-3823. 92p. Dep. NTIS.
Thesis.

55573 (ORNL-NSF-EP-23) REGIONAL MODELING ABSTRACTS. VOLUME III. Meyers, Charles R. Jr. (Oak Ridge National Lab., Tenn.). Jun 1972. Contract W-7405-eng-26. 331p. (ORNL-EIS-72-24). Dep. NTIS.

55574 (ORNL-TIP/TIRC-72-4) MAMMALIAN TOXICITY OF PURPURIN, QUINIZARIN, QUINALIZARIN, DIPHENYLTHIOCARBAZONE, AND 1,5-DIPHENYL-3-THIOCARBOHYDRAZIDE. Miller, Kathy (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 9p. Dep. NTIS.

55575 (ORNL-TIP/TIRC-72-10) TOXICITY OF POTASSIUM IODATE. Warren, Helen S. (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 2p. Dep. NTIS.

55576 (ORNL-TIP/TIRC-72-13) MATERIAL FOR USE BY PARENTS OF HANDICAPPED CHILDREN. Gerstner, Helga (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 33p. Dep. NTIS.

55577 (ORNL-TIP/TIRC-72-45) EFFECTS OF SODIUM NITRITE ON THE HEMOPOIETIC AND VASCULAR SYSTEM OF THE MAMMAL. Gerstner, Helga (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 4p. Dep. NTIS.

55578 (ORNL-TIP/TIRC-72-49) ANIMAL TOXICITY OF COUMAPHOS AND CONTAMINANTS. Gerrard, Martha (Toxicology Information Response Center, Oak Ridge, Tenn.). Sep 1972. 6p. Dep. NTIS.

55579 (ORNL-TIP/TIRC-72-52) DIETHYLPYROCARBONATE TOXICOLOGY AND PHARMACOLOGY. Holland, Florence (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 4p. Dep. NTIS.

55580 (ORNL-TIP/TIRC-72-53) MAXIMUM SAFE LEVELS OF FLUORINE FOR MAN AND ANIMALS. Gerrard, Martha (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 3p. Dep. NTIS.

55581 (ORNL-TIP/TIRC-72-54) TOXICITY DATA FOR IMIDO (IMIDATE) ESTERS. Warren, Helen (Toxicology Information Response Center, Oak Ridge, Tenn.). Aug 1972. 3p. Dep. NTIS.

55582 (ORNL-TIP/TIRC-72-59) EFFECT OF PYRAMIDON ON THE HEMOPOIETIC AND VASCULAR SYSTEM OF THE MAMMAL. Gerstner, Helga (Toxicology Information Response Center, Oak Ridge, Tenn.). Sep 1972. 5p. Dep. NTIS.

55583 (ORNL-TIP/TIRC-72-60) CARCINOGENICITY OF METHYL-NITRO-NITROSO-GUANIDINE. Warren, Helen S. (Toxicology Information Response Center, Oak Ridge, Tenn.). Sep 1972. 3p. Dep. NTIS.

55584 (ORNL-TIP/TIRC-72-61) TOXICOLOGY OF ISO-AMYLAMINE AND RELATED AMINES. Warren, Helen S. (Toxicology Information Response Center, Oak Ridge, Tenn.). Sep 1972. 6p. Dep. NTIS.

55585 (ORNL-TIP/TIRC-72-62) TOXICITY ASPECTS OF SILICA OR QUARTZ PARTICLES. Gerstner, Helga (Toxicology Information Response Center, Oak Ridge, Tenn.). Sep 1972. 9p. Dep. NTIS.

55586 (ORNL-TIP/TIRC-72-63) TOXICITY OF ELEMENTAL PHOSPHORUS. Gerstner, Helga (Toxicology Information Response Center, Oak Ridge, Tenn.). Sep 1972. 13p. Dep. NTIS.

55587 (ORNL-TM-3898) SEASONAL ALTERATIONS IN RODENT BLOOD. Dunaway, P. B.; Story, J. D.; Kitchings III, J. T.; Payne, J. A. (Oak Ridge National Lab., Tenn.). Sep 1972. Contract W-7405-eng-26. 93p. Dep. NTIS.

55588 (ORNL-tr-2394) ELEMENTARY MECHANISMS IN HETEROGENEOUS KINETICS. IV. COMPLEX AND PURE RATE SYSTEMS KINETIC LAWS AND INFLUENCE OF PRESSURE IN PURE RATE SYSTEMS. Besson, Jean; Azzopardi, Max; Caillet, Marcel; Sarrazin, Pierre; Soustelle, Michel. Translated for Oak Ridge National Lab., Tenn., from J. Chim. Phys.; 63: No. 7-8, 1049-54(1966). 12p. Dep. NTIS.

55589 (ORNL-tr-2603) STATUS OF MICRO-EMISSION SPECTRAL ANALYSIS WITH SOLID-STATE LASERS. Moenke, Horst. Translated by R. Gregg Mansfield (Oak Ridge National Lab., Tenn.), from Messtechnik; 10: 13-18(1968). 16p. Dep. NTIS.

55590 (ORNL-tr-2613-A) LIMITS OF DETECTION IN LOCALIZED SPECTROCHEMICAL ANALYSIS WITH LASERS. Hagenah, W. D.; Klocke, K.; Laqua, K. Translated for Oak Ridge National Lab., Tenn. from pp 634-5 of 14. International Colloquium of Spectroscopy, Debrecen, Hungary, August 7-12, 1967. 5p. Dep. NTIS.

55591 (ORNL-tr-2636) VIBRATION ANALYSIS OF E. P. DISCHARGE ELECTRODE. Hiramatsu, Tsutomu; Kobori, Yoichi. Translated by H. Kubota (Oak Ridge National Lab., Tenn.), from Hitachi Hyoron; 45: No. 4, 130-6(1963). 30p. Dep. NTIS.

55592 (PEL-220) LIST OF UNCLASSIFIED PEL REPORTS, 1st MARCH 1957-31st DECEMBER 1971. (Atomic Energy Board, Pelindaba, Pretoria (South Africa)). Feb 1972. 13p. Dep. NTIS (U. S. Sales Only).

55593 (RFP-Trans-108) INFLUENCE OF AUSTENITE GRAIN SIZE AND FORGING RATIO ON FERRITE BANDED STRUCTURE. Kusaka, Kunio; Araki, Shotaro; Iwamaru, Masaaki. Translated for Dow Chemical Co., Rocky Flats Div., from J. Jap. Inst. Metals; 34: 957-62(1970). 12p. Dep. NTIS.

55594 (RFP-Trans-110) X-RAY RESIDUAL STRESS ANALYSIS IN HARDENED STEELS. Pruemmer, R. A. (Karlsruhe Univ. (West Germany). Institut fuer Werkstoffkunde I). Translated for Dow Chemical Co., Rocky Flats Div., from a German report. 15p. Dep. NTIS.

55595 (RT/FIMA-(72)1) EULERO PROGRAM. Kranyc, A.; Fedele, V. D. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 11 Feb 1972. 7p. (In Italian). Dep. NTIS (U. S. Sales Only).

55596 (SC-CR-723162) MAGNUS FORCE TESTS FOR SANDIA CORPORATION, 1971-72. Wind-Tunnel Report No. 59. Ragsdale, William C. (Naval Ordnance Lab., White Oak, Md.). Jun 1972. 117p. Dep. NTIS.

55597 (SC-DC-714099) SURFACE PREPARATION FOR ADHESIVE BONDING. Jennings, C. W. (Sandia Labs., Albuquerque, N. Mex.). 1972. 19p. (CONF-720830-1). Dep. NTIS.

From Symposium on adhesion; Dover, NJ. (Aug 1972).

55598 (SC-DC-721020) ROOM TEMPERATURE ELECTRICAL PROPERTIES AND DOPANT PRECIPITATION FOR SiGe THERMOELECTRIC ALLOYS. Nasby, R. D.; Burgess, E. L. (Sandia Labs., Albuquerque, N. Mex.). 1972. 23p. (CONF-720925-5). Dep. NTIS.

From seventh intersociety energy conversion engineering conference; San Diego, CA. (25 Sep 1972).

55599 (SC-DC-721376) PROGRAM OPTIMIZATION. Gasser, Sidney B. (Sandia Labs., Albuquerque, N. Mex.). 12 Jun 1972. 14p. (CONF-721004-1). Dep. NTIS.

From third annual symposium for computing machinery; Gaithersburg, MD. (17 Oct 1972).

55600 (SC-DC-722244(RD)) FLIGHT TEST EVALUATION OF A FLUIDICALLY ACTUATED MONOPROPELLANT HYDRAZINE ROLL CONTROL SYSTEM. Hodapp, A. E. Jr.; Beckmann, R. C. (Sandia Labs., Albuquerque, N. Mex.). 1972. 67p. (CONF-720921-1). Dep. NTIS.

From second atmospheric flight mechanics conference; Moffett Field, GA. (11 Sep 1972).

55601 (SC-DC-722297) AROMATIC POLYIMIDE SYNTACTIC FOAM. Rand, Peter B. (Sandia Labs., Albuquerque, N. Mex.). Jun 1972. 17p. (CONF-720915-2). Dep. NTIS.

From 3rd international cellular plastics conference; Montreal, Canada (26 Sep 1972).

55602 (SC-DC-722298) LONG LIFE, WIDE TEMPERATURE RANGE ORGANIC ELECTROLYTE BATTERY. Levy, Samuel C. (Sandia Labs., Albuquerque, N. Mex.). 1972. 3p. (CONF-721008-1). Dep. NTIS.

From 142nd national fall meeting of the electrochemical society; Miami Beach, FL. (8 Oct 1972).

55603 (SC-DR-70-617) MECHANICAL AND THERMAL EXPANSION PROPERTIES OF A PARTICULATE FILLED POLYMER. Brassell, Gilbert W.; Wischmann, Kenneth B. (Sandia Labs., Albuquerque, N. Mex.). Nov 1971. 28p. Dep. NTIS.

55604 (SC-DR-720303) SIGNIFICANT DIGIT INCOMPLETE GAMMA RATIOS. Amos, D. E.; Daniel, S. L. (Sandia Labs., Albuquerque, N. Mex.). Apr 1972. 21p. Dep. NTIS.

55605 (SC-M-68-808) PLANT EQUIPMENT INVENTORY MANAGEMENT. Hollingsworth, L. E. (Sandia Labs., Albuquerque, N. Mex.). Nov 1968. 42p. Dep. NTIS.

55606 (SC-M-720514) TRASHP: TRANSEMBLER FOR THE HEWLETT-PACKARD MINICOMPUTERS. Petty, S. M. (Sandia Labs., Albuquerque, N. Mex.). Aug 1972. 12p. Dep. NTIS.

55607 (SC-R-722879) USING BASIC AS A REAL TIME EXECUTIVE ON A SMALL SYSTEM. Stiefeld, B. (Sandia Labs., Albuquerque, N. Mex.). [nd]. 4p. Dep. NTIS.

55608 (SC-RR-720286) IMAGEN: A COMPUTER PROGRAM FOR IMAGE ENHANCEMENT AND DISPLAY OF TWO-DIMENSIONAL DATA. Fisk, C. J. (Sandia Labs., Albuquerque, N. Mex.). Jul 1972. 62p. Dep. NTIS.

55609 (SC-TM-710557) MESH-GENERATION CODE AND A CONTOUR-PLOTTING ROUTINE. Lobitz, D. W. (Sandia Labs., Albuquerque, N. Mex.). Feb 1972. 50p. Dep. NTIS.

55610 (SCL-DR-720004) HEATMESH-71: A COMPUTER CODE FOR GENERATING GEOMETRICAL DATA REQUIRED FOR STUDIES OF HEAT TRANSFER IN AXISYMMETRIC STRUCTURES. Gabrielson, V. K. (Sandia Labs., Livermore, Calif.). Sep 1972. Contract AT(29-1)-789. 80p. Dep. NTIS.
Supersedes SCL-DR-67-30.

55611 (SCL-RR-710113) STEADY-STATE RESPONSE OF AN INFINITE PLATE TO AN EXPONENTIAL EDGE LOAD ALONG A FUSING CRACK: A MODEL FOR THE DYNAMIC EDGE FUSION OF TWO SEMI-INFINITE PLATES. Wesenberg, D. L.; Murphy, L. M. (Sandia Labs., Livermore, Calif.). Sep 1972. Contract AT(29-1)-789. 36p. Dep. NTIS.

55612 (SRO-639-12) FLUX OF RADIONUCLIDES THROUGH A SALT MARSH ECOSYSTEM. Progress Report, January 1–December 30, 1972. (Georgia Univ., Athens). 16 Aug 1972. Contract AT(38-1)-639. 15p. Dep. NTIS.

55613 (SU-326-P-17-X-2) STRUCTURE DEPENDENCE OF HIGH TEMPERATURE DEFORMATION OF METALS. Progress Report, March 1, 1970–March 1, 1971. Nix, William D.; Barrett, Craig R. (Stanford Univ., Calif. (USA). Dept. of Materials Science and Engineering). 1 Apr 1971. Contract AT-(04-3)-326. 66p. Dep. NTIS.

55614 (TID-25974) APPROXIMATE STRUCTURE FOR THE ANTIFERROELECTRIC PHASE OF COPPER FORMATE TETRAHYDRATE. Kay, M. I.; Kleinberg, R. (Puerto Rico Nuclear Center, Mayaguez). 1971. 16p. (CONF-720814-3). Dep. NTIS.
From ninth general assembly and international congress of crystallography; Kyoto, Japan (26 Aug 1972).

55615 (TID-26148) PRECIPITATION FROM SUPERSATURATED COPPER–TITANIUM SOLID SOLUTIONS: THE AGING PROCESS AND PRECIPITATION HARDENING IN COPPER–TITANIUM SIDEBAND ALLOYS. Progress Report, 1971–1972. Soffa, William A. (Pittsburgh Univ., Pa. (USA). Dept. of Metallurgical and Materials Engineering). Mar 1972. Contract AT-(11-1)-3434. 21p. Dep. NTIS.

55616 (TID-26149) FREE RADICALS IN BIOLOGICAL ENERGY CONVERSION: EPR STUDIES OF MODEL SYSTEMS. Three Year Review and Technical Progress Report, September 1, 1969–August 31, 1972. Tollin, Gordon (Arizona Univ., Tucson). 1972. Contract AT(11-1)-908. 45p. Dep. NTIS.

55617 (TID-26159) MAGNETIC PROPERTIES OF TRANSITION METALS AND THEIR ALLOYS DETERMINED BY MOESSBAUER MEASUREMENTS WITH ^{61}Ni. Obenshain, Felix E. (Oak Ridge National Lab., Tenn.). [nd]. 2p. Dep. NTIS.

55618 (UCID-16099) ENRP 69-5: DESIGN CRITERIA FOR CONFIDENCE AND RELIABILITY BASED ON SMALL SAMPLES. Robinson, E. Y. (California Univ., Livermore. Lawrence Livermore Lab.). 23 Jun 1969. Contract W-7405-Eng-48. 17p. Dep. NTIS.

55619 (UCID-16100) ENRP 69-8: COMPOSITE STATIC FATIQUE INTERPRETATION OF SOME DATA. Robinson, E. Y. (California Univ., Livermore. Lawrence Livermore Lab.). 18 Aug 1972. Contract W-7405-Eng-48. 38p. Dep. NTIS.

55620 (UCLA-12-871) METABOLISM OF 1-^{14}C PALMITIC ACID IN THE DEVELOPING BRAIN: PERSISTENCE OF RADIOACTIVITY IN THE CARBOXYL CARBON. Dhopeshwarkar, G. A.; Subramanian, Carole; Mead, James F. (California Univ., Los Angeles. Lab. of Nuclear Medicine and Radiation Biology). 1972. Contract AT-04-1-GEN-12. 18p. Dep. NTIS.

55621 (UCLA-12-877) PRODUCTION OF A NERVOUS-SYSTEM-SPECIFIC PROTEIN (14-3-2) BY HUMAN NEUROBLASTOMA CELLS IN CULTURE. Herschman, Harvey R.; Lerner, Michael P. (California Univ., Los Angeles. Lab. of Nuclear Medicine and Radiation Biology). 1972. Contract AT-04-1-GEN-12. 11p. Dep. NTIS.

55622 (UCLA-12-879) EFFECTS OF TEMPERATURE AND FATTY ACID STRUCTURE ON LIPID METABOLISM IN BACILLUS LICHENIFORMIS 9259. Chang, Norman C.; Fulco, Armand J. (California Univ., Los Angeles. School of Medicine). 1972. Contract AT(04-1)-GEN-12. 63p. Dep. NTIS.

55623 (UCLA-34-P-91-48) PHOSPHORESCENCE-MICROWAVE DOUBLE RESONANCE SPECTROSCOPY OF 1,2,4,5 TETRACHLOROBENZENE. Annual Report, September 15, 1971–September 14, 1972, Part 1. Chen, Chuan-Run (California Univ., Los Angeles. Dept. of Chemistry). Apr 1972. Contract AT(04-3)-34. 248p. Dep. NTIS.
Thesis.

55624 (UCRL-51255) USE OF GRATING TO INCREASE RECORDING CAPABILITY OF LASER FAR FIELD CAMERA. Weaver, H. Joseph Jr. (California Univ., Livermore. Lawrence Livermore Lab.). 26 Jul 1972. Contract W-7405-eng-48. 7p. Dep. NTIS.

55625 (UCRL-73334) SEMIMICRO GEL PERMEATION CHROMATOGRAPHIC ANALYSIS OF HMX-CONTAINING EXPLOSIVES. Clarkson, Jack E. (California Univ., Livermore. Lawrence Radiation Lab.). 19 Oct 1971. 15p. (CONF-711117-2). Dep. NTIS.
From second JANNAF Propellant Characterization Working Group meeting; Las Vegas, Nev. (1 Nov 1971).

55626 (UCRL-73610) SPECIMEN STRAIN MEASUREMENT IN THE SPLIT HOPKINSON PRESSURE BAR EXPERIMENT. Sharpe, William N. Jr.; Hoge, Kenneth G. (California Univ., Livermore. Lawrence Livermore Lab.). 18 Jan 1972. 23p. (CONF-721012-1). Dep. NTIS.
For Presentation at fall meeting of the Society of Experimental Stress Analysis; Seattle, WA. (17 Oct 1972).

55627 (UCRL-73772) FIBER STRENGTH OF S-GLASS/EPOXY COMPOSITES UNDER BIAXIAL LOADING. Chiao, T. T.; Commins, A. D. (California Univ., Livermore. Lawrence Livermore Lab.). 4 May 1972. 10p. (CONF-721009-1). Dep. NTIS.
From fourth SAMPE national technical conference; Palo Alto, CA. (17 Oct 1972).

55628 (UCRL-73773) CHARACTERIZATION OF AN EPOXY SYSTEM FOR FILAMENT WINDING. Chiao, T. T.; Althouse, L. P. (California Univ., Livermore. Lawrence Livermore Lab.). 4 May 1972. 8p. (CONF-721009-2). Dep. NTIS.
From fourth SAMPE national technical conference; Palo Alto, CA. (17 Oct 1972).

55629 (UCRL-73921) PNEUMATIC LOGIC CONTROLS FOR AUTOMATIC VACUUM SYSTEMS. Hugenberger, Charles E.; Petrich, Donald E. (California Univ., Livermore. Lawrence Livermore Lab.). 14 Jul 1972. 11p. (CONF-721003-2). Dep. NTIS.
From 19th national vacuum symposium; Chicago, IL. (2 Oct 1972).

55630 (UCRL-73943) BASEBAND DISTORTION EQUALIZATION IN THE TRANSMISSION OF PULSE INFORMATION. Ekstrom, M. P. (California Univ., Livermore. Lawrence Livermore Lab.). 1 Jun 1972. 27p. (CONF-720624-1). Dep. NTIS.
From Conference on precision electromagnetic measurements; Boulder, CO. (26 Jun 1972).

55631 (UCRL-74039) TEST RESULT OF THE GEOGRAPHIC POSITION LOCATOR: A SYSTEM FOR IMPROVING LAND NAVIGATION WITHOUT EXTERNAL AIDS. Salisbury, John D. (California Univ., Livermore. Lawrence Livermore Lab.). 21 Jul 1972. 40p. (CONF-721005-1). Dep. NTIS.
From sixth biennial guidance test symposium; Holloman AFB, NM. (4 Oct 1972).

55632 (UCRL-Trans-1479) VISCOSITY OF Al$_2$O$_3$–SiO$_2$ MELTS. Mishin, B. S.; Nagibin, Yu. A. Translated for Univ. of California, Lawrence Berkeley Lab., from Izv. Vyssh. Ucheb. Zaved., Chern. Met.; 12: No. 7, 8-10(1969). 4p. Dep. NTIS.

55633 (UCRL-Trans-10640) GAS COULOMETRY. Tanaka, Y.; Muto, G. Translated for Univ. of California, Lawrence Livermore Lab., from Nippon Kagaku Zasshi; 88: No. 1, 107-9 (1967). 5p. Dep. NTIS.

55634 (UR-3490-136) PULMONARY ABSORPTION OF TOXIC METALS. Morrow, P. E. (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1972. 35p. (CONF-720919-1). Dep. NTIS.
From 17th international congress on occupational health; Buenos Aires, Argentina (11 Sep 1972).

55635 (UR-3490-174) EFFECT OF K^+ AND K^+ GRADIENTS ON ACCUMULATION OF SUGARS BY ISOLATED INTESTINAL EPITHELIAL CELLS. Kimmich, George A.; Randles, Joan (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1971. Contract AT(11-1)-3490. 41p. Dep. NTIS.

55636 (UR-3490-177) STUDIES ON THE TRANSPORT OF L-LYSINE BY ISOLATED CHICK INTESTINAL EPITHELIAL CELLS. Barrett, Eugene; Kimmich, George (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1972. 44p. Dep. NTIS.

55637 (UR-3490-184) DIRECT DETERMINATION OF TOTAL IONIC FLUORIDE IN BIOLOGICAL FLUIDS. Hall, Larry L.; Smith, Frank A.; De Lopez, Ofelia H.; Gardner, Dwight E. (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1970. Contract AT(11-1)-3490. 23p. Dep. NTIS.

55638 (UR-3490-187) REDUCED RED CELL 2,3-DIPHOSPHOGLYCERATE AND ADENOSINE TRIPHOSPHATE, HYPOPHOSPHATEMIA AND INCREASED HEMOGLOBIN-OXYGEN AFFINITY AFTER CARDIAC SURGERY. Young, Jerald A.; Lichtman, Marshall A.; Cohen, Jules (Rochester Univ., N. Y. (USA). Dept. of Medicine). 1972. 21p. Dep. NTIS.

55639 (Y-1841) REAL-TIME ANALYSIS OF THERMAL DIFFUSIVITY DATA FROM A PULSED LASER FACILITY. Davenport, C. M.; Carver, D. W.; Schneider, P. G. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 11 Sep 1972. 27p. Dep. NTIS.

55640 (Y-1848) ANALYSIS OF THE EFFECTS OF SELECTED SCHEDULING RULES IN A PARALLEL PROCESSOR SHOP. Gentry, D. H. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 25 Aug 1972. Contract W-7405-eng-26. 160p. Dep. NTIS.

55641 EXPERIMENTAL DETERMINATION OF ION DENSITY TRAPPED BY ELECTRON BEAM. Hartnagel, H. L.; Herkmen, I. (Univ. of Newcastle upon Tyne, Eng.). Electron. Lett.; 8: No. 17, 430-1(24 Aug 1972).

A new probing technique was employed to determine the ion density trapped by the potential well of an electron beam as used in microwave tubes, and unexpectedly high values of ionic charge were found on the axis, the strong space-charge fields of which are neutralized by slow secondary electrons. (auth)

55642 SOLID-STATE CONTROLLED-POTENTIAL COULOMETERS (Jul 1969) (Engineering Materials). (New Brunswick Lab. (AEC), N. J.). (CAPE-2194).

4 drawings.

Modified versions of the ORNL Controlled-Potential Coulometers Z-2005 and Q-2564 (See CAPES-785 and -1196) using solid-state parts are described. The solid-state instrument shows smaller size, less power consumption, less heat evolution, and low long-term drift of the current and integrating amplifiers. Short term drift of the control amplifiers and a control potential less than 0.1 mV/day are possible. (4 drawings) (For details see TID-4100 Suppl. 70) (see also 25: 39411) (F.S.)

CORPORATE AUTHOR INDEX

In the Corporate Author Index, technical report literature is indexed to the organization or institution responsible for issuing the report. Headings are given for all report literature and for published literature for which a corporate author approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate author heading gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

Corporate Author Headings Used by the U. S. Atomic Energy Commission in Cataloging Reports, TID-5059 (10th Rev.), is available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22151, for $3.00 for full size or reproduction copy and $0.95 for microfiche copy.

Semimicro gel permeation chromatographic analysis of HMX-containing explosives, 26:55625 (UCRL-73334)

CALIFORNIA UNIV., LOS ANGELES. DEPT. OF CHEMISTRY.

Phosphorescence-microwave double resonance spectroscopy of 1,2,4,5 tetrachlorobenzene. Annual report, September 15, 1971--September 14, 1972, Part 1, 26:55623 (UCLA-34-P-91-48)

CALIFORNIA UNIV., LOS ANGELES. LAB. OF NUCLEAR MEDICINE AND RADIATION BIOLOGY.

Metabolism of $1-^{14}C$ palmitic acid in the developing brain: persistence of radioactivity in the carboxyl carbon, 26:55620 (UCLA-12-871)

Production of a nervous-system-specific protein (14-3-2) by human neuroblastoma cells in culture, 26:55621 (UCLA-12-877)

CALIFORNIA UNIV., LOS ANGELES. SCHOOL OF MEDICINE.

Effects of temperature and fatty acid structure on lipid metabolism in Bacillus licheniformis 9259, 26:55622 (UCLA-12-879)

CARNEGIE-MELLON UNIV., PITTSBURGH, PA.

Nuclear wave functions from particle transfer data, 26:54693 (LA-DC-72-954)

CARNEGIE-MELLON UNIV., PITTSBURGH, PA. DEPT. OF CHEMISTRY.

Determinations of elementary reaction rate constants for the reaction of hydrogen atoms with various substrate molecules in the gas phase. Annual progress report, 1971--72, 26:55519 (COO-3242-4)

CAROLINA POWER AND LIGHT CO., RALEIGH, N.C.

Brunswick Steam Electric Plant, Units 1 and 2. Conclusion that BSEP does not have a flooding problem, 26:55329 (DOCKET-50324-43)

H. B. Robinson Unit 2. Final facility description and safety analysis report, Volume 3, 26:55286 (DOCKET-50261-106)

H. B. Robinson Unit 2. Malfunction of part length rod control system, 26:55252 (DOCKET-50261-109)

H. B. Robinson Unit 2. Technical specifications, change, 26:55287 (DOCKET-50261-108)

Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4. License application, Amendment 14, 26:55262 (DOCKET-50400-23)

CASE WESTERN RESERVE UNIV., CLEVELAND, OHIO. DIV. OF METALLURGY AND MATERIALS SCIENCE.

Experiments in high-voltage electron microscopy. Progress report, October 31, 1972--July 31, 1973, 26:54972 (COO-2119-2)

CENTRAL ELECTRICITY GENERATING BOARD, BERKELEY (ENGLAND). BERKELEY NUCLEAR LABS.

Examination of irradiated UO_2 HTR fuel particles. Part I. Experimental techniques, 26:53555 (RD/B/N-2214)

Ignition of liquid metal: peroxide mixtures, 26:55178 (RD/B/N-2364)

Ordered table of gamma radiation emitted by fission products, 26:54607 (RD/B/M-2356)

RELP version C: a reactor economics linear program for IBM 360/85 computer, 26:55266 (RD/B/N-2261)

Use of Ge(Li) detectors in high dose rate γ spectrometry, 26:53237 (RD/B/N-2369)

Zero energy reactor facility at B.N.L., 1972, 26:55409 (RD/B/N-2272)

CENTRE DE RECHERCHES EN PHYSIQUE DES PLASMAS, LAUSANNE (SWITZERLAND).

Transverse dynamic stabilization of a theta pinch, 26:54808 (LRP-51/72)

CENTRE D'ETUDE DE L'ENERGIE NUCLEAIRE, MOL (BELGIUM).

Extraction of plutonium from heavy water fuels by the SALTEX process, 26:53079 (EUR-4812)

Index of SCK/CEN papers issued in 1970, 26:55471 (BLG-461)

CENTRE NATIONAL D'ASSISTANCE TECHNIQUE ET DE RECHERCHE APPLIQUEE, ANTWERP (BELGIUM).

Study by differential absorption in infrared of irradiated lipids and polymers, 26:52983 (EUR-4828)

CENTRO INFORMAZIONI STUDI ESPERIENZE, MILAN (ITALY).

Analytical solution of two-separable variational synthesis approach for two-group diffusion r,z equations, 26:55422 (CISE-R-243)

Buckling measurements in ECO with few CIRENE fuel elements, 26:55106 (CISE-R-283)

Experimental investigations on $U--D_2O$ lattices, 26:55101 (CISE-R-203)

Experimental results on operation of reactivity fast control system of CIRENE reactor, 26:55133 (CISE-R-268)

Iterative solution of heterogeneous equations in finite cylindrical system. Method of harmonics, 26:55423 (CISE-R-273)

Measurement of cell parameters in RB-1 reactor, 26:55102 (CISE-R-239)

MOBIDIC: a code for simplified evaluation of some continuous axial refueling schemes, 26:55196 (CISE-R-241)

MOICANO-1 code for reactivity and two-group flux calculation of fog-cooled reactor, taking into account true coolant distribution and equilibrium xenon poisoning, 26:55103 (CISE-R-242)

Neutron measurements at zero power on CIRENE fuel element in ESSOR reactor, 26:55105 (CISE-R-258)

RAS: synthesis program for calculation of 2-group neutron flux in r-theta, 26:54471 (CISE-R-252)

Steady state and transient measurements on scaled-down model of power channel of CIRENE reactor prototype, 26:55148 (CISE-R-270)

TERMO: digital code to evaluate steady state parameters of CIRENE type reactor, 26:55104 (CISE-R-246)

CESKOSLOVENSKA AKADEMIE VED, REZ. USTAV JADERNEHO VYZKUMU.

Absolute activity in irradiated fuel material by method of gamma scanning, 26:53041 (UJV-2867-M,A)

Nondestructive neutron activation analysis of mineral materials. II, 26:52901 (UJV-2851-F,Ch)

CHICAGO UNIV., ILL.

Prog. rpt. on [study of vibrational excitations in amorphous and crystalline solids], 12/1/72--8/30/72, 26:55502 (COO-2126-7)

CHICAGO UNIV., ILL. DEPT. OF PHYSICS.

New form factors in the dual resonance model, 26:54235 (COO-264-611)

PERSONAL AUTHOR INDEX

Authors' names are indexed in the form appearing in the abstracted publication. Each entry under an author's name gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. The following changes in spelling have been introduced to reduce some of the confusion which might result from omitting the accents:

Germanic	ä appears as	ae
Germanic	ö	oe
Germanic	ü	ue
Scandinavian	ϕ	oe

SUBJECT INDEX

Cross references are included in cumulative subject indexes and in *Subject Headings Used by the USAEC Technical Information Center* (USAEC report TID-5001).

The reader is also referred to *Guide to Abstracting and Indexing for Nuclear Science Abstracts* (USAEC report TID-4576).

Most headings in the subject index are the names of specific materials, things, and processes. Each heading is followed by a modifier that describes the properties of, or processes applied to, that heading.

All index entries cite *NSA* volume and abstract numbers; volume number precedes the colon and the abstract number follows it. The designation (R) following the abstract number indicates a progress report; (P) indicates a patent; and (T) indicates a translation. Abstracts for reports other than progress reports carry no letter designation. Report numbers, where applicable, are included in parentheses after the abstract number of the citation. Published literature (journal article or book) can be identified by the absence of a report number.

Ideas presented in the original literature, rather than key words, have been indexed. The indexers have selected what seemed the most probable and logical place to look for typical information. Since it is not always possible to anticipate where a user would look for information, the cumulative indexes include numerous cross references. Consideration of synonymous or closely related terms will prove valuable.

Information is indexed for the greatest use to the greatest number of users. This requires that a topic be indexed to headings that most specifically describe it and not ordinarily to the headings that describe its ultimate use or to the general class headings that include the specific headings. For example, information on boiler design for the Fermi Fast Breeder Reactor would be indexed under the headings BOILERS and FERMI FAST BREEDER REACTOR but not necessarily under the headings REACTORS, FAST or REACTORS, BREEDER.

General or broad headings are reserved for general summaries, reviews, comprehensive reports, and similar literature.

Subject Heading Styles

Generally, the direct form of subject entry is used rather than inverted headings; e.g., AMINO ACIDS rather than ACIDS, AMINO; HELIUM ISOTOPES He-4 rather than HELIUM—ISOTOPES He-4 or HELIUM—He-4 ISOTOPES. Note, however, that in some cases parenthetic modifying terms or inverted headings such as NEUTRONS, FAST, are used where the alphabetical arrangement of a direct entry would cause information to be scattered. In addition, organic compounds are usually entered in the index in the inverted form to facilitate grouping like or related compounds with the parent compounds; e.g., BENZENE, BROMO- rather than BROMOBENZENE.

Alphabetization

Subject headings are alphabetized word by word. Parenthetic qualifiers, numbers, and Greek letters within subject headings are disregarded in alphabetizing unless there are two or more headings that are otherwise identical, in which case the qualifier, numerical progression, or spelled names for the Greek letters determine the order.

Examples:

M-Capture
  see ELECTRON CAPTURE
MAGNESIUM
MAGNESIUM ALLOYS AND SYSTEMS
MESONS
MESONS (π)
MESONS (rho)
1-PENTANOL
2-PENTANOL
URANIUM OXIDES
URANIUM OXIDES UO_2

Modifying Phrases

The modifiers appearing under a subject heading are written specifically to show the relation between the item being indexed and the heading. The modifier therefore contains a maximum of useful information. Although the modifier begins with the word judged to be of greatest use to the greatest number of users, there is still need for the searcher to consider all modifiers under the heading(s) of interest.

Modifiers usually form meaningful phrases when combined with the subject heading. Some are intended to be read following the subject heading, e.g., the entry HYDROGEN—*sorption by charcoal,* should be read *hydrogen sorption by charcoal.* As a result of placing the important word first, however, many modifiers must be rearranged for smooth reading, e.g., FORMALDEHYDE—*yields in radiolysis of ethyl ether, effects of deuterium on,* should be read *effects of deuterium on formaldehyde yields in radiolysis of ethyl ether* and URANIUM—*crystal structure of, effect of cooling rate on allotropic transformations in,* should be read *effect of cooling rate on allotropic transformations in crystal structure of uranium.*

Special characters are added to modifiers in the fields of physics and reactor technology; if the modifier does not establish the experimental or theoretical character of a reference, a symbol (E), (T), or (E/T) is placed immediately after the modifying phrase and before the abstract number.

Physical States and Configurations of Materials

The specific physical state, if other than normal, or the geometric configuration of the material is included in the modifying phrase; e.g., information on liquid metals is indexed under the specific metal with "liquid" in the modifier and carbon crucibles is indexed under CARBON with "crucibles" appropriately placed in the modifier. The information on carbon crucibles is also indexed under CRUCIBLES.

Nomenclature of Inorganic Compounds

Inorganic compounds are indexed to subject headings in the direct form. Cations are listed in the order of increasing valence for polycationic salts of varying valence and in alphabetic order for polycationic salts in which all cations have the same valence; e.g., SODIUM ALUMINUM SILICATES and POTASSIUM SODIUM SULFATES. If more than one anionic species is presented in a compound, the anions are arranged alphabetically, e.g., BERYLLIUM FLUORIDE HYDROXIDES.

Nomenclature of Organic Compounds

Complex organic compounds occur in such variety as to require a systematic nomenclature. Headings for most substituted organic compounds are found in an inverted form following names of the parent compounds. Examples of two such headings are:

```
2,4-HEPTANEDIONE
2,4-HEPTANEDIONE, 1-PHENYL-
```

Headings are included for broad class names of enzymes, e.g., HYDROLASES and TRANSFERASES. Specific enzyme names are to be found in modifiers under these headings. Similarly, broad class names for hormones are included as headings, except in this case the headings are entered in the inverted form as, e.g., HORMONES, ADRENAL and HORMONES, SEX. The more specific names of hormones are to be found in the modifiers under the appropriate broad headings.

For compounds used as drugs, an effort is made to use subject headings that reflect the recommendations of the USAN (United States Adopted Names) compilation or the "New Names" columns of the *Journal of the American Medical Association.* The *Merck Index* has also been used in selecting subject headings for drugs.

Nomenclature of Life Sciences

Except for those in the phylum Tracheophyta, subject headings for plants are common names. For example, ALGAE, FUNGI, SLIME MOLDS, MOSSES, and LIVERWORTS are subject headings. The phylum name TRACHEOPHYTA and several classes and subclasses belonging to it are entered as subject headings. The specific classes entered are PSILOPSIDA, LYCOPSIDA, SPHENOPSIDA, and PTEROPSIDA. The three subclasses FILICINIDAE, GYMNOSPERMIDAE, and ANGIOSPERMIDAE which belong under Pteropsida are also subject headings. Scientific names (genus and species) and common names if known are used in the modifying phrase.

Subject headings for microorganisms are VIRUSES, RICKETTSIA, and BACTERIA. The name of the type or kind of virus or the genus and species names of the organisms should appear in the modifying phrase.

The names of animal phyla are subject headings. The arthropods are also indexed to subject headings for classes INSECTA, CRUSTACEA, ARACHNIDA, DIPLOPODA, and CHILOPODA. The invertebrate chordates are indexed to subject headings UROCHORDATA and CEPHALOCHORDATA. The vertebrates are indexed to headings for the classes AGNATHA, CHONDRICHTHYES, OSTEICHTHYES, AMPHIBIA, REPTILIA, AVES, and MAMMALIA as well as to the general heading VERTEBRATA. Common names are used as subject headings in the class Mammalia.

Subject headings are entered for various classes of commodities, and specific products are identified in the file-word position of the modifier. In the following examples, approved subject headings are capitalized and typical modifier file words are listed in lower case.

Example 1

```
CEREALS
  bread
  flour
  oats
  rice
  rye
  wheat
```

Example 2

```
MEATS
  beef
  fish
  mutton
  pork
  poultry
  seafood
```

Diseases, pathological conditions, and in vitro studies of atypical cells and tissues are indexed under subject headings for the organism affected, under the appropriate anatomical structure of physiological phenomenon affected, and under the appropriate disease heading. Subject headings for diseases (defined as any deviation from the norm) are common names such as ANEMIA, FIBROSIS, INFECTIONS, LEUKEMIA, NEOPLASMS, and RADIATION SICKNESS. Also, the general headings DISEASES and DISEASES, PLANTS are available as subject headings.

Multicomponent Alloys and Other Systems

Multicomponent alloys and systems, except those with well-known trade names, are indexed under a subject heading for each component in the form "element systems" for nonmetals or "element alloys and systems" for metals. The modifier begins with element symbols for each component arranged alphabetically. In addition, if significance is placed on the base metal of the alloy, this is indicated by adding "-base" to the element symbol.

Example: A 1.5C, 12Cr, 0.25V, 0.8Mo, bal Fe alloy is indexed as

```
CARBON SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
CHROMIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
IRON ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
MOLYBDENUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
VANADIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
```

Well-known alloys, such as ZIRCALOY-2, are indexed under the trade name; cross references from each component of the alloy to the trade name appear in cumulative indexes.

Multicomponent systems in which nonmetallic elements are present in large percentage and which are commonly referred to as systems or mixtures are indexed in a manner similar to alloys.

Example: A tungsten–silicon preparation is indexed as

```
TUNGSTEN ALLOYS AND SYSTEMS
  Si--W, ...
SILICON SYSTEMS
  Si--W, ...
```

Multicompound systems and mixtures of inorganic compounds are indexed under the subject heading for each component compound; the modifiers begin with an alphabetical listing of compound formulas.

Example: A lead titanate–lead zirconate mixture is indexed as

- LEAD TITANATES
  - $PbTiO_3$--$PbZrO_3$
- LEAD ZIRCONATES
  - $PbTiO_3$--$PbZrO_3$

Mixtures of organic compounds are indexed under subject headings for each component of the mixture; the modifiers begin with an alphabetical listing of compound names.

Example:

- ACETIC ACID
  - acetic acid--BF_3, ...
- BORON FLUORIDES
  - acetic acid--BF_3, ...

Example:

- BENZENE, CHLORO-
  - bromophenol--chlorobenzene, ...
- PHENOL, BROMO-
  - bromophenol--chlorobenzene, ...

A mixed system of compounds and elements is indexed by a combined form of the preceding conventions; e.g., a dispersion of copper and alumina would be indexed as

- ALUMINUM OXIDES
  - Al_2O_3--Cu, ...
- COPPER ALLOYS AND SYSTEMS
  - Al_2O_3--Cu, ...

If modifiers for alloys and systems are included with other modifiers under the same subject heading, they are filed last.

Example:

- CARBON SYSTEMS
  - deposition on nuclear fuel particles
  - molecular structure of
  - neutron total cross section for
  - sorptive properties for xenon
  - Young's modulus for
  - Al--C--Cr, superconductivity in
  - B--C, phase studies for
  - C--U--Zr, fabrication and physical properties of

Nomenclature of High Energy Physics

Information on particle-particle events is indexed under subject headings for the specific particles involved. The modifier file word *interactions* is followed by the specific interaction written in symbolic form. Particle nomenclature and symbols follow that of the Particle Data Group published in *Review of Particle Properties* (latest revision). For consistency the incident particle is always written first. The mass (in MeV) of a resonance state is included in parentheses after the symbol to avoid ambiguity. Hyperfragments are indicated in modifiers as in the following examples: Λ-He^5, Σ-H^3, $\Lambda\Lambda$-Be^{10}. The superscript on the right indicates the total number of baryons in the composite system.

Examples:

- MESONS (π^-)
  - interactions $\pi^- + p \rightarrow \Lambda + K^+ + \pi^-$ at 6 GeV/c in hydrogen bubble chamber, $\Lambda K(1700)$ enhancement in, (E)
- BARYONS, RESONANCE (Δ)
  - production of $\Delta^{++}(1236)$ and $\Delta^0(1236)$ from $K^- + p \rightarrow K^- + p + \pi^+ + \pi^-$ interactions at 2.63 and 2.70 GeV/c, (E)
- HYPERNUCLEI
  - binding energy of $\Lambda\Lambda$-He^6, three-body α--Λ--Λ model for

Subject headings are also provided for specific models and theories.

Examples:

- ELEMENTARY PARTICLE MODELS
  - quark, hadron total cross sections in, numerical analysis of
- CURRENT ALGEBRA
  - PCAC hypothesis for A_1 and rho dominance in $\pi \rightarrow e + \nu + \gamma$ decay
- REGGE POLE THEORY
  - predictions for polarization in $K^- + p \rightarrow$ anti $K^0 + n$, $\pi^- + p \rightarrow \pi^0 + n$, and $\pi^- + p \rightarrow$ eta + n interactions at high energies
- SYMMETRY GROUPS
  - SU(2) x SU(4) intermediate-coupling model for nucleon and hyperon isobars

Nomenclature of Reactor Technology

Subject headings for reactors are of three types:

(1) Specific reactors, e.g., ARGONNE RESEARCH REACTOR, SAXTON POWER REACTOR

(2) Reactors having a common physics or engineering characteristic, e.g., REACTORS, FAST; REACTORS, ORGANIC-COOLED; REACTORS, PRESSURIZED-WATER

(3) Reactors having a common purpose, e.g., REACTORS, POWER; REACTORS, RESEARCH

Information on specific reactors, type (1), is indexed under the one specific subject heading. Information on classes or types of reactors, types (2) (characteristics) and (3) (purpose), is indexed under all applicable headings. For example, information on a heavy-water-moderated organic-cooled power reactor is indexed under REACTORS, HEAVY WATER-MODERATED; REACTORS, ORGANIC-COOLED; and REACTORS, POWER.

Subject headings exist for selected reactor components, e.g., REACTOR FUEL ELEMENTS. When applicable, headings for components are indexed even though they may have been included in a modifier under a type (2) or (3) heading. The materials in reactor components are indexed when the information is peculiar to the material.

Modifier file words under reactor headings are of two primary types: one type expresses reactor characteristics, e.g., reactivity; the other, components, e.g., control rod. If no subject heading appears for a reactor component, the heading REACTORS is used, and the component is used as the modifier file word.

A

A-286 (IRON ALLOY)
- radiation effects on tensile properties of bolts of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)
- radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53696 (NASA-TM-X-2440, pp 595-602)

ACCELERATORS
- book: Radiation Protection at High-Energy Accelerators, 26:53742
- funding for medium energy physics research, outlook for, 26:53740 (LA-4874, pp 21-33)
- power losses in helical, methods of parameter optimization for minimizing, 26:53744
- radiation dose distributions near Ursvik FX-45 electron, Monte Carlo calculations of gamma, 26:53738 (FOA-4-4490-A-3)

ACCELEROMETERS
- design of passive impulse, for underground nuclear explosions, engineering drawings for, 26:53316

ACETAMIDE
- reactions with radiolytic hydrated electrons, kinetics of, 26:53006

ACETAMIDE, 2,2-DICHLORO-N-[2-HYDROXY-1-(HYDROXYMETHYL)ETHYL]-
- radiation effects on antibacterial activity of, and in mixtures with 1-bromo-4-nitrobenzene, nitrobenzene, and p-nitrophenol, γ, 26:52998

ACETIC ACID, [(CARBOXYMETHYLIMINO)BIS(ETHYLENENITRILO)]TETRA-
- effectiveness for removal of americium-241 from rats, 26:53531(T) (UCRL-Trans-1477)

ACETIC ACID, PHENYL-
- radiolysis of aqueous solutions of, rate constants for reaction of hydrogen atoms, hydroxyl radicals, and hydrated electrons in, 26:53015

ACETONE
- oxime, reactions with radiolytic hydrated electrons, kinetics of, 26:53006

ACETONITRILE
- radiolysis of crystals of, ESR studies on, 26:52991 (ORO-2968-78, Paper 6)

ACETYLCHOLINE
- effects on x-radiosensitivity of rat brain, 26:53461(R) (UCB-34-P-82-13)
- metabolism in rats, age dependence of, 26:53461(R) (UCB-34-P-82-13)

ACETYLENE
- yields from argon- and xenon-sensitized radiolysis of gaseous ethylene, 26:53000

ACETYLENEDICARBOXYLIC ACID
- radiolysis of monocrystals of dihydrate, ESR studies on, 26:53005

ACOUSTIC EMISSION TESTING
- use for continuous monitoring for pressure vessel defects, evaluation of, 26:55221 (NP-19338(Vol.1))

ACRYLIC ACID
- polyacrylates--polyethylene, radioinduced crosslinking polymerization of nylon grafted on, 26:53013(P)

ACRYLONITRILE
- radiolysis of crystals of, ESR studies on, 26:52991 (ORO-2968-78, Paper 6)

ACTINIDE HYDRIDES
- preparation and characterization of, p. 41, 26:53066 (ORNL-4794, pp 36-44)

ACTINIDE HYDROXIDES
- crystal structure of, electron microscopic, electron diffraction, and x-ray diffraction studies of, p. 42-3, 26:53066 (ORNL-4794, pp 36-44)

ACTINIDE OXIDES
- crystal structure of, electron diffraction study of, p. 42, 26:53066 (ORNL-4794, pp 36-44)

ACTINIDES
- chemical properties of aqueous solutions of, spectrophotometric studies of, pp. 81-2, 26:53036 (ORNL-4794, pp 81-3)
- complexes of trivalent, research on sulfate and thiocyanate, pp. 39-41, 26:53066 (ORNL-4794, pp 36-44)
- neutron cross sections for heavy, status of reactor, 26:54654 (CONF-720901-(Bks.1 and 2), pp 97-107)
- preparation by vapor deposition, p. 42, 26:53066 (ORNL-4794, pp 36-44)
- production by secondary reactions induced by GeV protons in tungsten and uranium-238, yields for, (E), 26:54672
- production of heavy, survey on prediction of reactor, 26:54654 (CONF-720901-(Bks.1 and 2), pp 97-107)
- properties of ternary hydrides of, literature review on, 26:53558 (UCRL-51244)
- separation from irradiated materials, solvent extraction processes in MILLI laboratory for, 26:53087

ACTINIUM
- separation of protactinium from, by anion exchange, 26:52903

ACTINIUM ISOTOPES Ac-217
- alpha decay of, half-life, Q value, and width for, (E), 26:54651

ACTINIUM ISOTOPES Ac-227
- decay of, γ-ray energies and intensities from, (E), 26:54652 (ANCR-1069)

ACTIVATION ANALYSIS
- book: Neutron Activation Analysis, 26:52912
- laboratory for neutron, at ORNL High Flux Isotope Reactor, features and tests of, 26:52897 (CONF-721010-3)
- methods for art identification, 26:52898 (COO-3034-2)
- methods of, review on, 26:52942
- sensitivity for forensic investigations, 26:52896 (CONF-720920-2)

ADHESIVES
- radioinduced curing of structural, for use in aerospace industry, electron and γ, 26:53716

ADIPONITRILE
- radiolysis of crystals of, ESR studies on, 26:52991 (ORO-2968-78, Paper 6)

AEROSOLS
- distribution of strontium-90 fused clay, in respiratory tract tissues of dogs and monkeys following inhalation, 26:53536

AET
- radioprotective effect on erythropoietic stem cells in mice, proton, 26:53454 (NASA-TM-X-2440, pp 642-6)
- radioprotective effects of, in combination with pantothenic acid on mice, whole-body x, 26:53481

AGE ESTIMATION
- thermoluminescent method for, Risoe development of, 26:53177

AGRICULTURE
- applications of radiation in research in, in Euratom Community, 26:53459(R) (NP-19403)
- heat sources for, feasibility of use of power plant waste heat for, 26:55212 (CONF-720925-2)
- radioactivity monitoring in products of, in Savannah River Area, 1971, 26:53153(R) (DPSPU-72-30-1)
- research in India, 1971--1972, 26:55452(R) (NP-19407)

AIKEN AREA (S.C.)
- radioactivity monitoring in vicinity of, 1971, 26:53153(R) (DPSPU-72-30-1)

AIR
- analysis in mines, electron-capture ionization detector for, 26:53287
- corrosive effects on copper/steel, Inconel/Zircaloy-2, and Zircaloy-2/Zircaloy-2 couples, fretting, 26:53609 (RT/ING-(72)7)
- electron-beam penetration in dense, (E/T), 26:54763
- monitoring of tritium in, gamma compensated flowthrough proportional counter for, 26:53216
- neutron attenuation in, measurement using manganese activation, (E), 26:54490
- neutron transport in, calculation of neutron and γ doses for evaluation of nitrogen neutron cross section sets, 26:54485 (ORNL-TM-3768)

AIRCRAFT
- radiation dose rate measurements at SST altitudes during solar flares, 26:54889 (NASA-TM-X-2440, pp 902-7)
- radiation doses to crew and passengers at SST altitudes from cosmic and solar rays, 26:54888 (NASA-TM-X-2440, pp 894-901)
- radiation monitoring system for SST Concorde, development of hybrid detector, 26:53203 (NASA-TM-X-2440, pp 874-83)

AIRGLOW
- electron energy deposition in water vapor in, (E/T), 26:54033
- intensity at 1304 and 1356 A from atomic oxygen in tropical ionospheric F region, theoretical time-dependent behavior of far uv, 26:54031
- oxygen emission in nightglow, altitude distribution of $O_2(^1\Delta)$ 1.27-μ, (E), 26:54042
- spectral continuum from 4100 to 8200 A, observations of night-sky, 26:54025
- spectral continuum from collision-induced transition of O_2 molecule and from NO + O reaction, (E/T), 26:54024

ALANINE
- radiolysis of frozen aqueous solutions of, ESR study of free radicals from γ, 26:52995

ALDRIN
- radiolysis in lipid solutions, effects of irradiation temperature on γ, 26:52997
- radiolysis of, dissolved in organic solvents, effects of temperature and solvent on γ, 26:53014

ALGAE
- Chlorella pyrenoidosa, radiation effects on reproductive capacity of, effects of energy on external and internal neutron, 26:53394
- Euglena sp., biochemical aspects of phototaxis in, 26:55485 (COO-908-37)

ALIQUAT-336
- solvent properties for cobalt, iron, and manganese, 26:53076

ALKALI METAL HALIDES
- radioinduced destruction of, pulse electron, 26:55012
- reactions with oxide impurities in uranium oxide (U_3O_8) matrix in carrier distillation process, 26:52955 (RT/CHI-(72)4)

ALKALINE EARTH HALIDES
- thermochemical reactions with impurities in uranium oxide matrices during carrier distillation, 26:53719

ALKANES
- radioinduced sulfoxidation of, effects of purity of

  compounds, dose, and pressure on kinetics of, 26:53012

ALLOYS
  crystal structure of dilute, field-ion microscopy studies of, 26:53652
  crystal structure of two-phase, field-ion microscopy studies of, 26:53653
  dislocations and stacking faults in, field-ion microscopy studies of, 26:53649
  fabrication by rolling at high temperature under vacuum, 26:53630
  fracture toughness testing at cryogenic temperatures, conference on, Toronto, Ontario, Canada, June 21 to 26, 1970, 26:53660
  microstructure of ordered, field-ion microscopy studies of, 26:53654
  microstructure of solid-solution, studies of ion microscopy images from, 26:53655
  precipitates in, edgewise growth kinetics of Widmanstaetten, 26:55528 (IS-2838)
  radioinduced point defects in, field-ion microscopy studies of, 26:53704
  strengthening of two-phase, mechanisms of dispersion, 26:53653

ALPHA DECAY
  decay constants for, effect of chemical environment on, (T), 26:54730

ALPHA PARTICLES
  channeling in thin gold crystals, 26:54974 (LYCEN-7228)
  content in environment of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  detection and measurement from coherent interactions of high-energy particles with helium-4, design and performance of recoil spectrometer for, 26:53281
  detection of, properties of thin films of organic fluorescent materials for, 26:53265
  dose to respiratory tract tissues following inhalation of radon-222 and radon-220 daughter products as aerosols, use of ICRP human lung model for estimation of, 26:53508
  effects on crosslinking and fading in poly(vinyl chloride) containing 1,4-diaminoanthraquinone, 26:53020
  effects on recrystallized grain size and recrystallization temperature of tungsten ribbons, 26:53711
  flux during energetic storm particle event, (E), 26:53966
  interactions $\alpha + d$ at 1 to 200 MeV (cms), optical-potential description of phases for scattering, (T), 26:54532
  interactions in an iron absorber of 10 to 300 GeV/N primary cosmic, (E/T), 26:53831
  propagation of primary cosmic, in interstellar space, (E), 26:53828
  reactions $(\alpha,2n)$ with uranium-238 at 25 MeV, conversion-electron spectra from, (E), 26:54664
  reactions $(\alpha,3n)$, (α,f), and (α,t) with uranium-235 at 24.5 to 28.0 MeV, excitation function for, (E), 26:54665
  reactions (α,γ) with sulfur-34 at 3.6 to 4.8 MeV, γ angular distributions and γ--γ angular correlations for, (E), 26:54560
  scattering by A = 12 to 208 nuclei at 166 MeV, angular distributions for elastic, (E), 26:54547
  scattering by copper-63 and -65 at 5.5 and 7 MeV, γ-γ angular correlations for inelastic, (E), 26:54594
  scattering by erbium-167 at 7 to 10 MeV, with Coulomb excitation, heat-flow analysis of temperature spikes following inelastic, (E/T), 26:54646
  scattering by helium-3 at 115 MeV, cross sections and energy spectra from inelastic, (E), 26:54515
  scattering by holmium-165 at 10 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following inelastic, (E/T), 26:54646
  scattering by lead near the Coulomb barrier, incoming wave boundary condition for elastic, (T), 26:54705
  scattering by silicon-28 at 10, 12, 14, and 18 MeV, α--γ angular correlations from inelastic, (E), 26:54561
  scattering by tin-116, -118, -120, and -124 at 166 MeV, angular distributions for elastic and inelastic, (E), 26:54616
  track size in sodium chloride monocrystals, (E), 26:55016

ALPHA SOURCES
  monitoring of natural, in ground-level atmosphere, meteorological effects on, 26:53160 (UUIM-27)
  preparation of thin-layer americium-241, by electrodeposition from sulfuric acid solutions, 26:53071

ALUMINUM
  analysis for boron by direct spectrophotometry, 26:52928
  cosmic secondary particle dose calculations, heavy galactic, 26:54878 (NASA-TM-X-2440, pp 104-7)
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  determination in water, effects of large amounts of copper on spectrographic, 26:52927
  electron and bremsstrahlung dose deposition calculations for shield slab of, comparison of methods for 0.5- to 10-MeV, 26:54886 (NASA-TM-X-2440, pp 801-15)
  electron penetration of semi-infinite slab of, phase-space-time-evolution calculations of 1-MeV, 26:54887 (NASA-TM-X-2440, pp 821-31)
  electron reactions up to 1 keV with, cross sections for formation of Al^{2+} and Al^{3+} in, 26:54103 (FRNC-CONF-51)
  electron scattering by, Monte Carlo study with catastrophic collisions in, 26:54898
  heat transfer from surfaces of pure, to boiling helium, comparison with OFHC copper, 26:54465
  microstructure and stability of coatings of, on chromium-cobalt alloy and Inconel 713C, effects of heat corrosion on, 26:53676
  neon-ion reactions at 0.7 to 4 MeV with, neon isotope effects on cross sections for K-shell ionization in, (E), 26:54114
  neutron reactions at energies up to 16 MeV, cross sections for gamma-ray production in, (E), 26:54960 (NASA-TM-X-2440, pp 500-11)
  oxygen ion reactions at 7.5 to 40 MeV, cross sections for K x-ray production in, (E), 26:54467(R) (ORO-2972-204)
  plasma of, measurements of transient properties of dense, (E/T), 26:54771
  radiation damage in undoped and helium-doped, threshold effect in 150- to 200-keV electron, 26:54990
  radioinduced defects in, relations of quench hardening with electron, 26:53712
  separation from indium by ion exchange chromatography, 26:52949
  thermal capacity of superconducting granular films of, at 1.3 to 8°K, 26:54450

ALUMINUM ALLOYS AND SYSTEMS
  analysis for boron by direct spectrophotometry, 26:52928
  fracture toughness of 2021-T81 and 7039-T61, at room and subzero temperatures, measurement of plane strain, 26:53661
  radiation effects on tensile properties of 7039-T63, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)
  tensile properties of boron and Borsic, and silicon carbide fiber-reinforced composites of 1100, 2024, 2219, 5052, 5056, and 6061, transverse, 26:53687
  Al--B, design and fabrication of composites of, for use in aircraft structures, 26:53573
  Al--B, fabrication of resin-bonded composites of, method for, 26:53574
  Al--B, mechanical properties of composites of, for use in aircraft structures, 26:53573
  Al--B, mechanical properties of resin-bonded composites of, 26:53574
  Al--B--SiC, development of aluminum--Borsic composite blades for use in advanced composite engine, 26:53575
  Al--B--SiC, fracture properties of Al--Borsic composites, dynamic, 26:53557 (SC-DC-721080)
  Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  Al--Co--Cr--Mo--Ni-base--Ti, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  Al--Mo--Sn--Ti-base--Zr, creep rupture of, at 755 and 865°K, cyclic, 26:53690
  Al--Mo--Ti-base--V, crack propagation and embrittlement by gaseous hydrogen, mechanism of, 26:53685
  Al--Ni-base--W--Zr, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  Al--Sn--Ti-base, radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)
  Al--Ti, reactions of ion-refined surfaces of intermetallic Ti_3Al, with hydrogen and oxygen, field-ion microscopy, studies of, 26:53657
  Al--Ti-base--V, fracture toughness of $\alpha + \beta$ and β processed, at room and subzero temperatures, measurement of plane strain, 26:53661
  Al--U, fission product release from irradiated foils of, mechanisms and measurement of recoil gaseous, 26:53694 (JAERI-Memo-3936)
  Al-base--B_4C--TiH_2, radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53696 (NASA-TM-X-2440, pp 595-602)
  Al-base--Si, tensile properties of boron, Borsic, and silicon carbide fiber-reinforced composites of, transverse, 26:53687
  Al-base--Zr, crystal structure of intermetallic metastable phase Al_3Zr in molten, produced by rapid solidification, 26:53686

ALUMINUM IONS
  scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139

ALUMINUM ISOTOPES Al-25
  energy levels from aluminum-27 (p,t) reactions, (E), 26:54551 (COO-535-673)

ALUMINUM ISOTOPES Al-26
  beta and electron-capture decay of, electromagnetic corrections to ft values for, (T), 26:54713
  cosmic-ray production in lunar rocks, (E/T), 26:53860
  energy levels from magnesium-26 (p,n) reactions, rotational-band, (E), 26:54554

ALUMINUM ISOTOPES Al-27
- meson (π) reactions at 100 to 260 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609
- neon-20 reactions at 85 to 206 MeV, direct-reaction effects in excitation functions and gamma spectra from, (E), 26:54558
- neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
- oxygen-16 reactions at 96 to 165 MeV, direct-reaction effects in excitation functions and gamma spectra from, (E), 26:54558
- photon reactions (γ,n) at 12 to 23 MeV, neutron spectra from, (E), 26:54563
- proton elastic scattering at 15.1 to 22.9 MeV, cross section and depolarization parameter for, (E), 26:54525 (FRNC-TH-191)
- proton reactions (p,t) and (p,He-3) at 27 MeV, angular distributions for, (E), 26:54551 (COO-535-673)
- proton reactions at 3 GeV, time-of-flight measurements of neutron spectra from, (E), 26:54528 (NASA-TM-X-2440, pp 523-6)
- proton scattering at 20 GeV, analysis using Steenberg model, (T), 26:54530

ALUMINUM NITRATES
- $Al(NO_3)_3$--HNO_3--NH_4F, corrosive effects on Corronel 230, HAPO-20 alloy, and Type 304L stainless steel, 26:53604 (BNWL-CC-449)

ALUMINUM NITRIDES
- diffusion of niobium, tantalum, titanium, and vanadium in, 26:53677

ALUMINUM OXIDES
- analysis of thin films of, obtained from reactive sputtering by nuclear reactions and ir spectrophotometry, 26:52902
- fabrication by hot isostatic pressing, 26:53578
- films of, use of proton-excited x rays for thickness measurement on, 26:52945
- growth and hardness of spherical agglomerates of, produced from powders, 26:53577
- ion emission by electron-bombarded, mass-spectral analysis of, 26:54084
- neutron distributions behind $W/Al_2O_3/W$ barriers, spatial, angular, and energy, 26:54966
- phonon resonant scattering in vanadium- and titanium-doped single crystals of, 26:54978
- production of microspheres of, from powders in rotating container, 26:53577
- radiation effects on sintered, ESR spectral studies on γ and in-pile, 26:53699 (RT/FI-(72)10)
- radiation effects on thermal conductivity of vanadium- and titanium-doped single crystals of, γ-, 26:54978
- reactions with alkali metal halides in carrier distillation process for uranium oxide (U_3O_8), 26:52955 (RT/CHI-(72)4)
- sintering of, effects of annealing and ball milling on, 26:53576
- Al_2O_3--Fe, cohesion and structural stability of composites of, effects of chromium, cobalt, manganese, molybdenum, nickel, and titanium additions on, 26:53589
- Al_2O_3--Ni, cohesion and structural stability of composites of, effects of chromium, manganese, and molybdenum additions on, 26:53589
- Al_2O_3--SiO_2, sorptive properties of silver salt-treated, for iodine and methyl iodide, 26:53077 (CONF-720823-9)
- Al_2O_3--SiO_2, viscosity of melts of, 26:55632(T) (UCRL-Trans-1479)

AMERICIUM HYDRIDES
- preparation of divalent, p. 42, 26:53066 (ORNL-4794, pp 36-44)

AMERICIUM ISOTOPES Am-241
- distribution and retention in tissues of rats following inhalation, time dependence of, 26:53531(T) (UCRL-Trans-1477)
- excretion in urine of rats following inhalation, time dependence of, 26:53531(T) (UCRL-Trans-1477)
- preparation of alpha--photon sources of, development of sputtering methods for, 26:53330(R) (BNWL-1308-10)
- preparation of thin-layer α sources of, by electrodeposition from sulfuric acid solutions, 26:53071
- uptake and retention in liver of mammals, mechanisms for, 26:53526(T) (BNWL-tr-71)

AMIDE POLYMERS
- radioinduced crosslinking polymerization of, grafted on polyacrylate--polyethylene system, 26:53013(P)

AMIDES
- positron lifetimes in liquid or solid, effects of dipolar electric fields of amide groups on, (E), 26:54100

AMMETERS
- design of chrono-, for analysis of molten salts, engineering drawings for, 26:52957

AMMONIA
- radiolysis of liquid, preparation of anhydrous hydrazine by electron or γ, 26:53001(P)
- reactions with uranium trioxide powders, factors affecting reduction, 26:53548 (AREAEE-139)

AMMONIUM CHLORIDES
- muon (μ^-) depolarization in aqueous solutions of, effects of chemical reactions, hydrogen peroxide concentration, and temperature on, (E), 26:54099
- positron lifetimes in, measurement of temperature-dependent, (E), 26:55064

AMMONIUM COMPOUNDS, SUBSTITUTED
- tetraethylammonium base, uptake by rat kidneys following injection, effects of uranyl nitrate on, 26:53537

AMMONIUM FLUORIDES
- $Al(NO_3)_3$--HNO_3--NH_4F, corrosive effects on Corronel 230, HAPO-20 alloy, and Type 304L stainless steel, 26:53604 (BNWL-CC-449)

AMMONIUM HYDROXIDES
- muon (μ^-) depolarization in aqueous solutions of, effects of chemical reactions, hydrogen peroxide concentration, and temperature on, (E), 26:54099

AMMONIUM IODIDES
- description of low-temperature, for production of electricity, 26:53108(P)

AMMONIUM PERCHLORATES
- radiolysis of single crystals of, electron microscopic studies of γ and x, 26:52985 (NASA-TM-X-2440, pp 584-94)

AMMONIUM PHOSPHATES
- radiolysis of arsenate-doped, ESR spectra of free radicals from, 26:52979 (COO-1105-179)

AMMONIUM URANIUM FLUORIDES
- preparation of crystals of α-NH_4UF_5 from uranyl compounds, 26:53049(P)

AMMONIUM URANYL CARBONATES
- spectra of, iterative deconvolution method for computer analysis of, 26:53055

AMPLIFIERS
- circuit for gated differential video, design and performance of radiation-hardened, 26:53307 (SC-DC-721159)
- radiation effects on gated differential video, neutron, 26:53307 (SC-DC-721159)

ANALYTICAL CHEMISTRY
- methods for solids, using electron emission by low-energy ion bombardment, 26:52936 (RT/EL-(72)4)

ANGIOSPERMIDAE
- Abelmoschus esculentus (okra), radiation effects on germination, growth, fruit quality, and yield of, following seed exposure, dose dependence of gamma, 26:53390
- Beta sp. (sugar beet), radiation effects on agricultural qualities of, following seed exposure, dose dependence of gamma, 26:53386
- Beta sp. (sugar beet), radiation effects on crop yield, plant morphology, and seed germination of, following seed exposure, dose dependence of gamma, 26:53388
- Beta sp. (sugar beet), radiation effects on, following seed exposure, effects of ploidy on seed germination and weight of, x, 26:53389
- Daucus sp. (carrot), radiation effects on growth and yield of, following exposure of seeds, dose dependence of x, 26:53391
- Hordeum sp. (barley), radiation effects on seeds of, combined effects of space flight environment on genetic, γ, 26:53384
- Hordeum vulgare (barley), radioisotope uptake by, from surface contaminated soils, effects of clinoptilolite on cesium-137 and strontium-90, 26:53540
- Musa paradisiaca (banana), quality improvement by selection, programs in Puerto Rico for, 26:55483 (CONF-720642-1)
- Phaseolus sp. (bean), radiation effects on crop quality and plant photosynthesis and transpiration following seed exposure, dose dependence of gamma, 26:53387
- Phaseolus vulgaris (bean), radioisotope uptake by, from surface contaminated soils, effects of clinoptilolite on cesium-137 and strontium-90, 26:53540
- radiation effects on, combined effects of space flight environment on mutagenesis and survival of, γ, 26:53365 (N-72-20065)
- Raphanus sp. (radish), radiation effects on growth and yield of, following exposure of seeds, dose dependence of x, 26:53391
- Secale sp. (rye), radiation effects on germination and mitotic activity in seeds of, effects of genetic heterogeneity on γ, 26:53392
- Secale sp. (rye), radioinduced chromosome aberrations in root cells of, effects of genetic heterogeneity on frequency of γ, 26:53392
- Tradescantia sp. (spiderwort), multiple mutant sectors in stamen hairs of, 26:55486 (COO-1400-41)
- Tradescantia sp. (spiderwort), radiation effects on, combined effects of space flight environment on cytologic and mutagenic, γ, 26:53382 (N-72-20054)
- Trifolium repens (clover), radioisotope uptake by, from continuously cropped uniformly contaminated soils, effects of clinoptilolite on cesium-137 and strontium-90, 26:53540
- Triticum sp. (wheat), radiation effects on free and bound tryptophan of, dose dependence of gamma, 26:53395
- Zea mays (maize), radiation effects on grain weight and water content of, following seed exposure, dose dependence of gamma, 26:53385
- Zea mays (maize), radiosensitivity of, effects of dose and genotype on thermal neutron, 26:53383

ANILINE, N,N-DIMETHYL-
- complexes with oxyfluorouranate ions, thermogravimetric studies on, 26:53043

ANIMALS
- coumaphos effects on, bibliography on, 26:55578 (ORNL-TIP/TIRC-72-49)
- plutonium-239 uptake and retention in tissues of, following inhalation as oxide aerosols, extrapolation of pathological data to man, 26:53511 (TID-26142)
- radiation effects on behavior of, review of literature on, 26:53448 (COO-1332-78)
- radiation effects on rate of recovery from traumatic injuries, whole-body, 26:53419
- radiation effects on, relevance for prediction of effects on man, 26:53411
- radioisotope uptake and retention in, following release to environment, bibliography on, 26:53530 (TID-3915(Suppl.1))
- radioisotope uptake by marine, from seawater, strontium-90 and zinc-65, 26:53532
- zinc-65 uptake in benthic fauna from Oregon and Washington continental shelf, 26:53149 (RLO-2227-T-12-26)

ANTHRACENE
- radiation damage effects in crystalline, for fast neutron dosimetry, 26:53229 (COO-1105-172)
- radioinduced color centers in single crystals of, absorption spectra of 77°K γ, 26:54996

2-ANTHRACENESULFONIC ACID, 9,10-DIHYDRO-3,4-DIHYDROXY-9,10-DIOXO-
- complexes with niobium, spectrophotometric studies on formation of, 26:52926

ANTHRANILIC ACID
- complexes with oxyfluorouranate ions, thermogravimetric studies on, 26:53043

ANTHRAQUINONE, 1,4-DIAMINO-
- radiation effects on fading of, in poly(vinyl chloride), alpha particle, deuteron, and γ, 26:53020

ANTIBIOTICS
- radiation effects on production of, in Aspergillus, gamma and uv, 26:53393

ANTIBODIES
- synthesis and irreversible differentiation of, RNA to DNA inverted transcription mechanism in, 26:55525 (EUR-4871)

ANTIGENS
- immunochemical studies with carcinoembryonic, 26:55505 (COO-3012-21)

ANTIMONY
- determination in meteoritic and terrestrial materials by neutron activation following separation from other elements, 26:52906
- determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
- determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- separation from indium by ion exchange chromatography, 26:52949
- solubility in liquid sodium, tracer studies on, 26:52895 (CONF-710959-, Paper 18)

ANTIMONY ALLOYS AND SYSTEMS
- Mg--Sb, lattice heat capacity of intermetallic Mg_3Sb_2, at 20 to 298°K, 26:53637 (LBL-101)

ANTIMONY ISOTOPES Sb-121
- neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589

ANTIMONY ISOTOPES Sb-124
- distribution in Columbia River, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)

ARCHAEOLOGICAL SPECIMENS
- age of, errors in fission track method for estimation of, 26:53181

ARGON
- abundance in extreme Population I stars and Sun, (T), 26:53892
- abundance in NGC 7662, (E/T), 26:53873
- carbon-ion reactions at 40 to 140 keV with, cross sections for charge exchange in, (E), 26:54137
- effects on radiolysis of gaseous ethylene, 26:53000
- effects on yields from γ radiolysis of gaseous hydrogen sulfide, 26:53011
- electron reactions at 25 keV and small angles with, determination of optical sums from energy-loss spectra from, 26:54128
- gold-atom elastic scattering at 5 to 90 eV by, interatomic potentials and total cross sections for, (E), 26:54142
- helium-atom and -ion reactions at 100 to 5000 eV with, angular and energy distributions of electrons from ionization and autoionization in, (E), 26:54141
- hydrocarbon-ion (CH/sub n/$^+$) reactions at 40 to 140 keV with, cross sections for dissociation and production of hydrogen atoms in, (E), 26:54137
- ion scattering at 8 to 25 keV by, total cross sections and interatomic potentials for, (E), 26:54139
- plasma of, conditions for wave transformation considering nonmonotonic longitudinal distribution, (E/T), 26:54841(T) (AEC-tr-7338)
- plasma of, interaction of pulsed large-current linear-discharge-produced electron beam with, argon-ion stimulated emission from, (E), 26:54787
- plasma of, localization of wave transformation region in shf discharges, (E), 26:54842(T) (AEC-tr-7339)
- plasma of, longitudinal and transverse diffusion coefficients for shf discharges, (E), 26:54776(T) (AEC-tr-7332)
- positron reactions at 8 eV with, total cross sections for, (E), 26:54119
- proton elastic scattering at low and moderate energies by, partial-wave calculations of, 26:54120
- proton reactions at 500 to 3000 eV with, differential cross sections for charge exchange, elastic scattering, excitation to autoionizing levels, and simple excitation in, (E/T), 26:54122
- proton reactions at moderate energies with, excitation by charge-exchange channel in, (T), 26:54120
- reactions with hydroxyl (OH), calculation of cross sections and rate constants for vibration--rotation energy transfer in, using distorted-wave and sudden approximations, 26:54126
- thermal capacity of solid, calculation of, 26:55515 (COO-3161-3)

ARGON HYDRIDES
- potential-energy curves for ground and excited states of ArH^+, LCAO--STO--MO--SCF calculations of, 26:54120

ARGON IONS
- effects on budding haploid yeast cells, sensitivity to lethal, 26:53368
- effects on surface microtopography of iron and copper, 26:55008
- effects on zirconium, calculated damage profiles of, 26:54969 (AECL-4130)
- emission from interaction of pulsed large-current linear-discharge-produced electron beam with argon plasma, stimulated, (E), 26:54787
- scattering by tungsten polycrystalline surfaces at 150 to 1000 eV, angular and energy distributions and cross sections for, (E), 26:54083

ARGON ISOTOPES
- abundance in Mokoia and Allende chondrites, (E), 26:53810

ARGON ISOTOPES Ar-37
- production of, reactor irradiation method and apparatus for, 26:53075(P)

ARGON ISOTOPES Ar-38
- energy levels from sulfur-34 (α,γ) reactions, spin--parity assignments and widths for, (E), 26:54560

ARGON ISOTOPES Ar-41
- content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)

ARGON SYSTEMS
- Ar--Hg, ionization of gaseous, 26:53196(R) (COO-323-28)
- Ar--N, radiolysis of, determination of short-lived species from electron pulse, 26:52980(R) (COO-3461-1)

ARGUS OPERATION
- electron belts and effects on Van Allen belts, 26:54044 (NASA-TM-X-2440, pp 178-92)

ARKANSAS NUCLEAR ONE POWER REACTOR
- cooling system for, revised data on, 26:55317 (DOCKET-50313-50)
- owners of, financial data on, 26:55317 (DOCKET-50313-50)
- personnel for, revised data on, 26:55317 (DOCKET-50313-50)
- site for, revised data on meteorology of, 26:55317 (DOCKET-50313-50)

ARSENIC
- determination in environmental samples by neutron activation, 26:52897 (CONF-721010-3)
- determination in thin layers of chalcogenide glasses by proton activation or x-ray fluorescence, 26:52900 (LYCEN-7236)
- determination of trace amounts of, in tobacco by neutron activation, 26:52907
- distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
- separation from indium by ion exchange chromatography, 26:52949

ARSENIC ISOTOPES As-74
- distribution and metabolism in tissues of mice, rabbits, and rats following oral administration, time dependence of, 26:53538

ARTERIES
- visualization of normal and occluded, in human limbs, effectiveness of metastable technetium-99-labeled pertechnetate for gamma camera, 26:53542

ARTHROPODA
- nutrient uptake and retention by, in forest floor ecosystem, calcium and potassium, 26:53539(R) (SRO-641-4)

ASTATINE ISOTOPES At-211
- energy levels of, shell-model calculations of wave functions and E2 transition probabilities for low-lying, (T), 26:54650

ASTRON DEVICE
- design of polygonal, with linear field regions, 26:54835(P)

ASTRONAUTS
- proton dose calculations using USAF--NASA model man, 26:54883 (NASA-TM-X-2440, pp 773-80)
- radiation dose and shielding calculations for, methods for, 26:54951 (NASA-TM-X-2440, pp 108-16)
- radiation hazards to, during prolonged space flight, cosmic, 26:53408 (NASA-TM-X-2440, pp 1007-15)
- radioinduced phosphene formation in eyes of, during space flight, cosmic, 26:53407 (NASA-TM-X-2440, pp 1002-6)

ASTRONOMY
- review of 1971 activities at Sydney Univ, 26:53993 (INIS-mf-252)

ASTROPHYSICS
- review of 1971 activities at Sydney Univ, 26:53993 (INIS-mf-252)

ATMOSPHERE
- alpha activity in ground-level, meteorological effects on natural, 26:53160 (UUIM-27)
- balloon flights in, history of use for scientific experiments, 26:54019
- beta activity in, near ground at Marsta Observatory, Sweden, natural, 26:53159 (UUIM-26)
- contamination by transportation vehicles, computer and manual methods for calculation of, 26:55467 (ANL/ES-15)
- cosmic-particle flux and ionization profiles in, balloon measurements of, 26:53807 (NASA-TM-X-2440, pp 908-13)
- cosmic-ray propagation in, theory of galactic, 26:54067 (NASA-TM-X-2440, pp 926-41)
- diffusion and turbulence in, research on, 26:55492 (COO-1585-22)
- gamma-ray shield testing on balloon flights with Ge(Li) detectors, 26:54964 (NASA-TM-X-2440, pp 914-21)
- radioactivity monitoring in Norwegian, 1956 to 1970, 26:53161
- radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- radon-220 content in, Nagoya, Japan, Nov. 1968, 26:53227
- thermal effluent effects on meteorological conditions in, 26:53188 (ANL-7860(Pt.3), pp 250-69)

ATMOSPHERIC PRECIPITATION
- radioactivity monitoring in Norwegian, 1956 to 1970, 26:53161

ATOMIC BEAMS
- injection into deuterium--tritium magnetic mirror devices, (T), 26:54757

ATOMIC ENERGY
- industrial requirements of, in Japan, 26:55094
- research activities in France for 1971, 26:55570 (NP-19408)

ATOMIC ENERGY, LEGAL ASPECTS
- legislation regarding nuclear liability in Japan, revision of, 26:55459
- radiation protection legislation in Japan during 1970, enforcement of, 26:55458

ATOMIC MASSES
- measurements of, survey on, 26:54495 (EUR-4765, pp 435-55)

ATOMIC MODELS
- development of realistic, 26:54144
- oscillation corrections to Thomas--Fermi, in quasi-classical approximation, 26:54151

ATOMIC PHYSICS
- bibliography on surface and vacuum physics, 26:54085

ATOMIC STRUCTURE
- calculation for closed-shell many-electron atoms, zero- and first-order Z-expansion coefficients for, 26:54149
- magnetic-field effects on, (T), 26:54144
- pressure effects on, (T), 26:54144
- wave functions in, spin-dependent operators in occupation-branching number representation for open-shell, (T), 26:55077

ATOMS
- electron correlation in, many-particle equations in different orders of perturbation theory for, 26:54148
- electron correlation in, model-independent definition of, 26:54146
- electron density in heavy, spatial oscillations of, (T), 26:54151
- electron interactions in heavy, Hamiltonian and two- and three-body interaction potentials for, (T), 26:54147
- electron interactions in heavy, relativistic corrections for K-, (T), 26:54147
- electron reactions at 2.04 MeV with A = 23 to 83, atomic-number dependence of cross sections for K-shell ionization in, (E), 26:54104
- electron reactions up to few keV with, processes of formation of multicharged ions in, 26:54103 (FRNC-CONF-51)
- electron reactions with, distorted-wave approximation for excitation in, 26:54106
- electron reactions with, role of configuration mixing of diabatic states in excitation in, (T), 26:54117
- energy levels of, symmetries of nonrelativistic, relativistic, and approximate relativistic Coulomb field for first-order Stark shifts for, (T), 26:54374
- energy of degenerate levels of, with two perturbations, double perturbation form for second-order, 26:54152
- energy of many-electron, cluster expansion for, (T), 26:54148
- energy of, calculation using transferred orbitals, 26:54143
- expectation values for, calculation using spin-adapted antisymmetrized products, 26:54154
- form factors in generalized field theory for, 26:54382
- ion reactions with, calculation of ejection probability and energy distribution from negative-, using sudden-switching approximation, 26:54112
- reactions of hot, computer simulation of effect of scavenger competition on, 26:53030
- reactions of hot, effects of scavenger competition in kinetic theory of, 26:53031
- reactions with atoms, ions, and molecules, bibliography and compilation of data on charge exchange, dissociations, excitation, and ionization, in, 26:54118
- reactions with diatomic molecules, effects of attractive Morse potential on quantum mechanical transition probabilities for, (T), 26:54132
- reactions with diatomic Morse oscillators, impulse approximation for vibrational-excitation probabilities in, 26:54131
- reactions with harmonic oscillators, calculation of semiclassical S-matrix elements for transitions in inelastic and reactive, by integration along complex-valued trajectories, 26:54129
- scattering by atoms at 40 to 100 keV, differential cross sections, distances of closest approach, and impact parameters for elastic, (E/T), 26:54101 (EUR-CEA-FC-630)
- scattering by solid surfaces, model for repulsive elastic, based on pairwise interaction potential, 26:54089
- Schroedinger equation for bound states, Sams--Kouri method for noniterative solution to integral form of, 26:54145
- wave functions for many-electron, physical interpretation of cluster expansion of, 26:54146
- wave functions for, asymptotic behavior of bound-state, 26:54153
- wave functions for, direct diagonalization method for generation of Serber-type simultaneous angular-momentum and spin eigenfunctions for use in expansion of, 26:54156
- wave functions for, direct-diagonalization method for generation of Serber-type spin eigenfunctions for use in expansion of, 26:54155
- wave functions for, expansion in terms of spin-adapted antisymmetrized products, 26:54154
- wave functions for, instabilities associated with complex and unrestricted Hartree--Fock, 26:54157
- wave functions for, optimization of transferability of Hartree--Fock valence-shell orbitals, 26:54143
- wave functions for, review of properties and uses of natural spin orbitals in construction of, 26:54150

ATUCHA POWER REACTOR
- construction of, status of, 26:55216

AUGER ELECTRONS
- detection and measurement of, design and performance of retarding field-cylindrical mirror analyzer for, 26:53310 (SC-DC-721302)

AURORAE
- arc event of Mar. 8--9, 1970, spectroscopy of O(^{1}D), O(^{1}S), and N(^{2}D) states during, (E), 26:54014
- creation of polar, relation of magnetosphere and solar wind phenomena with, (E/T), 26:54043
- electron energy deposition in water vapor in, (E/T), 26:54033
- ion origins in, optical measurements of electron and proton precipitations for determination of primary, (E), 26:54012 (SC-RR-720543)
- phenomena of, from simulated steady-flow interaction of charged particles with geomagnetic dipole field, (E), 26:54056
- spectra of radar, auroral-region plasma-instability identification from range-time-intensity film strip and vhf power, (E), 26:54038
- ultraviolet-radiation emission during weak breakup of, sounding-rocket observation on Feb. 18, 1970 of strong extreme, (E), 26:54030

AURORAL ZONE
- geomagnetic conjugacy level decrease with increasing planetary magnetic index K/sub p/ at auroral intensity of 5577 A, (E), 26:54013
- geomagnetic-field pulsations at magnetospheric polar cusp, occurrence of latitude-dependent Pc-4 and Pc-5, (E), 26:54034
- plasma instability identification from study of vhf power spectra of radar aurorae and range-time-intensity film strips, (E), 26:54038

AUSTRALIA
- radiation protection programs in New South Wales during 1971, 26:55454(R) (NP-19412)

AVES
- Gallus sp. (chicken), radiation effects on embryonic development, hatchability, and growth of, phosphorus-32, 26:53517
- Gallus sp. (chicken), radiation effects on immune reactions to adult allogeneic leukocytes in embryos, γ, 26:53477
- Gallus sp. (chicken), radiation effects on survival of young, following acute whole-body exposure, proton, 26:53457 (NASA-TM-X-2440, pp 659-64)
- Gallus sp. (chicken), radioinduced injuries of lymphatic organs in young, following acute sublethal exposure, proton, 26:53457 (NASA-TM-X-2440, pp 659-64)
- radiation effects on morphology and physiology of thyroid gland in, following parenteral injection of iodine-131, β and γ, 26:53515

AVIATION PERSONNEL
- radiobiological vulnerability to weapons during task performance, modular analysis of, 26:54880 (NASA-TM-X-

2440, pp 364-7)

AVR REACTOR
- coolant flow at high Reynolds numbers in, aerodynamics of, 26:55180

B

BACKGROUND RADIATION
- identification and control of Apollo sources of, that interfere with x-ray and gamma experiments, 26:53255 (NASA-TM-X-2440, pp 714-22)

BACTERIA
- Bacillus subtilis, radiation effects on survival and reproduction of spores of, effects of energy level on x, 26:53376
- Clostridium botulinum, radiation effects on growth and toxin production following spore exposure, temperature dependence of sublethal γ, 26:53366(R) (ORO-3347-8)
- Escherichia coli, canavanine death and mechanism of DNA replication in, 26:55491(R) (COO-1562-17)
- Escherichia coli, effects on course of gastrointestinal syndrome in γ-irradiated germ-free newborn swine following artificial colonization, 26:53495
- Escherichia coli, radiation effects on capacity of, to support growth of bacteriophage T4, γ, 26:53372
- Escherichia coli, radiation effects on cell volume and DNA content of parent strain and radioresistant mutant of, x, 26:53363
- Escherichia coli, radioinduced cell killing in, following uptake of tritium-labeled oleate, use for selective enrichment of altered acyl CoA synthetase mutants, β, 26:53518
- Escherichia coli, radioinduced pre-mutational lesions in, comparison of dose-response kinetics and photoreactivation of 254 nm and 313 nm uv, 26:53370
- Escherichia coli, radioinduced reversion mutations in, effects of tryptophan starvation on uv, 26:53379
- intestinal barrier to invasion by, 26:55474 (BNL-17004)
- Micrococcus radiodurans, radioinduced double-strand breaks in DNA of, inhibitory effects of chloramphenicol, dactinomycin, and tetracycline on repair of γ, 26:53349
- radiation effects on DNA in, review of role of enzymes in repair of uv, 26:53351
- radiation effects on DNA replication in, role in molecular repair mechanism, 26:53348
- radioinduced injuries of pathogenic, effects of culture media, dose, and storage temperature on recovery from γ, 26:53369
- radioinduced lesions in DNA in, role of enzymes in repair of uv, 26:53350
- radioinduced lesions in DNA of, role of repair processes in recovery from lethal and mutagenic γ, uv, and x, review of, 26:53357
- radiosterilization of spores of, on space vehicle components, dose response for uv, 26:53367(R) (SC-RR-720516)
- Salmonella typhimurium, radiation effects on growth and prophage induction in, during space flight, combined effects of weightlessness on γ, 26:53364 (N-72-20063)
- Salmonella typhimurium, radiation effects on infectivity of, for chick embryos following exposure of cultures to substerilizing doses, γ, 26:53369
- Staphylococcus sp., radiosensitivity of, relation between loss of pathogenicity and decreased γ, 26:53377

BACTERIOPHAGES
- M13, radiation effects on sedimentation properties of DNA in, in relation to molecular structure, uv, 26:53373
- phiX174, radiation effects on sedimentation properties of DNA in, in relation to molecular structure, uv, 26:53373
- radiation effects on DNA in, review of role of enzymes in repair of uv, 26:53351
- radiation effects on DNA replication in, role in molecular repair mechanism, 26:53348
- radiation effects on induction of, in Salmonella typhimurium during space flight, combined effects of weightlessness on γ, 26:53364 (N-72-20063)
- radioinduced lesions in DNA in, role of enzymes in repair of uv, 26:53350
- radioinduced lesions in DNA of, role of repair processes in recovery from lethal and mutagenic γ, uv, and x, review of, 26:53357
- T4, radiation effects on capacity of Escherichia coli to support growth of, γ, 26:53372

BAILLY POWER REACTOR, UNIT 1
- valves for, verification of wall thickness for nuclear service, 26:55340 (DOCKET-50367-31)

BALLOONS
- use in scientific experiments, history of, 26:54019

BALNEOTHERAPY
- effects of thermal, on recovery of mice following exposure to mixed fast neutron and γ radiation, 26:53465

BARIUM
- content in rock, γ--γ selective method for determination of equivalence between other heavy element and, 26:52943
- determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
- determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- photon reactions (γ,xn) with, model analysis of giant dipole resonance in, (E/T), 26:54598 (FRNC-TH-242)

BARIUM BORIDES
- BaB$_6$--LaB$_6$, preparation, sintering, and thermoemission properties of, 26:53582

BARIUM IONS
- release of clouds of, possible correlation with electron-intensity fluctuations observed on Feb. 14, 1970 in ionosphere, (E), 26:54039

BARIUM ISOTOPES Ba-130
- energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)
- neutron reactions with, resonance activation integrals for, (E), 26:54585

BARIUM ISOTOPES Ba-131
- energy levels from lanthanum-131 decay, spin--parity assignments for, (E), 26:54643
- energy-level transitions from lanthanum-131 decay, branching ratios and multipolarities for, (E), 26:54643

BARIUM ISOTOPES Ba-132
- energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)

BARIUM ISOTOPES Ba-133
- design of γ source of, for simulation of spectrum emitted by radioisotope thermoelectric generator, 26:53335 (NASA-TM-X-2440, pp 850-2)
- distribution and retention in rabbits following intravenous injection, kinetics of, 26:53534

BARIUM ISOTOPES Ba-139
- half-life of, (E), 26:54667

BARIUM ISOTOPES Ba-140
- content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)
- monitoring in Sweden from March 23, 1971 USSR underground nuclear explosion, 26:53158 (FOA-4-4502-A-1)

BARIUM ISOTOPES Ba-141
- beta decay endpoint energy of, (E), 26:54601 (IS-T-534)
- half-life of, (E), 26:54667

BARIUM ISOTOPES Ba-142
- half-life of, (E), 26:54667

BARIUM ISOTOPES Ba-143
- beta decay of, prediction of β endpoint energy using Way--Wood diagram, 26:54601 (IS-T-534)

BARIUM ISOTOPES Ba-144
- beta decay of, prediction of β endpoint energy using Way--Wood diagram, 26:54601 (IS-T-534)

BARIUM TITANATES
- radiation effects on dielectric constants and crystal structure of, electron and γ, 26:55020

BARYONS
- coupling to baryons and pseudoscalar mesons, effective-Lagrangian model for, (T), 26:54333
- couplings in chiral SU(3) x SU(3), tensors and axial charges for octet, 26:54371
- decay of, effective Lagrangian model for leptonic, (T), 26:54333
- form factors in parton model, elastic and inelastic, (T), 26:54311
- interactions of, relativistic equation in representation of Schwinger group W(3) for four-particle model of electromagnetic, (T), 26:54368
- interactions of, Schwinger group W(3) for electromagnetic, 26:54368
- interactions with mesons, effective Lagrangian model for, (T), 26:54333
- interactions with mesons, transition amplitudes, cross sections, and partial-wave decompositions for three-particle final state in, 26:54330
- magnetic moments of, Schwinger group W(3) for four-particle model of, (T), 26:54368
- mass of, effective Lagrangian model for, (T), 26:54333
- mixing operator for, representation of SU(3) x SU(3) chiral algebra for, (T), 26:54370 (NP-19418)
- structure of, relativistic equation in representation of Schwinger group W(3) for four-particle model for, 26:54372
- sum rules for octet and decuplet, from commutators of axial charges with axial divergences, (T), 26:54341

BARYONS, RESONANCE
- production in $K^- + n$ interactions at 4.9 GeV/c, cross sections and decay parameters for, (E), 26:54229
- production in $\pi^- + p \to N + 2\pi$ and $\pi^+ + p \to N + 2\pi$ interactions at 1.6 to 2.0 GeV, energy-independent partial-wave analysis of, (T), 26:54328 (LBL-544)
- production of πN, in nonlinear sigma model for nucleon structure, 26:54251
- trajectories of, correlations among, 26:54338

BARYONS, RESONANCE (Δ)
- production of $\Delta(1236)$ in three- and four-prong anti $p + p$ interactions at 7 GeV/c, (E), 26:54218
- production of Δ^0 in $\pi^- + d \to 2p + 2\pi^- + \pi^0$ interactions at 7 GeV/c in deuterium bubble chamber, validity of spectator model for cross sections for, (E), 26:54208 (COO-3065-16)
- production of Δ^{++} in $\gamma + p$ interactions at 2 to 7.5 GeV in hydrogen bubble chamber, cross sections for, (E), 26:54175 (SLAC-143)
- production of $\Delta^{++}(1236)$, $\Delta^0(1236)$, and $\Delta^+(1236)$ in $\pi^- + p$

  $\rightarrow p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, cross sections for, (E), 26:54207 (COO-3064-3)
BARYONS, RESONANCE (Λ)
  production in $K^- + p \rightarrow$ anti $K^0 + n$ interactions, properties of, (E/T), 26:54210 (NP-19419)
  production of $\Lambda(1405)$ and $\Lambda(1520)$ in $\pi^- + p$ interactions at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
BARYONS, RESONANCE (N)
  production in $\gamma + n \rightarrow n +$ eta and $\gamma + p \rightarrow p +$ eta interactions at threshold to 1.1 GeV, transition amplitudes and cross sections for, (E), 26:54166 (CALT-68-322)
  production of N(1500) and N(1700) in $\pi^- + p \rightarrow p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, cross sections for, (E), 26:54207 (COO-3064-3)
  production of N(1520) in $\gamma + n \rightarrow \pi^- + p$ interactions at 600 to 1250 MeV, (E), 26:54179
BARYONS, RESONANCE (Σ)
  production in $K^- + p \rightarrow$ anti $K^0 + n$ interactions, properties of, (E/T), 26:54210 (NP-19419)
  production of $\Sigma(1385)$ in $\pi^- + p$ interactions at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
BASALT
  properties for radioactive waste fixation, evaluation of, 26:53057(T) (BNWL-tr-75)
  thorium content of alkali olivine, in USSR, (E), 26:53147
  uranium content of alkali olivine, in USSR, (E), 26:53147
BASTNAESITES
  content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
BATTERIES
  performance testing of organic electrolyte, at -10 to 60°C, 26:55602 (SC-DC-722298)
BEAM MONITORS
  design and operation of Faraday effect, for relativistic electron beam current measurements, 26:53747 (SC-DR-720447)
  design and performance for MeV ion currents of 0.1 to 10 nA, 26:53802
  design and performance of passive calorimeter, for pulsed electron beam energy measurement, 26:53258 (SC-DR-720630)
BEAM SEPARATORS
  cavity resonators for, surface condition of niobium for superconducting rf, 26:53748
  deflectors for superconducting rf, theory of $\pi/2$-mode biperiodic, 26:53798
  design for producing separated electron beams over 100 GeV by using synchrotron radiation, 26:53801
BEARINGS
  design and fabrication of gas, for production machine tools, 26:53113 (Y-DA-4541(Rev.1))
BEHAVIOR
  radiation effects on learned-task performance, of monkeys following continuous whole-body exposure, effects of dose and dose rate on γ, 26:53452 (NASA-TM-X-2440, pp 633-40)
  radiation effects on stress-related performance, in man following continuous or protracted fractionated whole-body exposure, effectiveness of pulmonary-impedance power spectral analysis for determining γ, 26:53401 (NASA-TM-X-2440, pp 238-48)
  radiation effects on, of animals, review of, 26:53448 (COO-1332-78)
BELGIUM
  applications of radiation in agriculture research in, 26:53459(R) (NP-19403)
BELL STATION POWER REACTOR
  heated effluents from, prediction of effects on Cayuga Lake of, 26:53192
  radioisotope releases from, to Cayuga Lake, evaluation of effects of, 26:53192
BENZENE
  effects on γ-induced thermoluminescence of cyclohexene, 26:53010
BENZENE, 1-BROMO-4-NITRO-
  radiation effects on antibacterial activity of, and in mixtures with 2,2-dichloro-N-[2-hydroxy-1-(hydroxymethyl)ethyl]acetamide, γ, 26:52998
BENZENE, p-DICHLORO-
  radiation effects on crystals of, studies on γ, neutron, and x, 26:52984 (FRNC-TH-262)
BENZENE, NITRO-
  radiation effects on antibacterial activity of, and in mixtures with 2,2-dichloro-N-[2-hydroxy-1-(hydroxymethyl)ethyl]acetamide, γ, 26:52998
BENZENE, TETRACHLORO-
  spectroscopy of, phosphorescence--microwave double resonance, 26:55623(R) (UCLA-34-P-91-48)
BENZYL ALCOHOL
  reactions with radiolytic hydrated electrons, kinetics of, 26:53006
BERYLLIUM
  determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
  fabrication of thin wall tubes of, by hot isostatic pressing, 26:53618
  radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53696 (NASA-TM-X-2440, pp 595-602)
BERYLLIUM ALLOYS AND SYSTEMS
  Be--Cu-base, mechanical properties and stress relaxation of Alloy 25 at -320 to 300°F, 26:53641 (SC-DR-720471)
BERYLLIUM FLUORIDES
  BeF_2--LiF, thermodynamic evaluation for use as fusion reactor coolant, 26:54827 (IPP-4/97)
BERYLLIUM HYDRIDES
  stability at 25 to 250°C, 26:53714 (NAA-SR-8533)
BERYLLIUM ISOTOPES Be-6
  resonance in ^{3}He + ^{3}He system, implications for solar neutrino emission of, (T), 26:54508
BERYLLIUM ISOTOPES Be-7
  content in rainwater and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
BERYLLIUM ISOTOPES Be-9
  deuteron reactions (d,n) at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)
  deuteron reactions (d,n) at 50 and 54 MeV, biological implications of neutron spectra from, (E/T), 26:53804
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  proton elastic scattering at 15.1 to 22.9 MeV, cross section and depolarization parameter for, (E), 26:54525 (FRNC-TH-191)
  proton reactions (p,π^-) and (p,π^+) at 600 MeV, cross sections and spectra from, (E), 26:54535
  proton scattering at 20 GeV, analysis using Steenberg model, (T), 26:54530
BERYLLIUM ISOTOPES Be-10
  abundance in primary cosmic radiation, (E), 26:53833
  cosmic-ray production in lunar rocks, (E/T), 26:53860
BETA DECAY
  book: Beta Processes. Functions for Analyzing Beta Spectra and Electron Capture, 26:54740
  corrections of order $Z\alpha^2$ and $Z^2\alpha^3$ to pure Fermi, calculation of electromagnetic, (T), 26:54713
  theory of, limitation on use of impulse approximation in, (T), 26:54709
BETA PARTICLES
  content in environment of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  detection of, retained on resin columns, design and performance of Geiger--Mueller counter for, 26:53212
  dose distribution in man following administration of colloids of gold-198 or phosphorus-32 for treatment of malignant pleural effusions, time dependence of, 26:53509
  dose distribution in orthogonal plane surrounding iridium-192 wires implanted for interstitial therapy, effects of arrangement, number, and size of implants on, 26:53422
  dose distribution in respiratory tract of dogs and monkeys following inhalation of strontium-90 as fused clay aerosols, 26:53536
  dose to fingers of medical personnel during injection of radioisotopes, phantom studies of, 26:53424
  dose to personnel, comparison of results of actual and phantom measurements of, 26:53426
  dosimetry of tritium, grid-walled proportional counter study of micro-, 26:54895
  dosimetry of, ^{7}LiF thermoluminescent dosimeter for personnel, 26:53249
  effects on cells following incorporation of β-emitting radioisotopes into DNA, comparison of effects of external x-ray exposure with lethal and mutagenic, 26:53505
  effects on DNA following incorporation of β-emitting radioisotopes, repair processes for, 26:53505
  effects on thrombocyte count in man following intravenous injection of colloidal gold-198 for therapy of liver involvement in Hodgkin's disease, relation of dose fractionation and protraction to, 26:53507
  effects on water vapor, energy for ion pair formation from, 26:53196(R) (COO-323-28)
  production in atmosphere by high-altitude nuclear explosions, review, 26:54044 (NASA-TM-X-2440, pp 178-92)
BETA SOURCES
  activity in atmosphere near ground at Marsta Observatory, Sweden, natural, 26:53159 (UUIM-26)
  activity measurements of, in radiator solution, Cherenkov detector for, 26:53209
  dose distribution near implanted β and mixed β/γ emitters, (T), 26:54897
  use in skin cancer therapy, description of equipment for, 26:53341
BETA SPECTROMETERS
  description of compact magnetic, for in-beam measurements of internal conversion coefficients, 26:53264
  theory of magnetic prism, review of, 26:53259
BIBLIOGRAPHIES

BIG ROCK POINT POWER REACTOR
- neutron monitoring startup channels for, failure of, 26:55277 (DOCKET-50155-124)
- radioactive effluents from, effects on radioisotope content in Lake Michigan fish, 26:53169 (ANL-7860(Pt.3), pp 141-50)
- thermal effluents from, ecological studies on effects of, 26:53182 (ANL-7860(Pt.3), pp 101-2)
- valves for, verification of wall thicknesses for nuclear service, 26:55278 (DOCKET-50155-125)
- waste processing systems for, malfunction of holdup line for off gas, 26:55237 (DOCKET-50155-123)

BIOCHEMISTRY
- research in India, 1971--1972, 26:55452(R) (NP-19407)

BIOLOGICAL MATERIALS
- radiation effects on, 26:53396

BIOLOGICAL MODELS
- description of USAF--NASA Computerized Anatomical Model Man for calculating radiation doses for space missions, 26:54883 (NASA-TM-X-2440, pp 773-80)
- development for multi-parameter analysis of radioisotope kinetics in biological systems, 26:53519
- development for nutrient uptake and retention in forest floor-arthropod ecosystems, 26:53539(R) (SRO-641-4)
- development for radiation effects on epidermal cell kinetics in swine, 26:53450 (LA-4874, pp 126-44)
- development of heart, for measurements of blood volume distribution using iodine-131 scanning, 26:53543

BIOLOGICAL STRESS
- radioinduced, in man following continuous or fractionated dose exposure, effectiveness of pulmonary-impedance power spectral analysis for diagnosis of, 26:53401 (NASA-TM-X-2440, pp 238-48)

BIOLOGICAL SYSTEMS
- energy conversion processes in, at molecular level, EPR studies on, 26:55616(R) (TID-26149)

BIOLOGY
- metric concepts for molecular taxonomy, 26:55545 (LA-4973)
- research in India, 1971--1972, 26:55452(R) (NP-19407)

BIOTITES
- analysis of granitic, for cesium by neutron activation and γ spectrometry, 26:52908

BIPYRIDINE
- complexes with oxyfluorouranate ions, thermogravimetric studies on, 26:53043

BISMUTH
- determination in chalcopyrite and galena by neutron activation and α scintillation counting, 26:52910
- determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- determination in water, effects of large amounts of copper on spectrographic, 26:52927
- diffusion in mercury at 25°C, 26:53636 (IS-T-554)
- distribution between liquid bismuth--lithium alloys and molten lithium chloride, p. 4, 26:53081 (ORNL-4794, pp 1-14)
- separation from indium by ion exchange chromatography, 26:52949
- solubility in rare earth--thorium solutions, free energies of formation for compounds produced by, 26:53664
- solvent properties of liquid, for rare earths and thorium, pp. 4-5, 26:53081 (ORNL-4794, pp 1-14)
- sorption on diethylaminoethylcellulose in methanol--thiocyanate--hydrochloric acid media, 26:52951

BISMUTH ISOTOPES Bi-209
- fission of, isomer ratios of niobium-95 from, (E), 26:54627

BISMUTH ISOTOPES Bi-214
- content in uranium mine air, α-spectrometric method for determining, 26:53226

BLACK HOLES
- physics of, violation of second law of thermodynamics in, (T), 26:53906
- potentials in general relativity for, nonlinear generalization of Maxwell equations for static repulsive, (T), 26:54404

BLOOD
- alterations in rodent, seasonal, 26:55587 (ORNL-TM-3898)
- analysis for vitamin B_{12} by radiochemical method, 26:52938
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- radiation effects on human, following extracorporeal exposure, effects of dose on count of lymphocytes in, 26:53440
- volume distribution in heart, measurement by iodine-131 scanning, 26:53543

BLOOD CELLS
- radiation effects on, of rats following intratracheal administration of cerium-144, 26:53516

BLOOD PLATELETS
- radiation effects on serotonin uptake by, in rabbits in relation to content during acute radiation syndrome, γ, 26:53486

BOILERS
- design of 1 MW liquid sodium--water steam generator, for leak tests, 26:55153 (CONF-710548-, pp 57-104)
- development of sodium--water steam generator, test programs for, 26:55155 (CONF-710548-, pp 129-54)
- leak testing of straight tube, parameters for large, 26:55151 (CONF-710548-, pp 17-38)
- leakage of water into sodium in steam generator, damage and effects on safety of, 26:55150 (CONF-710548-, pp 1-16)
- leaks in sodium--water steam generators, use of hydrogen detector for detection of small, 26:55156 (CONF-710548-, pp 155-70)
- leaks of water into liquid sodium in 1 MW steam generator, corrosive effects on tube bundles of, 26:55153 (CONF-710548-, pp 57-104)
- leaks of water into sodium in steam generator, effects of reactions from, 26:55154 (CONF-710548-, pp 105-28)
- performance of 1 MW sodium--water steam generator, 26:55153 (CONF-710548-, pp 57-104)
- performance of sodium--water steam generator, 26:55159 (CONF-710548-, pp 206-12)
- safety of sodium--water steam generators, 26:55159 (CONF-710548-, pp 206-12)
- tube failure in austenic steel steam generator, effects of sodium--water reactions on, 26:55161 (CONF-710548-, pp 221-42)

BOILING
- crisis in water cooled reactors, critical review on state of the art on, 26:55179 (TID-25887)
- detection of sodium, acoustic method for, 26:55083(R) (EURFNR-1001)

BONDING
- surface preparation for adhesive, 26:55597 (SC-DC-714099)

BONDS, CHEMICAL
- research on covalently bonded compounds of light elements, 26:55523(R) (COO-3544-1)

BONE MARROW
- radiation dose to human, following whole-body exposure, use of lithium fluoride dosimeters in Alderson Rando phantom for calculation of γ, 26:53406 (NASA-TM-X-2440, pp 974-80)
- radiation dose to, of medical personnel during arteriography, x, 26:53443
- radiation effects on rat, role of thymus gland in recovery from γ, 26:53479
- radiation effects on ratio of erythrocytes to leukocytes in, of mice, evaluation for use as biological dosimeter following whole-body exposure, 26:53473
- radioinduced chromosome aberrations in cells of human, following local therapeutic exposure, effects of dose and time on frequency of γ, 26:53445
- radioinduced leukemic transformations in, of mice following intraperitonal injection of strontium-90, β, 26:53512
- radioinduced suppression of hematopoietic function of, in monkeys following continuous and subsequent fractionated whole-body exposures, effects of dose and dose rate on recovery from γ, 26:53452 (NASA-TM-X-2440, pp 633-40)

BONES
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- homeostatic function of, in relation to calcium

    metabolism, 26:55477 (BNL-50345)
  radiation effects on maxillary, of dogs following exposure of teeth, effects of lead bridges and plastic caps on γ, 26:53480
  radioinduced necrosis of jaw, in man following therapy of neoplasms of head and neck region, 26:53418
  strontium-90 content of samples of human, collected in France during 1970 in relation to stable strontium content, 26:53520 (CEA-N-1535)
  x-ray dose across plane interface with tissue, contribution of photoelectrons to, (T), 26:54896
BORIDES
  fracture toughness of composites of, effects of carbon and nickel on, 26:53581
BORON
  abundance in primary cosmic radiation, (E), 26:53833
  coating with boron nitride, method for surface, 26:53572
  content profile in silicon and silica, determination of, using secondary ion emission, 26:52937
  deposition on carbon monofilament substrate, problems in chemical vapor, 26:53571
  determination in aluminum and aluminum alloys by direct spectrophotometry, 26:52928
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  dimensions and mechanical properties of advanced composites of, fabricated by cocuring process, 26:53570
  effects of fiber reinforcements of, on transverse tensile properties of aluminum composites, 26:53687
  effects on sintering and stress-rupture properties of nickel-base alloys, 26:53674
  fabrication of advanced composites of, cocuring method for, 26:53570
BORON CARBIDES
  Al-base--B_4C--TiH_2, radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53696 (NASA-TM-X-2440, pp 595-602)
BORON IONS
  effects on budding haploid yeast cells, sensitivity to lethal, 26:53368
  effects on silicon at 40 keV, rod-like defects produced in, 26:54995
  implantation in amorphous silicon at 22 keV, secondary-ion mass spectrometric study of profile of, 26:55014
  reactions with copper and tantalum at 10.4 MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
BORON ISOTOPES B-10
  proton elastic scattering at 15.1 to 22.9 MeV, cross section and depolarization parameter for, (E), 26:54525 (FRNC-TH-191)
BORON ISOTOPES B-12
  nuclear dynamics of, particle--hole description of semileptonic electromagnetic and weak interactions in, (T), 26:54541
BORON NITRIDES
  deposition on boron fibers, method for surface, 26:53572
  radioinduced paramagnetic centers in hexagonal, correlation of EPR, thermally stimulated current, and thermoluminescence of γ, 26:55015
BORON OXIDES
  reactions with alkali metal halides in carrier distillation process for uranium oxide (U_3O_8), 26:52955 (RT/CHI-(72)4)
BORON SYSTEMS
  Al--B, design and fabrication of composites of, for use in aircraft structures, 26:53573
  Al--B, fabrication of resin-bonded composites of, method for, 26:53574
  Al--B, mechanical properties of composites of, for use in aircraft structures, 26:53573
  Al--B, mechanical properties of resin-bonded composites of, 26:53574
  Al--B--SiC, development of aluminum--Borsic composite blades for use in advanced composite engine, 26:53575
  Al--B--SiC, fracture properties of Al--Borsic composites, dynamic, 26:53557 (SC-DC-721080)
  B--graphite, dimensions and mechanical properties of advanced composites of, fabricated by cocuring process, 26:53570
  B--graphite, fabrication of advanced composites of, cocuring method for, 26:53570
  B--polyimide, development of composite blades of, for use in advanced composite engine, 26:53575
  B--SiC, effects of fiber reinforcements of Borsic on transverse tensile properties of aluminum composites, 26:53687
BOROSILICATES
  radiation effects on transmittance of BK-7 glass, electron, 26:54049 (NASA-TM-X-2440, pp 748-55)
BOSONS
  interactions with excited two-level system, mean transverse spin components from, (T), 26:55075
  interactions with excited two-level system, stationary level populations from, (T), 26:55076
  interactions with massive scalar and massless spinor fields, quantum two-dimensional classically solvable model with nontrivial scattering for, (T), 26:54385
  production of pairs of scalar, in threshold region by square-well potential with smooth sides, probability for, (T), 26:54384
  stability of many-body systems with singular attractive potentials, self-consistent Hartree field as limit for Schroedinger equation for, (T), 26:54408 (ITF-72-14-E)
  thermodynamic stability of nonideal Bose--Einstein gas, (T), 26:54432
BOSONS, INTERMEDIATE
  production of W^- in $e^+ + e^-$ colliding-beam interactions, total cross sections and angular and energy distribution for, (T), 26:54277
BRAIN
  arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
  metabolism of palmitic acid in developing rat, tracer study, 26:55620 (UCLA-12-871)
  radiation effects on human, following hypophysectomy using proton beams, 26:53446
  radiation effects on, comparison for rats and sharks, gamma, 26:53487
  radioinduced malformations in, of mice and rats following prenatal exposure, effects of developmental stage at exposure on, 26:53437
  radiosensitivity of rat, relation of content of acetylcholine to, 26:53461(R) (UCB-34-P-82-13)
BRASS
  analysis for copper by amperometric titration, 26:52924
  deuterium-molecule reactions with surfaces of, secondary-electron emission coefficients for, (E), 26:54105
  hydrogen-molecule reactions with surfaces of, secondary-electron emission coefficients for, (E), 26:54105
BREMSSTRAHLUNG
  dose deposition calculations for plane slabs, comparison of methods for 0.5- to 10-MeV, 26:54886 (NASA-TM-X-2440, pp 801-15)
  emission from relativistic particles in turbulent plasma, (T), 26:54774(T) (AEC-tr-7323)
  production in inelastic $\nu + \mu$ interactions, four-component neutrino theory for e and μ polarization effects on form of spectra for, (T), 26:54290
  production in potential scattering, soft-photon theorem for, 26:54737
  production of soft, in $p + p \to \pi^+ + d + \gamma$ interactions, amplitudes of, (T), 26:54250
  reactions $(\gamma,2n)$ with yttrium-89 at 23 to 50 MeV, calculation of isomer ratio in, (T), 26:54725
  reactions (γ,n) with $Z = 13$ to 82 nuclei at 12 to 23 MeV, neutron spectra from, (E), 26:54563
  reactions (γ,xn) with lanthanum-139 and praseodymium-141 at 8 to 24 MeV, cross sections for, (E), 26:54629
  scattering by concrete, iron, and lead at 2.0 to 10.5 MeV, dose albedos of back-angle, (E), 26:54892
  spectra of suprathermal proton cosmic, (E/T), 26:53820
BRICKS
  age of, thermoluminescent method for estimation of, 26:53177
BROMINE
  determination in environmental samples by neutron activation, 26:52897 (CONF-721010-3)
  determination of trace amounts of, in tobacco by neutron activation, 26:52907
  solubility in liquid sodium, tracer studies on, 26:52895 (CONF-710959-, Paper 18)
BROMINE ISOTOPES Br-79
  neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589
BROMINE ISOTOPES Br-80
  half-life of, (E), 26:54595
BROMINE SYSTEMS
  Br--HBr, photolysis of, deuterium isotope effects on reactions of hot hydrogen atoms from, 26:52962
BRONZE
  analysis for copper by amperometric titration, 26:52924
BRUNSWICK POWER REACTOR, UNIT 1
  engineered safeguards for, effects of circulating water system failure on flooding of, 26:55329 (DOCKET-50324-43)
BRUNSWICK POWER REACTOR, UNIT 2
  engineered safeguards for, effects of circulating water system failure on flooding of, 26:55329 (DOCKET-50324-43)
BUBBLES
  thermal equilibrium of vapor, near heated solid surface, model for prediction of, 26:53119 (AREAEE-122)
BUILDING MATERIALS
  damage to distant, from mechanical effects of underground nuclear explosions in granite, (E), 26:53129(T) (UCRL-Trans-10616-2)
BULK SHIELDING FACILITY
  operation during April to June 1972, 26:55408(R) (ORNL-TM-3949)
  operation of PCA in, during April to June 1972, 26:55408(R) (ORNL-TM-3949)
1,3-BUTANEDIONE, 4,4,4-TRIFLUORO-2-METHYL-1-(2-THIENYL)-
  solvent properties for cerium, synergistic effect of tri-n-octylamine on, 26:52952
1,3-BUTANEDIONE, 4,4,4-TRIFLUORO-1-(2-THIENYL)-
  solvent properties for tetravalent plutonium, 26:53034(T) (MLM-1964(tr))

C

CABLES
  power transmission by superconducting, underground, 26:54461 (BNL-50325)
CADARACHE REACTORS (RAPSODIE)
  cooling system of, decontamination of primary, (E), 26:55163 (CONF-710959-, Paper 3)
  cooling system of, post operation inspection and monitoring of, 26:55162 (CONF-710959-, Paper 2)
  fuel burnup in, program for measurement of, 26:55119 (CONF-720901-(Bks.1 and 2), pp 888-904)
  fuel element failures in, radioactive tracer technique for locating, 26:55185 (CONF-710959-, Paper 1)
  fuel elements of, location and effects of rupture of pin, 26:55162 (CONF-710959-, Paper 2)
  pumps of, decontamination of primary coolant, 26:55163 (CONF-710959-, Paper 3)
  rare gas transport in, 26:55185 (CONF-710959-, Paper 1)
CADMIUM
  cyclotron resonance in magnetic field in radio frequency region, Doppler-shifted, (E/T), 26:55044
  determination in environmental samples by neutron activation, 26:52897 (CONF-721010-3)
  determination in lunar, meteoritic, and terrestrial materials by neutron activation following separation from other elements, 26:52906
  determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  determination in organometallic compounds using oxine method after combustion, gravimetric or titrimetric, 26:52930
  determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
  effects on exit-tube measurements of neutron spectra, (E), 26:54470 (AREAEE-133)
  separation from indium by ion exchange chromatography, 26:52949
  sorption on diethylaminoethylcellulose in methanol--thiocyanate--hydrochloric acid media, 26:52951
  spectra of, relative isotope shifts in, (E), 26:54625
CADMIUM ALLOYS AND SYSTEMS
  Ag--Cd, phase transformation interfaces in, properties of massive, 26:53644
  Au--Cd, lattice heat capacity of intermetallic AuCd, at 20 to 298°K, 26:53637 (LBL-101)
  Cd--Mg, superconductivity in, (E), 26:54444
  Cd--Zr, phase diagrams for, 26:53663
  Cd--Zr, thermodynamic properties of, 26:53663
CADMIUM ISOTOPES Cd-112
  neutron reactions with, resonance parameters for, (E), 26:54599 (IAE-2116)
CADMIUM ISOTOPES Cd-114
  energy level of, multiple Coulomb interference effects on quadrupole moment of first 2+, (E), 26:54623
  helium-3 inelastic scattering at 10 to 17 MeV, collective model calculation of form factor for, (E/T), 26:54621
CADMIUM ISOTOPES Cd-115
  isomer yield ratios of, relation to excitation energies, (E), 26:54628
CADMIUM ISOTOPES Cd-116
  neutron reactions (n,2n), isomer yield ratio for, (E), 26:54628
CADMIUM SULFIDES
  radiation effects on donor--acceptor pair luminescence of, electron, 26:55002
  radiation effects on orientation of thin films of, electron-diffraction study of 3-MeV electron, 26:54992
  radiation effects on photocurrent--voltage characteristics of films of, γ, 26:54998
CAFFEINE
  effects on recombinational repair mechanisms for uv-radioinduced lesions in Schizosaccharomyces pombe, inhibitory, 26:53371
CALCIUM
  abundance in γ Cap, (E), 26:53888
  determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
  electron reactions at 10 to 40 eV with, cross sections for formation of Ca^{2+} in, 26:54103 (FRNC-CONF-51)
  metabolism in small intestine of animals, role of vitamin D in, 26:55498(R) (COO-1668-46)
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  oxygen ion reactions at 7.5 to 40 MeV, cross sections for K x-ray production in, (E), 26:54467(R) (ORO-2972-204)
  oxygen-16 elastic scattering near the Coulomb barrier, incoming wave boundary condition for, (T), 26:54705
  reactions with plutonium tetrafluoride, estimation of minimum temperatures in bomb reduction, 26:53037 (RFP-1455)
  transport to plant roots by diffusion and mass flow, 26:55490 (COO-1495-17)
CALCIUM CARBONATES
  reactions with yellow organic acids in freshwater, 26:55494 (COO-1599-63)
CALCIUM FLUORIDES
  paramagnetic relaxation in cerium-doped, initiated by flux jumping of Type-II superconductors, (E), 26:55029
CALCIUM IONS
  production in PIG source, 26:53752 (FRNC-CONF-54)
CALCIUM ISOTOPES
  energy levels of even, self-consistent Hartree--Fock, Hartree--Fock--Bogolyubov, and spherical BCS calculations using central Yukawa interaction and Hamada--Johnston and Tabskin potentials, (T), 26:54583
CALCIUM ISOTOPES Ca-40
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  deuteron reactions (d,Li-6) at 28 MeV, angular distributions and spectroscopic factors for, (E), 26:54527 (LYCEN-7219)
  deuteron reactions (d,pγ) at 3 MeV, γ-ray angular correlations for, (E), 26:54578
  energy level at 3.74 MeV from proton inelastic scattering, lifetime of, (E), 26:54575
  energy levels from proton inelastic scattering, (E), 26:54582
  energy-level transition from proton inelastic scattering, strength of E3, (E), 26:54575
  meson (π) reactions at 100 to 260 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609
  muon (μ^-) capture by, polarization of emitted neutron in, (T), 26:54564
  neutron radius of, determination from α elastic scattering, (E), 26:54547
  nuclear ground-state wave function of, multi-configuration calculation of, (T), 26:54577
CALCIUM ISOTOPES Ca-41
  deuteron reactions (d,p) at 12 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 26:54573
  energy level at 3614 keV from calcium-40 (d,pγ) reactions, spin assignment for, (E), 26:54578
CALCIUM ISOTOPES Ca-42
  energy levels from calcium-41 (d,p) reactions, spectroscopic factors for, (E), 26:54573
  proton reactions (p,γ) at 1 to 2 MeV, cross sections for, (E), 26:54567 (INR-1407)
CALCIUM ISOTOPES Ca-43
  proton reactions (p,γ) at 1 to 2 MeV, isomeric cross section ratios for, (E), 26:54567 (INR-1407)
CALCIUM ISOTOPES Ca-44
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from α elastic scattering, (E), 26:54547
CALCIUM ISOTOPES Ca-45
  metabolism and protein binding of, effects of method of preparation on, 26:53074
  production of, evaluation of complexing in methods for, 26:53074
CALCIUM ISOTOPES Ca-46
  neutron reactions with, resonance activation integrals for, (E), 26:54585
CALCIUM ISOTOPES Ca-48
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from α elastic scattering, (E), 26:54547
  proton inelastic scattering at 25.11 to 40.21 MeV, differential cross sections for, (E), 26:54582
  proton reactions (p,γ) and (p,n) at 1 to 2 MeV, cross sections for, (E), 26:54567 (INR-1407)
CALIFORNIUM ISOTOPES Cf-252
  calibration of neutron source of, with fast neutron detector, p.38, 26:53066 (ORNL-4794, pp 36-44)
  dose rate tables of implants of, neutron and gamma, (T), 26:54906
  fabrication of neutron sources of, p. 38, 26:53066 (ORNL-4794, pp 36-44)
  fission of, spectra from coincidence measurements of helium-5 emission in spontaneous, (E), 26:54674
  neutron absorption in reactor spectrum, effective cross section for, (E), 26:54668
  neutron-produced recoil ions about implanted needle of, dose distributions from, 26:54902
  relative biological effectiveness for acute lethality following whole-body exposure of mice, comparison of cobalt-60 and radium-226 γ with γ and neutron, 26:53484
  use as neutron source for radiography, 26:53330(R) (BNWL-1308-10)
CALIFORNIUM ISOTOPES Cf-253
  neutron absorption in reactor spectrum, effective cross section for, (E), 26:54668
CALORIMETERS
  development for solution measurements, 26:52923
CALORIMETRY
  developments in solution, review on, 26:52923
CALVERT CLIFFS POWER REACTOR, UNIT 1
  containment structure for, lightning protection for, 26:55327 (DOCKET-50317-58)
  emergency plan for, additional data on, 26:55327 (DOCKET-50317-58)
  site for, radiation monitoring program for, 26:55327 (DOCKET-50317-58)
  steam line isolation valve for, reliability testing of

    actuation system for main, 26:55327 (DOCKET-50317-58)
  transmission lines for, additional information on, 26:55327 (DOCKET-50317-58)
CALVERT CLIFFS POWER REACTOR, UNIT 2
  containment structure for, lightning protection for, 26:55327 (DOCKET-50317-58)
  emergency plan for, additional data on, 26:55327 (DOCKET-50317-58)
  site for, radiation monitoring program for, 26:55327 (DOCKET-50317-58)
  steam line isolation valve for, reliability testing of actuation system for main, 26:55327 (DOCKET-50317-58)
  transmission lines for, additional information on, 26:55327 (DOCKET-50317-58)
CAMERAS
  recording capability of laser far field, use of grating to increase, 26:55624 (UCRL-51255)
CANADA
  geology of Fay Mine uranium deposit in northwest Saskatchewan, 26:53145
  nuclear power development April 1971 to March 1972, 26:55081(R) (AECL-4162)
  nuclear power program in, development of, 26:55195 (AECL-4254)
CARBIDES
  formation energy of, relations with fuel capsule corrosion and deterioration, 26:53330(R) (BNWL-1308-10)
  sorptive properties of, effects of electronic structure on, 26:53593
  structure of refractory, for use in aerospace, defect and electronic, 26:53581
CARBON
  abundance in primary cosmic radiation from 10 to 1000 MeV/N, (E), 26:53835
  abundance in V553 Cen and RT TrA, (E), 26:53899
  activity in stainless steel, 26:55480(T) (BNWL-tr-72)
  activity in stainless steel, 26:55481(T) (BNWL-tr-73)
  cascades in iron due to 30- to 300-GeV/N cosmic, (E), 26:53832
  coating of monofilament substrate of, with boron, problems in chemical vapor deposition, 26:53571
  deposition on Incoloy, stainless steel, and steel reactor cooling system materials, 26:53605(R) (DP-Report-522)
  determination of surface and body concentrations of, in materials by helium-3 activation, 26:52899 (LA-DC-72-809)
  determination of trace amounts in liquid sodium, vacuum distillation method for, 26:55170 (CONF-710959-, Paper 14)
  effects in helium stars, (E/T), 26:53896
  effects on brittleness of molybdenum, 26:53682
  effects on corrosion resistance of zirconium and zirconium alloys in high-temperature water, 26:53614
  effects on metallography of cast tungsten, 26:53681
  effects on neutron radioinduced strengthening of chromium--iron welds, iron, and pressure vessel steel, 26:53710
  effects on sintering and stress-rupture properties of nickel-base alloys, 26:53674
  ionization balance in solar atmosphere, density dependent, (E), 26:53969
  meson (π^+ and π^-) reactions at 0.7 to 2 GeV/c, model analysis of, (E/T), 26:54529 (RPP/NS-8)
  metabolism in plants, photosynthetic mechanisms, 26:55561 (LBL-383)
  metabolism of dissolved and particulate detrital, in temperate hardwater lake, 26:55493 (COO-1599-58)
  neutron reactions up to 20 MeV, γ production cross sections for, (E), 26:54523 (CONF-720901-(Bks.1 and 2), pp 325-34)
  neutron spectra and age in pulsed sphere of, sensitivity to carbon cross sections in calculation of, 26:54474 (CONF-720901-(Bks.1 and 2), pp 409-17)
  neutron transport in, carbon shielding benchmark problem and other calculations for, 26:54939 (CONF-720901-(Bks.1 and 2), pp 397-408)
  radiation effects on mechanical properties of fibers of, fast neutron, 26:53717
  radiation effects on sorptive properties of activated, for radioiodine, γ, 26:53061 (DP-MS-72-14)
  radioinduced reactions with hydrogen, 30- to 45-keV electron beam, 26:53718
  spectral lines in sunspots due to molecular, (E), 26:53952
  spectral lines in sunspots due to molecular, (E), 26:53953
  spectral lines in zeta Oph due to interstellar, (E), 26:53875
  tensile properties of boron-coated monofilament substrate of, 26:53571
CARBON DIOXIDES
  electron reactions with, relation with Mariner Mars ultraviolet data, below 100-eV range, (E/T), 26:54009
  solvent properties for iodine, water, and krypton, pp. 29-31, 26:53083 (ORNL-4794, pp 26-32)
  solvent properties of liquid, for krypton, tracer studies on, 26:53059 (CONF-720823-12)
CARBON IONS
  effects of implanted, on Doppler broadening of positron annihilation photons in silver halide crystals, 26:54097
  effects on budding haploid yeast cells, sensitivity to lethal, 26:53368
  reactions with copper and tantalum at 10.4 MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
  reactions with gases at 40 to 140 keV, cross sections for charge exchange in, (E), 26:54137
  spectral lines in zeta Oph due to interstellar, (E), 26:53875
CARBON ISOTOPES
  proton reactions at 3 GeV, time-of-flight measurements of neutron spectra from, (E), 26:54528 (NASA-TM-X-2440, pp 523-6)
CARBON ISOTOPES C-12
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  deuteron reactions (d,α) at 7.2 to 14 MeV, analysis of reaction mechanism in isospin-forbidden and -allowed, (E), 26:54539
  deuteron reactions (d,Li-6) at 28 MeV, angular distributions and spectroscopic factors for, (E), 26:54527 (LYCEN-7219)
  deuteron reactions (d,n) and (d,p) with, calculation of spectroscopic factors using weakly bound projectile model, (T), 26:54543
  deuteron reactions (d,np) at 5.99 MeV, triangle graphs and isospin violation in rescattering in, (T), 26:54716
  electron inelastic scattering by, particle--hole-model calculations of form factor for, (T), 26:54541
  electron quasi-elastic scattering by, shell-model calculation of, 26:54526 (ITF-72-25-P)
  energy levels of, calculation using renormalized Brueckner--Hartree--Fock method with Hamada-Johnston potential, (T), 26:54696 (ORNL-TM-3951)
  giant dipole resonance in, inclusion of hole-state widths in particle--hole calculations of, (T), 26:54714
  helium-3 reactions (He-3,p) at 14 MeV with subsequent proton decay, gamma spectra and gamma and proton angular correlations in, (E), 26:54542
  muon (μ^-) capture by, gamma yields, rates, and weak-magnetism coupling constant from, (E), 26:54537
  muon capture by, particle--hole-model calculations of, (T), 26:54541
  neutrino reactions with, cross sections for, (T), 26:54541
  neutron radius of, determination from α elastic scattering, (E), 26:54547
  nuclear dynamics of, particle--hole description of semileptonic electromagnetic and weak interactions in, (T), 26:54541
  oxygen-16 elastic scattering at 5 to 14 MeV, optical-model analysis of effects of quasi-molecular states in cross sections for, (T), 26:54534
  proton scattering at 20 GeV, analysis using Steenberg model, (T), 26:54530
  reactions (C-12,xn) with lead-208 at 60 to 90 MeV, excitation functions for, (E), 26:54651
CARBON ISOTOPES C-13
  effects on microwave spectra of 3-oxetanone, isotope, 26:52960
CARBON ISOTOPES C-14
  determination in cellulose materials for art identification, 26:52898 (COO-3034-2)
  determination in labeled compounds, use of Knobloch elementary microanalyzer for combustion as pre-stage of liquid scintillation, 26:52944
  effects on cells following incorporation into DNA, role of transmutation in lethal and mutagenic, 26:53505
  incorporation in N,N'-bis(3-phenoxyhydroxypropyl)-ethylenediamine hydrochloride, 26:53052
CARBON MONOXIDES
  electron reactions with, impact cross sections and energy degradation from, relation with dayglow-emission observations from atmospheres of Mars and Venus, (E/T), 26:54008
  radiolytic reactions in, kinetic data on, 26:55416(R) (BNWL-1522-5)
  sorption on tungsten, field-emission microscopic study of binding states of, 26:55023
  spectral lines in xi Per due to interstellar, equivalent widths of, (E), 26:53890
CARBON SULFIDES
  spectral lines in xi Per due to interstellar, equivalent widths of, (E), 26:53890
CARBON SYSTEMS
  C--Fe-base, radiation damage in, electric resistivity study of 4.5°K fast-neutron, 26:54989
  C--graphite, properties at high temperatures, tensile and thermal, 26:53581
  C--Mo, thermodynamic properties of liquid solutions of, 26:53588
  C--O--Zr, reactions in, stability of phases produced by, 26:53581
CARBON TETRACHLORIDE
  effects on γ-induced thermoluminescence of cyclohexene, 26:53010
  potassium-atom scattering at thermal energies by, effects of temperature and internal and translational energy on differential cross sections for nonreactive, 26:54136

CARDIAC PACEMAKERS
  heat sources for, fabrication and safety of plutonium-238, 26:53331 (CEA-CONF-2026)
CASCADE SHOWERS
  development from alpha particles incident on iron absorber at 10 to 300 GeV/N, (E/T), 26:53831
  development in iron absorbers due to 30- to 300-GeV/N primary nuclei, (E), 26:53832
CATALYSTS
  circulation rates in catalytic cracking units, sodium-24 tracer method for measuring, 26:53343
CATTLE
  effects of fascioliasis of, on economic loss in Puerto Rico, 26:53498(R) (PRNC-156)
  effects of gamma-irradiated metacercariae of Fasciola hepatica on immune reactions of, 26:53498(R) (PRNC-156)
  immunization against dictyocaulosis using x-irradiated larvae, 26:53503
  radioisotope uptake by, following deposition of fallout on pasture grass, tracer study using lanthanum-140 labeled sand as simulant, 26:53527 (FOA-4-4503-A-3)
CAVITIES
  content and size of underground, formed by nuclear explosions in granite, (E/T), 26:53130(T) (UCRL-Trans-10616-4)
  natural gas storage in underground nuclear, hazards to users from, 26:53132(T) (UCRL-Trans-10617-2)
CAVITY RESONATORS
  power losses in helical, methods of parameter optimization for minimizing, 26:53744
  surfaces of superconducting rf, experimental study of conditions of niobium, 26:53748
  tests of superconducting niobium helix, 8-week, 26:53750
CELL DIVISION
  radiation effects on circadian changes in, in rat gastric glands following oral administration of radon water, effects of dose on α, 26:53514
CELL MEMBRANES
  lectures at Physics Laboratory of Istituto Superiore di Sanita, Rome, July--Dec. 1970, 26:54162 (ISS-71/31)
CELL PHASE
  effects on sensitivity of chromosomes in cultured rat-kangaroo cells to heliotrine, 26:53359
  effects on x-radiosensitivity of chromosomes in cultured rat-kangaroo cells, 26:53359
CELLS
  radiation effects on count of plaque-forming, in spleen of antigen-stimulated mice following whole-body exposure, effects of dose on γ and x, 26:53469
  radiation effects on mitotic activity and survival of, in early mouse embryos in relation to effects on gastrulation, repair of x, 26:53476
  radiation effects on reproduction of epidermal, of swine, dose dependence of fission neutron, thermal neutron, x, and neutron activation of boron-10 in, 26:53450 (LA-4874, pp 126-44)
  radiation effects on, following incorporation of β-emitting radioisotopes into DNA, comparison of effects of external x-ray exposure with lethal and mutagenic β, 26:53505
  radioinduced suppression of antibody-forming, in mouse spleen during response to antigen challenge, acute whole-body x, 26:53464
  spleen colony formation by hemopoietic stem, following transplantation into lethally x-irradiated isogeneic mice, 26:53466
CELLS, CULTURED
  effects of heliotrine on chromosomes in rat-kangaroo, effects of cell phase on sensitivity to, 26:53359
  mutations induced in Chinese hamster, by chemical mutagens, uv radiation, and x radiation, effects of dose and post-exposure culture medium on frequencies of, 26:53362
  mutations induced in mouse lymphoma, by chemical mutagens and x radiation, phenotypic method for comparing frequency of, 26:53361
  radiation effects on generation time, growth, and proliferation of rat hepatoma, γ, 26:53354
  radiation effects on metabolism of rickettsiae in L, gamma, 26:53360
  radiation effects on proliferation and survival of mouse lymphoma, effects of dose on long term uv and x, 26:53356
  radiation effects on survival of Chinese hamster, following low dose rate exposure, effects of temperature on sensitivity to x, 26:53358
  radiation effects on survival of rat hepatoma, as a function of post-exposure cell phase, statistical study of γ, 26:53354
  radiation effects on wallaby, effects of dose on chromosome aberration rate, DNA synthesis, mitosis rate, reproduction, and survival of, uv, 26:53353 (UR-3490-194)
  radioinduced lesions in Chinese hamster, following low dose rate sublethal exposure, effects of temperature on repair of x, 26:53358
  radioinduced lesions in DNA of mammalian, role of repair processes in recovery from lethal and mutagenic γ, uv, and x, review of, 26:53357
  radiosensitivity of chromosomes in rat-kangaroo, effects of cell phase on x, 26:53359
CELLULOSE
  radioinduced oxidation of, and mixtures with poly(methylhydrogensiloxane), rate of, 26:52994
CENTRAL AMERICA
  radioisotope uses in hydrology in, 26:53168
CEREALS
  analysis for mercury by neutron activation, 26:52911
  flour, radiation effects on bread-making and organoleptic properties of wheat, following grain exposure, dose dependence of γ, 26:53381 (CNEA-309)
  wheat, radiation effects on chemical and nutritional characteristics of, effects of dose on γ, 26:53381 (CNEA-309)
  wheat, radiation processing effects on content of nicotinic acid and vitamins of, gamma, 26:53344
CERIUM
  determination in method for measurement of chemical oxygen demand of water, fluorometric, 26:52915 (CONF-720827-2)
  electron band structure of, photoelectron spectral study of core level binding energies, 26:55024
  energy-level transitions and 4d binding energy of, relation between 4d → 4f, 26:54095
  oxidation of, uv photoemission studies of, 26:53611
  photon reactions (γ,xn) with, model analysis of giant dipole resonance in, (E/T), 26:54598 (FRNC-TH-242)
  separation of trivalent, from hydrochloric acid solutions by solvent extraction using TTA, synergistic effect of tri-n-octylamine on, 26:52952
CERIUM ALLOYS AND SYSTEMS
  Ce--Gd--Ru, magnetic properties of Ce/sub 1-x/Gd/sub x/Ru_2, 26:55037
  Ce--Pt--Ru, thermal capacity of CeRu/sub 2-x/Pt/sub x/ at 1.3 to 9°K, 26:55047
  Ce--Ru, thermal capacity of $CeRu_2$ at 1.3 to 9°K, 26:55047
CERIUM ISOTOPES Ce-136
  energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)
CERIUM ISOTOPES Ce-140
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  gamma transition cascade at 329 to 487 keV, parameters of unperturbed angular correlation of, (E), 26:55060
  meson (π) reactions at 100 to 260 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609
  neutron radius of, determination from elastic scattering, (E), 26:54547
CERIUM ISOTOPES Ce-141
  content in agricultural products, atmosphere, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
CERIUM ISOTOPES Ce-142
  deuteron reactions (d,p) and (d,t) at 12.6 MeV, particle spectra and angular distributions for, (E), 26:54618
  deuteron reactions (d,p) at 9 to 13 MeV, proton spectra from, (E), 26:54467(R) (ORO-2972-204)
  proton elastic and inelastic scattering at 9.5 to 12 MeV with isobaric analog excitation, excitation functions for, (E), 26:54618
CERIUM ISOTOPES Ce-143
  energy levels from cerium-142 (d,p) reactions, spectroscopic factors for, (E), 26:54618
CERIUM ISOTOPES Ce-144
  content in agricultural products, atmosphere, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  effects on blood of rats following intratracheal administration, β and γ, 26:53516
  sorption by ocean sediments from seawater, (E), 26:53167
CERIUM METAPHOSPHATES
  preparation and structure of, 26:53045
CERIUM OXIDES
  magnetic susceptibilities of nonstoichiometric, 26:55030
  spectra of, 4.2°K far-infrared (E/T), 26:55032
CERMETS
  fabrication of, review on, 26:53592
  production of plate-shaped and rod-shaped fuel elements of, methods for, 26:53592
CERN II SYNCHROTRON
  description of proposed, 26:53745
  experimental facility for, high intensity muon beam, 26:53783 (DNPL/P-131)
CESIUM
  determination in granitic biotites and feldspars by neutron activation and γ spectrometry, 26:52908
  plasma of, shock-wave investigation of equation of state of nonideal, on heated shock tube, (E), 26:54866
  solubility in liquid sodium, tracer studies on, 26:52895 (CONF-710959-, Paper 18)
CESIUM BROMIDES
  radioinduced color centers in, absorption spectral study of 4.2 and 77°K x-, 26:54980
CESIUM BROMOURANATES
  crystal lattice dynamics of Co_2UBr_6, model for calculations of phonon frequencies in, 26:53046
CESIUM ISOTOPES Cs-131
  electron-capture decay of, double k-shell ionization in, (E), 26:54617
CESIUM ISOTOPES Cs-134
  content in atmosphere and Savannah River in vicinity of

- Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- content in Lake Michigan fish, 26:53169 (ANL-7860(Pt.3), pp 141-50)

CESIUM ISOTOPES Cs-137
- content in agricultural products, animals, atmosphere, fish, milk, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- content in fallout in East Germany during 1970, (E), 26:53156 (SZS-128)
- content in Florida biosphere during June 1971 to June 1972, 26:53170(R) (ORO-4066-5)
- content in Lake Michigan fish, 26:53169 (ANL-7860(Pt.3), pp 141-50)
- content in Norwegian meats and milk during 1956 to 1970, 26:53161
- design of γ source of, for simulation of spectrum emitted by radioisotope thermoelectric generator, 26:53335 (NASA-TM-X-2440, pp 850-2)
- determination as measure of burnup in spent fuels, 26:52933 (JAERI-Memo-4094)
- distribution and retention in rabbits following intravenous injection, effects of peritoneal dialysis on, 26:53533
- distribution in soils and vegetation in Puerto Rico, 26:53162 (ANL-7860(Pt.3), pp 1-13)
- sorption by ocean sediments from seawater, (E), 26:53167
- uptake by barley and bean plants from surface contaminated soils, effects of clinoptilolite on, 26:53540
- uptake by clover plants from continuously cropped uniformly contaminated soils, effects of clinoptilolite on, 26:53540
- uptake by fish in White Oak Lake in relation to content of stable cesium and potassium and seasonal changes in food consumption, 26:53535
- uptake by plants in Georgia during 1971 in comparison with 1965, fallout, 26:53539(R) (SRO-641-4)

CESIUM ISOTOPES Cs-138
- half-life of, (E), 26:54667

CESIUM ISOTOPES Cs-139
- half-life of, (E), 26:54667

CESIUM ISOTOPES Cs-140
- beta decay endpoint energy of, (E), 26:54601 (IS-T-534)
- energy-level scheme from xenon-140 decay, (E), 26:54601 (IS-T-534)
- half-life of, (E), 26:54667

CESIUM ISOTOPES Cs-141
- beta decay endpoint energy of, (E), 26:54601 (IS-T-534)

CESIUM ISOTOPES Cs-142
- beta decay endpoint energy of, (E), 26:54601 (IS-T-534)

CHALCOGENIDES
- analysis of thin layers of glasses of, for arsenic, germanium, sulfur, and tellurium by proton activation or x-ray fluorescence, 26:52900 (LYCEN-7236)

CHALCOPYRITES
- analysis for bismuth by neutron activation and α scintillation counting, 26:52910

CHARCOAL
- analysis for tritium by bremsstrahlung counting, 26:52934 (MLM-1368)
- iodine retention on beds of, under accident and post-accident conditions, 26:53058 (CONF-720823-10)
- sorptive properties of commercial impregnated, for iodine and methyl iodide, 26:53058 (CONF-720823-10)
- sorptive properties of iodized, for iodine and methyl iodide, 26:53077 (CONF-720823-9)

CHARGED-PARTICLE BEAMS
- transport in first-order achromatic systems, change in beam spot size due to second-order effects in, 26:53764

CHARGED PARTICLES
- detection of minimum ionizing, design and performance of bifilar helical multiwire proportional counter for, 26:53273 (LA-4968)
- detection of ultrarelativistic, design and performance of transition detector for, 26:53277
- dosimetry of high-Z, Apollo astronaut plastic track detector, 26:53231 (NASA-TM-X-2440, pp 149-56)
- effects on human visual response following retinal exposure, effects of particle flux density on helium, 26:53403 (NASA-TM-X-2440, pp 416-22)
- effects on mice, effects on survival of epidermal cells in skin following single local exposure, comparison of RBE for, carbon, helium, and lithium with x radiation, 26:53456 (NASA-TM-X-2440, pp 652-8)
- effects on retina of dark-adapted human eye, use of virtual-quanta method to calculate stimulatory, 26:53405 (NASA-TM-X-2440, pp 767-72)
- energy distribution in plasmasphere during solar eclipse, dependence of equilibrium potential of satellite surface material on, (T), 26:54054
- interaction with geomagnetic dipole field, study of Earth's environmental space from, (E), 26:54056
- motion in solenoids with random magnetic fields, fluxes in, (T), 26:54783
- radiation emission of relativistic, in field of two plane waves, (T), 26:54264
- relation with creation of polar auroras, application in plasma physics of, (E/T), 26:54043
- scattering by nuclei at low energy, forward dispersion relation including Coulomb interaction for elastic, (T), 26:54711
- scattering by system of identical particles, K-matrix solution to coupled inhomogeneous equations for, 26:54414
- scattering of heavy, effects of Coulomb field on type of diffraction, (T), 26:54415
- trajectories in first-order achromatic beam transport systems, second-order effects on, 26:53764

CHEMICAL ENGINEERING
- research in India, 1971--1972, 26:55452(R) (NP-19407)

CHEMICAL REACTIONS
- kinetic measurements by solution calorimetry, 26:52923
- kinetics of, complex and pure rate laws in heterogeneous, 26:55588(T) (ORNL-tr-2394)

CHEMISTRY
- conference on, Joint Southeast--Southwest Regional ACS, New Orleans, Dec. 2-4, 1970, abstracts of papers, 26:53027
- research in India, 1971--1972, 26:55452(R) (NP-19407)
- research progress on, for April 1, 1971 to March 31, 1972, 26:53080(R) (ORNL-4794)

CHERENKOV RADIATION
- properties from proton reactions with potassium sodium tartrate at 660 MeV, (E), 26:54875 (JINR-P1-6552)
- use in monochromatic energy measurement of 665-MeV proton beams, 26:53800
- use to measure transient free carrier absorption in insulators, feasibility of, 26:54968(R) (AD-737312)

CHIMERAS
- determination of hematopoietic and pulmonary origins of alveolar macrophages in, of mice, 26:53492

CHLORAMPHENICOL
- effects on repair of γ-radioinduced double-strand breaks in DNA of Micrococcus radiodurans, inhibitory, 26:53349

CHLORIDES
- corrosive effects of aqueous solutions of, on overaged and underaged niobium--uranium-base alloys, 26:53608 (RFP-1904)

CHLORINE
- determination in environmental samples by neutron activation, 26:52897 (CONF-721010-3)
- determination of trace amounts in liquid sodium, vacuum distillation method for, 26:55170 (CONF-710959-, Paper 14)
- neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
- reactions of trivalent, with tetravalent uranium in presence of phenol in aqueous acid solutions, mechanism and kinetics of oxidation--reduction, 26:53044
- reactions of trivalent, with tetravalent uranium in presence of phenol in aqueous acid solution, kinetics and mechanisms of oxidation--reduction, 26:53051

CHLORINE IONS
- scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139

CHLORINE ISOTOPES Cl-34
- beta decay of, electromagnetic corrections to ft values for, (T), 26:54713

CHLORINE ISOTOPES Cl-35
- atomic mass of, 26:54495 (EUR-4765, pp 435-55)
- effects on Zeeman effect in chloroacetylene, 26:52969
- reactions with ruthenium-96 and tin-112 up to 270 MeV, delayed proton spectra from, (E), 26:54608(T) (UCRL-Trans-1473)
- scattering by samarium-152 and gadolinium-154 at 100 MeV with Coulomb excitation, gamma spectra from inelastic, (E), 26:54642

CHLORINE ISOTOPES Cl-36
- abundance in iron meteorites, (T), 26:53808(T) (ORNL-tr-2620)

CHLORINE ISOTOPES Cl-37
- atomic mass of, 26:54495 (EUR-4765, pp 435-55)
- effects on Zeeman effect in chloroacetylene, 26:52969

CHLOROPHYLL
- chemiluminescence and fluorescence of, in algae and green plants, methods for measuring delayed, 26:55517 (COO-3162-12)

CHONDRICHTHYES
- Ginglymostoma cirratum (shark), radiation effects on brain of, gamma, 26:53487
- hematopoiesis in, bibliography on, 26:53447 (CONF-720822-2)
- radiation effects on function of hematopoietic tissues in, effects of dose, dose rate, and species on acute and chronic γ, 26:53447 (CONF-720822-2)

CHROMATOGRAPHY
- development of ion exchange, 26:52948

CHROMIUM
- abundance in 21 sharp-lined nonvariable cool peculiar A stars, (E), 26:53882
- abundance in γ Cap, (E), 26:53888
- book: Early Transition Metals, 26:52956
- determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
- determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- effects on cohesion and structural stability of aluminum oxide composites with iron and nickel, 26:53589

  - effects on ductility of copper, 26:53669
  - separation from indium by ion exchange chromatography, 26:52949
- CHROMIUM ALLOYS AND SYSTEMS
  - Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  - Al--Co--Cr--Mo--Ni-base--Ti, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  - Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  - Co--Cr, microstructure and stability of aluminum coated, effects of heat corrosion on, 26:53676
  - Co-base--Cr--Ni--ThO_2, mechanical properties and microstructure of dispersion-hardened, 26:53675
  - Cr--Cu--Fe--Mo--Ni-base--Ti, corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
  - Cr--Fe-base, radiation effects on mechanical properties of, 2.3-MeV electron, 26:53706
  - Cr--Fe-base, radiation effects on strengthening of welds of, effects of carbon, copper, nickel, and vanadium additions on neutron, 26:53710
  - Cr--Mo--steel, corrosion by products of sodium--water reactions, 26:55154 (CONF-710548-, pp 105-28)
  - Cr-base--Mo--Ta, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
  - Cr-base--W--Y, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
  - Cr-base--Y, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
- CHROMIUM ISOTOPES Cr-51
  - content in conversion products of irradiated 300 series stainless steels, 26:55165 (CONF-710959-, Paper 9)
  - content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)
  - distribution in Columbia River, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)
  - use as tracer in biological materials together with iron-59, computerized data processing system for, 26:53544
- CHROMIUM ISOTOPES Cr-52
  - deuteron elastic scattering at 11.9 MeV, vector-polarized, (E), 26:54572
  - deuteron reactions (d,pγ) at 3 MeV, γ-ray angular correlations for, (E), 26:54578
- CHROMIUM ISOTOPES Cr-53
  - energy level at 3618 keV from chromium-52 (d,pγ) reactions, spin assignment for, (E), 26:54578
- CHROMIUM SILICIDES
  - Cr_5Si_3--TiB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  - Cr_5Si_3--ZrB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  - $CrSi_2$--TiB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  - $CrSi_2$--ZrB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
- CHROMOSOMES
  - effects of heliotrine on, in cultured rat-kangaroo cells, effects of cell phase on sensitivity to, 26:53359
  - radioinduced aberrations of barley seed, combined effects of space flight environment on gamma, 26:53384
  - radioinduced aberrations of, in cultured human lymphocytes, effects of dose on frequency of x, 26:53355
  - radioinduced aberrations of, in human bone marrow cells following local therapeutic exposure, effects of dose and time on frequency of γ, 26:53445
  - radioinduced aberrations of, in human leukocytes, x, 26:53427
  - radioinduced aberrations of, in human leukocytes, evaluation for use as dosimeter following nuclear explosion, 26:53397 (FOA-4-4500-A-3)
  - radioinduced aberrations of, in human lymphocytes, evaluation for use as biological dosimeters, 26:53420
  - radioinduced aberrations of, in lymphocytes of man exposed to residual fallout from atomic bombing of Nagasaki, 26:53414
  - radioinduced aberrations of, in mature oocytes of Drosophila melanogaster, effects of premeiotic breakage and interchanges on types of x, 26:53501
  - radioinduced aberrations of, in mature spermatozoa of Drosophila melanogaster, inhibitory effects of dactinomycin on post-fertilization maternal repair of x, 26:53502
  - radioinduced aberrations of, in mice, strontium-90 β and x, 26:53496
  - radioinduced aberrations of, in peripheral leukocytes of medical radiography personnel, incidence of x, 26:53428
  - radioinduced aberrations of, in rat embryos following exposure in utero, time dependence of fast neutron, 26:53470
  - radioinduced aberrations of, in rye root cell, effects of genetic heterogeneity on frequency of γ, 26:53392
  - radiosensitivity in cultured rat-kangaroo cells, effects of cell phase on x, 26:53359
- CHROMOSPHERE
  - current dissipation in, (T), 26:53937
  - spectra of quite, characteristics of Ca II K-line profiles in, (E), 26:53948
  - spectra of, ionized helium in, (T), 26:53949
- CIRCADIAN CLOCK
  - radiation effects on circadian changes in mitotic index and DNA synthesis in cells of rat gastric glands following oral administration of radon water, effects of dose on α, 26:53514
  - radiation effects on diurnal rhythm of neurosecretory activity in mice following whole-body exposure, x, 26:53478
- CIRCUITS
  - design and performance of radiation-hardened, for gated differential video amplifiers, 26:53307 (SC-DC-721159)
  - design for studying interaction of hf fields and plasma, 26:54775(T) (AEC-tr-7326)
  - design of radiation-tolerant integrated, DIAMOND method for, 26:53309 (SC-DC-721162)
  - design of Universal Digital Integrated, 26:53308 (SC-DC-721161)
  - fabrication of multilayer printed wiring boards, 26:55469 (BDX-613-382(Rev.))
  - ground detectors for ungrounded reactor control, methods for increasing sensitivity of, 26:55135 (DUN-SA-169)
  - radiation effects on integrated, neutron, 26:53309 (SC-DC-721162)
  - radiation effects on Universal Digital Integrated, neutron, 26:53308 (SC-DC-721161)
- CIRENE POWER REACTOR
  - control system for, hydraulic and dynamic testing of two-phase fluid, 26:55133 (CISE-R-268)
  - cooling channels for, steady-state and transient measurements on scale model of, 26:55148 (CISE-R-270)
  - core for, TERMO code for thermohydraulic analysis of, 26:55104 (CISE-R-246)
  - fuel elements for, ESSOR reactor neutron flux measurements on, 26:55105 (CISE-R-258)
  - lattice cell parameters of, RB-1 reactor measurements of, 26:55102 (CISE-R-239)
  - neutron buckling in, lattice mockup measurements of, 26:55106 (CISE-R-283)
- CIVILIAN DEFENSE
  - shelters for, numerical model of effectiveness of quick-access, 26:53135 (ORNL-TM-3485(Vol.1))
- CLAYS
  - age of, thermoluminescent method for estimation of, 26:53177
- CLINOPTILOLITE
  - effects on cesium-137 and strontium-90 uptake by clover plants from continuously cropped uniformly contaminated soils, 26:53540
  - effects on cesum-137 and strontium-90 uptake by barley and bean plants from surface contaminated soils, 26:53540
- CLINTON P. ANDERSON MESON PHYSICS FACILITY
  - academic uses of, promotion of, 26:53796 (LA-4874, pp 92-8)
  - biomedical research programs at, 26:53398 (LA-4874, pp 79-83)
  - development of, status of, 26:53739 (LA-4874, pp 16-20)
  - experimental facilities at, description of secondary pion, 26:53797 (LA-DC-72-881)
  - experimental facilities for, data acquisition system for, 26:53795 (LA-4874, pp 86-9)
  - experimental facilities for, nuclear chemistry, 26:53792 (LA-4874, pp 72-7)
  - experimental facility for, Biomedical Pion Channel, 26:53793 (LA-4874, pp 78)
  - experimental facility for, Energetic Pion Channel and Spectrometer, 26:53787 (LA-4874, pp 51-4)
  - experimental facility for, High Resolution Proton Spectrometer, 26:53791 (LA-4874, pp 67-71)
  - experimental facility for, neutrino, 26:53794 (LA-4874, pp 84-5)
  - experimental facility for, Nucleon Physics Laboratory, 26:53790 (LA-4874, pp 63-6)
  - experimental facility for, proposed low-energy pion channel, 26:53786 (LA-4874, pp 48-50)
  - experimental facility for, status of Pion and Particle Physics, 26:53788 (LA-4874, pp 55-8)
  - experimental facility for, stopped muon channel, 26:53789 (LA-4874, pp 59-62)
  - research program at, review of high-energy physics, 26:54195 (LA-4874, pp 36-44)
  - research proposals for, status of, 26:53785 (LA-4874, pp 45-7)
  - users meeting, Nov. 8-9, 1971, 26:53784 (LA-4874)
- CNIDARIA
  - corals, growth rates of, lead-210 and radium-228 methods for measuring, 26:53179
- COAGULATION
  - efficiency of, using organic flocculants, 26:53040 (SZS-129)
- COATINGS
  - effects of tungsten, on evaporation rate of zirconium carbide--tungsten, 26:55022
  - radiation resistance of selected, evaluation of, p. 98-100, 26:52986 (ORNL-4794, pp 98-101)
- COBALT
  - determination in water, effects of large amounts of

copper on spectrographic, 26:52927
determination of trace amounts of, in soil and plant tissue by instrumental neutron activation, 26:52904
distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
effects on cohesion and structural stability of aluminum oxide composites with iron, 26:53589
separation from iron by solvent extraction using Aliquat-336, 26:53076

COBALT ALLOYS AND SYSTEMS
composition and physical properties of composite powders of, 26:53680
preparation of composite powders of, by hydrogen reduction, 26:53680
Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
Al--Co--Cr--Mo--Ni-base--Ti, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
Co--Cr, microstructure and stability of aluminum coated, effects of heat corrosion on, 26:53676
Co--Pt, microstructure of intermetallic compounds of, methods for ion microscopy imaging of, 26:53655
Co--rare earth, magnetic properties of R_3Co, pulsed-field magnetometer measurements of, 26:55050
Co--transition metal carbides, erosion resistance of anodes of, 26:53568
Co--V, vanadium-51 NMR quadrupole splitting in sigma-phase, effects of composition on intensity of, 26:55056
Co-base--Cr--Ni--ThO_2, mechanical properties and microstructure of dispersion-hardened, 26:53675
Co-base--Ni--ThO_2--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675
Co-base--ThO_2, mechanical properties and microstructure of dispersion-hardened, 26:53675
Co-base--ThO_2--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675

COBALT ISOTOPES Co-54
beta decay of, electromagnetic corrections to ft values for, (T), 26:54713

COBALT ISOTOPES Co-58
content in conversion products of irradiated 300 series stainless steels, 26:55165 (CONF-710959-, Paper 9)

COBALT ISOTOPES Co-59
alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
helium-3 reactions (He-3,$d\gamma$) at 18 MeV, gamma spectra from, (E), 26:54587 (FRNC-TH-240)
neutron radius of, determination from α elastic scattering, (E), 26:54547
proton reactions at 3 GeV, time-of-flight measurements of neutron spectra from, (E), 26:54528 (NASA-TM-X-2440, pp 523-6)

COBALT ISOTOPES Co-60
content in atmosphere and Savannah River in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
content in conversion products of irradiated 300 series stainless steels, 26:55165 (CONF-710959-, Paper 9)
content in Lake Michigan fish, 26:53169 (ANL-7860(Pt.3), pp 141-50)
design of γ source of, for simulation of spectrum emitted by radioisotope thermoelectric generator, 26:53335 (NASA-TM-X-2440, pp 850-2)
diffusion in α-zirconium, mechanism of, 26:53666
distribution in Columbia River, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)
use as tracer for measuring leakage through dam near Baguio City, Philippines, 26:53175

COINCIDENCE CIRCUITS
design for plastic scintillation detectors for fission neutron detection for interrogation determination of uranium-235, 26:53217

COLCHICINE
effects on Aspergillus niger, mutagenic for citric acid production, 26:53380

COLLECTIVE ACCELERATORS
electric fields in coaxial channel of closed-electron-drift, effects of magnetic field configuration on, 26:53743

COLLISION PROCESSES
book: Excitation in Heavy-Particle Collisions, 26:54118
energy-level transitions in inelastic and reactive, calculation of semiclassical S-matrix elements for, by integration along complex-valued trajectories, 26:54129
resonance states in atomic, finite-difference boundary-value method for calculation of wave functions and energies of shape-, 26:54124
theory of, including rearrangement processes, WKB approximation and classical limit of S matrix in time-dependent, 26:54107

COLLOIDS
reactions of, theoretical model for, 26:53067 (ORNL-4794, pp 88-90)

COLUMBIA RIVER
radioisotope distribution in, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)
water and sediment distribution, properties, and transport in coastal northeast Pacific Ocean, (E), 26:53165(R) (RLO-2225-T-25-6)

COMETS
electron energy deposition in water vapor in water, (E/T), 26:54033

COMPOSITE MATERIALS
conference on, for aerospace material and process engineers, Los Angeles, California, April 11 to 13, 1972, 26:53569
fatigue properties of, data interpretation on static, 26:55619 (UCID-16100)
preparation and properties of powdered, 26:53680

COMPUTATIONAL MODULAR SYSTEMS
description for real-time computer based on CAMAC instrumentation, 26:55464 (AERE-R-6601)

COMPUTER PROGRAMS
ACSAP, for analysis of resonance neutron cross section data, 26:54468 (ANCR-1042)
ANALCOV, for covariance analysis, 26:55567 (MLM-1847)
AUGAT, for design of integrated circuits on wire wrap cards, 26:55563 (LBL-515)
BEHAVE-2, for operating performance of metal clad oxide fuel pins, FORTRAN 4 for GE 635, 26:55418 (GEAP-13788)
CITATION, for reactor in-core fuel cycle analysis, 26:55198 (ORNL-TM-2496(Rev.2)(Suppl.3))
CNTR, for producing contour plots, in FORTRAN IV, 26:55609 (SC-TM-710557)
DASQHE, for thermal reactor physics calculations, FORTRAN 5 for UNIVAC 1108, 26:55421 (BNWL-CC-2274)
DOMINO, general purpose discrete-ordinates-to-Monte-Carlo coupling, for radiation transport, 26:54872 (CONF-720901-(Bks.1 and 2), pp 499-511)
ENEDEP, for gamma-ray energy deposition in laminated materials, Extended Basic for GE-265, 26:54959 (NASA-TM-X-2440, pp 387-91)
EULERO, for visual display of periodical phenomena, for IBM 360/75, 26:55595 (RT/FIMA-(72)1)
for analysis of heat exchanger performance in nuclear-heated gas turbines, 26:53114
for automatic peak identification in analysis of gamma spectra from Ge(Li) detectors, in FORTRAN IV, 26:53257 (RT/FI-(72)14)
for processing clinical scintigraphic data, 26:53228
for processing of ENDF/B data, test using idealized data, 26:54475 (CONF-720901-(Bks.1 and 2), pp 1048-60)
for texture analysis, 26:55501 (COO-2118-35)
for unfolding neutron spectra, evaluation of, 26:53252 (CONF-720901-(Bks.1 and 2), pp 524-40)
GS-1, for analysis of pulsed neutron experiments on bare fast multiplying system by Storrer--Stievenart theory, 26:54483 (JAERI-M-4652)
HEATMESH-71, for generating geometrical data for studying heat transfer in axisymmetric structures, 26:55610 (SCL-DR-720004)
IMAGEN, for image enhancement and display of two-dimensional data, in FORTRAN for CDC-6600 and Univac 1108, 26:55608 (SC-RR-720286)
IONR, for damage profile in ion-bombarded targets, 26:54969 (AECL-4130)
IRT, for providing author proof plots of experimental data, 26:55476 (BNL-17115)
JN-METD2, for solution of neutron transport problems in multilayer slabs with isotropic scattering by J/sub N/ method, 26:54481 (EUR-4839)
KAPER, for core physics analysis in critical assemblies, 26:55396 (EURFNR-1014)
language for, specification of program flow in Madcap VI, 26:55547 (LA-DC-72-141)
MARE, for compound nucleus reaction calculations in the continuum, in FORTRAN IV, 26:54701 (RT/FI-(72)7)
MASH, for mesh generation for two-dimensional finite element and finite difference codes, in FORTRAN IV, 26:55609 (SC-TM-710557)
MOBIDIC, for analysis of reactor continuous axial refueling, for IBM 7040, 26:55196 (CISE-R-241)
MOICANO-1, for reactivity and neutron flux calculations for fog cooled reactors, FORTRAN 4 for IBM 7040, 26:55103 (CISE-R-242)
optimization of, 26:55599 (SC-DC-721376)
ORCOST, for capital costs of nuclear and steam power plants, FORTRAN 4 for IBM 360, 26:55265 (ORNL-TM-3743)
PAD, evaluation for reactor explosive power transients, 26:55441 (LA-DC-72-660)
PIBIMUG, for reactor physics calculations, FORTRAN-2 for IBM-1130, 26:55420 (AREAEE-141)
radiation transport, for calculating dose distributions, 26:54890 (ORNL-TM-3816)
RAS, for calculation of two-group neutron flux in polar geometry, 26:54471 (CISE-R-252)
reliability of Monte Carlo, for criticality calculations, 26:55445 (Y-KC-96)
RELIP, for economics of nuclear power plant mix in power grid, FORTRAN-4 for IBM-360, 26:55266 (RD/B/N-2261)
RELY 4, for Monte Carlo calculations of reactor system reliability, ALGOL, 26:55209 (RISO-M-1500)
REST-1, -2, -3, for decay heat from fission products in boiling water reactors, FORTRAN, 26:55127 (KFK-1579)
SATURN-1, for time history of fast reactor fuel pins, 26:55186(T) (EURFNR-985)
SLIP, for list processing, in FORTRAN for CDC 3300 and ICL 1905, 26:55543 (KFKI-72-32)
SOWACS, for sodium--water reactions, FORTRAN for CDC-

  - 3600, 26:55157 (CONF-710548-, pp 171-86)
  - TERMO, for steady state thermohydraulic analysis of CIRENE type reactors, 26:55104 (CISE-R-246)
  - TRASHP, for program assembly in FORTRAN for Hewlett--Packard minicomputers, 26:55606 (SC-M-720514)
  - TREFACT and TREMISS, for calculating exhaust emissions from transportation vehicles, 26:55467 (ANL/ES-15)
  - TRUD, for calculation of anisotropic neutron diffusion in xy geometry, in FORTRAN IV, 26:54488 (RT/FI-(72)1)
  - VIM-1, for Monte Carlo physics calculations for fast critical assemblies, FORTRAN for CDC 6600 and IBM 360, 26:55378 (AI-AEC-12951)
- COMPUTERS
  - data display system for, perspective transformer for stereomatrix 3-d iterative graphics, 26:55489 (COO-1469-210)
  - history of, trilogy on errors in, 26:55548 (LA-DC-72-243)
  - image restoration by, constrained least-squares estimation method for, 26:55451 (LA-DC-72-626)
  - interfacing for CAMAC systems, 26:53297 (CEA-N-1549)
  - language for Maniac, terminal control language for Madcap, 26:55551 (LA-DC-72-411)
  - languages for, meta-language for describing keyboard-based two dimensional, 26:55550 (LA-DC-72-410)
  - languages for, two-dimensional, 26:55549 (LA-DC-72-331)
  - number representation of exact and inexact quantities in, format and rules for, 26:55553 (LA-DC-72-783)
  - pattern recognition by, model for, 26:55455 (OSU-CISRC-TR-72-8)
  - PL/1 language for, use for interrogation of personnel card files, 26:55450 (CEA-CONF-2005)
  - research in India, 1971--1972, 26:55452(R) (NP-19407)
  - review of 1971 activities at Sydney Univ, 26:53993 (INIS-mf-252)
  - systems research at Illinois University, annual progress report on, 26:55488(R) (COO-1469-208)
  - use for reactor control and monitoring of mini-, compliance with IEEE-279 safety criteria of, 26:55136 (DUN-SA-186)
- CONCRETES
  - photon scattering at 2.0 to 10.5 MeV, dose albedos of back-angle, (E), 26:54892
  - concretes--polymer, development of composite materials of, 26:55473 (BNL-16609)
  - concretes--polymers, preparation and properties of, produced by radioinduced polymerization, 26:53722
- CONNECTICUT YANKEE POWER REACTOR
  - containment structure for, leak rate testing during June 1970 to June 1972, 26:55241 (DOCKET-50213-158)
  - site for, environmental radiation survey during January to June 1972, 26:55240 (DOCKET-50213-157)
- CONSTANTS AND CONVERSION FACTORS
  - relations between cosmological and quantum, 26:54392 (ITF-72-3-P)
- COOLING TOWERS
  - operation of, fog and glazed frost formation from, 26:53117
- COOPER POWER REACTOR
  - engineered safeguards for, effects of equipment failure on possible flooding of, 26:55307 (DOCKET-50298-50)
- COPPER
  - complexes with phthalocyanine, radiation effects on, chemical state of recoil copper-64 from neutron, 26:53032
  - complexes, copper-64 electron capture decay in labeled and neutron-irradiated crystals of phthalocyanine, 26:53032
  - determination in alloys and ore concentrates by amperometric titration, 26:52924
  - determination in liquid sodium by neutron activation, 26:52895 (CONF-710959-, Paper 18)
  - determination in presence of iron using EKCO mineral analyzer, 26:55568 (NIM-1430)
  - determination in samples from boreholes, neutron activation method for, 26:53174
  - determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  - distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
  - ductility of, effects of chromium and zirconium additions on, 26:53669
  - effects of large amounts of, on spectrographic determination of heavy elements in natural water, 26:52927
  - effects on neutron radioinduced strengthening of chromium--iron welds, iron, and pressure vessel steel, 26:53710
  - ion reactions at 10.4-MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
  - meson (K^0) reactions at 500 to 1500 MeV/c, $K_2^0 \to K_1^0$ regeneration amplitude from, (E), 26:54230
  - mixing of powders of, effects of friction on, 26:53617
  - oxygen ion reactions at 7.5 to 40 MeV, cross sections for K x-ray production in, (E), 26:54467(R) (ORO-2972-204)
  - photoelectron emission by, model calculations of angular and energy distributions of, 26:54885 (NASA-TM-X-2440, pp 792-800)
  - photon reactions (γ,n) at 12 to 23 MeV, neutron spectra from, (E), 26:54563
  - radiation damage in, electron microscopic study of 650-kV electron, 26:54972 (COO-2119-2)
  - radiation effects on spherical void growth in, effects of triaxial stress on, (T), 26:53702 (TID-26150)
  - radiation effects on surface microtopography of, argon-ion, 26:55008
  - separation from indium by ion exchange chromatography, 26:52949
  - solubility in liquid sodium, tracer studies on, 26:52895 (CONF-710959-, Paper 18)
  - sorption on diethylaminoethylcellulose in methanol--thiocyanate--hydrochloric acid media, 26:52951
- COPPER ALLOYS AND SYSTEMS
  - composition and physical properties of composite powders of, 26:53680
  - preparation of composite powders of, by hydrogen reduction, 26:53680
  - Au--Cu, lattice heat capacity of intermetallic $AuCu_3$, at 20 to 298ºK, effects of ordering on, 26:53637 (LBL-101)
  - Be--Cu-base, mechanical properties and stress relaxation of Alloy 25 at -320 to 300ºF, 26:53641 (SC-DR-720471)
  - Cr--Cu--Fe--Mo--Ni-base--Ti, corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
  - Cu--Ni--Tb, magnetic structures in TbNi/sub 1-x/Cu/sub x/ below ordering temperature, stability of sinusoidal-wave, 26:55039
  - Cu--Ni--Zn, analysis of nickel silver for copper by amperometric titration, 26:52924
  - Cu--Zn, phase transformation interfaces in, properties of massive, 26:53644
  - Cu-base--Fe, surface resistance of, Kondo anomaly in far-infrared, 26:55508 (COO-3151-4)
  - Cu-base--Ti, hardening of, mechanism of precipitation, 26:55615(R) (TID-26148)
- COPPER BORIDES
  - radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53696 (NASA-TM-X-2440, pp 595-602)
- COPPER COUPLES
  - Cu/steel, corrosion by water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
- COPPER FORMATES
  - structure for antiferroelectric phase of tetrahydrate of, 26:55614 (TID-25974)
- COPPER IONS
  - scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139
- COPPER ISOTOPES Cu-60
  - beta and electron-capture decay of, γ spectra and log ft value for, (E), 26:54593
- COPPER ISOTOPES Cu-63
  - alpha inelastic scattering at 5.5 and 7 MeV, γ-γ angular correlations for, (E), 26:54594
  - energy-level transitions from alpha Coulomb excitation, probabilities and multipole mixing ratios for, (E), 26:54594
- COPPER ISOTOPES Cu-64
  - chemical state of recoil, in neutron-irradiated copper phthalocyanine, 26:53032
  - electron capture decay in labeled and neutron-irradiated α-copper phthalocyanine crystals, 26:53032
  - meson (π) reactions at 100 to 260 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609
- COPPER ISOTOPES Cu-65
  - alpha inelastic scattering at 5.5 and 7 MeV, γ-γ angular correlations for, (E), 26:54594
  - energy levels from nickel-64 proton scattering, spin--parity assignments and elastic and inelastic widths for isobaric analog, (E), 26:54590
  - energy-level transitions from alpha Coulomb excitation, probabilities and multipole mixing ratios for, (E), 26:54594
- CORRONEL 230
  - corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
- CORROSION
  - conference on uses of field-ion microscopy in studies of, Atlanta, Georgia, May 15 to 17, 1968, 26:53647
- CORROSION LOOPS
  - corrosion product deposition in liquid sodium, measurement of patterns of, 26:55173 (CONF-710959-, Paper 17)
  - design and operation of, for studies of activated material mass transfer by sodium, 26:53121 (CONF-710959-, Paper 7)
- COSMIC GAMMA SOURCES
  - detection of Libra γ-1, (E), 26:53924
- COSMIC PARTICLES
  - abundance of $Z > 83$ nuclei in, (T), 26:53867
  - acceleration of high Z, in pulsars, (T), 26:53857
  - anisotropies of, effects of solar cycle on narrow-angle, (T), 26:53868
  - anisotropy of medium energy, sidereal, (E), 26:53846
  - anisotropy of primary, components of sidereal, (E/T), 26:53848
  - anisotropy of primary, interpretation of sidereal, (E), 26:53847
  - anisotropy of primary, sidereal and solar, (E), 26:53850
  - anisotropy of primary, spurious, (T), 26:53849
  - anisotropy of ultrahigh-energy, (E/T), 26:53851
  - anisotropy of, limits on magnitude of, (E), 26:53852
  - cascades from Z greater than or equal to 3 primary, in

iron, (E), 26:53832
charge composition of heavy primary nuclei, (E), 26:53842
charge composition of nuclear component of, (T), 26:53854
charge composition of primary nuclei, (E), 26:53839
charge composition of primary, at energies up to 10^{12} eV, (E), 26:53830
charge composition of primary, up to Z = 26, (E), 26:53836
charge composition of Z = 2 to 30 primary, (E), 26:53838
charge composition of, accelerated in pulsars, (T), 26:53858
charge composition to Z = 28 of primary, source, (E), 26:53837
charge of heavy and superheavy nuclei, calculation of delta electrons formed in stopping media as aid in determination of, 26:53805(T) (N-71-30295)
chemical composition of heavy primaries above 5 GeV, (E), 26:53840
chemical composition of low-energy L and M nuclei in primary, (E), 26:53841
confinement in Galaxy, mechanisms for, (T), 26:53865
confinement time of, galactic, (E), 26:53833
doses of secondary particles produced by heavy galactic primary, calculations of, 26:54878 (NASA-TM-X-2440, pp 104-7)
energy spectra of 3- to 15-GeV primary electrons, (E), 26:53821
energy spectra of heavy primary nuclei, (E), 26:53842
energy spectra of primary deuterons and helium-3 nuclei, (E), 26:53828
energy spectra of primary electrons and positrons, (E), 26:53855
energy spectra of primary electrons between 10 and 200 GeV, (E), 26:53823
energy spectra of primary electrons between 10 and 1000 GeV, (E), 26:53822
energy spectra of primary nuclei, effect of ionization loss on, (T), 26:53862
energy spectra of VH and VVH primary nuclei, (E), 26:53843
energy spectrum of primary electrons, 26:53809
eye light flashes induced by Cherenkov radiation from heavy nuclei, calculation of frequency of, 26:54882 (NASA-TM-X-2440, pp 757-66)
flux of anti-alpha particles at 0.3 to 3 GeV/N, (E), 26:53825
flux of primary electrons between 10 and 1000 GeV, (E), 26:53822
flux of transuranic nuclei, (E), 26:53844
intensity profiles of charged, in atmosphere, balloon measurements of flux and ionization, 26:53807 (NASA-TM-X-2440, pp 908-13)
mass of primary nuclei, method for determining, (E/T), 26:53824
mean age of superheavy, (T), 26:53867
neutron spectra measurements in upper atmosphere, 26:54066 (NASA-TM-X-2440, pp 922-5)
origin in Crab Nebula, (E/T), 26:53856
origin in pulsars, (T), 26:53858
origin in stellar flares, (T), 26:53853
origin in white-dwarf stars, (T), 26:53854
properties of neutrino, review of solar neutrinos, Fermi interaction, and stellar evolution for, (E/T), 26:54185 (NEIC-RR-47)
reactions with nuclei, cross sections for, (T), 26:53845
rigidity spectra for Z greater than or equal to 2, (E), 26:53826
rigidity spectrum of 5- to 300-GeV primary nuclei, (E), 26:53834
scattering by hydromagnetic waves, pitch-angle, (T), 26:53863
sources of extragalactic, (T), 26:53859
spectrum of primary, explanation of break in, (T), 26:53869
trapping of superheavy elements in geomagnetic field, possible detection of, 26:54047 (NASA-TM-X-2440, pp 548-55)

COSMIC RADIATION
anisotropy of, effects of source distribution and propagation on, (T), 26:53861
book: Measurement of Radiation in Space, 26:53276
chemical composition of, effects of source distribution and propagation on, (T), 26:53861
composition and energy spectra of primary, survey of, 26:53806 (NASA-TM-X-2440, pp 209-14)
conference on, Hobart 8/71, Vol. I, 26:53814
density in Milky Way, (E/T), 26:53992
detection of soft x-ray, thin polypropylene window proportional counters for, 26:53206
diquark search at 2750-m altitude in, 26:54177
diurnal variation from Deep River meson and neutron data, characteristics of, (E), 26:53811
diurnal variation of primary, modulation of solar, (T), 26:53849
doses to crew and passengers at SST altitudes, 26:54888 (NASA-TM-X-2440, pp 894-901)
effects of finite rest mass of wave quantum, (T), 26:53866
effects on eyes of astronauts during space flight, stimulatory for formation of phosphenes in, 26:53407 (NASA-TM-X-2440, pp 1002-6)
effects on space vehicle components and subsystems, design parameters and test facilities for testing, 26:53695 (NASA-TM-X-2440, pp 570-6)
flux of high-energy gamma rays in Milky Way, (E), 26:53819
galactic component of, upper limits for, (E/T), 26:53851
gamma background, energy spectra of 0.25 to 4.2 MeV, (E), 26:53818
gamma spectra from suprathermal proton bremsstrahlung, (E/T), 26:53820
hazards to astronauts during prolonged space flight, 26:53408 (NASA-TM-X-2440, pp 1007-15)
interaction with interstellar material, x-ray emission from, (E/T), 26:53815
measurements of gamma, behind shield on balloons at high altitudes, 26:54964 (NASA-TM-X-2440, pp 914-21)
modulation following June 8, 1969 Forbush decrease, abrupt change in 11-year variation of, (E), 26:53870
monitoring in stratosphere for SST Concorde flight, hybrid detector system for, 26:53203 (NASA-TM-X-2440, pp 874-83)
parameters of, effects of galactic field line motion on, (T), 26:53864
polar-cap noise absorption by solar flare particles, 26:53927 (NASA-TM-X-2440, pp 193-208)
propagation and source distribution of primary, (T), 26:53861
propagation in atmosphere of galactic, theory of, 26:54067 (NASA-TM-X-2440, pp 926-41)
quark search at 2750-m altitude in, e/3 and 2e/3, 26:54164
radionuclide production in lunar rocks by primary, (E/T), 26:53860
spectra of ultrahigh energy, hadronic interactions of urbaryons for cut-off problem in integral, (T), 26:54313
variations in interplanetary space, modulation effects on anisotropy responsible for solar semidiurnal, (T), 26:53812
variations in interplanetary space, modulation effects on anisotropy responsible for solar semidiurnal, 26:53813

COSMIC RADIO SOURCES
brightness distributions for 11, (E), 26:53914
positions of 11, (E), 26:53914
radiation emission mechanism for extragalactic, (T), 26:53925
rotation measures of, effects of galactic field on, (E), 26:53911
scintillation measurements of small-diameter, solar-wind parameters from analysis of three-station interplanetary, (E/T), 26:54070
scintillation observations of Cygnus A, F-region power-law wavenumber spectrum deduced from ionospheric, (E/T), 26:54029

COSMIC SHOWERS
arrival directions of EAS, (E/T), 26:53851
arrival directions of large E greater than 10^{17} eV, (E), 26:53852

COSMIC X-RAY SOURCES
energy spectra of Cyg X-1, short-period variations of, (E), 26:53921
energy spectra of several, in the 20- to 150-keV range, (E), 26:53920
gamma fluxes from Sco X-1, (E), 26:53818
identification of 2ASE 1253-28 with EX Hydrae, (E), 26:53895
identification of Leo XR-1 with CP0950, (E/T), 26:53907
intensity of several, in the 20- to 150-keV range, (E), 26:53920
intensity variations of Cyg X-1, short-period, (E), 26:53921
luminosity of Sco X-1, optical, (E), 26:53917
model for Sco X-1, featuring white dwarf, (E), 26:53917
optical observations of Sco X-1, (E), 26:53918
spectra of Sco X-1, time variation of, (E), 26:53917
spectral lines and continuum in optically-thick, transfer effects on, (T), 26:53926
spectral lines and continuum in Sco X-1, transfer effects on, (T), 26:53926
x-ray observations of Sco X-1, (E), 26:53918

COSMOLOGY
constants of, relations between quantum constants and, 26:54392 (ITF-72-3-P)
Friedmann models of, exact expressions for properties of zero-pressure, (T), 26:53999
galaxy formation in anisotropic, 26:53980
Hubble constant in, method for estimating, (E), 26:53974
models in scalar--tensor gravitation theory, isotropic, 26:54396 (ITF-72-41-P)
perturbations in expanding universe of free particles, (T), 26:53997
scalar--tensor field equations in, (T), 26:53998

COULOMETERS
design of controlled-potential controlled-current cyclic, engineering drawings for, 26:52957
design of solid-state controlled-potential, engineering drawings for, 26:55642

COUNTING DEVICES
operation of up--down, optimum value of open aperture fraction of chopper for, 26:53323

CRAB NEBULA
  cosmic-particle origin in, (E/T), 26:53856
  gamma emission above 10 MeV from, search for, (E), 26:53816
  gamma emission from, search for pulsed, (E), 26:53922
  x-ray spectra between 2.3 and 9.9 keV, (E), 26:53919
CRACKS
  detection of neutron-induced, detector for, 26:53317
CRITICAL ASSEMBLIES
  control rod mockups in ZPPR, reactivity worths and γ heating of boron and tantalum, (E), 26:55134 (CONF-720901-(Bks.1 and 2), pp 579-98)
  core physics analysis in SNEAK, evaluation of KAPER code for, 26:55396 (EURFNR-1014)
  core physics in, KAPER code for calculation of, 26:55396 (EURFNR-1014)
  correlation function from noise analysis of ZPR-9, 26:55448
  critical parameters of enriched uranium fueled graphite reflected cores in FCA, (E), 26:55401 (JAERI-Memo-3891)
  criticality measurements in MASURCA, program for, 26:55118 (CONF-720901-(Bks.1 and 2), pp 822-38)
  criticality measurements in ZPPR and ZPR-6, program for benchmark, 26:55116 (CONF-720901-(Bks.1 and 2), pp 789-808)
  criticality measurements in ZPPR, benchmark, 26:55117 (CONF-720901-(Bks.1 and 2), pp 809-21)
  criticality measurements in ZPPR-3 for liquid metal fast breeder core mockups, 26:55114 (CONF-720901-(Bks.1 and 2), pp 724-38)
  cross sections for fast, evaluation of ENDF/B data on, 26:55416(R) (BNWL-1522-5)
  Doppler reactivity measurements on uranium-238 in ZPPR-2, effects of core configuration on, 26:55393 (CONF-720901-(Bks.1 and 2), pp 1006-15)
  neutron fraction in plutonium fueled fast, measurement of effective delayed, 26:55389 (CONF-720901-(Bks.1 and 2), pp 700-12)
  operation of STEK, quarterly summary of, 26:55083(R) (EURFNR-1001)
  physics calculations for fast, KFKINR set of group constants for, 26:55397 (EURFNR-1016)
  physics calculations for fast, VIM-1 computer program for, 26:55378 (AI-AEC-12951)
  physics measurements for SNEAK 6A, 6B, and 6D, (E/T), 26:55398 (EURFNR-1029)
  physics measurements in fast, evaluation of neutron cross sections from, 26:55385 (CONF-720901-(Bks.1 and 2), pp 623-35)
  physics measurements in FCA, pulsed neutron techniques for effective delayed neutron fraction, 26:55403 (JAERI-Memo-4004)
  physics measurements in ZPPR-2 and ZPR-6-7, comparison for fuel plates vs. fuel pins of, 26:55395 (CONF-720901-12)
  physics measurements on plutonium fueled cores in SNEAK, (E/T), 26:55387 (CONF-720901-(Bks.1 and 2), pp 645-59)
  reactivity calculations for VINS, using Monte Carlo transport codes, 26:54469 (ANCR-1071)
  reactivity worth measurements in ZPPR-2, heterogeneity effects in sodium void, 26:55392 (CONF-720901-(Bks.1 and 2), pp 973-85)
CRITICALITY
  calculations for reactors, zero variance estimator for Monte Carlo, 26:55431 (CONF-720901-(Bks.1 and 2), pp 229-39)
  calculations for, reliability of Monte Carlo computer programs, 26:55445 (Y-KC-96)
  control parameters for 6 percent or less enriched uranium, 26:53733 (WCAP-2999)
  excursions in large boiling water reactors, analytical method for rod drop super prompt, 26:55353 (NEDO-10527)
  measurements in high burnup plutonium, effects of plutonium isotopic composition in, 26:55416(R) (BNWL-1522-5)
  measurements in plutonium nitrate ($Pu(NO_3)_4$)—polystyrene lattices, 26:55416(R) (BNWL-1522-5)
CRUSTACEA
  Chaetophiloscia sicula, γ radiosensitivity of, 26:53504
  Porcellio dilatus, γ radiosensitivity of, 26:53504
CRYSTAL RIVER POWER REACTOR, UNIT 3
  owners of, antitrust review for, 26:55308 (DOCKET-50302-52)
CRYSTAL STRUCTURE
  lectures at Physics Laboratory of Istituto Superiore di Sanita, Rome, July--Dec. 1970, 26:54162 (ISS-71/31)
CRYSTALS
  defects in lattices of, atomistic computer simulation of, (E), 26:54970 (CEA-CONF-1890)
  electron beam motion through, laser modulation in Schwarz--Hora effect for light production and upper limit for laser emission in, (T), 26:54245 (IS-T-531)
  electronic structure of conductor, in magnetic field, (T), 26:55533 (ITF-72-16-E)
  exciton energy in semiconductor, formulae for longitudinal, (E/T), 26:55065(T) (UCRL-Trans-10643)
  ion channeling in, flux peaking effect in, (T), 26:55007
  phonon frequency distributions of fcc Lennard--Jones harmonic, (T), 26:55515 (COO-3161-3)
  phonon resonant scattering by impurities in, review, 26:55511 (COO-3151-8)
  radiation damage in cubic and diamond lattices, correlated recovery kinetics of anisotropic, (T), 26:55005
  radiation effects on, atomistic computer simulation of, (E), 26:54970 (CEA-CONF-1890)
  transformations in ionic, with triparticle interactions, theory of polymorphous, 26:55538 (ITF-72-50-P)
CULTURE MEDIA
  effects on recovery of γ-irradiated pathogenic bacteria, combined effects of dose and storage temperature on, 26:53369
CURIUM ISOTOPES Cm-242
  content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
CURIUM ISOTOPES Cm-244
  content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  preparation of high purity, by reduction of curium oxide, p. 41, 26:53066 (ORNL-4794, pp 36-44)
CURIUM OXIDES
  reduction of, preparation of high purity curium metal by, p. 41, 26:53066 (ORNL-4794, pp 36-44)
CURRENT ALGEBRA
  commutation of axial charges with axial divergences for baryon states, 26:54341
  representations of local, general properties of, 26:54239
  SU(3) x SU(3) chiral, for mixing operator for baryons, 26:54370 (NP-19418)
2,4,6-CYCLOHEPTATRIEN-1-ONE, 2-HYDROXY-3-ISOPROPYL-
  solvent properties for tetravalent plutonium, 26:53034(T) (MLM-1964(tr))
CYCLOHEXANE
  radiolysis of gaseous, mass spectrometric studies on ion--molecule reactions produced by γ, 26:52982 (EUR-4765, pp 11-24)
CYCLOHEXENE
  radioinduced thermoluminescence of, effects of additives and dose on γ, 26:53010
CYCLOTRONS
  beam emittance measurements at Cracow U-120, for design of beam transport system, 26:53760
  beam injection systems for, review on, 26:53756 (LBL-654)
  beam oscillations in electron model of isochronous, effects of beam space charge on frequency shift of incoherent axial, 26:53761
  ion source for LBL 88-in., description of Penning-type heavy-, 26:53755 (LBL-644)
  operation of LBL 88-in., review of heavy-ion, 26:53755 (LBL-644)
CYSTEAMINE
  radioprotective effects on mice following fractionated sublethal whole-body exposure, 26:53475
CYSTEINE
  radiolysis of frozen aqueous solutions of, ESR study of free radicals from γ, 26:52995

D

DACTINOMYCIN
  effects on post-fertilization expression of x-radioinduced dominant and recessive lethal mutations in mature spermatozoa of Drosophila melanogaster, 26:53502
  effects on post-fertilization maternal repair of x-radioinduced chromosome aberrations in mature spermatozoa of Drosophila melanogaster, inhibitory, 26:53502
  effects on repair of γ-radioinduced double-strand breaks in DNA of Micrococcus radiodurans, inhibitory, 26:53349
DATA ACQUISITION SYSTEMS
  description for LAMPF experimental facilities, 26:53795 (LA-4874, pp 86-9)
  description of computer-based real time, for nondestructive testing, 26:55607 (SC-R-722879)
  description of Grenoble IBM 360-50 computer, 26:53312
  design and performance for mass spectrometer, 26:53324
DATA PROCESSING SYSTEMS
  buffers in real-time on-line computer, technique for handling, 26:55465 (AERE-R-6623)
  description of computer-based, for clinical scintigraphic data, 26:53228
  description of computer-based, for polarity-correlation noise analysis, 26:55448
  development of computerized, for gamma spectra subtraction during use of chromium-51 and iron-59 as dual tracers in biological systems, 26:53544
  development of digital computer, for analysis of gamma camera radioisotope imaging data for clinical use, 26:55457 (TID-26141)
  operation of computer, for periodic maintenance and calibration of reactor instrumentation, 26:55132 (ANL/EBR-63)
DATA TABULATIONS
  cross sections for excitation in heavy-particle collisions, 26:54118
  cross sections for π^{+-} + d, π^{+-} + n, and π^{+-} + p

- interactions, 26:54201 (CERN/HERA-72-1)
- on gamma rays from fission products, 26:54607 (RD/B/M-2356)
- on γ spectra from fissionable nuclei, 26:54652 (ANCR-1069)

DECAY SCHEMES
- measurement of, review of impact of advances in instrumentation on, 26:53263

DEER
- radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)

DERMATITIS
- radioinduced, in man following local exposure for therapy of underlying neoplasms, γ, 26:53433

DESALTING
- research in India, 1971--1972, 26:55452(R) (NP-19407)

DEUTERIUM
- abundance in Jovian atmosphere, (E), 26:54007
- atomic mass of, 26:54495 (EUR-4765, pp 435-55)
- crystal structure of, 26:55559 (LA-DC-72-903)
- deuteron elastic scattering at 12.305 MeV, differential cross sections for, (E), 26:54497 (LA-DC-72-876)
- deuteron reactions (d,n) at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)
- deuteron reactions (d,n) at 6 to 14 MeV, differential polarization from, (E), 26:54516
- deuteron reactions (d,p) at 2.0 to 14.0 MeV, differential polarization from, from tritium (p,d) reactions, (E), 26:54517
- effects on ESR spectra of γ-irradiated nitric acid, isotope, 26:53009
- effects on hot hydrogen atom reactions in bromine--hydrobromic acid systems, isotope, 26:52962
- effects on hydrolysis of tetrahydridoborate, isotope, 26:52965
- effects on methane ion molecule reactions with silane, isotope, 26:52961
- effects on potential function for ring puckering vibration of diborane, isotope, 26:52966
- effects on proton transfer to cyanines, solvent isotope, 26:52964
- effects on quenching of tyrosine and tryptophan fluorescence by water, isotope, 26:52958 (UR-3490-193)
- effects on Raman and ir spectra of ammonia polycrystals at 18 to 107°K, isotope, 26:52968
- effects on Raman spectra of cubic and orthorhomic hydrogen chloride at 86 to 104°K, isotope, 26:52971
- effects on triplet lifetimes of anthracene, position dependence of isotope, 26:52972
- effects on variable traps in electronic states of s-triazine, isotope, 26:52963
- exchange between ammonia and hydrogen molecules, heavy water production process based on, 26:53088
- exchange between heavy water and tetrahydridoborate, 26:52965
- exchange between water and N,N'-bis(3-phenoxyhydroxypropyl)ethylenediamine hydrochloride, 26:53052
- exchange equilibria in ammonia, effects of vibrational anharmonicity on self-, 26:52973
- exchange with hydrogen in x-irradiated DL-serine at 300°K, 26:52996
- interactions $\pi^- + d \to 2p + \pi^+ + 3\pi^- + m\pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
- neutron elastic scattering at zero energy, method of moments for solution of Faddeev equations for, (T), 26:54715
- nucleon elastic scattering at 10.85 MeV, agreement of exact calculations of polarization in, (T), 26:54509
- phase transitions in, 26:55559 (LA-DC-72-903)
- proton elastic scattering at 600 MeV, differential cross section for, (E), 26:54512
- proton reactions (p,2p) and (p,pn) with small momentum transfer, polar graph interpretation of differences in cross sections for, (T), 26:54510
- proton reactions (p,2p) at 155 MeV, analysis of angular distributions for off-energy-shell effects, (E), 26:54522
- proton reactions (p,2p) at 51.8 MeV, analysis of cross sections and spectra from, (E/T), 26:54505
- proton reactions (p,n) at 16 to 26 MeV, analysis of p - p final state interaction in, (E/T), 26:54503 (UCRL-74069)
- proton reactions (p,pn) and (p,2p) at 20 to 60 MeV, analysis of rescattering effects in, (E/T), 26:54511
- reactions between molecules of, at 50 to 500 eV, angular distributions and total cross sections for production of fast molecular ions in, (E), 26:54105
- reactions with brass surfaces of molecular, secondary-electron emission coefficients for, (E), 26:54105
- separation from hydrogen produced from water vapor, 26:52975(P)
- triton reactions (t,n) at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)

DEUTERIUM HYDRIDES
- nuclear spin--spin coupling constant of, perturbation calculation using bare-nucleus potential as function of internuclear separation, 26:54092
- spectral lines in xi Per due to interstellar, equivalent widths of, (E), 26:53890

DEUTERIUM SYSTEMS
- D--T, laser beam reactions with solid targets of, fusion reactions from, 26:54830
- D--T, thermonuclear reactions from spherical hot-spot in, (T), 26:54831

DEUTERONS
- breakup in Coulomb field in ISABELLE, cross section for, (T), 26:53776 (BNL-17063)
- dechanneling at 1.5 MeV in diamond lattices, 26:54988
- effects on crosslinking and fading in poly(vinyl chloride) containing 1,4-diaminoanthraquinone, 26:53020
- energy spectra of primary cosmic, (E), 26:53828
- interactions anti p + d → anti p + p + n, Fermi motion and n + p final-state interaction effects on low-momentum transfer cross sections for, (T), 26:54347 (UM-P-72-6)
- interactions anti p + d → p + anything, nonzero orbital momenta of anti pn bound states from recoil proton momentum spectrum in, (T), 26:54334
- interactions α + d at 1 to 200 MeV (cms), optical-potential description of phases for scattering, (T), 26:54532
- interactions e + d → e + d, renormalization and neutron magnetic form factor from analysis of available data on, (E), 26:54169 (JINR-E1-6647)
- interactions $\gamma + d \to p + p + \pi^-$ up to 1 GeV in bubble chamber, angular distributions and total cross sections for, (E/T), 26:54171 (LNF-72/31)
- interactions $K^+ + d$ at 9 GeV/c in deuterium bubble chamber, analysis of Q region of $K^+\pi^+\pi^-$ mass spectra from, (E), 26:54228
- interactions n + d, calculation of breakup cross section with separable potentials, 26:54520
- interactions n + d, calculation of doublet scattering length using Skornyakov--Ter-Martirosyan equations, 26:54344 (ITF-72-10-P)
- interactions ν + d → 2p + e near 50 MeV, cross section calculations for, (T), 26:54233 (LA-DC-72-848)
- interactions p + d → p + d at 10 to 70 GeV, tables of absolute differential cross sections and amplitudes for, (E), 26:54194 (JINR-E1-6615)
- interactions p + d at 10 to 70 GeV, slope parameter of diffraction cone and ratio of real to imaginary parts of amplitude of elastic, (E), 26:54197
- interactions p + d at 800 MeV, calculation of relative neutron and pion yields in, (T), 26:54467(R) (ORO-2972-204)
- interactions π + d, recoil and Fresnel corrections to Glauber multiple-scattering model for, 26:54352
- interactions $\pi^- + d \to 2p + 2\pi^- + m\pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
- interactions $\pi^- + d \to 2p + 2\pi^- + \pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections, upper limit for exotic multipion resonance production, and validity of spectator model for cross sections for Δ^0rho$^-$ channel in, (E), 26:54208 (COO-3065-16)
- interactions $\pi^- + d \to 2p + 2\pi^-$ at 7 GeV/c in deuterium bubble chamber, cross sections, upper limit for exotic multipion resonance production, and π + π scattering phase shifts in, (E), 26:54208 (COO-3065-16)
- interactions $\pi^- + d \to 2p + \pi^+ + 3\pi^- + \pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
- interactions $\pi^- + d \to 2p + \pi^+ + 3\pi^-$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
- interactions $\pi^+ + d \to 2p + \pi^+ + \pi^-$ at 13 GeV/c, I = 0 S-wave phase shift from partial-wave analysis of ππ spectra and rho and f production cross sections in, (E/T), 26:54219
- interactions $\pi^+ + d$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
- interactions $\pi^- + d$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
- proton elastic scattering at 3.6 to 9.1 MeV, vector to tensor polarization transfer in, (E), 26:54499 (LA-DC-72-905)
- reactions (d,α) and (d,p) with fluorine-19 at 3 MeV, differential cross sections for, (E), 26:54548
- reactions (d,α) with carbon-12 at 7.2 to 14 MeV, analysis of reaction mechanism in isospin-forbidden and -allowed, (E), 26:54539
- reactions (d,α) with iron-57 at 16 MeV, angular distributions for, (E), 26:54584
- reactions (d,α) with neon-20 at 3.5 to 8 MeV, excitation functions for, (E), 26:54467(R) (ORO-2972-204)
- reactions (d,Li-6) with carbon-12, oxygen-16, fluorine-19, and calcium-40 at 28 MeV, angular distributions and spectroscopic factors for, (E), 26:54527 (LYCEN-7219)
- reactions (d,n) and (d,p) with carbon-12, calculation of spectroscopic factors using weakly bound projectile model, (T), 26:54543
- reactions (d,n) with A = 2 to 9 nuclei at 30 keV to 1.5 MeV, calculation of thick target yields for, (T),

26:54502 (SC-RR-720513)
  reactions (d,n) with beryllium-9 at 50 and 54 MeV, biological implications of neutron spectra from, (E/T), 26:53804
  reactions (d,n) with deuterium, at 6 to 14 MeV, differential polarization from, (E), 26:54516
  reactions (d,np) and (d,p) with strontium-88 at 7.5 to 10.0 MeV, coupled-channels Born-approximation calculations of excitation functions for, (E/T), 26:54588
  reactions (d,np) with carbon-12 at 5.99 MeV, triangle graphs and isospin violation in rescattering in, (T), 26:54716
  reactions (d,p) and (d,t) with cerium-142 at 12.6 MeV, particle spectra and angular distributions for, (E), 26:54618
  reactions (d,p) with calcium-41 at 12 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 26:54573
  reactions (d,p) with cerium-142 at 9 to 13 MeV, proton spectra from, (E), 26:54467(R) (ORO-2972-204)
  reactions (d,p) with deuterium at 2.0 to 14.0 MeV, differential polarization from, from tritium (p,d) reactions, (E), 26:54517
  reactions (d,p) with hafnium-179 at 12 and 14 MeV, proton spectra from, (E), 26:54636
  reactions (d,p) with helium-3 at 366 to 1090 keV using polarized beam, analyzing power for, (E), 26:54500 (LA-DC-72-906)
  reactions (d,p) with iron-58 at 10 MeV, angular distributions for, (E), 26:54592
  reactions (d,p) with molybdenum-100 at 3.05 to 3.75 MeV, DWBA analysis of differential cross sections and excitation function for, (E), 26:54614
  reactions (d,p) with nickel-62 and -64 at 12 MeV, angular distributions for, (E), 26:54587 (FRNC-TH-240)
  reactions (d,p) with rhenium-187 at 12 MeV, proton spectra and cross sections for, (E), 26:54637
  reactions (d,p) with silver-109 at 10 MeV, proton spectra from, (E), 26:54467(R) (ORO-2972-204)
  reactions (d,pγ) with calcium-40, chromium-52, and iron-54 at 3 MeV, γ-ray angular correlations for, (E), 26:54578
  reactions (d,t) with dysprosium-164 and gadolinium-160, coupled channel analysis of mixing in, (T), 26:54635 (JINR-P4-6509)
  reactions (d,t) with hafnium-177 at 12 and 14 MeV, triton spectra from, (E), 26:54636
  scattering by deuterium at 12.305 MeV, differential cross sections for elastic, (E), 26:54497 (LA-DC-72-876)
  scattering by helium-4 at 4.8 to 8.6 MeV, polarization transfer in elastic, (E), 26:54498 (LA-DC-72-904)
  scattering by hydrogen at 6.00 to 11.50 MeV, phase-shift analysis of polarized elastic, (T), 26:54513
  scattering by iron-56 and -58 at 10 MeV, angular distributions and optical model parameters for elastic, (E), 26:54592
  scattering by magnesium-24 at 12.1 MeV, coupled-channels and DWBA analyses of differential cross sections and analyzing powers from polarized elastic and inelastic, (E), 26:54557
  scattering of vector-polarized, by titanium-48, -49, -50 and chromium-50 at 11.9 MeV, elastic, (E), 26:54572
DIAMONDS
  radiation effects on optical spectra of Type-I, 17.0- and 18.3-MeV proton, 26:54991
DIELECTRICS
  magnetic splittings in cubic antiferro-, theory of Bethe and Davydov, 26:55536 (ITF-72-32-P)
DIET
  radium-226 content of human, in Poland, 26:53525
DIFFERENTIAL EQUATIONS
  book: Kinetic Equations, 26:54797
DIODES
  fabrication and properties of ion-implanted zinc telluride electroluminescent, 26:54971 (CEA-R-4313)
DISEASES
  hypertension, radioinduced, in rats, effects on distribution and excretion of exchangeable sodium, sodium-22 tracer study of, 26:53463
  thrombocytopenia, radioinduced, in man following intravenous injection of colloidal gold-198 for therapy of liver involvement in Hodgkin's disease, relation of dose fractionation and protraction to β and γ, 26:53507
DISPERSION RELATIONS
  derivation of forward, for low-energy elastic scattering of charged particles by nuclei, (T), 26:54711
  sum rules in axiomatic quantum field theory, spectral Jost--Lehman--Dyson representation for structure of, 26:54377 (ITF-72-54-P)
DISPLACEMENT GAGES
  design of electroacoustical, for signaling sample arrival in pneumatic reactor tubes, 26:55413(P)
DISTILLATION
  thermochemical reactions of alkaline halides in carrier, for uranium oxide purification, 26:53719
DOGS
  radiation dose distribution in respiratory tract tissues of, following inhalation of strontium-90 as fused clay aerosols, β, 26:53536
  radiation effects on maxillary bone of, following exposure of teeth, effects of lead bridges and plastic caps on γ, 26:53480
  radiation effects on thyroid gland of, relation of metabolic rate to carcinogenic and morphologic, x, 26:53462 (UR-3490-183)
DONALD C. COOK POWER REACTOR, UNIT 1
  construction of, authorization for provisional permit for, 26:55323 (DOCKET-50315-79)
  construction of, provisional permit for, 26:55320 (DOCKET-50315-76)
  containment spray system for, design changes for, 26:55322 (DOCKET-50315-78)
  containment system for, evaluation program for ice condenser, 26:55324 (DOCKET-50315-80)
  coolant for, increase in average temperature for, 26:55322 (DOCKET-50315-78)
  effluents from, environmental monitoring programs for chemical and thermal, 26:55326 (DOCKET-50315-82)
  emergency core cooling system for, design changes for, 26:55322 (DOCKET-50315-78)
  safety evaluation of, Division of Reactor Licensing, 26:55318 (DOCKET-50315-74)
  site for, Benton Harbor limnology survey near, 26:55325 (DOCKET-50315-81)
  site for, nonradiological environmental monitoring program for, 26:55326 (DOCKET-50315-82)
  spent fuel pit for, tornado and missile hazard analysis for, 26:55321 (DOCKET-50315-77)
  steam generator for, design changes for isolation valve for, 26:55322 (DOCKET-50315-78)
  valves for, verification of wall thicknesses for nuclear service, 26:55319 (DOCKET-50315-75)
DONALD C. COOK POWER REACTOR, UNIT 2
  construction of, authorization for provisional permit for, 26:55323 (DOCKET-50315-79)
  construction of, provisional permit for, 26:55320 (DOCKET-50315-76)
  containment spray system for, design changes for, 26:55322 (DOCKET-50315-78)
  containment system for, evaluation program for ice condenser, 26:55324 (DOCKET-50315-80)
  coolant for, increase in average temperature for, 26:55322 (DOCKET-50315-78)
  effluents from, environmental monitoring programs for chemical and thermal, 26:55326 (DOCKET-50315-82)
  emergency core cooling system for, design changes for, 26:55322 (DOCKET-50315-78)
  safety evaluation of, Division of Reactor Licensing, 26:55318 (DOCKET-50315-74)
  site for, Benton Harbor limnology survey near, 26:55325 (DOCKET-50315-81)
  site for, nonradiological environmental monitoring program for, 26:55326 (DOCKET-50315-82)
  spent fuel pit for, tornado and missile hazard analysis for, 26:55321 (DOCKET-50315-77)
  steam generator for, design changes for isolation valve for, 26:55322 (DOCKET-50315-78)
  valves for, verification of wall thicknesses for nuclear service, 26:55319 (DOCKET-50315-75)
DOUNREAY FAST REACTOR
  coolant contamination in, mechanisms of, (E), 26:55167 (CONF-710959-, Paper 11)
  cooling systems of, effectiveness of water for decontamination of, (E), 26:55167 (CONF-710959-, Paper 11)
  cooling systems of, mechanisms of fission and corrosion product deposition in, (E), 26:55167 (CONF-710959-, Paper 11)
  fission product transport in NaK coolant of, mechanisms of, (E), 26:55167 (CONF-710959-, Paper 11)
  fuel element corrosion in NaK coolant of, mechanisms of, (E), 26:55167 (CONF-710959-, Paper 11)
  fuel transport in NaK coolant of, mechanisms of, (E), 26:55167 (CONF-710959-, Paper 11)
DRESDEN POWER REACTOR, UNIT 1
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
DRESDEN POWER REACTOR, UNIT 2
  steam line for, low flow in, 26:55244 (DOCKET-50237-258)
  switches for, incorrect scram setpoints for electrohydraulic control oil low pressure, 26:55243 (DOCKET-50237-257)
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
DRESDEN POWER REACTOR, UNIT 3
  hydraulic control system for, incorrect set point for low oil pressure scram switches for electro, 26:55247 (DOCKET-50249-155)
  switches for, incorrect scram setpoints for electrohydraulic control oil low pressure, 26:55243 (DOCKET-50237-257)
  turbine for, malfunction of control valve for, 26:55247 (DOCKET-50249-155)
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
DRILL CORES
  analysis for copper and nickel, by neutron activation using californium-252 source, 26:53174
DRILL HOLES
  exploration of, neutron activation method for, 26:53174

DUANE ARNOLD POWER REACTOR
  valves for, verification of wall thicknesses for nuclear service, 26:55330 (DOCKET-50331-52)
DURALUMIN
  analysis for copper by amperometric titration, 26:52924
DUSTS
  density in solar corona, (T), 26:53938
  infrared radiation from interstellar, (T), 26:53989
DYES
  toxicity of diphenylthiocarbazone, 1,5-diphenyl-3-thiocarbohydrazide, purpurin, quinalizarin, and quinizarin in mammals, bibliography on, 26:55574 (ORNL-TIP/TIRC-72-4)
DYSPROSIUM
  magnetoelastic interaction for magnon--phonon mixing, (T), 26:55026
  oxidation under controlled oxygen partial pressures at 727 to 1327°C, 26:53550 (IS-T-540)
DYSPROSIUM ISOTOPES Dy-153
  electron-capture decay of, conversion-electron and gamma spectra from, (E), 26:54643
DYSPROSIUM ISOTOPES Dy-155
  beta and electron-capture decay of, conversion-electron spectra from, (E), 26:54643
DYSPROSIUM ISOTOPES Dy-160
  neutron reactions (n,α) with, calculation of, (T), 26:54707
DYSPROSIUM ISOTOPES Dy-162
  neutron reactions (n,α) with, calculation of, (T), 26:54707
DYSPROSIUM ISOTOPES Dy-163
  neutron capture up to 200 eV, correlation of partial radiative and neutron widths in resonance, (E), 26:54631(T) (BNL-tr-490)
DYSPROSIUM ISOTOPES Dy-164
  deuteron reactions (d,t) with, coupled channel analysis of mixing in, (T), 26:54635 (JINR-P4-6509)
  neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589
  neutron reactions (n,α) with, calculation of, (T), 26:54707
DYSPROSIUM ISOTOPES Dy-165
  beta decay of, heat-flow analysis of temperature spikes following, (E/T), 26:54646

E

EARTH
  rotation of, relativistic gravitational effects on influence on mechanical vibrations of, 26:54400 (ITF-72-59-P)
EARTHQUAKES
  ground motion from San Fernando, damage to Glendale, Calif. residential buildings from, 26:53137 (JAB-99-96)
ECOSYSTEMS
  cesium-137 content in Florida, during June 1971 to June 1972, 26:53170(R) (ORO-4066-5)
  hazards to aquatic, from surface water-discharge of power plant waste heat, 26:53194
  model of hardwood forest, development of analog, 26:53170(R) (ORO-4066-5)
  nutrient cycling through forest floor-arthropod, tracer studies on calcium and potassium, 26:53539(R) (SRO-641-4)
  phosphorus flux through salt marsh, model for, 26:55612(R) (SRO-639-12)
  plant associations in Whiteshell Nuclear Research Establishment controlled area, 26:55462 (AECL-3957)
  radioisotope content and distribution in Savannah River swamp forest, (E), 26:53171(R) (SRO-708-1)
  radioisotope cycling in, bibliography on, 26:53530 (TID-3915(Suppl.1))
  radioisotope transport in marine, relation of uptake by animals and plants to strontium-90 and zinc-65, 26:53532
  trophic dynamics and niches of salt marsh foraminifera, 26:55520 (COO-3254-6)
  zinc-65 distribution in Oregon and Washington continental shelf, 26:53149 (RLO-2227-T-12-26)
EDDY CURRENT TESTING
  equipment and method for Type 316 stainless steel fuel cladding tubes, 26:53125
EDWIN I. HATCH POWER REACTOR, UNIT 1
  steam line isolation valves for, verification of wall thicknesses for main, 26:55328 (DOCKET-50321-49)
EGYPT
  mineralogy of southwest Aswan radioactive syenite rock in, 26:53142 (AREAEE-138)
ELECTRIC CURRENTS
  effects of pulsed, on crystal structure of tungsten, 26:53668
ELECTRIC DISCHARGE
  blast wave generation in plasma in pulsed, (E), 26:54856
  collision processes in, research on, (E/T), 26:54779(R) (NP-19393)
  oscillations in bounded neon positive column, constant-wavelength, (E/T), 26:54859
  plasma density and skin-layer thickness measurements in strong hf, (E), 26:54768(T) (AEC-tr-7329)
  plasma diffusion coefficients for shf, transverse and longitudinal, (E), 26:54776(T) (AEC-tr-7332)
  plasma oscillations in hf, in magnetic fields, (E), 26:54849
  plasma wave transformation region in shf, localization of, (E), 26:54842(T) (AEC-tr-7339)
  research on low-pressure, Flinders Univ. of South Australia, (E/T), 26:54779(R) (NP-19393)
ELECTRIC FIELDS
  symmetries of nonrelativistic, relativistic, and approximate relativistic Coulomb problem for, radial integrals, relation between parabolic and spherical wave functions, and first-order Stark shifts from, (T), 26:54374
ELECTRIC POWER
  generation in manned space stations, design and requirements of nuclear systems for, 26:53094 (NASA-TM-X-2440, pp 26-33)
  generation in US, evaluation of optional methods for, 26:53097
  generation in US, legal methods for controlling demand for increased, 26:53101
  generation of, survey of options in, 26:55086
  operation and use of, environmentalists' view on growth rates for, 26:53100
  production in Japan, evaluation of hydraulic, fossil fuel, and nuclear methods for, 26:55092
  requirements in US for, during the period 1980 to 2000, 26:53097
  transmission by underground superconducting cable, 26:54461 (BNL-50325)
  transmission of, survey of options in, 26:55086
ELECTRIC PROBES
  plasma flow around, potential measurements for ionospheric applications, 26:54011 (ONERA-Publ.-137)
ELECTROHYDRODYNAMIC GENERATORS
  operation of, description of simulator facility for, 26:53089 (AD-737380)
ELECTROJETS
  lunar variations in Peruvian equatorial, comments on seasonal and daily, (E), 26:54041
  wave generation in ionospheric, potential transverse-current-produced, (T), 26:54027
ELECTROLUMINESCENCE
  diode fabrication and properties, using ion-implanted zinc telluride, 26:54971 (CEA-R-4313)
ELECTROLYTES
  mass transfer in systems of, multicomponent, p. 93, 26:53085 (ORNL-4794, pp 91-5)
ELECTROMAGNETIC FIELDS
  interactions with many-level molecular systems, semiclassical theory of, 26:55468 (AREAEE-136)
  Maxwell equations in presence of electric and magnetic charges for, variational principle and external invariance of, (T), 26:54373 (ITF-72-35-P)
  pair production in strong, with arbitrary spin and magnetic moment, 26:54266
  penetration into nontransparent plasma, traveling hf, (T), 26:54843 (AREAEE-124)
ELECTROMAGNETIC LENSES
  charged-particle trajectories in first-order achromatic, second-order effects on, 26:53764
  coil configurations in superconducting quadrupole, limitations on good field aperture due to use of finite number of ribbons in, 26:53768 (BNL-16980)
  design for producing separated electron beams over 100 GeV by using synchrotron radiation, 26:53801
  field distribution in superconducting, calculation of, 26:53759
ELECTROMAGNETIC WAVES
  absorption in linear plasma layer in hybrid resonance region, extraordinary, (T), 26:54864
  charged-particle radiation emission in field of two plane, relativistic, (T), 26:54264
  excitation in plasma by relativistic electron beams, (T), 26:54837(T) (AEC-tr-7333)
  interactions with collisionless plasma, generation of fast electrons in, (E), 26:54836(T) (AEC-tr-7331)
  propagation in homogeneous magnetosphere, nonlinear theory of monochromatic circularly polarized ulf and vlf, (T), 26:54050
  propagation in magnetosphere of ulf Pc-1 micropulsations, effect of nonlinear phenomena on, (E/T), 26:54050
  reflection at oblique incidence on sharp plasma boundary formed by ionization source moving with constant velocity, (T), 26:54865
  scattering on plasma in flat waveguides, effect of electron charge fluctuations on, (T), 26:54848
ELECTROMETERS
  design for ionization chamber for monitoring normal gamma environmental levels, engineering drawings for, 26:53218
ELECTRON BEAMS
  diffraction by magnetoactive plasma cylinder, (T), 26:54847
  dosimetry of pulsed calorimeter for, 26:53258 (SC-DR-720630)
  effects on alkali halides at 10 to 50 keV, density of color centers from, (E), 26:54973 (FRNC-TH-210)
  effects on carbon--hydrogen reactions at 30 to 45 keV, 26:53718
  focusing by ion beams in transverse gas flow, (E/T),

26:54086
interactions of large-current linear-discharge-produced pulsed, with argon plasma, argon-ion stimulation emission from, (E), 26:54787
interactions with plasma, dispersion equation for multiloop, (T), 26:54793
interactions with plasma, electromagnetic wave excitation by relativistic, (T), 26:54837(T) (AEC-tr-7333)
interactions with plasma, instability control in, (E), 26:54819
interactions with plasma, ion heating by oscillations, (E), 26:54762
interactions with plasma, modulation of lf oscillations from, 26:54782
interactions with plasma, nonlinear interaction of waves from, (T), 26:54795
interactions with plasma, steady-state beam shape in, (T), 26:54794
interactions with proton beams, calculation of luminosity of, 26:53777 (BNL-17067)
monitoring of currents of relativistic, Faraday ring for, 26:53747 (SC-DR-720447)
motion of relativistic, in drift space, self-consistent, 26:53757
motion through crystal, laser modulation in Schwarz--Hora effect for light production and upper limit for laser emission in, (T), 26:54245 (IS-T-531)
penetration in dense gas, (E/T), 26:54763

ELECTRON CAPTURE
book: Beta Processes. Functions for Analyzing Beta Spectra and Electron Capture, 26:54740

ELECTRON GAS
pair-correlation function of degenerate, 26:55532 (ITF-72-2-P)
positron correlation energy in, (T), 26:55066

ELECTRON MICROSCOPES
defect diffusion to surface in foils irradiated by high-voltage, (T), 26:54985
use of high-voltage, for high-flux irradiation of Nimonic PE 16, 26:53708

ELECTRON MICROSCOPY
selected-area diffraction in high-voltage, error distance in, 26:54972 (COO-2119-2)

ELECTRON TUBES
design and performance of magnetrons in production of multicharged ions, 26:54079 (FRNC-CONF-53)
ion density measurement in microwave, probe technique for, 26:55641

ELECTRONIC EQUIPMENT
radiation protection standards for, development of, 26:54925

ELECTRONICS
vacuum technique application to, conference at Versailles, France, Sept. 13, 1971, 26:53138

ELECTRONS
absorbed dose in tumor therapy, integral, (T), 26:54909
configuration diagram of solvated, spectral studies on, 26:53025
detection and measurement of, design and performance of retarding field-cylindrical mirror analyzer for, 26:53310 (SC-DC-721302)
detection at high energies, fabrication of total-absorption detector using condensed xenon for, 26:53272 (JINR-P13-6541)
detection at ISABELLE and PEP storage rings, design of hybrid detector for, 26:53268 (BNL-17066)
diffusion into polar-cap regions of 0.4- to 1.0-MeV solar, from interplanetary space, (E), 26:54069
dose deposition calculations for plane slabs, comparison of methods for 0.5- to 10-MeV, 26:54886 (NASA-TM-X-2440, pp 801-15)
dose distribution perturbation near cavities in tissue-equivalent materials at 10 to 35 MeV, iso-, (E), 26:54903
dose to man during high-energy therapy, use of thermoluminescent dosimeters to determine, 26:53415
dynamics in magnetosphere, conjugate features observed at balloon altitudes of, (E), 26:54020
effects of intense pulses of, on solids, 26:55012
effects of Jupiter-belt, on fly-by space missions, 26:54002 (NASA-TM-X-2440, pp 781-4)
effects of pulsed, on aqueous solutions of potassium hydroxide, kinetics of disappearance of hydrated electron from, 26:53018
effects of pulsed, on gases, determination of short-lived species from, 26:52980(R) (COO-3461-1)
effects of pulsed, on succinonitrile plastic crystals, transient absorption spectra from, 26:53003
effects on aluminum at 150 to 200 keV, effects of helium doping on threshold energy of, 26:54990
effects on cadmium sulfide films at 3 MeV, 26:54992
effects on curing of adhesives by polymerization at room temperature, 26:53716
effects on defect charge state in germanium converted to p-type at 140°K and 1 MeV, 26:55013
effects on dielectric constants and crystal structure of perovskite-type compounds, 26:55020
effects on electric conductivity of naphthalene, (E/T), 26:54968(R) (AD-737312)
effects on gadolinium single-crystal films, dislocation loops produced in, 26:54979
effects on gallium arsenide, (E), 26:54968(R) (AD-737312)
effects on liquid ammonia, preparation of anhydrous hydrazine by, 26:53001(P)
effects on luminescence of cadmium sulfide, 26:55002
effects on mechanical properties of chromium--iron alloys and iron--molybdenum alloys at 2.3 MeV, 26:53706
effects on metals, graphite, and quartz at 650 kV, electron microscopic studies of, 26:54972 (COO-2119-2)
effects on n-type germanium at 85°K, similarity of annealing behavior to p-type germanium, 26:54997
effects on platinum, comparison of stage I annealing with interstitial-migration theories for, 26:55011
effects on platinum, recovery in stage I of annealing of, (E), 26:55010
effects on point defect distribution in quench hardened aluminum at 1.6 MeV, 26:53712
effects on silicon at energies far below threshold, (E/T), 26:55017
effects on silicon, (E/T), 26:54968(R) (AD-737312)
effects on skin of miniature swine, dose and time dependence of pathological, 26:53458 (NASA-TM-X-2440, pp 665-71)
effects on small solid grains, collision processes in heating, (T), 26:54874 (EUR-CEA-FC-647)
effects on solid molecular hydrogen at 1.4 to 8°K, yields and EPR spectra of hydrogen atoms from, 26:52979 (COO-1105-179)
effects on swelling of metals, dose and dose rate dependences of, (T), 26:53707
effects on transmittance of borosilicate glass, 26:54049 (NASA-TM-X-2440, pp 748-55)
effects on vibrational spectra of gallium arsenide containing silicon and boron, 26:54984
emission by copper of secondary photo-, model calculations of angular and energy distributions of, 26:54885 (NASA-TM-X-2440, pp 792-800)
emission by gamma- and x-irradiated materials, Monte Carlo POEM program for calculating, 26:54884 (NASA-TM-X-2440, pp 786-91)
emission by solids bombarded by low-energy ions, surface analysis by, 26:52936 (RT/EL-(72)4)
energy spectra in water irradiated with 10- to 20-MeV electron beams, 26:54894
energy spectra of 3- to 15-GeV primary cosmic, (E), 26:53821
energy spectra of primary cosmic, (E), 26:53855
energy spectra of primary cosmic, between 10 and 1000 GeV, (E), 26:53822
energy spectra of primary cosmic, between 10 and 200 GeV, (E), 26:53823
energy spectrum for primary cosmic, equilibrium, (T), 26:53809
flux measurements at ATS-5 satellite at synchronous altitude of low-energy, effects of magnetic activity on, 26:54045 (NASA-TM-X-2440, pp 530-8)
flux of primary cosmic, between 10 and 1000 GeV, (E), 26:53822
fluxes in Jupiter radiation belt, models of, 26:54001 (NASA-TM-X-2440, pp 556-60)
fluxes of geomagnetically trapped, temporal variations in, 26:54046 (NASA-TM-X-2440, pp 539-47)
fluxes of trapped, in Jovian magnetosphere, (E/T), 26:54006
geomagnetic cutoff-rigidity calculations for Fort Churchill, Canada, daily variations of, (E/T), 26:54065
gyromagnetic ratio of, sixth-order contribution to anomalous, (T), 26:54271
interaction with water vapor, atomic processes and energy deposition, applications in atmospheric sciences of, (E/T), 26:54033
interactions $e + d \to e + d$, renormalization and neutron magnetic form factor from analysis of available data on, (E), 26:54169 (JINR-E1-6647)
interactions $e + N \to \pi + N$ at threshold, method for calculating axial nucleon form factor and pion electromagnetic form factor in, (T), 26:54247 (NP-19417)
interactions e + N at high energies, review of kinematics, scaling, scattering from deuterons and complex nuclei, sum rules, single π^+ production, vector meson diffractive production, and coincidence measurements in inelastic, (E), 26:54173 (RPP/H-97)
interactions e + N at $q^2 = 0.6$ to 1.56 GeV^2, angular distributions for π^0 production in, (E), 26:54268
interactions e + N in quark--parton model, bare quark mass and structure function for, (T), 26:54282
interactions e + N, relation between prominent resonances and limiting scaling data in inelastic, (T), 26:54258
interactions e + N, sum rule and model for S-matrix elements in presence of standing-wave states as shadow quarks in Bjorken limit of deep inelastic, (T), 26:54248 (ORO-3992-106)
interactions $e + p \to e + K^+(K^-)$ + anything at 6.5 GeV, momentum spectra of K in inclusive, (E), 26:54178
interactions $e + p \to e + \mu^+ + \mu^-$ + anything, test of algebra of bilocal operators from, (T), 26:54253
interactions $e + p \to e + p$ + anything at 6.5 GeV, momentum spectra of protons in inclusive, (E), 26:54178
interactions $e + p \to e + \pi^+(\pi^-)$ + anything at 6.5 GeV,

momentum spectra of π in inclusive, (E), 26:54178
interactions $e + p \to e^+ + e^- + e + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
interactions $e + p \to \mu^+ + \mu^- + e + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
interactions $e + p$ at $q^2 = 1(\mathrm{GeV}/c)^2$ in resonance region, separation of longitudinal contribution from total cross sections of virtual $\gamma + p$ interactions in inelastic, (E), 26:54168 (DESY-72/38)
interactions $e + p$ in spin-$^1/_2$ parton model, two-photon exchange effects in deep inelastic, (T), 26:54269
interactions $e + p$, k^2 dependence of transverse cross section for meson (π^+) production in generalized Born term model, (T), 26:54243 (DESY-72/30)
interactions $e + p$, perturbation theory for $e^+ + e^- \to$ hadrons relation to deep inelastic, (T), 26:54262
interactions $e^+ + e^- \to$ hadrons, perturbation theory for relation to deep inelastic $e + p$ scattering, (T), 26:54262
interactions $e^+ + e^- \to$ hadrons, review of total cross sections, SU(3) ratios, SU(6) quark model predictions, multiplicities, transverse momentum distributions, resonance production, and $\gamma + \gamma$ processes for annihilation, (E/T), 26:54176 (SLAC-PUB-1043)
interactions $e^+ + e^- \to W^- + e^+ + \nu$, total cross section and angular and energy distributions of e^+ and W^- production in, (T), 26:54277
interactions $e^+ + e^- \to W^- + \mu^+ + \nu$, W^- production in, (T), 26:54277
interactions $e^+ + e^-$ in storage rings, test for existence of high-mass vector mesons in, (T), 26:54283
interactions $e^+ + e^-$, angular distributions in annihilation, (T), 26:54281
interactions $e^+ + e^-$, Schwarz inequality for asymptotic behavior of cross sections for annihilation, (T), 26:54287 (LBL-766)
interactions $\gamma + e$, differential cross sections and left--right asymmetry in Compton, (T), 26:54256
interactions $\gamma + e$, hypothesis consistency and relation with behavior of electromagnetic current commutator near light cone for automodel asymptotic of spectral functions of virtual Compton, (T), 26:54246 (JINR-P2-6636)
interactions $\gamma + e$, Schwinger source theory for calculation of spectral forms for invariant amplitudes of order e^4 for Compton, (T), 26:54255
interactions of current-sheet, with electrostatic waves, one-dimensional model of resonant, (T), 26:54052
interactions with hadrons, Regge and scaling limits for inclusive production, (T), 26:54275
isodose curves in lungs, measurement of, 26:54901
measurements on Apollo-15 subsatellite, high-energy solar-wind and interplanetary, (E), 26:54072
penetration of 1-MeV, in aluminum slab, phase-space-time-evolution calculations of, 26:54887 (NASA-TM-X-2440, pp 821-31)
photon Compton scattering by K-shell, nonrelativistic theory with retardation for inelastic, 26:54279
photon Compton scattering by K-shell, nonrelativistic dipole approximation for, (T), 26:54280
production in inelastic $\nu + \mu$ interactions with bremsstrahlung, four-component neutrino theory for e and μ polarization effects on form of spectra for, (T), 26:54290
production of $e^+ - e^-$ pairs in photon reactions with spin-$^1/_2$ point nuclei, differential cross sections and effects of neutral vector mesons an angular dependence of cross sections for, (T), 26:54260
production of relativistic, from solar flares associated with sunspot groups that emit meter type-I noise storms, (T), 26:53968
reaction with carbon dioxide, prediction of distribution of energy among possible loss channels from energetic, (E/T), 26:54009
reactions (e,e'p) with, cross-section calculations for, (T), 26:54496 (ITF-72-24-P)
reactions of hydrated, in radiolysis of aqueous solutions of indole-3-acetic acid and other plant hormones, 26:53015
reactions of radiolytic hydrated, with hydrogen ions and organic compounds, kinetics of, 26:53006
reactions with argon at 25 keV and small angles, determination of optical sums from energy-loss spectra from, 26:54128
reactions with atoms having Z = 23 to 83 at 2.04 MeV, atomic-number dependence of cross sections for K-shell ionization in, (E), 26:54104
reactions with atoms up to few keV, processes of formation of multicharged ions in, 26:54103 (FRNC-CONF-51)
reactions with atoms, distorted-wave approximation for excitation in, 26:54106
reactions with atoms, role of configuration mixing of diabatic states in excitation in, (T), 26:54117
reactions with carbon monoxide, impact cross sections and energy degradation from, relation with dayglow-emission observations from atmospheres of Mars and Venus, (E/T), 26:54008
reactions with helium and hydrogen atoms, adiabatic-approximation calculations of cross sections for excitation and spin change in, 26:54117
reactions with helium and nitrogen molecules, dependence of computed excitation cross sections for, on accuracy of wave functions used, 26:54108
reactions with helium at 200 to 500 eV, second-Born-approximation calculations of 1^1S, 2^1S, and 2^1P transitions in, 26:54138
reactions with helium at 26.5 to 300 eV, distorted-wave calculations of differential and integral cross sections for excitation of ^1p states in, 26:54106
reactions with helium at 30 to 80 eV, relation of momentum transfer to coincidence-measured angular and energy distributions of electrons scattered and ejected in ionization in, 26:54123
reactions with helium at 50 to 200 eV, coincidence measurements of absolute differential cross sections for 1^1S--4^1D transition in, 26:54113
reactions with helium, close-coupling calculations of indirect coupling effects on cross sections for excitation in, 26:54108
reactions with helium, relation between dispersion relation, optical theorem, and second Born scattering amplitude for, (T), 26:54110
reactions with lamellar media and single layers, radiation from 0.25- to 3.7-GeV, (T), 26:54907
reactions with mercury at 25 to 180 eV, distorted-wave calculations of differential cross sections for excitation and spin polarization of emitted electrons from, 26:54106
reactions with nitrogen molecules, calculation of excitation cross sections for, using Gaussian orbitals, 26:54108
reactions with nitrous oxide diluted with ethane, hydrogen, nitrogen, or propane at 278 to 355°K, rate constants for dissociative electron attachment and subsequent electron detachment in, (E), 26:54135
reactions with solids, mass spectra of ions emitted in, 26:54084
scattering by carbon-12, particle--hole-model calculations of form factor for inelastic, (T), 26:54541
scattering by carbon-12, shell-model calculation of quasi-elastic, 26:54526 (ITF-72-25-P)
scattering by lead-208 at 124 and 167 MeV, differential cross sections for inelastic, (E), 26:54649
scattering by lithium-6 with deuteron emission, cross-section calculations using Born approximation, (T), 26:54546
scattering by nitrogen molecules, method of linear combination of scaled atomic charge distributions for calculation of static potential for, 26:54125
scattering by nuclei at high energy, analysis of short-range correlations by, 26:54687 (ISS-71/29)
scattering by nuclei, contributions of time reversal noninvariant terms in elastic, (T), 26:54363 (IS-T-536)
scattering of microwave background by relativistic, (E/T), 26:54000
scattering, Monte Carlo study of catastrophic collisions with delta electrons considered, (T), 26:54898
separation from other particles over 100 GeV by using synchrotron radiation, angle and energy fluctuations in, 26:53801
spatial distribution of greater than equal to 50-keV, in plasma sheet at 24 R/sub E/, (E), 26:54057
spectra of hydrated, in pulse radiolysis of aqueous solutions of potassium hydroxide, 26:53018
spectra of radiolytic solvated, in liquid 3-methylhexane and propane, time dependence of, 26:53007
spectra of trapped radiolytic, in crystalline ice, 26:53002
structure of radiolytic hydrated, calculations of spin density distributions for, 26:52989 (ORO-2968-78, Paper 4)
transport data, parametric fits for spacecraft shielding, 26:54963 (NASA-TM-X-2440, pp 832-41)
ELECTROSTATIC ANALYZERS
  design and performance of retarding field-cylindrical mirror, for Auger and ionization spectroscopy, 26:53310 (SC-DC-721302)
ELECTROSTATIC PRECIPITATORS
  electrode for, vibration analysis of discharge, 26:55591(T) (ORNL-tr-2636)
ELEMENT 104
  properties of, use of Mendeleev periodic law for prediction of, 26:53053
ELEMENT 105
  properties of, use of Mendeleev periodic law for prediction of, 26:53053
ELEMENT 106
  properties of, use of Mendeleev periodic law for prediction of, 26:53053
ELEMENT 107
  properties of, use of Mendeleev periodic law for prediction of, 26:53053
ELEMENT 114
  nuclear binding energy of, Hartree--Fock calculations for, (T), 26:54726
ELEMENTARY PARTICLE MODELS
  diffraction, behavior in nondiffractive regions, 26:54303 (RPP/T-25)

- dual absorptive, helicity-conserving and helicity-nonconserving pomeron-exchange amplitudes in, 26:54419
- dual resonance, calculation of cross sections for inclusive interactions in, 26:54301 (ITF-72-55-P)
- dual resonance, derivation of off-shell N-point amplitude in, 26:54420
- dual resonance, power law fall off of elastic form factor and nonscaling of structure function in, 26:54235 (COO-264-611)
- dual resonance, relation between quantum field theory and zero-slope limit of, 26:54388
- dual resonance, review of fragmentation and pionization in inclusive interactions in, 26:54302 (LBL-1007)
- dual resonance, statistical approach to multiplicity and resonance widths in, (T), 26:54300 (ITF-72-53-E)
- dual resonance, two-particle distribution functions from inclusive reactions at high energies, (T), 26:54307
- dual, calculation of distribution function for resonance spins and dependence of elastic widths of resonances on mass using statistical mechanics methods, 26:54299 (ITF-72-49-P)
- dual, Feynman rules for massive gauge fields with topology of, 26:54381
- dual, for three-particle scattering in double-Regge region, 26:54422
- dual, SL(2,C) symmetry in formulation of, 26:54309
- kappa dominance, bounds on $K \to \pi + l + \nu$ decay parameters from weak, 26:54289
- Lee, infinity suppression due to nonlinearity in generalized, 26:54310
- Lee, unitary renormalization, positivity, and hermiticity of Hamiltonian for four-dimensional, 26:54237 (ITF-72-48-E)
- multiperipheral, interference term effects on cross section energy dependence, pion multiplicities, and correlation function structures in K + p and π + p interactions in, 26:54329 (NYO-3533-265)
- multiperipheral, two-particle distribution function for inclusive interactions, 26:54312
- parton, elastic and inelastic form factors of hadrons in, 26:54311
- pion--muon, linear mass relations from, 26:54272
- spectator, validity for cross sections of Δ^0rho$^-$ channel in $\pi^- + d \to 2p + 2\pi^- + \pi^0$ interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54208 (COO-3065-16)
- statistical, for conservation of P-, C-, and G-parity, 26:54360
- theory for multiple production based on intuitive picture of hadrons, 26:54314
- urbaryon, test of Nagoya and Hiroshima, 26:54297

ELEMENTARY PARTICLES
- compositeness condition for three-particle bound state, vanishing of vertex-function renormalization constant as, (T), 26:54379
- detection and measurement at high energies, design and performance of helium recoil spectrometer for, 26:53281
- interaction radius of, scaling of, (T), 26:54354
- interactions at high energies, calculation of two-particle distribution function using dual resonance model, (T), 26:54307
- interactions at high energies, design of 4π multiwire proportional counter for high-multiplicity, 25:53267 (BNL-17064)
- interactions in multiperipheral model, two-particle distribution function for inclusive, (T), 26:54312
- interactions of, exotic fragmenting states in inclusive, 26:54304
- interactions of, generalization of semilocal duality for three-particle to three-particle, 26:54422
- interactions of, research at Purdue Univ., June 1971 to May 1972, (T), 26:54236(R) (COO-1428-303)
- interactions of, review of Mueller formalism, SU(3) predictions, angular distributions, dual resonance model for fragmentation and pionization, γ and π^0 distributions, and charged multiplicity for inclusive, (T), 26:54302 (LBL-1007)
- interactions of, unitary renormalization, positivity, and hermiticity of Hamiltonian for four-dimensional Lee model for, (T), 26:54237 (ITF-72-48-E)
- interactions with external fields, Bogoliubov transformation in strong coupling theory for mass squared spectrum for classical relativistic, 26:54383
- interactions with protons at high energies in deuterium targets, proposed experiment using spectator neutrons for determining total cross sections for, (E), 26:54163 (NP-19421)
- mass relations from pion--muon model, linear, 26:54272
- production of pairs with arbitrary spin and magnetic moment in strong electromagnetic field, (T), 26:54266
- strong interactions of, quasi-eikonal approximation with contributions of Regge poles and rescattering for amplitudes of, (T), 26:54306
- strong interactions of, research at Indiana Univ., Dec. 1971 to Nov. 1972, (E), 26:54206(R) (COO-2009-36)
- strong interactions of, s-channel helicity conservation for amplitudes of elastic, (T), 26:54287 (LBL-766)
- strong interactions of, three-dimensional unitary group for unified gauge weak, electromagnetic, and, (T), 26:54364 (NYO-3533-264)
- structure of, review of, (T), 26:54234 (BNL-50342)
- symmetries from one-particle singularities of current matrix elements for, physical, 26:54356
- symmetry group in general relativity for, asymptotically flat space-time, 26:54357
- theory for nuclear currents in nuclear muon capture and π^- capture by lithium-6, (T), 26:54238 (LYCEN-7211)
- weak interactions of, gauge principle for CP-violating, 26:54367

ELEMENTARY PARTICLES, POSTULATED
- urbaryon hadronic interactions for cut-off problem in integral spectra of ultrahigh energy cosmic rays, 26:54313
- urbaryon structure, test of new Nagoya and Hiroshima models for, 26:54297

ELEMENTS
- electron reactions at 2.04 MeV with A = 23 to 83, atomic-number dependence of cross sections for K-shell ionization in, (E), 26:54104
- isotope abundance of, accuracy of determining natural, 26:52916 (EUR-4765, pp 41-75)
- neutron absorption by, survey of data on Doppler effect in fast, 26:54479 (CONF-720901-(Bks.1 and 2), pp 1152-65)

ELK RIVER POWER REACTOR
- deactivation of, status of, 26:55273 (DOCKET-1151-58)

EMBRYOS
- radiation effects on development of chick, phosphorus-32, 26:53517
- radiation effects on survival of mouse, following acute or fractionated exposure in utero, comparison of fast neutron RBE with x rays, 26:53453 (NASA-TM-X-2440, pp 641)
- radioinduced chromosome aberrations in rat, following exposure in utero, time dependence of fast neutron, 26:53470
- radioinduced inhibition of gastrulation in early mouse, x, 26:53476
- radioinduced malformations in developing rat, following exposure in utero, role of chromosome damage and repair errors in incidence of fast neutron, 26:53470

ENERGY
- book: New Energy Technology: Some Facts and Assessments, 26:55085
- consumption and requirements in US for, predictions for 1972 to 2020, 26:53098
- conversion of, efficiency of methods for, 26:53107
- conversion of, systems for, 26:55085
- conversion to electric power, evaluation of optional methods for, 26:53097
- production and consumption of, environmental impact of, 26:53193
- production and requirements predictions, 26:55091
- production, sources, and uses in US, graphic and tabulated data on, 26:53096 (UCRL-51221)

ENGINEERING
- conference on materials review for 1972 for aerospace and process, Los Angeles, California, April 11 to 13, 1972, 26:53569

ENGINEERING TEST REACTOR
- power variations in, analysis of, 26:55379 (ANCR-1085)

ENVIRONMENT
- book: Patient Earth, 26:53191
- impact report, amendment to San Onofre Power Reactor Units 2 and 3, 26:55338 (DOCKET-50361-27)
- impact report, Fort Calhoun Power Reactor Unit 1, 26:55301 (DOCKET-50285-71)
- impact report, Hutchinson Island Power Reactor Unit 1, 26:55331 (DOCKET-50335-33)
- impact report, Quad Cities Power Reactor Units 1 and 2, 26:55285 (DOCKET-50254-120)
- impact report, supplement to Limerick Power Reactor, Units 1 and 2, 26:55335 (DOCKET-50352-28)
- impact report, supplement to Mendocino Power Reactor, Units 1 and 2, 26:55348 (DOCKET-50398-19)
- impact report, supplement to Nine Mile Point Power Reactor Unit 2, 26:55351 (DOCKET-50410-10)
- impact report, William H, Zimmer Power Reactor Unit 1, 26:55337 (DOCKET-50358-41)
- impact statements on, ORNL Chemical Technology Division participation in, p. 100-1, 26:52986 (ORNL-4794, pp 98-101)
- plutonium-239 transport to man through, following release during fast reactor accidents, hazards from, 26:53511 (TID-26142)
- radioisotope transport through, to man, mechanisms for, 26:53521
- radioisotope transport to animals and plants through, bibliography on, 26:53530 (TID-3915(Suppl.1))
- radioisotope transport to man through, 26:53522
- Regional Modeling Abstracts, Vol. III, 26:55573 (ORNL-NSF-EP-23)
- research on, ANL Radiological Physics Div., Jan. to Dec., 1971, 26:53150(R) (ANL-7860(Pt.3))

ENZYMES
- role in repair of uv-irradiated DNA in microorganisms, 26:53350

EPOXY RESINS
- preparation and properties of, for use as filament winding, 26:55628 (UCRL-73773)
- epoxy resins--glass textiles, fiber strength of composites of, under biaxial loading, 26:55627 (UCRL-73772)

EQUIPMENT AND PROCEDURES
  inventory management of plant, 26:55605 (SC-M-68-808)
  standards for hoisting and rigging of reactor components, 26:53112 (RDT-F-8-6-T(8-72))
ERBIUM
  photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
ERBIUM ALLOYS AND SYSTEMS
  Au--Er, magnetic structure of ErAu$_2$, neutron diffraction study of, 26:55034
ERBIUM CARBIDES
  magnetic structure of ErC$_2$ at 2 to 297°K, neutron-diffraction study of, 26:55035
ERBIUM ISOTOPES Er-158
  beta and electron-capture decay of, branching ratios, conversion-electron spectra, and log-ft values for, (E), 26:54643
ERBIUM ISOTOPES Er-161
  beta and electron-capture decay of, γ singles and coincidence spectra from, (E), 26:54632 (COO-3255-2)
  electron-capture decay of, branching ratios, conversion-electron spectra, and log-ft values for, (E), 26:54643
ERBIUM ISOTOPES Er-165
  electron-capture decay of, double k-shell ionization in, (E), 26:54617
ERBIUM ISOTOPES Er-166
  neutron reactions (n,α) with, calculation of, (T), 26:54707
ERBIUM ISOTOPES Er-167
  alpha inelastic scattering at 7 to 10 MeV, with Coulomb excitation, heat-flow analysis of temperature spikes following, (E/T), 26:54646
  proton inelastic scattering at 4 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following, (E/T), 26:54646
ERBIUM ISOTOPES Er-168
  neutron reactions (n,α) with, calculation of, (T), 26:54707
  proton inelastic scattering at 15 MeV, proton spectra from, (E), 26:54467(R) (ORO-2972-204)
ERYTHROCYTES
  radiation effects on uptake of selenium-75-labeled selenomethionine by rat, following whole-body exposure, dose dependence of γ, 26:53482
ESOPHAGUS
  radioinduced fistulae and perforations in human, following therapy of esophageal carcinomas and gastric sarcomas, surgical treatment of, 26:53438
ESTERS
  toxicity data for imido, bibliography on, 26:55581 (ORNL-TIP/TIRC-72-54)
ETHANOL, 2-CHLORO-
  reactions with radiolytic hydrated electrons, kinetics of, 26:53006
ETHYL SULFATES
  effects on Eremothecium ashbyii (fungi) in relation to riboflavin production, mutagenic, 26:53374
ETHYLENE
  radiolysis of gaseous, G values for acetylene and methane in argon- and xenon-sensitized, 26:53000
ETHYLENE, CHLORO-, POLYMERS
  radiation effects on 1,4-diaminoanthraquinone-containing, crosslinking and fading produced by alpha particle, deuteron, and γ, 26:53020
  radiation stability of bags of, effects of temperature on γ, 26:52992 (RFP-1924)
  thermal stability of bags of, 26:52992 (RFP-1924)
ETHYLENE POLYMERS
  laser beam reactions with deuterated, plasma production by nanosecond and picosecond, 26:54804
  radiation effects on molding properties of, γ, 26:53720
  polyacrylates--polyethylene, radioinduced crosslinking polymerization of nylon grafted on, 26:53013(P)
EUROPE
  radioactive waste storage sites in, development of community-type, 26:53726
EUROPIUM
  solubility in bismuth--thorium solutions, free energies of formation for compounds produced by, 26:53664
  thermal conductivity divergence at Neel point of, (E), 26:55049
EUROPIUM ISOTOPES Eu-151
  effects on ESR spectra of divalent europium in strontium chloride lattices, 26:52970
  neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589
EUROPIUM ISOTOPES Eu-152
  effects on ESR spectra of divalent europium in strontium chloride lattices, 26:52970
EUROPIUM OXIDES
  magnon states in, bound state of two-, (T), 26:55042
  preparation of transparent films of, by oxidation, effects of annealing and oxidizing temperatures on, 26:53567
EVAPORATORS
  heat transfer in individual tube clusters in VTE-X, measurement of, 26:53110 (ORNL-TM-3841)
  performance of vertical tube, comparison of calculated and measured, 26:53110 (ORNL-TM-3841)
EXPERIMENTAL BREEDER REACTOR-II
  data processing system for periodic maintenance and calibration of instrumentation for, 26:55132 (ANL/EBR-63)
  fuel element irradiation testing in, summary of methods for, 26:55120 (CONF-720901-(Bks.1 and 2), pp 905-27)
  fuel elements for, procedures for xenon tagging pin type driver, 26:55184 (ANL/EBR-57)
  fuel irradiation testing in, status of mixed oxide, 26:55189(R) (GEAP-10028-39)
  instrumentation for, data processing systems for periodic maintenance and calibration of, 26:55132 (ANL/EBR-63)
EXPLOSIVES
  analysis of HMX-containing, by semimicro gel permeation chromatography, 26:55625 (UCRL-73334)
  determination of residual, in drainage ditch soil at sump effluent outlets, 26:55545 (LA-4925)
EXPONENTIAL PILES
  criticality measurements in plutonium nitrate (Pu(NO$_3$)$_4$)-polystyrene, 26:55416(R) (BNWL-1522-5)
EXTRACTION APPARATUS
  interface detector for, salt--metal, p. 12, 26:53081 (ORNL-4794, pp 1-14)
EYES
  light flashes induced by Cherenkov radiation from heavy cosmic nuclei, calculation of frequency of, 26:54882 (NASA-TM-X-2440, pp 757-66)
  radiation dose to, of medical personnel during arteriography, x, 26:53443
  radioinduced light flashes on retina of dark-adapted human, use of virtual-quanta method to calculate frequency of charged particle, 26:53405 (NASA-TM-X-2440, pp 767-72)
  radioinduced phosphenes in, of astronauts during space flight, cosmic, 26:53407 (NASA-TM-X-2440, pp 1002-6)
  radioinduced retinal injuries in human, following therapy of nasal cavity and paranasal sinus carcinomas, dose and time dependence of γ and x, 26:53444
  radiotherapy with ^{60}Co applicators, computer calculation of dose distributions from, 26:54900

F

FALLOUT
  monitoring in East Germany during 1970, 26:53156 (SZS-128)
  monitoring in Norwegian atmosphere during 1956 to 1970, 26:53161
  transport to cattle following deposition on pasture grass, tracer study using lanthanum-140 labeled sand as simulant, 26:53527 (FDA-4-4503-A-3)
FAST BURST REACTOR FACILITY
  use in space radiation studies, summary of, 26:55406 (NASA-TM-X-2440, pp 618-19)
FAST CERAMIC REACTOR
  core for, design and kinetics analysis of, 26:55189(R) (GEAP-10028-39)
  core for, design and kinetics analysis of, 26:55190(R) (GEAP-10028-42)
  fuel elements for, development during February to April 1972, 26:55190(R) (GEAP-10028-42)
  fuel elements for, development during May to July 1971, 26:55189(R) (GEAP-10028-39)
  safety of, development of models for analysis of, 26:55190(R) (GEAP-10028-42)
  safety of, transient overpower and coolant flow loss effects on, 26:55189(R) (GEAP-10028-39)
  safety of, transient overpower and coolant flow loss effects on, 26:55190(R) (GEAP-10028-42)
FAST FLUX TEST FACILITY
  cooling systems of, effects of corrosion on radioactivity levels in, 26:55172 (CONF-710959-, Paper 16)
  fuel element assemblies for, design of grid spaced driver, 26:55190(R) (GEAP-10028-42)
  pipe chases in, neutron streaming in sodium filled, (E/T), 26:55394 (CONF-720901-3)
FAST TEST REACTOR
  cooling system for, neutron streaming in outlet and inlet pipe chases of, (E), 26:55382 (CONF-720901-(Bks.1 and 2), pp 431-41)
  neutron generation time in subcritical, transfer and scattering kinetics scheme for determination of, 26:55437 (CONF-720901-(Bks.1 and 2), pp 713-23)
  physics parameters of, effects of delayed neutron data variations on, 26:55388 (CONF-720901-(Bks.1 and 2), pp 660-86)
  physics parameters of, review of programs for determination of, 26:55391 (CONF-720901-(Bks.1 and 2), pp 839-87)
  reactivity coefficients in, mockup measurements of sodium-void, (E/T), 26:55390 (CONF-720901-(Bks.1 and 2), pp 739-67)
  shielding design for, calculation methods for, 26:55383 (CONF-720901-(Bks.1 and 2), pp 445-58)
  vessel head compartment for, neutron and γ dose rates in, (T), 26:55144 (CONF-720901-(Bks.1 and 2), pp 480-98)
FATS
  radiation effects on, ir spectral studies on γ, 26:52983 (EUR-4828)
FEDERAL REPUBLIC OF GERMANY
  applications of radiation in agriculture research in, 26:53459(R) (NP-19403)
  energy market in, review on, 26:55377

  radiation protection programs for nuclear personnel in, 26:55456 (SZS-136)
  reactor safety research projects in, summaries of current, 26:55202(R) (IRS-F-10)
FELDSPARS
  analysis of granitic, for cesium by neutron activation and γ spectrometry, 26:52908
FERMI FAST BREEDER REACTOR
  core subassembly of, shock loading during handling of, 26:53732 (WCAP-1615)
  cover gas of, performance of cleanup system for, 26:55226 (CONF-710959-, Paper 5)
  maintenance during June 1972, 26:55233 (DOCKET-50016-170)
  operations during June 1972, 26:55233 (DOCKET-50016-170)
  site for, environmental radiation survey during June 1972, 26:55233 (DOCKET-50016-170)
FERMI POWER REACTOR, UNIT 2
  valves for, verification of wall thicknesses for nuclear service, 26:55333 (DOCKET-50341-45)
FERMIONS
  excitations in quantum condensated gas of, (T), 26:54443
  interactions with massive scalar and massless spinor fields, quantum two-dimensional classically solvable model with nontrivial scattering for, (T), 26:54385
  interactions with photons, effective differential cross sections for Compton, (T), 26:54278
  stability of many-body systems with singular attractive potentials, self-consistent Hartree field as limit for Schroedinger equation for, (T), 26:54408 (ITF-72-14-E)
FERMIUM ISOTOPES Fm-256
  fission of, average prompt neutron yield from spontaneous, 26:54659 (JINR-P15-6518)
FERROMAGNETIC MATERIALS
  exchange model of weak ferromagnetism of MnB$_2$, (T), 26:55048
FETUSES
  radiation effects on growth of thyroid gland in mouse, following intravenous injection of iodine-131, β and γ, 26:53513
  radioinduced digital malformations in mouse, following whole-body exposure, effects of developmental stage, dose, and dose rate on incidence of γ, 26:53471
  radioinduced malformations in human, following in utero exposure from maternal therapy during pregnancy, radium and x, 26:53437
  radioinduced malformations of brain of developing mouse and rat, following in utero exposure, effects of developmental stage at exposure on, 26:53437
FIELD EMISSION MICROSCOPES
  design of atom probe-type, for metallography, 26:53648
  performance of tubes of, as chamber for studies of tungsten carburization, 26:53560
  use in study of material deformation structures by instrument tip contact with sample specimen, 26:53651
FIELD EMISSION MICROSCOPY
  method for analysis of dislocations and stacking faults, 26:53649
  method for measuring single atom reactions with atomically defined surfaces, 26:53656
  method for solid solution image analysis, 26:53655
  method for studies of stress corrosion cracking, 26:53610
  method for study of dilute alloys and solid solutions, 26:53652
  method for study of ordered alloys, 26:53654
  methods and equipment for radioinduced point defects in alloys and metals, 26:53704
  methods for studies of corrosion and physical metallurgy, 26:53647
  methods for studies of metal grain boundaries, 26:53650
  methods for studies of phase interfaces and dispersion strengthening of two-phase alloys, 26:53653
FILMS
  deposition of thin, ultrahigh vacuum evaporation unit with high-speed cryopump for, 26:53139
  thickness measurement on thin, using proton-excited x rays, 26:52945
FISSION
  book: Atomic Nucleus, 26:54738
  theory of, review on Strutinsky, 26:54676 (CONF-720901-(Bks.1 and 2), pp 1087-110
FISSION FRAGMENTS
  dose to crew from high-impulse gas-core nuclear rocket plume, (T), 26:54967
  tracks in archaeological materials, errors in dating by, (E), 26:53181
  yield in uranium-235 thermal neutron fission, odd-even effect in, (E), 26:54667
FISSION PRODUCTS
  behavior in liquid sodium systems, 26:55166 (CONF-710959-, Paper 10)
  decay heating of fuel elements following coolant loss accidents, effects of fission product escape on, (T), 26:55206 (KFK-1580)
  detection in reactor coolants, methods for, 26:55218(T) (EURFNR-976)
  determination in irradiated reactor fuels by automated mass spectrometry, 26:52917 (EUR-4765, pp 77-89)
  diffusion and gas bubble nucleation in uranium dioxide fuels, 26:53565
  diffusion from irradiated aluminum--uranium foils, mechanisms and measurement of recoil-induced, 26:53694 (JAERI-Memo-3936)
  diffusion into cooling system cover gases, problems of, 26:55171 (CONF-710959-, Paper 15)
  distribution in cooling systems of HTGR type reactors, (E), 26:55207(R) (ORNL-TM-3900)
  gamma ray emission from, table for, 26:54607 (RD/B/M-2356)
  production of gaseous, reactor irradiation method and apparatus for, 26:53075(P)
  release from coated particle fuels, effects of annealing temperatures on, (E), 26:55207(R) (ORNL-TM-3900)
  release from reprocessing of irradiated recycle test elements, pp. 27-31, 26:53083 (ORNL-4794, pp 26-32)
  release from thermionic reactor cores, methods for control of gaseous, (T), 26:55373 (NASA-TM-X-2440, pp 1016-20)
  release in head-end reprocessing of HTGR-type graphite fuel, 26:53078 (CONF-720823-11)
  release to fast reactor sodium coolant, boundary conditions for, (T), 26:55169 (CONF-710959-, Paper 13)
  separation from off-gases from HTGR fuel reprocessing, 26:53059 (CONF-720823-12)
  separation of rare gas, from combustion off-gases by scrubbing with liquid carbon dioxide, 26:53064(T) (ORNL-tr-2621)
  separation of volatile, in reprocessing of LMFBR fuels by voloxidation, pp. 17-20, 26:53082 (ORNL-4794, pp 15-25)
  tracks from heavier transuranium elements in natural glasses and minerals, study of spontaneous, 26:54670
  transport in NaK, mechanisms of, (E), 26:55167 (CONF-710959-, Paper 11)
FISSIONABLE MATERIAL
  neutron absorption by, summary of resonance and Doppler theory for, 26:54480 (CONF-720901-(Bks.1 and 2), pp 1166-82)
FLORIDA
  cesium-137 behavior in ecosystems in, 26:53170(R) (ORO-4066-5)
FLOWMETERS
  design and testing of 6-in-diameter transit time, for water and liquid sodium, 26:53305 (LMEC-72-4)
FLUIDS
  energy states in fluid--gas system, kinetics of weakly inhomogeneous, (T), 26:55535 (ITF-72-29-P)
FLUORIDES
  determination of ionic, in biological fluids, direct, 26:55637 (UR-3490-184)
  formation energy of, relations with fuel capsule corrosion and deterioration, 26:53330(R) (BNWL-1308-10)
FLUORINE
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  maximum safe levels of, for animals and man, bibliography on, 26:55580 (ORNL-TIP/TIRC-72-53)
  reactions of atoms of, laser spectral study of, 26:55527 (IPP-IV-38)
FLUORINE ISOTOPES F-18
  energy levels from nitrogen-15 (Li-6,t) reactions, particle--hole structure of, (E), 26:54549
  energy levels of, off-shell effects in two-particle shell-model calculation of, (T), 26:54538
FLUORINE ISOTOPES F-19
  deuteron beams (d,α) and (d,p) at 3 MeV, differential cross sections for, (E), 26:54548
  deuteron reactions (d,Li-6) at 28 MeV, angular distributions and spectroscopic factors for, (E), 26:54527 (LYCEN-7219)
  effects on γ and neutron spectra of molybdenum--plutonium dioxide heat sources, 26:53336 (NASA-TM-X-2440, pp 853-8)
FLUORINE ISOTOPES F-20
  energy levels from fluorine-19 (d,p) reactions, spin-parity assignments and spectroscopic factors for, (E), 26:54548
FOG
  formation from operation of cooling towers, 26:53117
FOILS
  radioinduced point defects from high-voltage electron microscopy, diffusion to foil surface, (T), 26:54985
FOOD
  book: Radiation and Health, 26:53157
  radiation effects on, bibliography on, 26:53342 (AED-C-5-11)
  radiation effects on, ir spectral studies on γ, 26:52983 (EUR-4828)
  radioactivity monitoring of Hungarian, from 1959 to 1971, 26:53172
  radiopreservation of, in Euratom Community, 26:53459(R) (NP-19403)
  radium-226 content of, in Poland, 26:53525
FOOD CHAINS
  iodine-131 transport from atmosphere through grass-cow-milk-man, relation to radiation dose to thyroid gland of children in relation to age, 26:53506(T) (ORNL-tr-2629)
FORBUSH DECREASES
  occurrence of June 8, 1969, followed by abrupt change in functional form of modulation for 11-year variation,

(E), 26:53870
FORENSIC SCIENCE
  activation analysis uses in, neutron, 26:52896 (CONF-720920-2)
  art identification by nuclear methods of analysis in, 26:52898 (COO-3034-2)
FORESTS
  nutrient cycling in, tracer studies on calcium and potassium, 26:53539(R) (SRO-641-4)
FORGING
  standards for low-alloy steel and stainless steel, 26:53640 (RDT-M-2-2-T(8-72))
FORKED RIVER POWER REACTOR, UNIT 1
  safety analysis report for, revised figures for preliminary, 26:55339 (DOCKET-50363-37)
FORMAMIDE
  reactions with radiolytic hydrated electrons, kinetics of, 26:53006
FORMIC ACID, OXYDI-
  diethyl ester, pharmacology and toxicology of, bibliography on, 26:55579 (ORNL-TIP/TIRC-72-52)
FORT CALHOUN POWER REACTOR, UNIT 1
  containment structure for, information on prestressed tendon installation for, 26:55300 (DOCKET-50285-70)
  effluents from, effects on environment of chemical, radioactive, and thermal, 26:55301 (DOCKET-50285-71)
  operation of, cost-benefit analysis for, 26:55301 (DOCKET-50285-71)
  piping system for, additional data on weld specifications for primary pressure boundary, 26:55302 (DOCKET-50285-72)
  site for, ecology, hydrology, and meteorology of, 26:55301 (DOCKET-50285-71)
FRACTURE TESTS
  conference on cryogenic temperature, Toronto, Ontario, Canada, June 21 to 26, 1970, 26:53660
FRANCE
  strontium-90 content of human bone samples collected during 1970 in, 26:53520 (CEA-N-1535)
FREE RADICALS
  spectra of radiolytic, ESR, 26:52993(R) (RRL-3238-398)
  spectra of trapped radiolytic, in organic liquids, 26:52987(R) (ORO-2968-78)
FRUITS
  analysis for mercury by neutron activation, 26:52911
  oranges, radiation processing of, effects on metabolism and respiration, 26:53347
  oranges, radiation processing of, effects on organoleptic properties and wholesomeness, 26:53347
FUEL CAPSULES
  compatibility of materials for, with strontium fluoride impurities and radioactive decay products, 26:53330(R) (BNWL-1308-10)
  fabrication and testing of, for cesium sources, 26:53330(R) (BNWL-1308-10)
FUEL CELLS
  development for electric power generation, 26:55086
FUELS
  availability of competing, in United Kingdom, 26:55088
  conversion of fossil, 26:55085
  conversion using heat from high-temperature reactors, 26:55377
FUNGI
  Aspergillus chevalieri, radioinduced mutations in, for antibiotic production, gamma and uv, 26:53393
  Aspergillus niger, mutations induced in, by colchicine and nitrogen mustards for citric acid production, comparison of, 26:53380
  Aspergillus niger, radioinduced mutations in, for citric acid production, comparison of γ and uv, 26:53380
  Eremothecium ashbyii, mutations induced in, by diethyl sulfate and nitrosoguanidine for increased riboflavin production, 26:53374
  Eremothecium ashbyii, radioinduced mutations in, for increased riboflavin production, uv, 26:53374
  Streptomyces coelicolor, genotypic classification of uv-radiosensitive mutants of, method for, 26:53378
FUSED SALTS
  electrochemical properties of, voltammeter to study, 26:52957

G

GADOLINIUM
  abundance in 21 sharp-lined nonvariable cool peculiar A stars, (E), 26:53882
  magnetic permeability of, effects of plastic deformation and recrystallization on weak-field ac, 26:55040
  oxidation under controlled oxygen partial pressures at 727 to 1327°C, 26:53550 (IS-T-540)
  radioinduced dislocation loops in thin single-crystal films of, electron microscopy of, 26:54979
GADOLINIUM ALLOYS AND SYSTEMS
  Ce--Gd--Ru, magnetic properties of Ce/sub 1-x/Gd/sub x/Ru$_2$, 26:55037
  Gd--Zn, hyperfine fields in GdZn diluted with yttrium or lanthanum, NMR study of, 26:55059
GADOLINIUM BORIDES
  preparation and thermoemission properties of, 26:53582
GADOLINIUM ISOTOPES Gd-149
  energy-level transitions from terbium-149 decay, internal conversion coefficients for, (E), 26:54603 (JINR-P6-6511)
GADOLINIUM ISOTOPES Gd-151
  energy level at 108 keV, g-factor for, (E), 26:54634 (JINR-E6-6479)
GADOLINIUM ISOTOPES Gd-152
  neutron capture by, cross section for thermal, (E), 26:54585
  neutron reactions with, resonance activation integrals for, (E), 26:54585
GADOLINIUM ISOTOPES Gd-154
  chlorine-35 inelastic scattering at 100 MeV with Coulomb excitation, gamma spectra from, (E), 26:54642
  energy levels from Coulomb excitation, Doppler-shift recoil measurements of lifetimes and transition probabilities for, (E), 26:54642
GADOLINIUM ISOTOPES Gd-155
  nuclear magnetic resonance in GdZn diluted with yttrium or lanthanum, 26:55059
GADOLINIUM ISOTOPES Gd-156
  energy levels from Coulomb excitation, Doppler-shift recoil measurements of lifetimes and transition probabilities for, (E), 26:54642
GADOLINIUM ISOTOPES Gd-158
  neutron reactions with, resonance activation integrals for, (E), 26:54585
GADOLINIUM ISOTOPES Gd-160
  deuteron reactions (d,t) with, coupled channel analysis of mixing in, (T), 26:54635 (JINR-P4-6509)
GALAXIES
  age of II Zw 40, (E), 26:53976
  book: Galactic Astronomy, Vol. I, 26:53981
  Cepheid variables in, (T), 26:53986
  distribution of, (E/T), 26:53995
  evolution of, program for, (T), 26:53978
  evolution of, statistical studies of, (E/T), 26:53995
  formation in anisotropic cosmologies, 26:53980
  hydrogen in three, aperture synthesis of observations of neutral, (E), 26:53971
  magnetic fields in, origin and form of, (T), 26:53975
  metal abundance in, as a function of luminosity, (T), 26:53977
  population synthesis of, quadratic programming for, (T), 26:53977
  properties of 5 Scd, from 21-cm observations, (E), 26:53972
  radio source counts on the basis of evolution models for, (T), 26:53996
  spectra of 3 RCB stars in LMC, (E), 26:53904
  spectra of nucleus of NGC 205, composite, (E), 26:53880
  spiral structure in, causes and effects of irregular, (T), 26:53987
  star formation and evolution in, (T), 26:53978
  structure of II Zw 40, (E), 26:53976
  x-ray emission from intergalactic gas in vicinity of, (T), 26:53988
  x-ray emission from Vir A and Andromeda, (T), 26:53988
GALENAS
  analysis for bismuth by neutron activation and α scintillation counting, 26:52910
GALLIUM
  separation from indium by ion exchange chromatography, 26:52949
GALLIUM ALLOYS AND SYSTEMS
  Ga-base--In, superconductivity and ac susceptibility in fast frozen, (E/T), 26:54438
GALLIUM ARSENIDES
  ion implantation damage in single crystals of, krypton-ion channeling study of dose rate dependence of, 26:54993
  radiation damage in, electron, (E), 26:54968(R) (AD-737312)
  radiation effects on electric conductivity of, tunnel-assisted hopping in neutron, 26:54982
  radiation effects on vibrational spectra of boat-grown and pulled crystals of silicon-doped, electron and neutron, 26:54984
GALLIUM PHOSPHIDES
  charged-particle dechanneling at 1.5 MeV, proton, deuteron, and helium-ion, 26:54988
GAMMA CAMERAS
  description of digital stereoscintigraphic, 26:53215
  performance in conjunction with scintiscanning for diagnosis of neoplasms in man, 26:53214
GAMMA RADIATION
  absorption materials for, thickness calculations for, 26:54936
  angular distribution of, in Milky Way, (E/T), 26:53992
  depth-dose distribution of ^{60}Co, under lattice, theoretical calculation of, 26:54908
  dose changes due to shield layer changes, use of perturbation theory to determine, 26:54941 (CONF-720901-(Bks.1 and 2), pp 541-58)
  dose distribution in man following administration of gold-198 colloids for treatment of malignant pleural effusions, time dependence of, 26:53509
  dose distribution in orthogonal plane surrounding iridium-192 wires implanted for interstitial therapy, effects of arrangement, number, and size of implants on, 26:53422
  dose to fingers of medical personnel during injection of

radioisotopes, phantom studies of, 26:53424
dose to human bone marrow following whole-body exposure, use of lithium fluoride dosimeters in Alderson Rando phantom for calculation of, 26:53406 (NASA-TM-X-2440, pp 974-80)
dose to man during intravenous arteriography using metastable technetium-99-labeled pertechnetate, 26:53542
dose to personnel, comparison of results of actual and phantom measurements of, 26:53426
dose to Thermoelectric Outer Planet Spacecraft from radioisotope thermoelectric generator, environmental analysis of, 26:53338 (NASA-TM-X-2440, pp 862-5)
dosimetry in tissues, tissue-equivalent plastic ionization chamber for simultaneous neutron and, 26:53234 (NASA-TM-X-2440, pp 609-13)
dosimetry of ^{60}Co, grid-walled proportional counter study of micro-, 26:54895
dosimetry of, ^{7}LiF thermoluminescent dosimeter for personnel, 26:53249
dosimetry of, properties of silver-activated glass photoluminescent dosimeter for, 26:53242
dosimetry of, real-time spectrum-to-dose conversion system for, 26:53201 (NASA-TM-X-2440, pp 142-8)
dosimetry simultaneously with neutrons, effects of ^{6}Li content in mixture of natural fluorite and LiF for thermoluminescence, 26:53240
effects on aldrin in lipid solutions, effects of irradiation temperature on, 26:52997
effects on aldrin in organic solvents, effects of temperature and solvent on, 26:53014
effects on amino acids in frozen aqueous solutions, ESR spectral studies of free radicals from, 26:52995
effects on ammonium perchlorate single crystals, electron microscopic studies of, 26:52985 (NASA-TM-X-2440, pp 584-94)
effects on anthracene single crystals at 77°K, absorption spectra of color centers produced in, 26:54996
effects on antibacterial activity of 1-bromo-4-nitrobenzene, nitrobenzene, and p-nitrophenol and their mixtures with 2,2-dichloro-N-[2-hydroxy-1-(hydroxymethyl)ethyl]acetamide, 26:52998
effects on Aspergillus niger, mutagenic for citric acid production, 26:53380
effects on Aspergillus, mutagenic for antibiotic production, 26:53393
effects on bacteria, effects of culture media, dose, storage time, and storage temperature on recovery from pathological and lethal, 26:53369
effects on beans following seed exposure, effects on crop quality and photosynthesis and transpiration in plants, dose dependence of, 26:53387
effects on bovine ferrimyoglobin in anoxic and oxygenated solutions, comparison of, 26:53346
effects on brain, comparison for sharks and rats, 26:53487
effects on cation ion exchange resin Zerolit 225, 26:53016
effects on chromosomes in human bone marrow cells following local therapeutic exposure, effects of dose and time on frequency of aberrant, 26:53445
effects on chromosomes in root cells of rye plants, effects of genetic heterogeneity on frequency of aberrant, 26:53392
effects on Clostridium botulinum spores, relation to growth and toxin production following sublethal exposure, 26:53366(R) (ORO-3347-8)
effects on content of nicotonic acid and vitamins of wheat, wheat bread, and wheat flour, 26:53344
effects on count of plaque-forming cells in spleen of antigen-stimulated mice following whole-body exposure, effects of dose on, 26:53469
effects on crosslinking and fading in poly(vinyl chloride) containing 1,4-diaminoanthraquinone, 26:53020
effects on crustacea, species difference in sensitivity to, 26:53504
effects on crystalline ice, spectra of trapped electrons from, 26:53002
effects on crystalline potassium iodide, effects of water vapor on, 26:53017
effects on curing of adhesives by polymerization at room temperature, 26:53716
effects on deuterated and normal nitric acid at 77°K, ESR and ir spectral studies on products of, 26:53009
effects on dielectric constants and crystal structure of perovskite-type compounds, 26:55020
effects on DNA in cultured mammalian cells and microorganisms, role of repair processes in recovery from lethal and mutagenic, review of, 26:53357
effects on DNA in Micrococcus radiodurans, inhibitory effects of chloramphenicol, dactinomycin, and tetracycline on repair of, 26:53349
effects on electric properties of polystyrene capacitors with metal electrodes, (E), 26:54968(R) (AD-737312)
effects on Escherichia coli capacity to support growth of bacteriophage T4, 26:53372
effects on fats, foods, and plastics, ir studies on, 26:52983 (EUR-4828)
effects on free and bound tryptophan in wheat, dose dependence of, 26:53395
effects on gaseous cyclohexane, mass spectrometric studies on ion--molecule reactions produced by, 26:52982 (EUR-4765, pp 11-24)
effects on gaseous hydrogen sulfide, effects of argon, krypton, nitrogen, and xenon on yields from, 26:53011
effects on gastrointestinal tract of germ-free newborn swine following lethal whole-body exposure, effects of artificial colonization with Escherichia coli on pathological, 26:53495
effects on hematopoiesis and immune reactions in mice following whole-body exposure, comparison of RBE with high-intensity pulsed x rays for pathological, 26:53469
effects on hematopoietic tissues in fish, effects of dose, dose rate, and species on pathological, 26:53447 (CONF-720822-2)
effects on hexagonal boron nitride, EPR, thermally stimulated current, and thermoluminescence of paramagnetic centers produced in, 26:55015
effects on human capacity to perform under stress following continuous or protracted fractionated exposures, effectiveness of pulmonary-impedance power spectral analysis for determining, 26:53401 (NASA-TM-X-2440, pp 238-48)
effects on human cervical vertebrae following therapy of laryngeal and pharyngeal carcinomas, delayed pathological, 26:53425
effects on human gastrointestinal tract following continuous or protracted fractionated whole-body exposure, effectiveness of pulmonary-impedance power spectral analysis for determining pathological, 26:53401 (NASA-TM-X-2440, pp 238-48)
effects on human heart following therapy of esophageal carcinomas, electrocardiogram studies of pathological, 26:53439
effects on human skin following local exposure for therapy of underlying neoplasms, pathological, 26:53433
effects on immune reactions in chick embryos to adult allogeneic leukocytes, 26:53477
effects on infectivity of Salmonella typhimurium for chick embryos following exposure of cultures to substerilizing doses, 26:53369
effects on leukocyte count in peripheral blood of rats following whole-body exposure, dose and time dependence of, 26:53483
effects on limbs of fetal mice following whole-body exposure in utero, effects of developmental stage, dose, and dose rate on incidence of teratogenic, 26:53471
effects on liquid ammonia, preparation of anhydrous hydrazine by, 26:53001(P)
effects on liquid methanol, spin trapping studies on primary methoxy radicals from, 26:52988 (ORO-2968-78, Paper 2)
effects on low-temperature thermal conductivity of vanadium- and titanium-doped alumina single crystals, 26:54978
effects on maize following seed exposure, dose dependence of grain weight and water content, 26:53385
effects on maxillary bone of dogs following exposure of teeth, effects of lead bridges and plastic caps on, 26:53480
effects on metabolism of rickettsiae in L cells, 26:53360
effects on metacercariae of Fasciola hepatica for immunization of rats and cattle, 26:53498(R) (PRNC-156)
effects on mice following whole-body exposure, incidence of leukemogenic, 26:53469
effects on mice, combined effects of cortisone on serum protein content and serum albumin-globulin ratio, 26:53490
effects on mice, effects of bathing in thermal spring water on recovery from pathological mixed fast neutron and, 26:53465
effects on molding properties of polyethylene, 26:53720
effects on monkeys, effects on ability to perform learned tasks following continuous whole-body exposure, dose and dose rate dependence of, 26:53452 (NASA-TM-X-2440, pp 633-40)
effects on monkeys, effects on bone marrow hematopoietic function following continuous and subsequent fractionated whole-body exposures, effects of dose and dose rate on recovery from suppressive, 26:53452 (NASA-TM-X-2440, pp 633-40)
effects on okra following seed exposure, dose dependence of germination, growth, fruit quality, and yield, 26:53390
effects on oocytes of grain moth, effects of meiotic stage on sensitivity to, 26:53499
effects on organisms, combined effects of space flight environment on mutagenesis and survival of insects, microorganisms and plants, 26:53365 (N-72-20065)
effects on oxidation of cellulose or poly(methylhydrogensiloxane) and their mixture, 26:52994
effects on oxides, comparison of explosive shock-induced defects with defects produced by, 26:54983
effects on p-dichlorobenzene and sodium chlorate crystals, 26:52984 (FRNC-TH-262)
effects on photocurrent--voltage characteristics of

- cadmium sulfide films, 26:54998
- effects on poly(vinyl chloride) bags, effects of temperature on, 26:52992 (RFP-1924)
- effects on propene polymers, kinetics of reactions of methyl methacrylate with radicals produced by, 26:53019
- effects on rabbits, effects on serotonin uptake by blood platelets in relation to content during acute radiation syndrome, 26:53486
- effects on radioiodine retention by activated carbon, 26:53061 (DP-MS-72-14)
- effects on rat bone marrow, role of thymus gland in recovery of, 26:53479
- effects on rat hepatoma cells in cultures, effects on generation time, growth, and proliferation of, 26:53354
- effects on rat hepatoma cells in cultures, relation of post-exposure cell phase to incidence of lethal, 26:53354
- effects on rats following acute whole-body exposure, comparison with effects of protons for lethal and neoplastic, 26:53455 (NASA-TM-X-2440, pp 647-51)
- effects on rye seeds, effects of genetic heterogeneity on germination and mitotic activity in, 26:53392
- effects on Salmonella typhimurium during space flight, combined effects of weightlessness on growth and prophage induction, 26:53364 (N-72-20063)
- effects on seeds of barley, combined effects of space flight environment on genetic, 26:53384
- effects on semiconductor devices, hardening against, 26:53289 (NASA-TM-X-2440, pp 481-6)
- effects on sheep following various combinations of acute, chronic, continuous, or fractionated dose whole-body exposure, effects of dose and dose rate on pathological, 26:53451 (NASA-TM-X-2440, pp 622-32)
- effects on single crystals of monohydrate and anhydrous thymine, ESR studies on, 26:52999
- effects on single-strand breaks in DNA, 26:52981 (COO-3571-3)
- effects on sintered aluminum oxide, ESR spectral studies on, 26:53699 (RT/FI-(72)10)
- effects on space vehicle components and subsystems, design parameters and test facilities for testing, 26:53695 (NASA-TM-X-2440, pp 570-6)
- effects on spacecraft instruments, program for studying, 26:53294 (NASA-TM-X-2440, pp 866-72)
- effects on Staphylococcus, relation between loss of pathogenicity and decreased sensitivity to lethal dose, 26:53377
- effects on sugar beets following exposure of seeds, dose dependence of agricultural qualities of, 26:53386
- effects on sugar beets following seed exposure, dose dependence of crop yield, plant morphology, and seed germination, 26:53388
- effects on surface color of vacuum packaged beef following exposure to pasteurizing doses, effects of subsequent exposure to air on, 26:53346
- effects on survival of mice following acute lethal whole-body exposure, comparison of RBE for californium-252, cobalt-60, and radium-226, 26:53484
- effects on swine following various combinations of acute, chronic, continuous, or fractionated dose whole-body exposures, effects of dose and dose rate on pathological, 26:53451 (NASA-TM-X-2440, pp 622-32)
- effects on thermoluminescence of cyclohexene, effects of additives and dose on, 26:53010
- effects on thrombocyte count in man following intravenous injection of colloidal gold-198 for therapy of liver involvement in Hodgkin's disease, relation of dose fractionation and protraction to, 26:53507
- effects on Tradescantia, combined effects of space flight environment on cytologic and mutagenic, 26:53382 (N-72-20054)
- effects on uptake of selenium-75-labeled selenomethionine by rat erythrocytes following whole-body exposure, dose dependence of, 26:53482
- effects on vibronic spectra of silicon, 26:54999
- effects on vision, in relation to changes in human optic nerve and retina following therapy of nasal cavity and paranasal sinus carcinomas, dose and time dependence of pathological, 26:53444
- effects on wheat flour, following grain exposure, dose dependence of bread-making and organoleptic properties of, 26:53381 (CNEA-309)
- effects on wheat, effects of dose on chemical and nutritional characteristics of stored, 26:53381 (CNEA-309)
- emission from Crab and anticenter plane of Milky Way, search for, (E), 26:53816
- emission from Crab Nebula, search for pulsed, (E), 26:53922
- emission from molybdenum--plutonium dioxide heat sources, effects of age, fluorine-19, oxygen-17, oxygen-18, plutonium-236, and size on, 26:53336 (NASA-TM-X-2440, pp 853-8)
- emission from NP 0532, (E), 26:53923
- energy deposition in laminated materials, computer code for dosage and attenuated dosage in, 26:54959 (NASA-TM-X-2440, pp 387-91)
- flux from Sco X-1 and galactic center region, (E), 26:53818
- flux of high-energy, in Milky Way, (E), 26:53819
- flux of solar, (E), 26:53967
- galactic background, energy spectra of 0.25 to 4.2 MeV, (E), 26:53818
- galactic background, flux of, (E), 26:53855
- intensity of 0.511-MeV, in atmosphere, (E), 26:53817
- intensity of, in Milky Way, (E/T), 26:53992
- isodose curves in lungs, measurement of, 26:54901
- monitoring of normal environmental, ionization chamber for, 26:53218
- production by neutron capture in space shielding materials, cascade calculation of, 26:54961 (NASA-TM-X-2440, pp 527-8)
- production by neutron reactions in shielding materials for space nuclear systems, cross sections for, (E), 26:54960 (NASA-TM-X-2440, pp 500-11)
- reactions of secondary, in thermonuclear reactors, problems from, 26:54826 (CONF-720901-(Bks.1 and 2), pp 559-73)
- reactions with materials, Monte Carlo POEM program for calculating electron emission in, 26:54884 (NASA-TM-X-2440, pp 786-91)
- spectra from Ge(Li) detectors, computer program for automatic peak identification in analysis of, 26:53257 (RT/FI-(72)14)
- spectra in reactor cores from thermal neutron capture, heat generation from, (T), 26:55444 (TRG-2189)
- spectra measurements at high altitudes behind shield, 26:54964 (NASA-TM-X-2440, pp 914-21)
- spectra of cosmic, from suprathermal proton bremsstrahlung, (E/T), 26:53820

GAMMA SOURCES
- design for simulation of spectrum emitted by radioisotope thermoelectric generator, 26:53335 (NASA-TM-X-2440, pp 850-2)
- dose distribution near implanted mixed β/γ emitters, (T), 26:54897
- preparation for Moessbauer studies, pp. 38-9, 26:53066 (ORNL-4794, pp 36-44)
- radiation dose distribution from sealed radium-226, used for implant therapy, 26:53409 (STI/PUB-295(Vol.4))
- thickness determination from deformation of hard part of energy spectrum, 26:54936
- use in skin cancer therapy, description of equipment for, 26:53341

GAMMA SPECTROMETERS
- advances in, review of impact on nuclear measurements, 26:53263
- background interference with Apollo, identification and control of onboard radiation sources causing, 26:53255 (NASA-TM-X-2440, pp 714-22)
- calibration up to 10 MeV, least square method for, 26:53253 (FRNC-TH-237)
- data analysis method for real-time spectrum-to-dose conversion, 26:53201 (NASA-TM-X-2440, pp 142-8)
- data reduction of Ge(Li), using small computers, 26:53256 (NASA-TM-X-2440, pp 744-6)
- description of Airborne Radiac scintillation, for measuring ground level radiation dose, 26:53195(R) (AD-737993)
- design of Compton scatter attenuation, for high flux intensities, conceptual, 26:53254 (NASA-TM-X-2440, pp 614-17)
- design of NaI, for spent fuel age determination, engineering drawings for, 26:53261
- operation and performance of Ge(Li), at high dose rates, 26:53237 (RD/B/N-2369)
- shield testing on balloon flights for astrophysical, 26:54964 (NASA-TM-X-2440, pp 914-21)
- stabilization of high-resolution Ge(Li), reference pulser for, 26:53262

GAS ANALYZERS
- description of electron-capture ionization detector, for mine air, 26:53287

GAS CENTRIFUGES
- uranium enrichment using, review of developments in, 26:53328

GAS CHROMATOGRAPHY
- equipment for removal of tritium from gas effluents in, 26:53313(P)

GAS FLOW
- calculations for bundle arranged roughened fuel rods, (T), 26:55188 (EURFNR-1020)
- flow distribution and pressure drop in, through tube clusters in vertical tube evaporator, comparison of calculated and measured, 26:53110 (ORNL-TM-3841)
- magnetohydrodynamic shock wave reflection from boundary shock, (T), 26:54159

GASEOUS DIFFUSION PROCESS
- cascades for, method for calculating flow rate of stream fed to separators in step, 26:53329
- uranium enrichment using, review of developments in, 26:53328

GASES
- analysis by coulometry, 26:55633(T) (UCRL-Trans-10640)
- density of, problems in measuring, 26:53300 (EUR-4797)
- diffusion in binary mixtures of, flowing in inhomogeneous medium, inter-, (T), 26:53120 (CEA-R-4318)
- electron-beam penetration in dense, (E/T), 26:54763
- energy states in fluid--gas system, kinetics of weakly inhomogeneous, (T), 26:55535 (ITF-72-29-P)
- flow through dry crushed salt beds, (E), 26:53724 (ORNL-

TM-3815)
- kinetic theory of, derivation of Boltzmann distribution law for, 26:55071 (LA-4868)
- radiolysis of, determination of short-lived species from electron pulse, 26:52980(R) (COO-3461-1)
- reactions with metals, field-ion microscopy studies of, 26:53657

GASTROINTESTINAL TRACT
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- radioinduced injuries to human, following continuous or protracted fractionated whole-body exposure, effectiveness of pulmonary-impedance power spectral analysis for determining γ, 26:53401 (NASA-TM-X-2440, pp 238-48)
- radioinduced lesions in, of germ-free newborn swine following lethal whole-body exposure, effects of artificial colonization with Escherichia coli on γ, 26:53495

GATING SYSTEMS
- design and development of random pulse sampler, for nuclear reaction studies, 26:53321
- design of gateable delay-gate generator, 26:53299 (COO-3058-10)

GENETICS
- use of radiation in research on, 26:53459(R) (NP-19403)

GENTILLY POWER REACTOR
- operation of, shutdowns and problems in, 26:55268

GEOCHEMISTRY
- conference on, American Geophysical Union annual, Washington, D. C., 4/71, 26:54010

GEOLOGY
- conference on, American Geophysical Union annual, Washington, D. C., 4/71, 26:54010

GEOMAGNETIC FIELDS
- activity of, effect on magnetic-field intensity depression in magnetotail near 60 R/sub E/ due to diamagnetic effect of plasma sheet, (E), 26:54058
- configuration of distant, association with solar-particle access to polar-cap regions from interplanetary space, (T), 26:54069
- conjugacy relation to index K/sub p/, auroral photometric observations of, (E), 26:54013
- disturbances in polar cap, daily variations of Sq/sup p/ and DP-2, (E/T), 26:54053
- interactions with flow of charged particles, study of Earth's environmental space from dipole, (E), 26:54056
- pulsations at magnetospheric polar cusp, occurrence of latitude-dependent Pc-4 and Pc-5, (E), 26:54034
- pulsations in low-latitude, polarization studies of hydromagnetic-emission-type Pc-1, relation with ionosphere--Earth waveguide propagation, (E), 26:54021
- pulsations in, interaction of Pc-1 and Pc-2 with Pc-5 micropulsations at synchronous orbit during magnetospheric substorms, (E), 26:54035
- pulsations in, statistical characteristics of storm-associated Pc-5 micropulsations at synchronous equatorial orbit, (E), 26:54036
- solar-particle magnetospheric access to polar-cap regions of, interplanetary 1.2- to 40-MeV proton and 0.4- to 1.0-MeV electron, (E), 26:54069
- superheavy element trapping in, possible detection of, 26:54047 (NASA-TM-X-2440, pp 548-55)

GEOPHYSICS
- conference on, American Geophysical Union annual, Washington, D. C., 4/71, 26:54010

GERMANIUM
- annealing behavior of p-type and electron-converted n-type, similarities in, 26:54997
- determination in thin layers of chalcogenide glasses by proton activation or x-ray fluorescence, 26:52900 (LYCEN-7236)
- radiation effects on electrical properties of n-type doped, fast-neutron, 26:54981
- radioinduced conversion into p-type, charge state of defects produced at 140°K in 1-MeV electron, 26:55013

GERMANIUM IONS
- production in PIG source, 26:53752 (FRNC-CONF-54)

GERMANIUM ISOTOPES Ge-74
- neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589

GERMANIUM SILICIDES
- electrical properties of hot-pressed, effects of dopant precipitation on, 26:55598 (SC-DC-721020)

GLASS
- crystal lattice deformation in, field-ion microscope studies of tip--glass contact, 26:53651
- fatigue properties of strands of S-, data interpretation on static, 26:55619 (UCID-16100)
- positron lifetimes in nitrate, measurement of temperature-dependent, (E), 26:55064
- radiation effects on transmittance of BK-7 borosilicate, electron, 26:54049 (NASA-TM-X-2440, pp 748-55)
- radiophotoluminescence in silver-activated phosphate, as function of electronic stopping, depth distribution of charged-particle, 26:55009

GLASS TEXTILES
- epoxy resins--glass textiles, fiber strength of composites of, under biaxial loading, 26:55627 (UCRL-73772)
- glass textiles--plastics, preparation and properties of, produced by radioinduced polymerization, 26:53722

GLUCOSE
- preparation of labeled, by tritium atom bombardment, 26:53028 (COO-584-50)

GLYCINE
- radiolysis of frozen aqueous solutions of, ESR study of free radicals from γ, 26:52995

GOLD
- fabrication of thin monocrystalline, by epitaxy, 26:55566 (LYCEN-7232)
- ion channeling through thin crystals of, 0.5 to 2-MeV light, 26:54974 (LYCEN-7228)
- location in silicon lattice of diffused dopant atoms of, using helium-ion channeling, 26:54987
- scattering by argon at 5 to 90 eV, interatomic potentials and total cross sections for elastic, (E), 26:54142

GOLD ALLOYS AND SYSTEMS
- Au--Cd, lattice heat capacity of intermetallic AuCd, at 20 to 298°K, 26:53637 (LBL-101)
- Au--Cu, lattice heat capacity of intermetallic $AuCu_3$, at 20 to 298°K, effects of ordering on, 26:53637 (LBL-101)
- Au--Er, magnetic structure of $ErAu_2$, neutron diffraction study of, 26:55034
- Au--Ho, magnetic structure of $HoAu_2$, neutron diffraction study of, 26:55033

GOLD IONS
- implantation in silica layers for gate MOS structure fabrication, 26:53314
- scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139

GOLD ISOTOPES Au-197
- neutron capture at 24.3 keV, TOF cross-section measurements using iron-filtered beam, (E), 26:54597 (CONF-720901-(Bks.1 and 2), pp 1107-14)
- neutron capture by, survey of cross section data for, 26:54657 (FEI-292)
- neutron capture near 24.3 keV, pulse height spectra and relative cross section for, (E), 26:54656(R) (COO-3058-21)
- neutron transmission at unresolved resonance energies, effect of temperature on, (E/T), 26:54484 (KFK-1519)
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

GOLD ISOTOPES Au-198
- effectiveness of colloidal, for therapy of liver involvement in Hodgkin's disease following fractionated intravenous injection, additive effects of external x-ray exposure on, 26:53507
- radiation dose to fingers of medical personnel during injection of, phantom studies of, 26:53424
- use of colloids of, for treatment of malignant pleural effusions in man, measurement of dose distribution with time following, beta and gamma, 26:53509

GONIOMETERS
- design of two-axis, with sample temperature control for implantation and channeling experiments, 26:53322

GRAIN STRUCTURE
- grain boundary dislocation model for studies of, 26:55513 (COO-3158-10)

GRANITE DEPOSITS
- cavities and fracture zones in Hoggar, from underground nuclear explosions, content and size of, 26:53130(T) (UCRL-Trans-10616-4)
- nuclear explosion effects in Hoggar, distant mechanical, 26:53129(T) (UCRL-Trans-10616-2)
- nuclear explosion effects on Hoggar, close-in mechanical, 26:53131(T) (UCRL-Trans-10616-5)

GRANITES
- temperature distribution in, following underground nuclear explosion, 26:53127 (CEA-R-4288)

GRAPHITE
- corrosion of H327, by high temperature steam, (E), 26:55207(R) (ORNL-TM-3900)
- dimensions and mechanical properties of advanced composites of, fabricated by cocuring process, 26:53570
- fabrication of advanced composites of, cocuring method for, 26:53570
- radiation damage in, electron microscopic study of 650-kV electron, 26:54972 (COO-2119-2)
- radiation effects on, relations of flux density and temperature to pile neutron, 26:53713 (CEA-CONF-1894)

GRAPHITE SYSTEMS
- B--graphite, dimensions and mechanical properties of advanced composites of, fabricated by cocuring process, 26:53570
- B--graphite, fabrication of advanced composites of, cocuring method for, 26:53570
- C--graphite, properties at high temperatures, tensile and thermal, 26:53581

GRAVITATION
- constant in, time variation of, (E), 26:54403
- cosmological models in scalar--tensor theory of, isotropic, (T), 26:54396 (ITF-72-41-P)
- effects of weightlessness on growth and prophage induction in Salmonella typhimurium during space flight, effects of γ irradiation on, 26:53364 (N-72-20063)
- particle motion in circular orbit in direct interaction theory of, stability of two-body, 26:54399 (ITF-72-58-

  - P)
  - potential in canonical formalism, 26:54405
  - theory for, Lie groups in, 26:54402
  - theory of, scalar--tensor, 26:54395 (ITF-72-21-P)
  - two-body problem in Fokker formalism in direct interaction theory of, existence and uniqueness theorem for equations of motion for, (T), 26:54398 (ITF-72-52-P)
- GRAVITATIONAL FIELDS
  - energy--momentum tensor of, spatial localizability of, (T), 26:54393 (ITF-72-5-P)
  - modeling in Einstein theory for solar, (T), 26:54390 (ITF-71-130-P)
  - photon trajectories in, bending of, (T), 26:53866
  - spaces in two-symmetric and two-recurrent, algebraic method for validity for positively definite metric and classes of relativistic, (T), 26:54397 (ITF-72-46-P)
- GRAVITATIONAL RADIATION
  - emission and scattering by relativistic neutron stars, nonradial vibrational modes from, (T), 26:53894
  - interaction with neutrinos in expanding universe, (T), 26:53997
  - propagation of third- and higher-order, for tensor and scalar--tensor fields, (T), 26:54406
- GRAVITY WAVES
  - propagation in ionospheric E region, induction of gradient instabilities in E region from internal atmospheric, (T), 26:54018
- GROSSWELZHEIM SUPERHEAT REACTOR
  - fuel elements for, criteria for defining voids in, 26:55229(T) (EURFNR-975)
- GROUND
  - motion from San Fernando earthquake, damage to Glendale, Calif. residential buildings from, 26:53137 (JAB-99-96)
- GROUP THEORY
  - Lie groups for gravitation theory, 26:54402
  - Lie groups in, Wigner--Eckart theorem extension for continuum unitary and nonunitary representations of semi-simple, 26:54355 (ITF-72-33-E)
  - Lie groups of automorphisms of C* algebra in, continuity in norm topology for covariance of algebra representations for compact, 26:54358
  - Lorentz-covariant bilinear forms and operators in, manifestly covariant formalism for, 26:54359
- GUANIDINE, 1-METHYL-3-NITRO-1-NITROSO-
  - carcinogenicity of, bibliography on, 26:55583 (ORNL-TIP/TIRC-72-60)
  - effects on Eremothecium ashbyii (fungi) in relation to riboflavin production, mutagenic, 26:53374
- GUINEA PIGS
  - radiation effects on immune reactions in, effects of transplants of cells of bone marrow, lymph nodes, and spleen on lethal dose, 26:53474

H

- H.B. ROBINSON POWER REACTOR, UNIT 2
  - auxiliary systems for, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - control rod system for, malfunction of part length, 26:55252 (DOCKET-50261-109)
  - electrical systems for, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - emergency core cooling system for, revised performance requirements for, 26:55287 (DOCKET-50261-108)
  - emergency systems for, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - operation aspects of, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - power conversion system for, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - radiation protection systems for, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - radioactive waste disposal systems for, final safety analysis of, 26:55286 (DOCKET-50261-106)
  - safety analysis for, 26:55286 (DOCKET-50261-106)
  - testing of, final safety analysis of initial, 26:55286 (DOCKET-50261-106)
- HI REGIONS
  - distribution in 5 Scd galaxies, (E), 26:53972
  - distribution in Milky Way, (T), 26:53984
  - distribution in NGC 4236, NGC 2403, and IC10, (E), 26:53971
  - origin of high-velocity, in Milky Way, (T), 26:53983
- HII REGIONS
  - radio fine structure in, synthesis observations at 11 and 3.7 cm, (E), 26:53910
- HADRONS
  - decay into $e^{+} + e^{-}$ + hadron (photon), radiative corrections to invariant mass spectra of Dalitz pair in, (T), 26:54277
  - detection of high energy, development of total absorption liquid argon scintillation detector for, 26:53269 (BNL-17070)
  - detection of, total absorption counters for, 26:53270 (BNL-17071)
  - form factors in parton model, elastic and inelastic, (T), 26:54311
  - interactions at 50 to 1200 GeV, model for multiple production in, (T), 26:54314
  - interactions of, exotic fragmenting states in inclusive, 26:54304
  - interactions of, study using electromagnetic- and strong-interaction experiments at ISABELLE, (T), 26:54298 (BNL-16997)
  - interactions of, thermodynamic model for limiting temperature for, (T), 26:54305
  - interactions of, three-dimensional unitary group for unified gauge weak--electromagnetic, (T), 26:54364 (NYO-3533-264)
  - interactions of, three-dimensional unitary group for unified gauge weak-electromagnetic-strong, (T), 26:54364 (NYO-3533-264)
  - interactions with electrons, Regge and scaling limits for inclusive production, (T), 26:54275
  - interactions with hadrons and nuclei, diffraction emission in, (T), 26:54690 (ITF-72-57-P)
  - interactions with hadrons, quasi-eikonal approximation with contributions of Regge poles and rescattering for amplitudes of, (T), 26:54306
  - interactions with hadrons, research at Indiana Univ., Dec. 1971 to Nov. 1972, (E), 26:54206(R) (COO-2009-36)
  - interactions with hadrons, s-channel helicity conservation for amplitudes of elastic, (T), 26:54287 (LBL-766)
  - model for, Markoffian, 26:54308
  - production of, thermodynamic model for limiting temperature for, 26:54305
- HAFNIUM
  - book: Early Transition Metals, 26:52956
  - deposition by pack cementation on chromium-base alloys for nitridation protection in air, effects of chromium, lanthanum, and yttrium additions on, 26:53689

  - monitoring program for power reactor, environmental, 26:55326 (DOCKET-50315-82)
  - temperature of, effects on type and quantity of fish near Point Beach Nuclear Power Plant, 26:53185 (ANL-7860(Pt.3), pp 118-20)
  - thermal plumes from, acoustic location method for studying fish distribution relative to, 26:53186 (ANL-7860(Pt.3), pp 121-30)
  - use for urban space heating, industrial and sewage processing, and agricultural purposes, feasibility of, 26:55212 (CONF-720925-2)
- HEATERS
  - performance of electric, for liquid sodium cooled fuel element testing facility, 26:55207(R) (ORNL-TM-3900)
  - performance of filament type electric, for simulation of uranium oxide (UO_2) rods in pressurized water reactors, 26:55183 (ANCR-1038)
- HELIOTRINE
  - effects on chromosomes in cultured rat-kangaroo cells, effects of cell phase on sensitivity to, 26:53359
- HELIUM
  - abundance in blue horizontal-branch stars, (T), 26:53891
  - abundance in extreme Population I stars and Sun, (T), 26:53892
  - abundance in NGC 7662, (E/T), 26:53873
  - abundance in primary cosmic radiation from 10 to 1000 MeV/N, (E), 26:53835
  - abundance in subdwarf HD 49798, (E), 26:53900
  - binding energy of, effects of intense magnetic fields on, 26:54144
  - carbon-ion reactions at 40 to 140 keV with, cross sections for charge exchange in, (E), 26:54137
  - electron reactions at 200 to 500 eV with, second-Born-approximation calculations of 1^1S, 2^1S, and 2^1P transitions in, 26:54138
  - electron reactions at 26.5 to 300 eV with, distorted-wave calculations of differential and integral cross sections for excitation of ^1p states in, 26:54106
  - electron reactions at 30 to 80 eV with, relation of momentum transfer to coincidence-measured angular and energy distributions of electrons scattered and ejected in ionization in, 26:54123
  - electron reactions at 50 to 200 eV with, coincidence measurements of absolute differential cross sections for 1^1S--4^1D transition in, 26:54113
  - electron reactions with, adiabatic-approximation calculations of cross sections for excitation and spin change in, 26:54117
  - electron reactions with, close-coupling calculations of indirect coupling effects on cross sections for excitation in, 26:54108
  - electron reactions with, dependence of computed excitation cross sections for, on accuracy of wave functions used, 26:54108
  - electron reactions with, relations between dispersion relation, optical theorem, and second Born scattering amplitude for, 26:54110
  - electron-beam penetration in dense, (E/T), 26:54763
  - energy of, calculation using Sams--Kouri method for solving integral form of Schroedinger equation, 26:54145
  - energy spectra of primary cosmic, at 50 to 2000 GeV, (E), 26:53829
  - heat transfer from 16 tube fuel assemblies to, measurement of, 26:55227(T) (EURFNR-1000)
  - heat transfer to boiling, from aluminum surfaces, 26:54465
  - helium-ion reactions at 1 to 3 keV with, differential cross sections for excitation and ionization in, (E), 26:54140
  - helium-ion reactions at 1 to 3 keV with, energy distribution of electrons ejected by ionization in, (E), 26:54140
  - helium-ion reactions at 500 to 1500 eV with, time-of-flight measurements of charge-exchange cross sections and energy-loss spectra of neutral excited atoms from, 26:54109
  - hydrocarbon-ion (CH/sub n/$^+$) reactions at 40 to 140 keV with, cross sections for dissociation and production of hydrogen atoms in, (E), 26:54137
  - ionization energy of, effects of intense magnetic fields on, 26:54144
  - isotopic ratio of, mass spectrometric measurement of, (E), 26:54519
  - neutron attenuation in, measurement using manganese activation, (E), 26:54490
  - neutron total cross section at 0.7 to 30 MeV, (E), 26:54656(R) (COO-3058-21)
  - oxygen-ion (O_2^+) reactions with, impulse approximation for vibrational excitation in, using Morse potential, 26:54131
  - photon reactions with triplet metastable, light-intensity dependence of probability of ionization in five-, (E), 26:54094
  - plasma of, collisional--radiative recombination and ionization coefficients for, 26:54788 (EUR-CEA-FC-642)
  - positron reactions at 2 to 20 eV with, total cross sections for, (E), 26:54119
  - pressure drop in 16 tube fuel assemblies, measurement of, 26:55227(T) (EURFNR-1000)
  - proton reactions at 500 to 3000 eV with, differential cross sections for charge exchange, elastic scattering, excitation to autoionizing levels, and simple excitation in, (E/T), 26:54122
  - reactions with hydrogen atoms, calulation of translational absorption spectrum from, 26:54134
  - reactions with hydrogen molecules at 0.14 meV to 2.9 eV, absolute integral total cross sections and interaction potentials for, (E), 26:54130
  - reactions with rare gases at 100 to 5000 eV, angular and energy distributions of electrons from ionization and autoionization in, (E), 26:54141
  - release of injected, from nickel, stainless steels, and Nimonic PE 16, 26:53709
  - scattering by lithium fluoride surfaces, diffraction intensities for, calculated using pairwise interaction,

26:54089

- thermodynamics of mixtures of hydrogen and, in interior of Jupiter, (T), 26:54003

HELIUM, SUPERFLUID
- energy flux between two baths of, separated by thin metallic foil, 26:54434
- film flow transfer in and out of Plexiglas ampoules, 26:54431
- hydrodynamics near lambda point, high-frequency, 26:54424
- ion mobility in, roton-limited, (T), 26:54425
- roton lifetime in, (T), 26:54429
- scintillation of, alpha-particle-induced, 26:54430
- spectra of, application of equation-of-motion method to, (T), 26:54428
- spectra of, application of equation-of-motion method to, (T), 26:54427

HELIUM HYDRIDES
- dipole moment of ground-state, as function of internuclear separation, (T), 26:54134
- potential-energy curves for ground state of, (T), 26:54134

HELIUM IONS
- channeling of, use to locate diffused depant gold atoms in silicon lattice, 26:54987
- dechanneling at 1.5 MeV in diamond lattices, 26:54988
- effects of injected, on creep rupture properties of Type 316 stainless steel, 26:53703
- effects on silver-activated phosphate glass at 200 to 400 keV, depth distribution of photoluminescence induced by, 26:55009
- effects on structure of polycrystalline molybdenum and nickel at 60 keV, x-ray diffraction studies on, 26:53700(T) (SC-T-722540)
- implantation into nickel at low energy, 26:53709
- reactions with copper and tantalum at 10.4 MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
- reactions with helium at 1 to 3 keV, differential cross sections for excitation and ionization in, (E), 26:54140
- reactions with helium at 1 to 3 KeV, energy distribution of electrons ejected by ionization in, (E), 26:54140
- reactions with helium at 500 to 1500 eV, time-of-flight study of charge-exchange cross sections and energy-loss spectra of neutral excited atoms from, 26:54109
- reactions with rare gases at 100 to 5000 eV, angular and energy distributions of electrons from ionization and autoionization in, (E), 26:54141
- scattering by tungsten polycrystalline surfaces at 150 to 1000 eV, angular and energy distributions and cross sections for, (E), 26:54083
- spectral lines in prominences and chromosphere due to, (E), 26:53949

HELIUM ISOTOPES He-3
- abundance in atmospheric helium, (E), 26:54519
- abundance in primary cosmic radiation, (E), 26:53827
- alpha inelastic scattering at 115 MeV, cross sections and energy spectra from, (E), 26:54515
- deuteron reactions (d,p) at 366 to 1090 keV using polarized beam, analyzing power for, (E), 26:54500 (LA-DC-72-906)
- electrodisintegration of, calculation of two-particle, (T), 26:54496 (ITF-72-24-P)
- energy spectra of primary cosmic, (E), 26:53828
- interactions ^{3}He + ^{3}He, implications for solar neutrino emission of resonance in, (T), 26:54508
- interactions ^{3}He + t at 1 to 200 MeV (cms), optical-potential description of phases for scattering, (T), 26:54532
- nuclear charge radius of, calculations using very-soft-core Riihimaki potential, (T), 26:54504
- nuclear magnetic moment of, calculation using quark model, 26:54494 (COO-3001-15)
- nuclear magnetic moment of, two-body OPE contributions to isovector, (T), 26:54506
- proton elastic scattering at 30 MeV using polarized beam, analyzing power for, (E), 26:54521
- proton elastic scattering at 600 MeV, differential cross section for, (E), 26:54512
- reactions (He-3,αp) with lithium-6 at 1.54 MeV, asymmetric proton yields for, (E), 26:54540
- reactions (He-3,Be-7) with nuclei, DWBA treatment of, (T), 26:54706
- reactions (He-3,dγ) with cobalt-59 at 18 MeV, angular distributions for, (E), 26:54587 (FRNC-TH-240)
- reactions (He-3,nγ) with neon-20 at 4.3 to 11.5 MeV, coincidence and angular correlation measurements for, (E), 26:54559
- reactions (He-3,p) with carbon-12 at 14 MeV with subsequent proton decay, gamma spectra and gamma and proton angular correlations in, (E), 26:54542
- reactions (He-3,p) with nitrogen-14, contributions of rectangular graphs in, (T), 26:54533
- scattering by cadmium-114 at 10 to 17 MeV, collective model calculation of form factor for inelastic, (E/T), 26:54621
- scattering by intermediate nuclei at 10 to 85 MeV, energy dependence in optical-model analysis of elastic, (T), 26:54580
- scattering by iron-56 at 53.4 MeV, differential cross sections and optical-model parameters for elastic, (E), 26:54571
- scintillation of liquid, alpha-particle-induced, 26:54430
- He-3--He-4, osmotic pressure waves in solutions of superfluid, (T), 26:54433
- He-3--He-4, scintillation of liquid, alpha particle induced, 26:54430
- He-3--He-4, thermal capacity near gas--liquid critical point, (E), 26:54426

HELIUM ISOTOPES He-4
- abundance in primary cosmic radiation, (E), 26:53827
- deuteron elastic scattering at 4.8 to 8.6 MeV, polarization transfer in, (E), 26:54498 (LA-DC-72-904)
- energy levels of, calculations using separable nonlocal potential, (T), 26:54683 (FRNC-TH-180)
- interactions with He-4, potential from low-energy cross-section measurements, (E), 26:54514
- nuclear charge form factor of, effects of center-of-mass spuriosity on, (T), 26:54507
- proton elastic scattering at 0 to 50 MeV, forward dispersion relation including Coulomb interaction for, (T), 26:54711
- proton elastic scattering at 600 MeV, differential cross section for, (E), 26:54512
- proton reactions (p,d) at 65 MeV, cross sections and energy spectra from, (E), 26:54515
- He-3--He-4, osmotic pressure waves in solutions of superfluid, (T), 26:54433
- He-3--He-4, scintillation of liquid, alpha particle induced, 26:54430
- He-3--He-4, thermal capacity near gas--liquid critical point, (E), 26:54426

HELIUM SYSTEMS
- He--N, radiolysis of, determination of short-lived species from electron pulse, 26:52980(R) (COO-3461-1)

HEMATOPOIESIS
- radiation effects on, in mice following whole-body exposure, comparison of RBE for γ and high-intensity pulsed x, 26:53469

HEMATOPOIETIC SYSTEM
- pyramidon effect on, of mammal, bibliography on, 26:55582 (ORNL-TIP/TIRC-72-59)
- radiation effects on survival of erythropoietic stem cells in, of mice following sublethal whole-body exposure, protective effects of AET and serotonin against proton, 26:53454 (NASA-TM-X-2440, pp 642-6)
- radioinduced injuries of, in fish, relation of species to repair time for γ, 26:53447 (CONF-720822-2)

HEXANE, 3-METHYL-
- radiolysis of liquid, time dependence of spectra of solvated electrons from, 26:53007

HIGH-ENERGY PHYSICS
- funding and outlook for medium energy, 26:53740 (LA-4874, pp 21-33)
- lectures at Physics Laboratory of Istituto Superiore di Sanita, Rome, July--Dec. 1970, 26:54162 (ISS-71/31)
- research by High Energy Counter Group at State Univ. of New York, Stony Brook, 1971, 26:54212(R) (TID-26138)
- research program at LAMPF, review of, 26:54195 (LA-4874, pp 36-44)

HIGH-TEMPERATURE GAS-COOLED REACTOR EXPERIMENT
- cooling system for, testing of materials for, 26:53605(R) (DP-Report-522)
- fuel reprocessing for, head-end method for, pp. 27-9, 26:53083 (ORNL-4794, pp 26-32)

HIGH-TEMPERATURE LATTICE TEST REACTOR
- operation of, successfully completed program for, 26:55416(R) (BNWL-1522-5)

HIPPURIC ACID, p-AMINO-
- uptake by rat kidneys following injection, effects of uranyl nitrate on, 26:53537

HIROSHIMA
- radiation dose to residents of, comparison for diagnostic radiographic examinations and A-bomb survivors, 26:53434

HOLMIUM ALLOYS AND SYSTEMS
- Au--Ho, magnetic structure of HoAu$_2$, neutron diffraction study of, 26:55033

HOLMIUM ISOTOPES Ho-158
- energy levels from erbium-158 decay, Nilsson and spin--parity assignments for, (E), 26:54643

HOLMIUM ISOTOPES Ho-161
- energy levels from erbium-161 decay, Nilsson and spin--parity assignments for, (E), 26:54643
- energy levels from erbium-161 decay, spin--parity assignments for, (E), 26:54632 (COO-3255-2)
- energy-level transitions from erbium-161 decay, branching ratios and multipolarities for, (E), 26:54643
- energy-level transitions from erbium-161 decay, multipolarities and conversion coefficients for, (E), 26:54632 (COO-3255-2)

HOLMIUM ISOTOPES Ho-165
- alpha inelastic scattering at 10 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following, (E/T), 26:54646
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
- proton inelastic scattering at 4 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following, (E/T), 26:54646

HOLOGRAPHY
  development of ultrasonic, for visualization of flaws in thick walled structures, 26:55222(R) (NP-19338(Vol.2))
HORMONES, ADRENAL
  cortisone, effects on serum protein content and serum albumin-globulin ratio of gamma-irradiated mice, 26:53490
HORMONES, PLANT
  indole-3-acetic acid, radiolysis of aqueous solutions of, rate constants for reaction of hydrogen atom, hydroxyl radicals, and hydrated electrons in, 26:53015
HOT CELLS
  design for post-irradiation examination of plutonium fuels, 26:53728 (JAERI-Memo-4009)
  design of Hot Fuel Examination Facility, for remote disassembly and inspection of fuel failure test loops, 26:53727 (ANL/HFEF-1)
  sample preparation for metallography in, selection of noncorrosive cleaning solutions and lubricants for, 26:53729 (LA-DC-72-230)
HUNGARY
  radioactivity monitoring of foods in, from 1959 to 1971, 26:53172
HUTCHINSON ISLAND POWER REACTOR, UNIT 1
  effluents from, effects on environment of chemical, radioactive, and thermal, 26:55331 (DOCKET-50335-33)
  operation of, cost-benefit analysis for, 26:55331 (DOCKET-50335-33)
  site for, ecology, geology, hydrology, and meteorology of, 26:55331 (DOCKET-50335-33)
HYDRAZINE
  muon (μ^-) depolarization in aqueous solutions of, effects of chemical reactions, hydrogen peroxide concentration, and temperature on, (E), 26:54099
  radioinduced production of anhydrous, by electron or γ radiolysis of liquid ammonia, 26:53001(P)
HYDRIDES
  properties of metal, for storage of hydrogen, evaluation of, 26:53090 (BNL-16889)
HYDROBROMIC ACID
  Br--HBr, photolysis of, deuterium isotope effects on reactions of hot hydrogen atoms from, 26:52962
HYDROCARBONS
  reactions with gases at 40 to 140 keV of ions (CH/sub n/+) of, cross sections for dissociation and production of hydrogen atoms in, (E), 26:54137
  reactions with nitrogen molecules of ions (CH/sub n/+) of, energy spectra of dissociation products from, (E), 26:54102 (EUR-CEA-FC-644)
HYDROGEN
  abstraction from methanol molecules by radiolytic methyl radicals, 26:52990 (ORO-2968-78, Paper 5)
  atomic mass of, 26:54495 (EUR-4765, pp 435-55)
  carbon-ion reactions at 40 to 140 keV with molecular, cross sections for charge exchange in, (E), 26:54137
  determination of trace amounts in liquid sodium, vacuum distillation method for, 26:55170 (CONF-710959-, Paper 14)
  deuteron elastic scattering at 6.00 to 11.50 MeV, phase-shift analysis of polarized, (T), 26:54513
  dissociation on hot tungsten filaments, ESR study of, 26:55036
  distribution in Zircaloy, effects of thermal gradients on, 26:53665
  distribution of atomic, in Milky Way, (T), 26:53979
  effects in helium stars, (E/T), 26:53896
  effects on corrosion resistance of zirconium and zirconium alloys in high-temperature water, 26:53614
  effects on steel, literature review on, 26:53606 (MLM-1355)
  electron reactions with atomic, adiabatic-approximation calculations of cross sections for excitation and spin change in, 26:54117
  energy of ground and first three excited states of atom of, calculation using Sams--Kouri method for solution of integral form of Schroedinger equation, 26:54145
  energy of ground-state one-dimensional atom of, effects of inclusion of repulsive core in Coulomb potential on, 26:54093
  explosion hazards of, analysis of, 26:55524 (DP-1295)
  handling, shipping, and storage of liquid, 26:55552 (LA-DC-72-632)
  helium-atom reactions at 0.14 MeV to 2.9 eV with molecular, absolute integral total cross sections and interaction potentials for, (E), 26:54130
  hydrocarbon-ion (CH/sub n/+) reactions at 40 to 140 keV with molecular, cross sections for dissociation and production of hydrogen atoms in, (E), 26:54137
  lithium-ion reactions with molecular, quantum mechanical calculations of vibrational excitation in, using coupled Volterra equations, 26:54133
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  photon reactions with singly excited molecules of, calculation of cross sections for ionization in, using phase shifts for electron scattering by hydrogen ions (H_2^+), 26:54091
  plasma of, spectral shifts of Stark broadened Lyman-alpha lines of, (T), 26:54796
  production by reduction of water vapor over chromium, iron, or nickel, 26:52975(P)
  properties of frozen and reacting ortho--para mixtures of, thermodynamic and transport, 26:53715 (NASA-TM-X-2440, pp 476-80)
  proton elastic scattering at 600 MeV, differential cross section for, (E), 26:54512
  radiation effects on thermodynamic and transport properties of frozen and reacting ortho--para mixtures of, 26:53715 (NASA-TM-X-2440, pp 476-80)
  radio emission at 21-cm from neutral, (T), 26:53984
  radioinduced reactions with carbon, 30- to 45-keV electron beam, 26:53718
  radiolysis of solid molecular, at 1.4 to 8°K by 160-keV electrons, yields and EPR spectra of atomic hydrogen from, 26:52979 (COO-1105-179)
  reactions between atoms and molecules of, at 5 to 50 keV, cross sections for dissociation, electron capture, electron loss, excitation, and ionization in, (E), 26:54115
  reactions between atoms and molecules of, free-collision-model calculations of cross sections for electron loss in, 26:54121
  reactions between molecules of, at 50 to 500 eV, angular distributions and total cross sections for production of fast molecular ions in, (E), 26:54105
  reactions of atoms of, in radiolysis of aqueous solutions of indole-3-acetic acid and other plant hormones, 26:53015
  reactions of atoms of, with various substrate molecules in gas phase, research progress on elementary reaction rate constants for, 26:55519(R) (COO-3242-4)
  reactions of photolytic hot, deuterium isotope effects on, 26:52962
  reactions with brass surfaces of molecular, secondary-electron emission coefficients for, (E), 26:54105
  reactions with helium of atomic, calculation of translational absorption spectrum from, 26:54134
  reactions with nitrogen and oxygen molecules of atomic, free-collision-model calculations of cross sections for electron loss in, 26:54121
  reactions with sodium from 300 to 450°C, 26:55154 (CONF-710548-, pp 105-28)
  reactions with uranium dioxide pellets during sintering, oxidation, 26:53563
  reactions with uranium trioxide powders, factors affecting reduction, 26:53548 (AREAEE-139)
  solubility in sodium, 26:55154 (CONF-710548-, pp 105-28)
  spectral lines in xi Per due to interstellar molecular, equivalent widths of, (E), 26:53890
  storage in metal hydrides, evaluation of, 26:53090 (BNL-16889)
  thermodynamics of mixtures of helium and, in interior of Jupiter, (T), 26:54003
  effects on crack propagation and embrittlement of aluminum--molybdenum--titanium-base--vanadium alloy, 26:53685
HYDROGEN HALIDES
  wave functions for, complex, 26:54157
HYDROGEN IONS (H^+)
  reactions with argon at moderate energies, excitation by charge-exchange channel in, (T), 26:54120
  reactions with negative ions above 25 keV, calculation of cross sections for electron capture in, using continuum distorted-wave-Born approximation, 26:54116
  reactions with rare gas atoms at 500 to 3000 eV, atomic-number dependence of charge exchange and excitation in, (E/T), 26:54122
  reactions with rare gas atoms at 500 to 3000 eV, differential cross sections for charge exchange, elastic scattering, excitation to autoionizing levels and simple excitation in, (E/T), 26:54122
  scattering by argon at low and moderate energies, partial-wave calculations for elastic, 26:54120
HYDROGEN IONS (H^-)
  binding energy of, effects of intense magnetic fields on, 26:54144
  ionization energy of, effects of intense magnetic fields on, 26:54144
  proton reactions above 25 keV with, calculation of cross sections for electron capture in, using continuum distorted-wave-Born approximation, 26:54116
HYDROGEN IONS (H_2^+)
  channeling through thin gold crystals at 1 MeV, 26:54974 (LYCEN-7228)
HYDROGEN IONS (H_3^+)
  spectra of, observability of dipole-allowed fundamental transition in infrared absorption, (T), 26:54090
HYDROGEN ISOTOPES
  determination in water using distillation column and mass spectroscopy, 26:52913(T) (AEC-tr-7345)
  effects of, theory of kinetic, 26:52959
HYDROGEN PEROXIDES
  effects on depolarization of negative muons in aqueous solutions and water, (E), 26:54099
HYDROGEN SULFIDES
  radiolysis of gaseous, effects of argon, krypton, nitrogen, and xenon on yields from γ, 26:53011
HYDROGEN SYSTEMS
  H--Sc, properties of, structural and thermodynamic, 26:53556 (SC-CR-723158)
HYDROLASES
  radiation effects on activity of alkaline phosphatase in mice, strontium-90 β and x, 26:53496

radiation effects on L-arginine aminohydrolase activity in liver of rats, dose dependence of, 26:53491

HYDROLOGY
radioisotope uses in, in Latin America, 26:53168

HYDROMAGNETIC WAVES
cosmic-ray pitch-angle scattering by, (T), 26:53863
emission of type Pc-1 micropulsations in plane of Earth's surface, polarization studies of, (E), 26:54021
propagation in incompressible beam--plasma systems, theory for, 26:54857

HYDROXYL (HO)
argon-atom reactions with, calculation of cross sections and rate constants for vibration--rotation energy transfer in, using distorted-wave and sudden approximations, 26:54126
energy levels of, reduced eigenvalues for l = 50 resonance states, 26:54124
parametric down-conversion in astrophysical masers, (T), 26:53909
reactions in radiolysis of aqueous solutions of indole-3-acetic acid and other plant hormones, 26:53015

HYPERNUCLEI
decay of Λ-He^4 and Λ-H^4, model with direct transition of Λ into n for probabilities of nonmesic, (T), 26:54293
energy levels of, shell-model calculations of spin--parity assignments and wave functions for, (T), 26:54351
hyperon (Λ) binding energies in p-shell, shell-model analysis of, (T), 26:54351

HYPERONS
decay of, current-algebra approach to octet dominance in nonleptonic, (T), 26:54286 (DNPL/P-130)

HYPERONS (Λ)
binding energies in p-shell hypernuclei, shell-model analysis of, (T), 26:54351
polarization in $\pi^- + p \to \Lambda + K^0$ interactions at 4.5 and 6 GeV/c, (E), 26:54217
production in $\pi + N \to \pi + \Sigma(\Lambda)$ interactions near threshold, cross sections and polarization phenomena from PCAC theory, (T), 26:54335

HYPERONS (Σ)
production in $\pi + N \to \pi + \Sigma(\Lambda)$ interactions near threshold, cross sections and polarization phenomena from PCAC theory, (T), 26:54335

HYPERONS (Σ^-)
decay $\Sigma^- \to p + \mu^- + e^-$, test of lepton number assignments from, (T), 26:54296
mass difference ($^1/_2$ ($\Sigma^+ + \Sigma^-$) $-$ Σ^0), deep inelastic contribution to electromagnetic, (T), 26:54257
mass difference ($\Sigma^- - \Sigma^+$), deep inelastic contribution to electromagnetic, (T), 26:54257

HYPERONS (Σ^0)
mass difference ($^1/_2$ ($\Sigma^+ + \Sigma^-$) $-$ Σ^0), deep inelastic contribution to electromagnetic, (T), 26:54257

HYPERONS (Σ^+)
decay $\Sigma^+ \to p + \gamma$ in pole model, asymmetry parameter and rate of, (T), 26:54292
mass difference ($^1/_2$ ($\Sigma^+ + \Sigma^-$) $-$ Σ^0), deep inelastic contribution to electromagnetic, (T), 26:54257
mass difference ($\Sigma^- - \Sigma^+$), deep inelastic contribution to electromagnetic, (T), 26:54257

HYPERONS (Ξ^-)
decay $\Xi^- \to \Lambda + \pi^-$ in heavy-liquid bubble chamber, Ξ^- lifetime, α parameters, and branching ratio for, (E), 26:54174 (RPP/H-99)
decay $\Xi^- \to \Sigma^+ + \mu^- + e^-$, test of lepton number assignments from, (T), 26:54296
lifetime of, determination from $\Xi^- \to \Lambda + \pi^-$ decay in heavy-liquid bubble chamber, (E), 26:54174 (RPP/H-99)
mass difference ($\Xi^- - \Xi^0$), deep inelastic contribution to electromagnetic, (T), 26:54257

HYPERONS (Ξ^0)
decay $\Xi^0 \to \Lambda + \pi^0$ in heavy-liquid bubble chamber, Ξ^0 lifetime, α parameters, and branching ratios for, (E), 26:54174 (RPP/H-99)
lifetime of, determination from $\Xi^0 \to \Lambda + \pi^0$ decay in heavy-liquid bubble chamber, (E), 26:54174 (RPP/H-99)
mass difference ($\Xi^- - \Xi^0$), deep inelastic contribution to electromagnetic, (T), 26:54257

I

ICE
radiolysis of crystalline, absorption spectra of trapped electrons from γ, 26:53002

IMAGE BRIGHTNESS INTENSIFIERS
development for neutron radiography using californium-252 sources, 26:53330(R) (BNWL-1308-10)
performance during fluoroscopic x ray examination, hazards to man from deficiencies in, 26:53421

IMIDES
polymers, preparation of syntactic foams of, 26:55601 (SC-DC-722297)
B--polyimide, development of composite blades of, for use in advanced composite engine, 26:53575

IMMUNE REACTIONS
effects of gamma-irradiated metacercariae of Fasciola hepatica on, of cattle, 26:53498(R) (PRNC-156)
radiation effects on, in chick embryos to adult allogeneic leukocytes, γ, 26:53477
radiation effects on, in guinea pigs, lethal dose, 26:53474
radiation effects on, in mice following transplantation of allogeneic bone marrow, lethal x, 26:53485
radiation effects on, in mice following whole-body exposure, comparison of RBE for γ and high-intensity pulsed x, 26:53469
radiation effects on, in patients during therapy, 26:53432
radioinduced suppression of, in mice, acute whole-body x, 26:53464

IN-PILE LOOPS
disassembly and inspection of Fuel Element Failure Propagation, design of facility for, 26:53727 (ANL/HFEF-1)
operation characteristics of Japan Low Temperature Fissiochemical, comparison with design parameters of, 26:55400 (JAERI-M-4630)

INCOLOY 800
coating with carbon from carbon monoxide decomposition in argon coolant at 550 to 600°C, 26:53605(R) (DP-Report-522)
fatigue at 800 to 1400°F, effects of hold-time on low-cycle, 26:53658
radiation effects on swelling and mechanical properties of, fast neutron, (E), 26:55189(R) (GEAP-10028-39)

INCONEL 600
fatigue testing of pipes of, failure rates from, 26:55175(R) (GEAP-10207-26)

INCONEL 713C
microstructure and stability of aluminum-coated, effects of heat corrosion on, 26:53676

INCONEL 718
fabrication of composite structures of, spark sintering and bonding method for, 26:53628
radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)

INDIA
nuclear power plant operation in, control of airborne contamination from, 26:53154 (INIS-mf-160, pp 22-52)

INDIAN POINT POWER REACTOR, UNIT 1
boron injection pumps for, requested change in testing schedule for high pressure, 26:55232 (DOCKET-50003-125)
steam stop valve for, malfunction of motor operator for main, 26:55231 (DOCKET-50003-124)

INDIAN POINT POWER REACTOR, UNIT 2
construction of, extension of completion date for permit for, 26:55281 (DOCKET-50247-81)

INDIUM
determination in lunar, meteoritic, and terrestrial materials by neutron activation following separation from other elements, 26:52906
determination in phosphate concentrates by titrimetric method following chromatographic separation from some metals, 26:52949
electron reactions up to 1 keV with, cross sections for formation of multicharged ions in, 26:54103 (FRNC-CONF-51)
neutron capture at 24.3 keV, TOF cross-section measurements using iron-filtered beam, (E), 26:54597 (CONF-720901-(Bks.1 and 2), pp 1107-14)
neutron capture near 24.3 keV, pulse height spectra and relative cross section for, (E), 26:54656(R) (COO-3058-21)
sorption on diethylaminoethylcellulose in methanol--thiocyanate--hydrochloric acid media, 26:52951
superconducting transition in, dependence of variation of dislocation electron slowing-down force on stress, temperature, and velocity in, (T), 26:54447

INDIUM ALLOYS AND SYSTEMS
Ga-base--In, superconductivity and ac susceptibility in fast frozen, (E/T), 26:54438
In--Pb, electric conductivity anisotropy of superconducting, near H/sub c3/, (E), 26:54456
In--Pb, lattice heat capacity of intermetallic InSb, at 20 to 298°K, 26:53637 (LBL-101)
In--Pb-base, superconducting transition in, dependence of variation of dislocation electron slowing-down force on stress, temperature, and velocity in, (T), 26:54447
In--Sc, magnetization and field dependence of sound velocity and thermal capacity of Sc$_3$In, low-temperature, 26:55045

INDIUM ISOTOPES In-111
use to label biological macromolecules for perturbed angular correlation studies, 26:55058

INDIUM ISOTOPES In-113
energy levels of, calculation using vibration--hole coupling, 26:54620

INDIUM ISOTOPES In-115
energy levels of, calculation using vibration--hole coupling, 26:54620

INDIUM ISOTOPES In-117
energy levels of, calculation using vibration--hole coupling, 26:54620

INDOLE
radiolysis of aqueous solutions of, rate constants for reaction of hydrogen atoms, hydroxyl radicals, and hydrated electrons in, 26:53015

INDOLE-3-PROPIONIC ACID
radiolysis of aqueous solutions of, rate constants for

reaction of hydrogen atoms, hydroxyl radicals, and hydrated electrons in, 26:53015
INDUSTRIAL MANAGEMENT
job scheduling in maintenance repair shops, effectiveness of priority rules for, 26:55640 (Y-1848)
INFECTIONS
tuberculosis, occurrence in miners in relation to exposure to radon and radon daughters in air, 26:53412
INFORMATION CENTERS
description of American Nuclear Society' Nuclear Standards, 26:54917
operation of Nuclear Safety, during May and June 1972, 26:55207(R) (ORNL-TM-3900)
INSECTA
Drosophila melanogaster (fruit fly), radiation effects on, following acute exposure of mature spermatozoa, dose dependence of genetic, x, 26:53497(R) (COO-1748-12)
Drosophila melanogaster (fruit fly), radiation effects on metabolism in bar gene mutants of, stimulatory low dose, 26:53500
Drosophila melanogaster (fruit fly), radioinduced chromosome aberrations in mature oocytes of, effects of premeiotic breakage and interchanges on types of x, 26:53501
Drosophila melanogaster (fruit fly), radioinduced chromosome aberrations in mature spermatozoa of, inhibitory effects of dactinomycin on post-fertilization maternal repair of x, 26:53502
Drosophila melanogaster (fruit fly), radioinduced dominant and recessive lethal mutations in mature spermatozoa of, effects of dactinomycin on post-fertilization expression of x, 26:53502
radiation effects on, combined effects of space flight environment on mutagenesis and survival of, γ, 26:53365 (N-72-20065)
Sitotroga cerealella (grain moth), radiosensitivity of oocytes of, effects of meiotic stage on γ, 26:53499
INSTRUMENTS
description for control of cryogenic systems, 26:55554 (LA-DC-72-855)
design and operation of radioactive non-contact encoder, 26:53286 (N-71-37956)
design of passive crack detector, engineering drawings for, 26:53317
development and research in South Africa, 1971, 26:55453(R) (NP-19410)
interfacing of CAMAC, to computers, 26:53297 (CEA-N-1549)
radiation dose to space vehicle, from radioisotope thermoelectric generators, γ and neutron, 26:53338 (NASA-TM-X-2440, pp 862-5)
radiation effects on Grand Tour spacecraft, protective design for, 26:53292 (NASA-TM-X-2440, pp 729-34)
radiation effects on spacecraft, program for studying radioisotope thermoelectric generator, 26:53294 (NASA-TM-X-2440, pp 866-72)
specification of amplitude analog signals for CAMAC, 26:53302 (EUR-5100)
standards for, procedures for developing and writing, 26:53248
INTERFEROMETERS
design for direct measurement of plasma electron densities, 26:54770
INTERNAL CONVERSION
coefficients of, description of electron spectrometer for in-beam measurement of, 26:53264
INTERSTELLAR MATERIAL
cosmic-ray interactions with, x-ray emission from, (E/T), 26:53815
light absorption by, (T), 26:53985
models for, grain, (T), 26:53989
INTESTINES
radiation effects on respiration and ultrastructure of mitochondria in epithelial cells of rat, during amino acid absorption, whole-body x, 26:53493
radioinduced fistulae and perforations in human, following therapy of gastric sarcomas or rectal and uterine neoplasms, surgical treatment of, 26:53438
INVARIANCE PRINCIPLES
charge conjugation, statistical model for conservation of, 26:54360
CP violation in anti K^0 and $K^0 \rightarrow \pi^+ + \pi^-$ time decay distributions, (E), 26:54362 (COO-1195-244)
CP violation in anti K^0 and $K^0 \rightarrow \pi^+ + \pi^-$ time decay rates, (E), 26:54361 (COO-1195-242)
CP violation in $K^0 \rightarrow \mu^+ + \mu^-$ decays, lower bound on, (T), 26:54369
CP violation in $K^0 \rightarrow \pi^+ + \pi^- + \pi^0$ decay, (E), 26:54188
CP-violating gauge interactions, Lagrangian for, 26:54367
G-parity, statistical model for conservation of, 26:54360
gauge invariance in relativistic quantum field theory, (T), 26:54387
parity, statistical model for conservation of, 26:54360
scale invariance breaking for low-energy theorems of $\pi\pi$ interactions, contribution of epsilon and S*(980) to, (T), 26:54319
time reversal noninvariant terms in electron elastic scattering by nuclei, (T), 26:54363 (IS-T-536)
time reversed operator for unstable particles, definition for decays in media without intrinsic T violation, (T), 26:54366
IODINE
desorption from iron oxide (Fe_3O_4), effects of steam on, (E), 26:55207(R) (ORNL-TM-3900)
determination in meteoritic and terrestrial materials by neutron activation following separation from other elements, 26:52906
determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
metabolism in dogs, effects of iodine intake on kinetics of, 26:55518(R) (COO-3173-10)
radiation effects on sorption on activated carbon, 26:53061 (DP-MS-72-14)
reactions of gaseous, with iron oxide (Fe_3O_4), kinetics of surface, 26:52953 (CONF-720716-1)
retention on charcoal beds under accident and post-accident conditions, 26:53058 (CONF-720823-10)
separation from fuel reprocessing off-gases, evaluation of silver-containing sorbents for, 26:53077 (CONF-720823-9)
separation from xenon by liquid nitrogen cooling and distillation, 26:53068
separation of fission product, from off-gases in reprocessing of LMFBR fuel, pp. 21-2, 26:53082 (ORNL-4794, pp 15-25)
solubility in liquid carbon dioxide, pp. 29-31, 26:53083 (ORNL-4794, pp 26-32)
solubility in liquid sodium, tracer studies on, 26:52895 (CONF-710959-, Paper 18)
sorption on commercial impregnated charcoals, efficiencies of, 26:53058 (CONF-720823-10)
transport and retention in reactor cooling systems, effects of reactions with iron oxides on, 26:52953 (CONF-720716-1)
IODINE ISOTOPES
removal from emergency reactor off-gas systems, efficiency of filters for, 26:55146
IODINE ISOTOPES I-125
activity of, evaluation of various methods of counting, 26:53056 (AREAEE-129)
incorporation in iodoquine, 26:53029(P)
production by neutron reactions with xenon in reactor loop, 26:53068
production by proton reactions with tellurium-125, 26:53056 (AREAEE-129)
purification of, 26:53056 (AREAEE-129)
IODINE ISOTOPES I-127
photon reactions (γ,xn) with, model analysis of giant dipole resonance in, (E/T), 26:54598 (FRNC-TH-242)
IODINE ISOTOPES I-131
content in atmosphere, rainwater, and Savannah River in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
content in Norwegian milk during 1956 to 1970, 26:53161
content of human milk following injection of labeled pharmaceuticals for diagnostic scanning of kidneys, lungs, and placenta, 26:53524
effects on growth of goitrogen-stimulated thyroid gland in mice following intraperitoneal injection in comparison to effects of x rays, effects of dose rate on inhibitory, 26:53472
effects on growth of thyroid gland in fetal and goitrogen-stimulated adult mice following intravenous injection, 26:53513
exchange between solid silver iodide and iodine in p-cymene solution, effects of temperature on, 26:52974
incorporation in iodoquine, 26:53029(P)
production from neutron-irradiated telluric acid, wet distillation method for, 26:53070
radiation dose to fingers of medical personnel during injection of, phantom studies of, 26:53424
scanning in heart for measurement of systolic blood volume, 26:53543
uptake by children from milk, age dependence of, 26:53506(T) (ORNL-tr-2629)
uptake by hair following intravenous injection in rats, correlation with body burden and, 26:53529 (NASA-TM-X-2440, pp 982-8)
uptake by thyroid gland in birds following parenteral injection, dose-response relations following, 26:53515
use as tracer for measuring leakage through dam near Baguio City, Philippines, 26:53175
IODINE ISOTOPES I-132
effects on growth of goitrogen-stimulated thyroid gland in mice following intraperitoneal injection in comparison to effects of x rays, effects of dose rate on inhibitory, 26:53472
IODINE ISOTOPES I-136
yield of 44- and 83-sec, from thermal fission of uranium-235, (E), 26:54626
IODINE ISOTOPES I-137
beta decay of, prediction of β endpoint energy using Way-Wood diagram, 26:54601 (IS-T-534)
IODINE ISOTOPES I-140
beta decay of, prediction of β endpoint energy using Way-Wood diagram, 26:54601 (IS-T-534)
IODOQUINE
preparation of iodine-125- and iodine-131-labeled, 26:53029(P)

ION BEAMS
  heating of plasma ions by, possibility of collisionless, (E/T), 26:54767
  injection into deuterium--tritium magnetic mirror devices, (T), 26:54757
  interactions with plasma, longwave surface-wave instabilities from, (T), 26:54816
ION EXCHANGE
  development for chromatography, review on, 26:52948
  uses of, review on, 26:52948
ION EXCHANGE MATERIALS
  analysis for beta activities retained in, design and performance of Geiger--Mueller counter for, 26:53212
  radiation effects on degradation and crosslinking in Zerolit 225, γ, 26:53016
  separation of materials from spent, method for, 26:53072(P)
  sorptive properties of silver zeolite, for iodine and methyl iodide, 26:53077 (CONF-720823-9)
ION SOURCES
  description of heavy, with confined electron beam, 26:53753 (FRNC-CONF-56)
  design and performance of duoplasmatrons for production of multicharged ions, 26:54079 (FRNC-CONF-53)
  development using laser beam impact on metallic target, (E), 26:54801 (CEA-CONF-2049)
  focusing system for MEBIS, 26:54081 (FRNC-CONF-57)
  performance of MEBIS, 26:54081 (FRNC-CONF-57)
  performance of PIG, for production of Ca, Ge, Kr, and Zn ions, 26:53752 (FRNC-CONF-54)
  performance of PIG, spectroscopic analysis of, 26:54082 (FRNC-CONF-58)
  performance of, with confined electron beams, review of, 26:54080 (FRNC-CONF-55)
  vacuum lock for mass spectrometer, design of, 26:53318
IONOSPHERE
  D region, collision frequency and electron-density distribution measurements with differential absorption and differential-phase partial-reflection experiments, (E/T), 26:54032
  D region, electron density and collision frequency in, simultaneous measurements by partial reflection of, (E), 26:54028
  E region, characteristics of, over Dushanbe during 1964, (E), 26:54017
  E region, correlation of electron density with height of Sun, calculations at Duschanbe, 1964, (E/T), 26:54016
  E region, instability in, induced by internal atmospheric gravity-wave propagation in E region, (T), 26:54018
  electromagnetic-wave propagation in homogeneous, nonlinear theory of monochromatic circularly polarized ulf and vlf, (T), 26:54050
  electron energy transfer rates to neutral gases in, calculations of, (T), 26:54022
  electron-intensity fluctuations observed on Feb. 14, 1970 in, possible correlation with barium-cloud releases, (E), 26:54039
  F region, far-uv airglow intensity at 1304 and 1356 A from atomic oxygen in, theoretical time-dependent behavior of tropical, 26:54031
  F region, ion distribution in, one-dimensional nonisothermal admixture of, (T), 26:54026
  F region, wavenumber spectrum for sizes 4 to 0.6 km in, deduced from ionospheric scintillation observations of Cygnus A, power-law, (E/T), 26:54029
  F2 layer, average behavior of total electron content, peak density, and slab thickness in, during geomagnetic storms, (E), 26:54040
  plasma diagnostics in, cylindrical probe analysis for, (E/T), 26:54011 (ONERA-Publ.-137)
  scintillation observations from Cygnus A, F-region power-law wavenumber spectrum deduced from, (E/T), 26:54029
  solar-wind torque on, calculations of upper limit, (T), 26:54075
  sporadic E, velocities and heights of nighttime association with atmospheric-gravity-wave-induced instability in ionospheric E region, (T), 26:54018
  wave generation in electrojet region of, potential transverse-current-produced, (T), 26:54027
  whistler propagation in, refractive index and attenuation surfaces in vicinity of cross-over level, (T), 26:54015
IONS
  channeling and blocking in single crystals, experimental apparatus for, 26:54977
  channeling of, design of two-axis goniometer with sample temperature control for study of, 26:53322
  channeling of, flux peaking effect in, (T), 26:55007
  detection of stripped, at electron cyclotron resonance, x-ray-spectroscopy unit for, 26:54078 (CEA-CONF-2050)
  dosimetry of heavy, based on particle tracks in silver halide single crystals, 26:53230 (NASA-TM-X-2440, pp 138-41)
  effects on small solid grains, collision processes in heating, (T), 26:54874 (EUR-CEA-FC-647)
  effects on solids, computer program for damage profile of, 26:54969 (AECL-4130)
  effects on swelling of metals, dose and dose rate dependences of, (T), 26:53707
  emission by semiconductors for determination of impurity profiles, secondary, 26:52937
  energy of degenerate levels of, with two perturbations, double perturbation form for second-order, 26:54152
  implantation damage in gallium arsenide, channeling study of, 26:54993
  implantation facility at Orsay, France, 26:54976
  implantation in silicon, electron microscopic observation of surface and depth distribution of damage produced in, 26:55003
  implantation layers in silicon, computer calculations of sheet resistance of, 26:54986
  implantation of, design of two-axis goniometer with sample temperature control for study of, 26:53322
  production of multicharged, research program on duoplasmatrons and magnetrons for use in, 26:54079 (FRNC-CONF-53)
  proton reactions above 25 keV with negative, calculation of cross sections for electron capture in, using continuum distorted-wave-Born approximation, 26:54116
  reactions between very heavy, effective potentials for superheavy molecules formed in, (T), 26:54111
  reactions with atoms of negative, calculation of ejection probability and energy distribution of electrons from, using sudden-switching approximation, 26:54112
  reactions with atoms, ions, and molecules, bibliography and compilation of data on charge exchange, dissociations, excitation, and ionization, in, 26:54118
  scattering by nuclei above Coulomb barrier, coupled-channel analysis of heavy, (T), 26:54736
  scattering by nuclei, analysis of absorptive potentials for elastic heavy, (T), 26:54678 (COO-535-672)
  stopping of heavy, large-depth decrease of range and deposited-energy distributions in, (T), 26:54899
IRIDIUM
  determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
IRIDIUM ISOTOPES Ir-186
  beta and electron-capture decay of, γ singles and coincidence spectra from, (E), 26:54633 (COO-3255-3)
IRIDIUM ISOTOPES Ir-192
  implantation of wires of, for interstitial therapy, effects of arrangement, number, and size of implants on radiation dose distribution in surrounding tissues, 26:53422
IRON
  abundance in 120 evolved stars, (E), 26:53898
  abundance in 21 sharp-lined nonvariable cool peculiar A stars, (E), 26:53882
  abundance in solar corona, (E), 26:53957
  cascades in iron due to 30- to 300-GeV/N cosmic, (E), 26:53832
  content in rock, γ--γ selective method for determination of equivalence between other heavy element and, 26:52943
  determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
  determination in minerals by direct measurement of oxide ratios, spectroscopic, 26:52932
  determination in water, effects of large amounts of copper on spectrographic, 26:52927
  distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
  mixing of powders of, effects of friction on, 26:53617
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  neutron cross-section sensitivity analysis for sodium/iron shielding, 26:54940 (CONF-720901-(Bks.1 and 2), pp 512-23)
  neutron distributions behind Fe/plastic/Fe barriers, spatial, angular, and energy, 26:54966
  neutron reactions at 0.8 to 20 MeV, data tabulation on γ production cross sections for, 26:54569 (ORNL-4798)
  neutron reactions at energies up to 16 MeV, cross sections for gamma-ray production in, (E), 26:54960 (NASA-TM-X-2440, pp 500-11)
  neutron reactions up to 20 MeV, γ production cross sections for, (E), 26:54523 (CONF-720901-(Bks.1 and 2), pp 325-34)
  neutron total cross section at 10 to 1000 keV, (E), 26:54566 (CONF-720901-(Bks.1 and 2), pp 1075-86)
  neutron total cross section at 22 to 25 keV, R-matrix fit to, 26:54656(R) (COO-3058-21)
  neutron transport in sodium/iron shield, effect of cross section sensitivity on 300-keV to thermal-range, (T), 26:54943 (CONF-720901-6)
  neutron transport in, analysis of mechanism in fast, 26:54473 (CONF-720901-(Bks.1 and 2), pp 335-48)
  oxygen ion reactions at 30 MeV, Kα x-ray spectra from, (E), 26:54467(R) (ORO-2972-204)
  photon scattering at 2.0 to 10.5 MeV, dose albedos of back-angle, (E), 26:54892
  radiation effects on lower yield strength of, relations of spectra with neutron, 26:53705
  radiation effects on strengthening of, effects of carbon, copper, nickel, phosphorus, and vanadium additions on neutron, 26:53710
  radiation effects on surface microtopography of, argon-ion, 26:55008
  separation from cobalt and manganese by solvent extraction using Aliquat-336, 26:53076
  separation from indium by ion exchange chromatography,

- 26:52949
- separation from uranium by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)
- spectral lines in Vega due to, (E), 26:53887

IRON ALLOYS AND SYSTEMS
- Al_2O_3--Fe, cohesion and structural stability of composites of, effects of chromium, cobalt, manganese, molybdenum, nickel, and titanium additions on, 26:53589
- C--Fe-base, radiation damage in, electric resistivity study of 4.5°K fast-neutron, 26:54989
- Cr--Cu--Fe--Mo--Ni-base--Ti, corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
- Cr--Fe-base, radiation effects on mechanical properties of, 2.3-MeV electron, 26:53706
- Cr--Fe-base, radiation effects on strengthening of welds of, effects of carbon, copper, nickel, and vanadium additions on neutron, 26:53710
- Cu-base--Fe, surface resistance of, Kondo anomaly in far-infrared, 26:55508 (COO-3151-4)
- Fe--transition metal carbides, erosion resistance of anodes of, 26:53568
- Fe-base--Mo, radiation effects on mechanical properties of, 2.3-MeV electron, 26:53706
- Fe-base--N, radiation damage in, electric resistivity study of 4.5°K fast-neutron, 26:54989

IRON CHLORIDES $FeCl_2$
- magnetic phase transition at 2 kbar, study using frequency shift of far-infrared-active antiferromagnetic resonance mode, 26:55509 (COO-3151-5)

IRON ISOTOPES Fe-53
- energy levels from neutron pickup reactions, spectroscopic factors and spins for, (T), 26:54576

IRON ISOTOPES Fe-54
- deuteron reactions (d,pγ) at 3 MeV, γ-ray angular correlations for, (E), 26:54578
- energy level at 1.409 MeV from Coulomb excitation, g factor for, (E), 26:54581
- energy levels of, shell-model study of, (T), 26:54570
- neutron reactions at 0.8 to 20 MeV, data tabulation on γ production cross sections for, 26:54569 (ORNL-4798)
- neutron total cross section at 10 to 1000 keV, (E), 26:54566 (CONF-720901-(Bks.1 and 2), pp 1075-86)
- oxygen-16 reactions (O-16,C-12) at 46 MeV, analysis for reaction mechanism in, (E), 26:54579

IRON ISOTOPES Fe-55
- energy level at 3788 keV from iron-54 (d,pγ) reactions, spin assignment for, (E), 26:54578
- energy levels from iron-57 (p,t) reactions, spin--parity assignments for, (E), 26:54584

IRON ISOTOPES Fe-56
- alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
- deuteron elastic scattering at 10 MeV, angular distributions and optical model parameters for, (E), 26:54592
- energy levels of, shell-model study of, (T), 26:54570
- helium-3 elastic scattering at 53.4 MeV, differential cross sections and optical-model parameters for, (E), 26:54571
- neutron radius of, determination from α elastic scattering, (E), 26:54547

IRON ISOTOPES Fe-57
- charge states in solid xenon following cobalt-57 decay, Moessbauer effect study of, 26:55057
- deuteron reactions (d,α) at 16 MeV, angular distributions for, (E), 26:54584
- Moessbauer effect in transition-metal borides, 26:55055 (IS-T-529)
- Moessbauer effect measurements on, in nickel host near Curie point, 26:55572 (NYO-3823-12)
- neutron total cross section at 10 to 1000 keV, (E), 26:54566 (CONF-720901-(Bks.1 and 2), pp 1075-86)
- proton reactions (p,He-3) and (p,t) at 27 MeV, angular distributions for, (E), 26:54584
- triton elastic scattering at 12 MeV, angular distribution and optical model parameters for, (E), 26:54592
- triton reactions (t,p) at 12 MeV, angular distributions for, (E), 26:54592

IRON ISOTOPES Fe-58
- deuteron elastic scattering at 10 MeV, angular distributions and optical model parameters for, (E), 26:54592
- deuteron reactions (d,p) at 10 MeV, angular distributions for, (E), 26:54592

IRON ISOTOPES Fe-59
- diffusion in α-zirconium, mechanism of, 26:53666
- energy levels from (t,p) and (d,p) reactions, spin-parity assignments and spectroscopic factors for, (E), 26:54592
- production of carrier-free, from neutron-irradiated cobalt by solvent extraction using Aliquat-336, 26:53076
- radiation dose to fingers of medical personnel during injection of, phantom studies of, 26:53424
- use as tracer in biological materials together with chromium-51, computerized data processing system for, 26:53544

IRON OXIDES Fe_3O_4
- iodine desorption from, effects of steam on, (E), 26:55207(R) (ORNL-TM-3900)
- reactions with gaseous iodine, kinetics of surface, 26:52953 (CONF-720716-1)

IRRADIATION FACILITIES
- construction and calibration of standard thermal neutron flux, 26:53118
- design for testing space vehicle components and subsystems, 26:53695 (NASA-TM-X-2440, pp 570-6)
- dose distribution in gamma, at the Isotopes Institute, Budapest, 26:53340
- performance of californium-252 neutron source activation, at Savannah River Laboratory, 26:53109 (DP-MS-72-37)

ISOCYANIC ACID
- tert-butyl ester, radiolysis of crystals of, ESR studies on, 26:52991 (ORO-2968-78, Paper 6)

ISOLEUCINE
- radiolysis of frozen aqueous solutions of, ESR study of free radicals from γ, 26:52995

ISOPENTYLAMINE
- toxicology of, bibliography on, 26:55584 (ORNL-TIP/TIRC-72-61)

ISOTHIOCYANIC ACID
- tert-butyl ester, radiolysis of crystals of, ESR studies on, 26:52991 (ORO-2968-78, Paper 6)

ISOTOPE EFFECTS
- theory of kinetic hydrogen, 26:52959

ISOTOPE SEPARATION METHODS
- performance of rotating plasma, 26:53327 (JEN-244)

ISOTOPES
- determination of natural abundance of, accuracy of, 26:52916 (EUR-4765, pp 41-75)

ITALY
- applications of radiation in agriculture research in, 26:53459(R) (NP-19403)

J

JAMES A. FITZPATRICK POWER REACTOR
- owners of, financial data on, 26:55259 (DOCKET-50333-53)

JAPAN
- electric power production in, review on, 26:55092
- legislation regarding nuclear liability in, revision of, 26:55459
- nuclear energy industry in, requirements of, 26:55094
- nuclear industry in, status of development of, 26:55089
- radiation protection legislation in, during 1970, enforcement of, 26:55458
- uses of radiation sources and radioisotopes in medicine, industry, and research in, during 1970, status of, 26:55458

JAPANESE EXPERIMENTAL FAST REACTOR
- experimental facilities in, conceptual design of, 26:55405(T) (JAPFNR-43)
- steam generators for, development of, 26:55155 (CONF-710548-, pp 129-54)
- steam generators for, use of hydrogen detector for detection of small leaks in, 26:55156 (CONF-710548-, pp 155-70)

JAPANESE POWER DEMONSTRATION REACTOR
- fuel element burnup in, FLARE and TERA code calculations of, 26:55264 (JAERI-Memo-4083)

JAPANESE POWER DEMONSTRATION REACTOR II
- control rods for, use of VISTA method for development of, 26:55137 (JAERI-Memo-3893)
- pressure vessel for, cyclic pressure loading of model, 26:55228 (JAERI-Memo-4016)

JINR SYNCHROTRON
- beam extraction by 2/3 nonlinear resonance, (T), 26:53754 (JINR-E9-6538)

JUPITER (PLANET)
- deuterium in atmosphere of, (E), 26:54007
- hydrogen--helium mixtures in interior of, statistical mechanics of, (T), 26:54003
- magnetosphere of, fluxes of trapped electrons and protons in, (E/T), 26:54006
- radiation belt effects on spacecraft, calculations of, 26:54002 (NASA-TM-X-2440, pp 781-4)
- radiation belt of, models of electron and proton fluxes in, 26:54001 (NASA-TM-X-2440, pp 556-60)
- radio emission from, effects of Io on, (T), 26:54004

K

KEWAUNEE POWER REACTOR
- containment system for, revised information on, 26:55309 (DOCKET-50305-48)
- electrical systems for, revised information on, 26:55309 (DOCKET-50305-48)
- engineered safeguards for, revised information on, 26:55309 (DOCKET-50305-48)
- instrumentation for, revised information on, 26:55309 (DOCKET-50305-48)
- protection systems for, revised information on, 26:55309 (DOCKET-50305-48)
- radioactive waste disposal systems for, revised information on, 26:55309 (DOCKET-50305-48)
- safety analysis for, revised information on, 26:55309 (DOCKET-50305-48)
- safety analysis report for, errata sheets for, 26:55311

(DOCKET-50305-51)
- valves for, verification of wall thicknesses for nuclear service, 26:55310 (DOCKET-50305-49)

KIDNEYS
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- radioinduced carcinomas of, in parabiosed rats, whole-body x, 26:53449 (COO-3017-4)
- scintiscanning of human, for diagnosis of neoplasms, use of gamma camera in, 26:53214
- uptake of organic bases by rat, effects of uranyl nitrate on, 26:53537

KRYPTON
- effects on yields from γ radiolysis of gaseous hydrogen sulfide, 26:53011
- electron reactions with, Auger and direct ionization processes in, 26:54103 (FRNC-CONF-51)
- helium-atom and -ion reactions at 100 to 5000 eV with, angular and energy distributions of electrons from ionization and autoionization in, (E), 26:54141
- plasma of, continuum spectra of shock-heated, (E), 26:54777 (BMBW-FBK-72-8)
- proton reactions at 500 to 3000 eV with, differential cross sections for charge exchange, elastic scattering, excitation to autoionizing levels, and simple excitation in, (E/T), 26:54122
- separation from off-gases from HTGR fuel reprocessing, 26:53059 (CONF-720823-12)
- separation of fission product, from combustion off-gases by scrubbing with liquid carbon dioxide, 26:53064(T) (ORNL-tr-2621)
- solubility in liquid carbon dioxide, pp. 29-31, 26:53083 (ORNL-4794, pp 26-32)
- solubility in liquid carbon dioxide, tracer studies on, 26:53059 (CONF-720823-12)

KRYPTON IONS
- channeling of, use to study ion implantation damage in gallium arsenide, 26:54993
- production in PIG source, 26:53752 (FRNC-CONF-54)

KRYPTON ISOTOPES
- abundance in Mokoia and Allende chondrites, (E), 26:53810
- radiation dose to human body and lungs following ingestion, inhalation, or immersion in cloud of, methods for estimation of, 26:53510
- yields in uranium-235 thermal neutron fission, (E), 26:54667

KRYPTON ISOTOPES Kr-85
- content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- content in natural gas stored in underground nuclear cavities, 26:53132(T) (UCRL-Trans-10617-2)
- release in head-end reprocessing of HTGR-type graphite fuel, 26:53078 (CONF-720823-11)

KRYPTON ISOTOPES Kr-86
- proton elastic and inelastic scattering at 4.8 to 10.1 MeV, excitation functions for, (E), 26:54467(R) (ORO-2972-204)

KRYPTON ISOTOPES Kr-87
- energy levels of, calculation of wave functions and binding energies using weak coupling model, (T), 26:54467(R) (ORO-2972-204)
- half-life of, (E), 26:54667

KRYPTON ISOTOPES Kr-88
- content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- half-life of, (E), 26:54667

KRYPTON ISOTOPES Kr-89
- half-life of, (E), 26:54667

L

LA CROSSE BOILING-WATER REACTOR
- valves for, verification of wall thicknesses for nuclear service, 26:55350 (DOCKET-50409-13)

LA SALLE COUNTY POWER REACTOR, UNIT 1
- valves for, verification of wall thicknesses for nuclear service, 26:55341 (DOCKET-50373-27)

LA SALLE COUNTY POWER REACTOR, UNIT 2
- valves for, verification of wall thicknesses for nuclear service, 26:55341 (DOCKET-50373-27)

LAKE MICHIGAN
- ecology of, effects of thermal effluents on, 26:53184 (ANL-7860(Pt.3), pp 109-17)
- nutrient enrichment and eutrophication of, 26:55499(R) (COO-2003-17)
- radioisotope content of fish in, 26:53169 (ANL-7860(Pt.3), pp 141-50)
- surface energy budget measurements over, 26:53189 (ANL-7860(Pt.3), pp 270-98)
- trace element content in sediments and core samples from Green Bay area of, 26:53164 (ANL-7860(Pt.3), pp 64-76)

LAKES
- heated effluent and radioisotope effects on Cayuga, predictions of, 26:53192

LAMINATES
- electron reactions with single layers and, radiation from 0.25- to 3.7-GeV, (T), 26:54907
- gamma-ray energy deposition in, computer code for dosage and attenuated dosage in, 26:54959 (NASA-TM-X-2440, pp 387-91)

LANTHANUM
- deposition by pack cementation on chromium-base alloys for nitridation protection in air, effects on chromium, hafnium, and yttrium additions on, 26:53689
- distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
- electron band structure of, photoelectron spectral study of core level binding energies, 26:55024
- energy-level transitions and 4d binding energy of, relation between 4d → 4f, 26:54095
- solubility in bismuth--thorium solutions, free energies of formation for compounds produced by, 26:53664

LANTHANUM ALLOYS AND SYSTEMS
- La--Ru, thermal capacity of $LaRu_2$ at 1.3 to 20°K, 26:55047

LANTHANUM BORIDES
- preparation and thermoemission properties of, 26:53582
- BaB_6--LaB_6, preparation, sintering, and thermoemission properties of, 26:53582

LANTHANUM HYDRIDES
- preparation and characterization of, p. 41, 26:53066 (ORNL-4794, pp 36-44)

LANTHANUM ISOTOPES
- proton decay of light, search for, (E), 26:54608(T) (UCRL-Trans-1473)

LANTHANUM ISOTOPES La-131
- beta and electron-capture decay of, conversion-electron and gamma spectra from, (E), 26:54643

LANTHANUM ISOTOPES La-132
- beta and electron-capture decay of isomeric, conversion-electron spectra from, (E), 26:54643
- energy-level transitions from decay of isomeric, multipolarities for, (E), 26:54643
- isomeric transitions in, conversion-electron spectra from, (E), 26:54643

LANTHANUM ISOTOPES La-139
- nuclear magnetic resonance in lanthanum-diluted GdZn, 26:55059
- photon reactions (γ,xn) at 8 to 24 MeV, cross sections for, (E), 26:54629
- photon reactions (γ,xn) with, model analysis of giant dipole resonance in, (E/T), 26:54598 (FRNC-TH-242)

LANTHANUM ISOTOPES La-140
- content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)

LANTHANUM ISOTOPES La-141
- half-life of, (E), 26:54667

LANTHANUM ISOTOPES La-142
- half-life of, (E), 26:54667

LANTHANUM ISOTOPES La-143
- half-life of, (E), 26:54667

LANTHANUM ISOTOPES La-144
- beta decay of, prediction of β endpoint energy using Way--Wood diagram, 26:54601 (IS-T-534)

LANTHANUM OXIDES
- spectra and structure of, vibrational, 26:55031
- vaporization at 1927°C, measurement of isothermal, 26:53549 (EUR-4765, pp 343-63)

LASER RADIATION
- emission in electron beam motion through crystal, laser modulation in Schwarz--Hora effect for upper limit for, 26:54245 (IS-T-531)
- interaction with plasma, kinetic processes in high temperature, (T), 26:54799
- interactions with discharge plasmas, transmission in, (E), 26:54785
- interactions with plasma, electron density determination from refraction of, 26:54769
- pulse duration and intensity of, different order photoelectric effects method for measuring mode-locked ultrashort, 26:55544 (KFKI-72-41)
- reactions with deuterated polyethylene, plasma production from nanosecond and picosecond, 26:54804
- reactions with metallic targets, analysis of heavy ions from, (E), 26:54801 (CEA-CONF-2049)
- reactions with solid deuterium--tritium targets, fusion reactions from, 26:54830
- reactions with solid targets, ion energies from, (E/T), 26:54802
- reactions with solid targets, self-igniting pulsed optical discharges from, (E), 26:54803
- scattering by plasma, induced Compton effect in, (T), 26:54798

LASERS
- feasibility of gamma, based on long-lived Moessbauer isomers, (T), 26:55062
- modulation effects in Schwarz--Hora effect for light production and upper limit for laser emission in electron beam motion through crystal, (T), 26:54245 (IS-T-531)
- spectrum of pulsed discharge-initiated hf hydrogen fluoride, 26:55526 (IPP-IV-31)
- use to heat superdense plasma, (T), 26:54764
- use with magnetic field to heat plasma, (T), 26:54760
- uses in spectrochemical analysis, 26:55590(T) (ORNL-tr-2613-A)
- uses of solid-state, in spectral analysis, 26:55589(T) (ORNL-tr-2603)

LEAD
- alpha elastic scattering near the Coulomb barrier,

incoming wave boundary condition for, (T), 26:54705
content in rock, γ--γ selective method for determination of equivalence between other heavy element and, 26:52943
determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
determination in water, effects of large amounts of copper on spectrographic, 26:52927
diffusion in mercury at 25°C, 26:53636 (IS-T-554)
meson (π^+ and π^-) reactions at 0.7 to 2 GeV/c, model analysis of, (E/T), 26:54529 (RPP/NS-8)
neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
photon reactions (γ,n) at 12 to 23 MeV, neutron spectra from, (E), 26:54563
photon scattering at 2.0 to 10.5 MeV, dose albedos of back-angle, (E), 26:54892
separation from indium by ion exchange chromatography, 26:52949
spectra of monovalent, from x radiolysis of lead acetate monocrystals and powders, ESR, 26:53008
superconducting transition in, dependence of variation of dislocation electron slowing-down force on stress, temperature, and velocity in, (T), 26:54447
superconductivity of single crystals, anisotropy of surface, (E), 26:54440
x-ray attenuation by, 50- to 300-kVp broad-beam, (E), 26:54904

LEAD ACETATES
radiolysis of monocrystals and powders of, ESR studies on Pb$^+$ and PbH^{2+} from x, 26:53008

LEAD ALLOYS AND SYSTEMS
In--Pb, electric conductivity anisotropy of superconducting, near H/sub c3/, (E), 26:54456
In--Pb, lattice heat capacity of intermetallic InSb, at 20 to 298°K, 26:53637 (LBL-101)
In--Pb-base, superconducting transition in, dependence of variation of dislocation electron slowing-down force on stress, temperature, and velocity in, (T), 26:54447

LEAD HYDRIDES
spectra of PbH^{2+}, from x radiolysis of lead acetate monocrystals and powders, ESR, 26:53008

LEAD ISOTOPES
photon reactions (γ,3π) with, test of low-energy theorem for $\gamma + \gamma \to \pi + \pi + \pi$ interactions from, (T), 26:54252

LEAD ISOTOPES Pb-204
energy-level transition from thallium-205 (p,2n) reactions, branching ratio for cross-over, (E), 26:54647

LEAD ISOTOPES Pb-208
alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
carbon-12 reactions (C-12,xn) at 60 to 90 MeV, excitation functions for, (E), 26:54651
electron inelastic scattering at 124 and 167 MeV, differential cross sections for, (E), 26:54649
energy levels from electron inelastic scattering, transition probabilities for, (E), 26:54649
energy-level transitions of muonic atoms of, corrections to long-wavelength approximation for electric multipole, 26:54098
meson (π) reactions at 100 to 260 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609
neutron capture at 6.2 to 14.7 MeV, cross section for, (E), 26:54662
neutron radius of, determination from elastic scattering, (E), 26:54547
nitrogen-14 reactions (N-14,xn) at 80 to 100 MeV, excitation functions and delayed alpha spectrum from, (E), 26:54651
photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

LEAD ISOTOPES Pb-209
energy levels from neutron capture by lead-208, (E), 26:54662

LEAD ISOTOPES Pb-210
content ratio to radium-226 in corals, determination of coral growth rates from measurements of, 26:53179

LEAD ISOTOPES Pb-211
energy levels of, shell-model calculations of wave functions for, low-lying, (T), 26:54650

LEAD TITANATES
radiation effects on dielectric properties and crystal structure of, electron, neutron, and γ, 26:55020

LEAD ZIRCONATES
radiation effects on dielectric constants and crystal structure of, electron and γ, 26:55020

LEAK DETECTORS
development of acoustic, for sodium--water, 26:55154 (CONF-710548-, pp 105-28)
use of hydrogen detectors for sodium--water, 26:55156 (CONF-710548-, pp 155-70)

LEPTONS
assignment of lepton number, test of schemes for, (T), 26:54296
field theory of, unified, (T), 26:54294
interactions l + N, asymmetries for models for spin-averaged cross sections and spin effects in Bjorken scaling region for polarization effects in deep inelastic, (T), 26:54244 (DESY-72/36)
interactions of, three-dimensional unitary group for unified gauge weak--electromagnetic, (T), 26:54364 (NYO-3533-264)

LEPTONS, HEAVY
theory for, from unified weak--electromagnetic gauge schemes based on three-dimensional unitary group, 26:54364 (NYO-3533-264)

LEUCINE
radiolysis of frozen aqueous solutions of, ESR study of free radicals from γ, 26:52995

LEUKOCYTES
determination of hematopoietic and pulmonary origins of alveolar macrophages in mouse radiation chimeras, 26:53492
radiation effects on count of human, following whole-body exposure for therapy of leukemias and lymphosarcomas, multifactorial analysis of dose and time dependence of, 26:53400 (NASA-TM-X-2440, pp 233-7)
radiation effects on count of, in peripheral blood of rats following whole-body exposure, dose and time dependence of γ, 26:53483
radioinduced aberrations of chromosomes in human, evaluation for use as dosimeter for populations following nuclear explosion, 26:53397 (FOA-4-4500-A-3)
radioinduced aberrations of chromosomes in, of human peripheral blood following exposure of stomach during diagnostic radiography, x, 26:53427
radioinduced chromosome aberrations in peripheral, of medical radiography personnel, incidence of x, 26:53428

LEVEL INDICATORS
performance of, using time domain reflectometry for liquids in tanks, 26:53306 (RFP-1902)

LIGASES
role of DNA ligase in repair of uv-irradiated DNA in microorganisms, 26:53351

LIGHT
conference on light scattering in solids, Paris, France, 7/71, 26:55041
photoelectric counting statistics of Gaussian, effect of spatial coherence on, 26:55506 (COO-3120-2)
production in electron beam motion through crystal, laser modulation in Schwarz--Hora effect for, (T), 26:54245 (IS-T-531)

LIGHTNING
electron energy deposition in water vapor in, (E/T), 26:54033

LIMERICK POWER REACTOR, UNIT 1
environmental effects of, requested additional data on, 26:55335 (DOCKET-50352-28)

LIMERICK POWER REACTOR, UNIT 2
environmental effects of, requested additional data on, 26:55335 (DOCKET-50352-28)

LINEAR ACCELERATORS
beam instability in traveling wave electron, effects of injection parameters on transverse, 26:53758
beam preinjector system for I-100, power supply for, 26:53751(T) (BNL-tr-498)
cavity resonators for electron, surface condition of niobium for superconducting rf, 26:53748
experimental facility for x radiotherapy at 10-MeV electron, depth dose data and isodose curves for, 26:53799
microwave matching of waveguide and accelerator tubes at Risoe 10-MeV electron, 26:53746 (RISO-M-1518)

LIPIDS
metabolism in Bacillus licheniformis, effects of fatty acid structure and temperature on, 26:55622 (UCLA-12-879)

LIQUID FLOW
magnetohydrodynamic electrically conducting viscous, agitated by oscillating plane in induction field, (T), 26:54161
magnetohydrodynamic incompressible viscous, due to time-varying motion of infinite flat plate, (T), 26:54158
magnetohydrodynamic, electromagnetic coupling of two one-dimensional laminar viscous, (T), 26:54160

LIQUID METAL FAST BREEDER REACTOR
control rods for, reactivity worths and γ heating of boron and tantalum, (E), 26:55134 (CONF-720901-(Bks.1 and 2), pp 579-98)
criticality measurements on ZPPR-3 core mockups of, program for, 26:55114 (CONF-720901-(Bks.1 and 2), pp 724-38)
Doppler reactivity feedback in, measurements of transient, 26:55123 (CONF-720901-(Bks.1 and 2), pp 986-1005
fuel assemblies for, design of Failed Fuel Mockup for thermal and hydraulic testing of, 26:55191 (ORNL-TM-3656)
fuel assemblies for, Fuel Failure Mockup measurements of coolant temperature oscillations in, 26:55192 (ORNL-TM-3761)
fuel element bundles for, effects of configuration and flow blockage area on heat transfer coefficients and temperature distribution in, (E/T), 26:55207(R) (ORNL-TM-3900)
fuel element bundles for, Failed Fuel Mockup facility for testing, 26:55207(R) (ORNL-TM-3900)
fuel elements for, development of stainless steel clad plutonium oxide (PuO_2)--uranium oxide (UO_2), 26:55189(R) (GEAP-10028-39)
fuel reprocessing for, development of aqueous methods

for, 26:53082 (ORNL-4794, pp 15-25)
- fuels for, radiation properties and shielding requirements of, pp. 22-3, 26:53082 (ORNL-4794, pp 15-25)
- physics calculations for, effects of fast neutron multigroup cross section generation methods on, 26:55113 (CONF-720901-(Bks.1 and 2), pp 211-28)
- physics parameters of, benchmark measurements on, 26:55117 (CONF-720901-(Bks.1 and 2), pp 809-21)
- physics parameters of, program for benchmark measurements on, 26:55116 (CONF-720901-(Bks.1 and 2), pp 789-808)
- shielding for, design of experiments for development of, 26:55145(R) (GEAP-13822-1)

LIQUIDS
- levels in tanks, performance of time domain reflectometry for measuring, 26:53306 (RFP-1902)
- pair potential in, from exact Born-Green equation, 26:55516 (COO-3161-4)

LITHIUM
- distribution between liquid bismuth--lithium alloys and molten lithium chloride, p. 4, 26:53081 (ORNL-4794, pp 1-14)
- performance as coolant for fusion reactor blankets, thermodynamic evaluation for, 26:54827 (IPP-4/97)
- performance as toroidal fusion reactor coolant, stress analysis for determining, (T), 26:54825 (CLM-R-116)
- separation from salt solutions by synergistic extraction using β-diketone and trioctylphosphine oxide, p. 57, 26:53084 (ORNL-4794, pp 54-62)
- sodium-ion reactions with, two-state impact-parameter calculations of total cross sections for charge exchange in, 26:54127

LITHIUM CHLORIDES
- LiCl--UCl$_3$--UCl$_4$, melting point diagrams for, 26:53721

LITHIUM FLUORIDES
- helium-atom elastic scattering by, diffraction intensities for, calculated using pairwise interaction, 26:54089
- neon-atom scattering by surfaces of, calculation of angular distributions from, as functions of beam temperature and angle and plane of incidence, 26:54088
- neon-atom scattering by surfaces of, determination of potential parameters from data on, 26:54087
- radioinduced color centers in, by 10- to 50-keV electron beams, (E), 26:54973 (FRNC-TH-210)
- BeF$_2$--LiF, thermodynamic evaluation for use as fusion reactor coolant, 26:54827 (IPP-4/97)

LITHIUM HYDRIDES
- analysis for impurities from production process by activation, 26:52894 (CEA-R-4338)
- fabrication for space-reactor shields, facility for, 26:54949 (NASA-TM-X-2440, pp 92-7)
- neutron transmission measurements in aluminum-clad slabs of, analysis of Shield Test Facility, 26:54944 (NAA-SR-Memo-8597)
- production of single crystals of, tracer and activation studies of impurities occurring in, 26:52894 (CEA-R-4338)

LITHIUM IONS
- effects on budding haploid yeast cells, sensitivity to lethal, 26:53368
- reactions with hydrogen molecules, quantum mechanical calculations of vibrational excitation in, using coupled Volterra equations, 26:54133

LITHIUM ISOTOPES Li-6
- deuteron reactions (d,n) at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)
- effects on electrophoretic behavior of lithium in sulfuric acid solution, 26:52967
- electron scattering with deuteron emission, cross-section calculations using Born approximation, (T), 25:54546
- helium-3 reactions (He-3,αp) at 1.54 MeV, asymmetric proton yields for, (E), 26:54540
- meson (π^-) capture by, elementary particle theory for nuclear currents in, (T), 26:54238 (LYCEN-7211)
- neutron total cross section at 0.7 to 30 MeV, (E), 26:54656(R) (COO-3058-21)
- nuclear form factors in α--d and ^{3}He--t channels, cluster-model calculations of, (T), 26:54532
- reactions (Li-6,d) with nickel-58 at 38 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 26:54586
- reactions (Li-6,d) with nickel-64 at 38 MeV, cross sections for, (E), 26:54586
- reactions (Li-6,d) with nuclei, DWBA treatment of, (T), 26:54706
- reactions (Li-6,t) with nitrogen-15 at 30 MeV, angular distributions and energy spectra from, (E), 26:54549

LITHIUM ISOTOPES Li-7
- deuteron reactions (d,n) at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)
- effects on electrophoretic behavior of lithium in sulfuric acid solution, 26:52967
- reactions (Li-7,t) with nitrogen-15 and oxygen-16, finite-range DWBA analysis of, (T), 26:54708
- reactions (Li-7,t) with nuclei, DWBA treatment of, (T), 26:54706

LITHIUM SULFATES
- analysis for impurities, spectrographic, 26:52935(R) (MLM-1888)

LIVER
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- radioisotope retention in, of mammals, mechanisms for americium-241 and plutonium-239, 26:53526(T) (BNWL-tr-71)
- scintiscanning of human, for diagnosis of neoplasms, use of gamma camera in, 26:53214

LUNAR MATERIALS
- analysis for cadmium and indium by neutron activation following separation from other elements, 26:52906
- cosmic-ray production of radionuclides in, (E/T), 26:53860

LUNGS
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- biochemical studies on pulmonary surfactant, 26:55565(T) (LF-tr-72)
- plutonium removal from, of monkeys following inhalation as oxide, effectiveness of pulmonary lavage for, 26:53528(T) (LF-tr-71)
- radiation isodose curves for, cobalt-60 gamma and 35-MeV electron, 26:54901
- sorption of toxic metals, 26:55634 (UR-3490-136)

LUTETIUM
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

LUTETIUM ISOTOPES Lu-175
- proton inelastic scattering at 3 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following, (E/T), 26:54646

LYMPH SYSTEM
- radioinduced injuries of, in young chickens following acute sublethal exposure, proton, 26:53457 (NASA-TM-X-2440, pp 659-64)

LYMPHOCYTES
- radiation effects on count of human, following extracorporeal exposure of blood, effects of dose on, 26:53440
- radiation effects on production of, in patients during therapy of mammary neoplasms, relation of thymus exposure to, 26:53432
- radioinduced aberrations of chromosomes in human, dose response relationships, evaluation for use as biological dosimeters, 26:53420
- radioinduced chromosome aberrations in cultured human, effects of dose on frequency of x, 26:53355

LYSINE
- transport of l, by isolated chick intestinal epithelial cells, 26:55636 (UR-3490-177)

M

MACHINE TOOLS
- bearings for production, design and fabrication of gas, 26:53113 (Y-DA-4541(Rev.1))

MAGNESIUM
- determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
- determination in organometallic compounds using oxine method after combustion, gravimetric or titrimetric, 26:52930
- neon-ion reactions at 0.7 to 4 MeV with, neon isotope effects on cross sections for K-shell ionization in, (E), 26:54114
- oxygen ion reactions at 21 MeV, Kα x-ray spectra from, (E), 26:54467(R) (ORO-2972-204)
- spectral lines in Vega due to, (E), 26:53887
- superconducting transition temperature for pure, extrapolated from Mg--Cd data, 26:54444

MAGNESIUM ALLOYS AND SYSTEMS
- Cd--Mg, superconductivity in, (E), 26:54444
- Mg--Sb, lattice heat capacity of intermetallic Mg$_3$Sb$_2$, at 20 to 298°K, 26:53637 (LBL-101)

MAGNESIUM IONS
- scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139

MAGNESIUM ISOTOPES Mg-22
- energy levels from neon-20 (He-3,nγ) reactions, lifetimes and spin--parity assignments for, (E), 26:54559
- energy-level transitions from neon-20 (He-3,nγ) reactions, branching and multipole mixing ratios for, (E), 26:54559

MAGNESIUM ISOTOPES Mg-24
- alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
- deuteron elastic and inelastic scattering at 12.1 MeV, coupled-channels and DWBA analyses of differential cross sections and analyzing powers from polarized, (E), 26:54557
- energy levels of, projected Hartree--Fock and shell-model calculations of spins of, (T), 26:54553
- muon (μ^-) capture by, γ-ray yields from, (E), 26:54555
- neutron radius of, determination from α elastic scattering, (E), 26:54547
- nuclear deformation from polarized deuteron elastic and

inelastic scattering, (E), 26:54557
proton elastic and inelastic scattering at 9.7 MeV, polarization in, (E), 26:54467(R) (ORO-2972-204)
proton inelastic scattering by, coupled-channel treatment with projected Hartree--Fock wave functions, (T), 26:54565

MAGNESIUM ISOTOPES Mg-25
energy levels from aluminum-27 (p,He-3) reactions, (E), 26:54551 (COO-535-673)

MAGNESIUM ISOTOPES Mg-26
proton reactions (p,t) at 26 MeV, Hauser--Feshback calculation of angular distributions for, (T), 26:54556

MAGNESIUM OXIDES
fabrication by hot isostatic pressing, 26:53578
radioinduced defects in, comparison of explosive shock-induced defects with, 26:54983
sintering of powders of, mechanism of material transport by dislocation motion in, 26:53620

MAGNET COILS
design for fusion reactor technology, summary of conference on, 26:54829 (ORNL-TM-3953)
design of conventional--superconducting 250-kG, for continuous operation, 26:54466
processing evaluation of magnetic products, 26:55470 (BDX-613-518(Rev.))

MAGNETIC FIELDS
atlas of coronal, (E), 26:53955
compression by implosion process, energy-transfer efficiency in, 26:54781
diffusion of solar, in weak-plage regions, (E), 26:53933
direction of interplanetary, relation to polar-cap electric-field distributions, (E), 26:54062
effects of intense, on properties and electronic structure of atoms, (T), 26:54144
effects on electric fields in closed-electron-drift accelerators, 26:53743
effects on plasma heating by laser, (T), 26:54760
intensity depression in magnetotail near 60 R/sub E/ due to diamagnetic effect of plasma sheet, effect of geomagnetic activity on, (E), 26:54058
measurements in extended magnetotail at approximately 1000 R/sub E/, (E), 26:54074
origin of galactic, primordial model for, (T), 26:53975
production of megagauss, methods for, 26:54834
spectral line formation in solar, mean depth of, (T), 26:53944
structure of interplanetary, in solar-flare-associated solar-wind disturbances, (E/T), 26:54076

MAGNETIC MATERIALS
conference, digests of 1971 INTERMAG, Denver, April 13 to 16, 1971, 26:55028

MAGNETIC MIRROR MACHINES
atomic beam injection into deuterium--tritium, penetration properties of, (T), 26:54757
ion beam injection into deuterium--tritium, penetration properties of, (T), 26:54757
plasma confinement in hybrid fields, with quadrupole and quadrupole-cusp geometries, 26:54756
plasma instabilities in, research on, (T), 26:54807(R) (COO-3497-2)
plasma stabilization in, method and apparatus for, 26:54823(P)

MAGNETIC RECORDING SYSTEMS
conference, digests of 1971 INTERMAG, Denver, April 13 to 16, 1971, 26:55028

MAGNETIC STORMS
correlation of expansion phase of magnetospheric substorm with Pc-5 micropulsations at synchronous equatorial orbit, statistical characteristics of, 26:54036
development of magnetospheric substorm, ground-based and satellite coordinated observations of, (E), 26:54061
development of magnetospheric substorms, May 2 and May 5, 1970, (E), 26:54060
development of magnetospheric substorms, physical mechanism for growth and expansion phases, (T), 26:54051
effect on average behavior of total electron content, peak density, and slab thickness in midlatitude F region, (E), 26:54040
morphology of polar substorms in evening high latitudes, relation of partial ring currents with space--time, (E), 26:54023
relation of magnetospheric substorms with interaction of Pc-1 and 2 with Pc-5 micropulsations at synchronous orbit, (E), 26:54035
solar-flare proton-to-alpha ratios during, (E), 26:53966

MAGNETISM
conference, digests of 1971 INTERMAG, Denver, April 13 to 16, 1971, 26:55028

MAGNETOHYDRODYNAMIC GENERATORS
description of low-temperature, for production of electricity, 26:53108(P)
development for electric power generation, 26:55086
electron density relaxation in ducts of non-equilibrium, 26:53104
end power losses in channels, determination of magnetic field extension profile for reducing, (T), 26:53099
performance of liquid metal, effects of Hall current and heterogeneity on, 26:53105
performance of, using cesium--neon working fluid, (T), 26:53091 (IPP-IV-36)
pressure drop in, using liquid mercury working fluid, 26:53106

MAGNETOSHEATH
geomagnetic sudden-impulse propagation in, origin and speed of, (E), 26:54055

MAGNETOSPHERE
bow-shock interaction with interplanetary double-shock ensemble, MHD theory for, 26:54073
charged-particle energy distribution in plasmasphere during solar eclipse, dependence of equilibrium potential of satellite surface material on, (T), 26:54054
charged-particle flux measurements in ATS-5 satellite at synchronous altitude, effects of magnetic activity on low-energy, 26:54045 (NASA-TM-X-2440, pp 530-8)
dynamics and structure of, from solar-wind and interplanetary electron measurements on Apollo-15 subsatellite, (E/T), 26:54072
electric-field distributions in, relation to interplanetary magnetic-field direction, polar-cap, (E), 26:54062
electric-field induction in, by slowly decaying ring current, (T), 26:54063
electromagnetic-wave propagation in homogeneous, nonlinear theory of monochromatic circularly polarized ulf and vlf, (T), 26:54050
electron dynamics observed at balloon altitudes in, conjugate features of, (E), 26:54020
geomagnetic-field pulsations at polar cusp, occurrence of latitude-dependent Pc-4 and Pc-5, (E), 26:54034
magnetic substorms in, manifested by DP-2 mode in polar cap, (E/T), 26:54053
magnetic-storm development in, ground-based and satellite coordinated observations of substorm, E), 26:54061
magnetic-storm development in, physical mechanism for growth and expansion phases of substorm, (T), 26:54051
magnetic-substorm onset in, characteristics of May 2 and May 5, 1970 slowly developing, (E), 26:54060
magnetosonic waves in, nonlinear, (T), 26:53941
particle cutoff-rigidity calculations for Fort Churchill, Canada, daily variations of electron and proton, (E/T), 26:54065
phenomena of, from simulated steady-flow interaction of charged particles with geomagnetic dipole field, (E), 26:54056
phenomena of, relation with creation of polar auroras, (E/T), 26:54043
proton measurements with energies down to 12.4 keV over polar caps following Mar. 21, 1969 solar-particle event, solar-flare, (E), 26:54071
solar-wind plasma in boundary layer of, upper limit of torque exerted in coupling to ionosphere, 26:54075
whistler propagation in, comparison of quasi-monochromatic helical-wave evolution in plasma with monochromatic, (E/T), 26:54868

MAGNETOTAIL
configuration of distant, association with solar-particle access to polar-cap regions from interplanetary space, (T), 26:54069
electric current system in, determination of contributions from magnetization, curvature drift, and gradient drift to total, (T), 26:54064
electron spatial distribution in plasma sheet at 24 R/sub E/, greater than equal to 50-keV, (E), 26:54057
electrostatic-wave interactions with electrons in current sheet, one-dimensional model of resonant, (T), 26:54052
geomagnetic sudden-impulse propagation in, origin and speed of, (E), 26:54055
plasma flow at inner edge of plasma sheet, proposed model of, (T), 26:54051
plasma-sheet characteristics near 60 R/sub E/ in, spatial distributions of averaged magnetic-field magnitude and plasma energy density, (E), 26:54058
plasma-sheet structure in, magnetic balance of stresses in, (T), 26:54059
solar-wind and plasma measurements in expected region at approximately 1000 R/sub E/, Pioneer-7 simultaneous, (E), 26:54074

MAGNETS
design and fabrication of high-performance window frame-type, for magnetic-lens spectrometers, 26:53296 (CEA-N-1539)
design for fusion reactor technology, summary of conference on, 26:54829 (ORNL-TM-3953)
design for TRIUMF, history of, 26:53749
fault protection for ISABELLE, method for, 26:53765 (BNL-16816)
materials for superconducting, review of developments in and radiation effects on, 26:54464 (ORNL-TM-3921)
operation of superconducting, use of liquid helium bath level indicator for observing normalcies in, 26:54463 (ORNL-TM-3886)

MAINE YANKEE POWER REACTOR
coolant loss accidents in, fuel element cladding peak temperature for, 26:55312 (DOCKET-50309-68)
operation of, license for, 26:55313 (DOCKET-50309-69)
technical specifications for, 26:55313 (DOCKET-50309-69)

MALEIMIDE, N-ETHYL-
radiosensitizing effects of, on DNA, review of x, 26:53352

MALFORMATIONS
- radioinduced digital, in fetal mice following whole-body exposure in utero, effects of developmental stage, dose, and dose rate on incidence of γ, 26:53471
- radioinduced, in brain of children following prenatal exposure from maternal therapy during pregnancy, radium and x, 26:53437
- radioinduced, in brain of mice and rats following prenatal exposure, effects of developmental stage at exposure on, 26:53437
- radioinduced, in rat embryos following exposure in utero, role of chromosome damage and repair errors in incidence of fast neutron, 26:53470

MAMMALIA
- radioisotope retention in liver of, mechanisms for americium-241 and plutonium-239, 26:53526(T) (BNWL-tr-71)

MAN
- iodine-131 content of milk in women following injection of labeled pharmaceuticals for diagnostic scanning of kidneys, lungs, and placenta, 26:53524
- iodine-131 uptake from milk by children, age dependence of, 26:53506(T) (ORNL-tr-2629)
- lymphoma incidence in, residing in Hiroshima and Nagasaki in relation to radiation exposure dose, 26:53432
- radiation dose distribution in tissues of, following administration of gold-198 or phosphorus-32 colloids for treatment of malignant pleural effusions, time dependence of beta and gamma, 26:53509
- radiation dose distribution in, as a function of time following inhalation of plutonium-239 oxide aerosols, guidelines for estimation of, 26:53511 (TID-26142)
- radiation dose distribution in, following whole-body exposure, role of quality factors and fluence in calculating, 26:53404 (NASA-TM-X-2440, pp 424-34)
- radiation dose distribution in, from sealed radium-226 sources used for implant therapy, γ, 26:53409 (STI/PUB-295(Vol.4))
- radiation dose to body and lungs of, following ingestion, inhalation, or immersion in cloud of xenon isotopes, methods for estimation of, 26:53510
- radiation dose to body and lungs of, following ingestion, inhalation, or immersion in cloud of krypton isotopes, methods for estimation of, 26:53510
- radiation dose to bone marrow of, following whole-body exposure, use of lithium fluoride dosimeters in Alderson Rando phantom for calculation of γ, 26:53406 (NASA-TM-X-2440, pp 974-80)
- radiation dose to children during diagnostic radiography, methods for reducing x, 26:53417
- radiation dose to gonads and stomach wall of, during diagnostic radiography of stomach, relation to induction of chromosome aberrations in peripheral blood leukocytes, x, 26:53427
- radiation dose to respiratory tract tissues of, following inhalation of radon-222 and radon-220 daughter products as aerosols, use of ICRP lung model for estimation of alpha, 26:53508
- radiation dose to, during diagnostic radiographic examinations, phantom measurements in bone marrow, gonads, and skin, x, 26:53434
- radiation dose to, during diagnostic radiography, phantom studies for predetermination of absorbed x, 26:53416
- radiation dose to, during high-energy therapy, use of thermoluminescent dosimeters to determine electron, 26:53415
- radiation dose to, during intravenous arteriography using metastable technetium-99-labeled pertechnetate, γ, 26:53542
- radiation doses to crew and passengers at SST altitudes from cosmic and solar rays, 26:54888 (NASA-TM-X-2440, pp 894-901)
- radiation effects on ability of, to perform under stress following continuous or protracted fractionated exposure, effectiveness of pulmonary-impedance power spectral analysis for determining γ, 26:53401 (NASA-TM-X-2440, pp 238-48)
- radiation effects on brain of, following hypophysectomy using proton beams, 26:53446
- radiation effects on immune reactions in, during therapy, 26:53432
- radiation effects on leukocyte count in, following whole-body exposure for therapy of leukemias and lymphosarcomas, multifactorial analysis of dose and time dependence of, 26:53400 (NASA-TM-X-2440, pp 233-7)
- radiation effects on lymphocyte production in, during therapy of mammary neoplasms, relation of thymus exposure to, 26:53432
- radiation effects on oral tissues of, during tumor therapy in head and neck region, construction of prosthesis shield for protection against, 26:53410
- radiation effects on rate of recovery from traumatic injuries, whole-body, 26:53419
- radiation effects on survival of neoplastic cells in, relation of anoxia to response to chemical radiosensitizers during fractionated dose therapy, 26:53430
- radiation effects on visual response of, following retinal exposure, effects of particle flux density on charged helium ion, 26:53403 (NASA-TM-X-2440, pp 416-22)
- radiation hazards to, during fluoroscopic radiographic examination, effects of image intensifier performance on, 26:53421
- radiation hazards to, during space flight, extrapolation of clinical data on dose-response-time relations to estimate, 26:53402 (NASA-TM-X-2440, pp 398-415)
- radioinduced aberrations of chromosomes in leukocytes of, evaluation for use as biological dosimeter following nuclear explosion, 26:53397 (FOA-4-4500-A-3)
- radioinduced aberrations of chromosomes in lymphocytes of, evaluation for use as biological dosimeters, 26:53420
- radioinduced chromosome aberrations in bone marrow cells of, following local therapeutic exposure, effects of dose and time on frequency of γ, 26:53445
- radioinduced chromosome aberrations in lymphocytes of, exposed to residual fallout from atomic bombing of Nagasaki, 26:53414
- radioinduced dermatitis in, following local exposure for therapy of underlying neoplasms, γ, 26:53433
- radioinduced gastrointestinal distress in, following continuous or protracted fractionated whole-body exposure, effectiveness of pulmonary-impedance power spectral analysis for determining γ, 26:53401 (NASA-TM-X-2440, pp 238-48)
- radioinduced inflammation of salivary glands of, following therapy, 26:53423
- radioinduced inhibition of spermatogenesis in, following exposure of testes, dose and time dependence of x, 26:53399 (NASA-TM-X-2440, pp 229-32)
- radioinduced injuries in skin of, following chronic therapeutic exposure, relation of DNA and RNA contents and ultrastructural changes in epidermis during x, 26:53441
- radioinduced injuries in tissues of, following therapy of neoplasms, surgical treatment of local, 26:53438
- radioinduced injuries in, clinical aspects of pathogenesis and recovery from, relevance of animal studies to, 26:53411
- radioinduced injuries of skin of, dose-response relationships for, 26:53431
- radioinduced injuries of spinal cord tissues in, following therapy, etiology of, 26:53429
- radioinduced injuries to heart in, following therapy of esophageal carcinomas, electrocardiogram studies of γ and x, 26:53439
- radioinduced injuries to optic nerve and retina of, following therapy of nasal cavity and paranasal sinus carcinomas, dose and time dependence of γ and x, 26:53444
- radioinduced leukemia and other neoplasms in, following exposure in utero, review of epidemiological studies on, 26:53435
- radioinduced light flashes on retina of dark-adapted eye of, use of virtual-quanta method to calculate frequency of charged particle, 26:53405 (NASA-TM-X-2440, pp 767-72)
- radioinduced lymphopenia in, following extracorporal exposure of blood, effects of dose on extent and rate of development of, 26:53440
- radioinduced malformations of brain of children following prenatal exposure from maternal therapy during pregnancy, radium and x, 26:53437
- radioinduced myelopathy in cervical vertebrae of, following therapy, role of vascular changes in pathogenesis of γ, 26:53425
- radioinduced necrosis of jaw bones of, following therapy of neoplasms of head and neck region, 26:53418
- radioinduced neoplasms in, relation of radioisotope content of environment to, 26:53523
- radioinduced neoplasms in, surviving atomic bombing of Nagasaki 10 to 25 years following exposure as children, effects of dose on incidence of, 26:53442
- radioinduced thrombocytopenia in, following intravenous injection of colloidal gold-198 for therapy of liver involvement in Hodgkin's disease, relation of dose fractionation and protraction to β and γ, 26:53507
- radioisotope transport through environment to, 26:53521
- radioisotope transport to, following release to environment, 26:53522
- strontium-90 content of bones of, in France during 1970, age dependence of, 26:53520 (CEA-N-1535)

MANGANESE
- abundance in 21 sharp-lined nonvariable cool peculiar A stars, (E), 26:53882
- determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
- determination in minerals by direct measurement of oxide ratios, spectroscopic, 26:52932
- determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- determination in water, effects of large amounts of copper on spectrographic, 26:52927
- effects on cohesion and structural stability of aluminum oxide composites with iron and nickel, 26:53589
- separation from iron by solvent extraction using Aliquat-336, 26:53076

MANGANESE ALLOYS AND SYSTEMS
- Mn--Mo--Ni--steel, mechanical properties of pressure vessel, effects of quenching, tempering, and heat

  treatment on, 26:53646
MANGANESE BORIDES
  ferromagnetism of MnB$_2$, exchange model of weak, (T), 26:55048
MANGANESE FLUORIDES
  superexchange interactions in undoped and ferrous-doped, study using pressure shift of far-infrared-active magnetic mode frequency, 26:55510 (COO-3151-6)
MANGANESE ISOTOPES Mn-50
  beta decay of, electromagnetic corrections to ft values for, (T), 26:54713
MANGANESE ISOTOPES Mn-53
  cosmic-ray production in lunar rocks, (E/T), 26:53860
MANGANESE ISOTOPES Mn-54
  content in conversion products of irradiated 300 series stainless steels, 26:55165 (CONF-710959-, Paper 9)
  content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)
  distribution in Columbia River, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)
  production of carrie-free, from neutron-irradiated iron by solvent extraction using Aliquat-336, 26:53076
  uptake by hair following intravenous injection in rats, correlation with body burden and, 26:53529 (NASA-TM-X-2440, pp 982-8)
MANGANESE ISOTOPES Mn-55
  energy levels from (d,α) and (p,He-3) reactions, spin--parity assignments for, (E), 26:54584
  energy levels in K-mesic atoms, resonance coupling between atomic and nuclear, (E), 26:54568 (LBL-776)
MANGANESE OXIDES
  superexchange interactions in, study using pressure shift of far-infrared-active magnetic mode frequency, 26:55510 (COO-3151-6)
MANY BODY PROBLEM
  energy variational principle in, derivation of explicit equations for linked cluster amplitudes for, (T), 26:54735
  Faddeev equations for three-body, method of moments for solution of, (T), 26:54715
  fermion operators in, transition operator boson expansion of, (T), 26:54682 (COO-3071-10)
  symmetry groups for orbital angular momentum in, orthogonal and unitary, 26:55072
  three-nucleon problem with large-momentum cutoff, solutions of Skornyakov--Ter-Martirosyan equations for, 26:54344 (ITF-72-10-P)
  variational transformation for nuclear, 26:54718
MARITIME NUCLEAR STEAM GENERATOR
  coolant for, radiation dose from oxygen activation in secondary, (T), 26:55356 (CONF-720901-(Bks.1 and 2), pp 471-9)
MARITIME PRESSURIZED-WATER REACTOR
  fire protection procedures for, inadequacies in, 26:55357 (DOCKET-50238-92)
MARS (PLANET)
  dayglow emission from atmosphere of, relation with electron impact excitation cross sections and energy degradation in carbon monoxide, (E/T), 26:54008
  ultraviolet radiation data from Mariner in atmosphere of, relation with electron reactions with carbon dioxide below 100 eV, (E/T), 26:54009
MASERS
  parametric down-conversion in astrophysical, (T), 26:53909
MASS SPECTROGRAPHY
  analysis of solids using ion emission induced by electron beam, 26:54084
  conference on, Ispra, Italy, Sept. 1--3, 1971, 26:52893 (EUR-4765)
MASS SPECTROMETERS
  data acquisition system for, design and performance of, 26:53324
  ion source for, vacuum lock for thermal-ionization, 26:53318
MATERIALS TESTING, NONDESTRUCTIVE
  facility for evaluation of, description of, 26:55221 (NP-19338(Vol.1))
  methods for reactor pressure vessel, development of in-service, 26:55222(R) (NP-19338(Vol.2))
  methods for reactor pressure vessel, development of in-service, 26:55221 (NP-19338(Vol.1))
MATHEMATICAL PHYSICS
  analytic extrapolation from boundary and interior points, functional integration approach to, 26:55079
  Bogolyubov kinetic equations in, method for solution in Banach space, (T), 26:55067 (ITF-72-9-E)
  fermion operators in, transition operator boson expansion of, (T), 26:54682 (COO-3071-10)
MATHEMATICS
  covariance analysis in, computer program for, 25:55567 (MLM-1847)
  gamma distribution, computer programs for significant digit incomplete gamma ratios for, 26:55604 (SC-DR-720303)
  Pade approximant for series expansion, invariance and convergence properties of, 26:55475 (BNL-17110)
  Pade approximant for series expansion, two recent generalizations of, 26:55557 (LA-DC-72-879)
  Pade approximants for Legendre series, nonlinear, 26:55556 (LA-DC-72-873)
  Pade approximants for series expansions, generalizations of, 26:55555 (LA-DC-72-872)
  Pade approximants, effect of random errors in terms of power series on convergence of, 26:55558 (LA-DC-72-880)
MATTER, ANTI-
  flux of cosmic anti-alpha particles at 0.3 to 3.0 GeV/N, (E), 26:53825
MEATS
  analysis for mercury by neutron activation, 26:52911
  beef, radiation processing of vacuum packaged, effects on surface color, effects of subsequent exposure to air on γ, 26:53346
  cesium-137 content of Norwegian, 1956 to 1970, 26:53161
MEDICAL PERSONNEL
  radiation dose to bone marrow and eyes of, during arteriography, x, 26:53443
  radiation dose to fingers of, during injection of radioisotopes, phantom studies of β and γ, 26:53424
  radioinduced chromosome aberrations in peripheral leukocytes of radiography, incidence of x, 26:53428
  training programs for medical physicists, 26:55461 (ACRH-1000-350)
  training programs for medical physicists, 26:55460 (ACRH-1000-349)
MEDICINE
  research in India, 1971--1972, 26:55452(R) (NP-19407)
  uses of radiation and radioisotopes in, IAEA-WHO survey on world-wide, 26:53413
  uses of radioisotopes in, training course manual, 26:53541 (TID-26128)
MEIOSIS
  effects on γ-radiosensitivity of grain moth oocytes, 26:53499
MEMBRANES
  phase transitions in mitochondrial, spin label studies on, 26:55504(R) (COO-2223-1)
MENDOCINO POWER REACTOR, UNIT 1
  auxiliary systems for, revised data on, 26:55347 (DOCKET-50398-18)
  containment system for, revised data on, 26:55347 (DOCKET-50398-18)
  engineered safeguards for, revised data on, 26:55347 (DOCKET-50398-18)
  fire protection system for, revised data on, 26:55347 (DOCKET-50398-18)
  instrumentation for, revised data on, 26:55347 (DOCKET-50398-18)
  piping systems for, stress limits for, 26:55347 (DOCKET-50398-18)
  power conversion system for, requested data on, 26:55347 (DOCKET-50398-18)
  power transmission lines for, environmental impact of, 26:55348 (DOCKET-50398-19)
  pumps for, stress limits for, 26:55347 (DOCKET-50398-18)
  radioactive waste system for, revised data on, 26:55347 (DOCKET-50398-18)
  structures for, earthquake stress limits for Class 1, 26:55347 (DOCKET-50398-18)
  structures for, stress limits for support, 26:55347 (DOCKET-50398-18)
  valves for, stress limits for, 26:55347 (DOCKET-50398-18)
MENDOCINO POWER REACTOR, UNIT 2
  auxiliary systems for, revised data on, 26:55347 (DOCKET-50398-18)
  containment system for, revised data on, 26:55347 (DOCKET-50398-18)
  engineered safeguards for, revised data on, 26:55347 (DOCKET-50398-18)
  fire protection system for, revised data on, 26:55347 (DOCKET-50398-18)
  instrumentation for, revised data on, 26:55347 (DOCKET-50398-18)
  piping systems for, stress limits for, 26:55347 (DOCKET-50398-18)
  power conversion system for, requested data on, 26:55347 (DOCKET-50398-18)
  power transmission lines for, environmental impact of, 26:55348 (DOCKET-50398-19)
  pumps for, stress limits for, 26:55347 (DOCKET-50398-18)
  radioactive waste system for, revised data on, 26:55347 (DOCKET-50398-18)
  structures for, earthquake stress limits for Class 1, 26:55347 (DOCKET-50398-18)
  structures for, stress limits for support, 26:55347 (DOCKET-50398-18)
  valves for, stress limits for, 26:55347 (DOCKET-50398-18)
MERCURY
  determination in environmental samples by neutron activation, 26:52897 (CONF-721010-3)
  determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  determination of trace amounts of, in foodstuffs by neutron activation, 26:52911
  determination of trace amounts of, in tobacco by neutron activation, 26:52907
  diffusion of bismuth and lead in, at 25°C, 26:53636 (IS-T-554)
  distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)

electron reactions at 25 to 180 keV with, distorted-wave calculations of differential cross sections for excitation and spin polarization of emitted electrons from, 26:54106
toxicity in rats following subcutaneous injection as chloride, prophylactic effects of ascorbic acid on, 26:55497 (COO-1630-29)
MERCURY (PLANET)
perihelion advance of, comparison of experiment with general relativistic predictions for, (E/T), 26:54403
MERCURY ALLOYS AND SYSTEMS
Ar--Hg, ionization of gaseous, 26:53196(R) (COO-323-28)
MERCURY ISOTOPES Hg-203
radiation dose to fingers of medical personnel during injection of, phantom studies of, 26:53424
MESIC ATOMS
resonance coupling in manganese-55 K-, between nuclear and atomic energy levels, (E), 26:54568 (LBL-776)
x-ray spectra from niobium-93 μ^-, (E), 26:54605 (KFK-1602)
MESONS
diurnal variation of cosmic, temperature effects on, (E), 26:53811
form factors in parton model, elastic and inelastic, (T), 26:54311
interactions with baryons, effective Lagrangian model for, (T), 26:54333
interactions with baryons, transition amplitudes, cross sections, and partial-wave decompositions for three-particle final state in, 26:54330
reactions with carbon and lead, model analysis of, (E/T), 26:54529 (RPP/NS-8)
reactions with nuclei at 0.7 to 2 GeV/c, π^-/π^+ cross section ratios for, (E), 26:54529 (RPP/NS-8)
MESONS (eta)
decay eta $\to 3\pi$, model satisfying analyticity, crossing symmetry, and approximate unitarity for, (T), 26:54259
decay eta $\to 3\pi$, Moffat model of meson--meson scattering for, (T), 26:54276
decay eta $\to \gamma + e^+ + e^-$, radiative corrections to, (T), 26:54277
production of eta^0 in $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, cross sections for, (E), 26:54207 (COO-3064-3)
production of S^*, D^0, and E^0 in anti p + p interactions at 1.2 GeV/c, (E), 26:54199
MESONS (K)
decay $K \to 3\pi$, model satisfying analyticity, crossing symmetry, and approximate unitarity for, (T), 26:54259
decay $K \to 3\pi$, Moffat model of meson--meson scattering for, (T), 26:54276
decay $K \to \pi + l + \nu$, Schwarz inequality for slope parameter relation with spectral function of isovector electromagnetic current for, (T), 26:54287 (LBL-766)
decay $K \to \pi + l + \nu$, weak kappa-dominance model for bounds on parameters for, (T), 26:54289
interactions K + p, interference term effects in multiperipheral model for cross section energy dependence, pion multiplicities, and structures in correlation functions for, (T), 26:54329 (NYO-3533-265)
interactions $K + \pi$ at 0.640 to 1 GeV, dispersion relations for S and P waves for resonance behavior of phase shifts for, (T), 26:54315 (JINR-E2-6525)
production in $p + p \to K$ + anything interactions at 12 to 30 GeV/c, Bose distribution and scaling behavior for, (T), 26:54349
production in p + p and $\pi^- + p$ interactions, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
MESONS (K^-)
capture by nuclei, gamma yields for different final states in, (T), 26:54536
decay $K^- \to \mu^- + \pi^0 + \nu$ in hydrogen bubble chamber, branching ratio for, (E), 26:54190
decay $K^- \to \pi^0 + e + \nu$ in hydrogen bubble chamber, branching ratio for, (E), 26:54190
decay $K^- \to \pi^+ + \mu^- + e^-$, test of lepton number assignments from, (T), 26:54296
decay $K^- \to \pi^- + \pi^0 + \pi^0$ in hydrogen bubble chamber, branching ratio for, (E), 26:54190
decay $K^- \to \pi^- + \pi^0$ in hydrogen bubble chamber, branching ratio for, (E), 26:54190
decay $K^- \to \pi^- + \pi^+ + \pi^-$ in hydrogen bubble chamber, branching ratio and slope of Dalitz plot for, (E), 26:54190
interactions $K^- + n \to \Lambda + \pi + K^0$ + anti K^0 at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^-$ + eta at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^-$ + missing mass at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^- + \pi^0$ at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^-$ at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Sigma^0 + \pi^-$ at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions K^- + N, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342
interactions $K^- + p \to$ anti K^0 + n at 1 to 3 GeV/c, scintillation counter study of cross sections and resonance production in, (E/T), 26:54210 (NP-19419)
interactions $K^- + p \to$ anti K^0 + n at 1700 to 2100 MeV, cross sections, polarizations, and angular distributions for, (E), 26:54215
interactions $K^- + p \to$ anti K^0 + n, Regge pole--cut model for, (E/T), 26:54230
interactions $K^- + p \to \Delta^{++} + K^{*-} + \pi^-$ at 10 GeV/c, Veneziano model analysis of, (E/T), 26:54225
interactions $K^- + p \to \Lambda + \pi^0$ at 1700 to 2100 MeV, cross sections, polarizations, and angular distributions for, (E), 26:54215
interactions $K^- + p \to p$ + anti $K^0 + \pi^+ + \pi^- + \pi^- + \pi^0$ at 10 GeV/c, analysis of $K^{*-}(890)$, $\Delta^{++}(1236)$, and ω^0 production in, (E), 26:54225
interactions $K^- + p \to p$ + anti $K^0 + \pi^+ + \pi^- + \pi^-$ at 10 GeV/c, analysis of $K^{*-}(890)$, $\Delta^{++}(1236)$, and rho^0 production in, (E), 26:54225
interactions $K^- + p \to \pi^- + \Sigma^+$, new Regge absorption model for cross sections of, (T), 26:54336
interactions $K^- + p \to \pi^+(\pi^-)$ + anything at 10 GeV/c, differential cross sections and symmetry of π emission in, (E), 26:54222
interactions K^- + p at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
production in $e + p \to e + K^-$ + anything interactions at 6.5 GeV, momentum spectra of, (E), 26:54178
production of K^+--K^- pairs in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
MESONS (K^0)
decay $K^0 \to \pi^+ + \pi^- + \pi^0$, CP violation in, (E), 26:54188
decay $K^0 \to \pi^+ + \pi^-$, wire spark chamber and scintillation counter study of CP violation in time dependence of rates for, (E), 26:54361 (COO-1195-242)
decay $K^0 \to \pi^+ + \pi^-$, wire spark chamber study of CP violation in time decay distributions of, (E), 26:54362 (COO-1195-244)
decay $K_1^0 \to 2\gamma$ relative to $K_2^0 \to \pi^+ + \pi^-$, use of dispersion relation and unitarity in calculation of rate, (T), 26:54295
decay $K_1^0 \to \mu^+ + \mu^-$, lower bound for CP-nonconservation in, (T), 26:54369
decay $K_2^0 \to 3\pi^0$ in xenon bubble chamber, branching ratio relative to $K_2^0 \to \pi^+ + \pi^- + \pi^0$, (E), 26:54187
decay $K_2^0 \to \mu^+ + \mu^-$, lower bound for CP-nonconservation in, (T), 26:54369
decay $K_2^0 \to \pi + l + \nu$, ν/sub e/ and ν/sub mu/ mass upper limits from double magnetic spectrometer study of, (E), 26:54184 (LBL-4)
decay $K_2^0 \to \pi^+ + \pi^- + \gamma$, SU(3) symmetry-breaking model for rate of, (T), 26:54365
decay of K_2^0, search for neutral vector meson in, (E), 26:54291
decay of, effects of T violation in medium on conclusions from apparent T violation in, (T), 26:54366
regeneration $K_2^0 \to K_1^0$ on copper at 500 to 1500 MeV/c, amplitude for, (E), 26:54230
MESONS (anti K^0)
decay anti $K^0 \to \pi^+ + \pi^-$, wire spark chamber and scintillation counter study of CP violation in time dependence of rates for, (E), 26:54361 (COO-1195-242)
decay anti $K^0 \to \pi^+ + \pi^-$, wire spark chamber study of CP violation in time decay distributions of, (E), 26:54362 (COO-1195-244)
MESONS (K^+)
decay $K^+ \to e^+ + \nu + \gamma$, SU(3) symmetry-breaking parameter for, (T), 26:54365
decay $K^+ \to \mu^+ + \nu$, branching ratio for, (E), 26:54186
decay $K^+ \to \pi^0 + e^+ + \nu$, branching ratio for, (E), 26:54186
decay $K^+ \to \pi^0 + \mu^+ + \nu$, branching ratio for, (E), 26:54186
decay $K^+ \to \pi^0 + \mu^+(e^+) + \nu$ in heavy-liquid bubble chamber, form factors, branching ratios, and Dalitz diagrams for, (E), 26:54170 (LAL-1255)
decay $K^+ \to \pi^+ + \gamma + \gamma$, SU(3) symmetry-breaking model for π spectra and rate of, (T), 26:54365
decay $K^+ \to \pi^- + \mu^+ + e^+$, test of lepton number assignments from, 26:54296
decay $K^+ \to \pi^+ + \pi^0 + \pi^0$, branching ratio for, (E), 26:54186
decay $K^+ \to \pi^+ + \pi^0$, branching ratio for, (E), 26:54186
decay $K^+ \to \pi^+ + \pi^- + e^+ + \nu$, Pais--Treiman determination of π--π phase shift from spark chamber study of, 26:54183 (CEA-N-1553)
decay $K^+ \to \pi^+ + \pi^+ + \pi^-$, branching ratio for, (E), 26:54186
interactions K^+ + d at 9 GeV/c in deuterium bubble chamber, analysis of Q region of $K^+\pi^+\pi^-$ mass spectra from, (E), 26:54228
interactions $K^+ + n \to K^0 + p$, Regge pole--cut model for, (E/T), 26:54230
interactions $K^+ + n \to K^+ + \pi^- + p$ at 3.8 GeV/c in deuterium bubble chamber, cross sections and quasi-two-body interaction cross sections for $K^0(890)$ and $K^0(1420)$ production in, (E), 26:54202 (COO-1195-238)
interactions $K^+ + n \to K^+ + \pi^- + p$ at 9 GeV/c, resonance production in, (E), 26:54203 (COO-1428-308)

  interactions $K^+ + n \to p +$ anything at 9 GeV/c in deuterium bubble chamber, proposed experiment for K(1760) and K(2200) production in, (E), 26:54204 (COO-1428-310)
  interactions $K^+ + N$, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342
  interactions $K^+ + p \to K^0 + \pi^0 + \pi^+ + p$ at 5 to 12.7 GeV/c, longitudinal phase space analysis of, (E/T), 26:54226
  interactions $K^+ + p \to K^+ + \pi^- + \pi^+ + p$ at 5 to 12.7 GeV/c, longitudinal phase space analysis of, (E/T), 26:54226
  interactions $K^+ + p \to p + K^0 + \pi^+$ at 1.37 to 2.17 GeV/c, cross sections for, (E), 26:54231
  interactions $K^+ + p \to p + K^+ + \pi^+ + \pi^-$ at 1.37 to 2.17 GeV/c, cross sections for, (E), 26:54231
  interactions $K^+ + p \to \pi^- +$ anything at 12.6 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
  interactions $K^+ + p$ at 0.909 to 1.907 GeV/c, differential and total cross sections for elastic, (E), 26:54211 (RPP/H-95)
  interactions $K^+ + p$ at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
  interactions $K^+ + \pi^0$, Schwarz inequality for cross sections for, (T), 26:54287 (LBL-766)
  production in $e + p \to e + K^+ +$ anything interactions at 6.5 GeV, momentum spectra of, (E), 26:54178
  production of K^+--K^- pairs in three- and four-prong anti $p + p$ interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
MESONS (ω)
  coupling constants for $\gamma\omega$, in relativistic extended quark model, 26:54283
  mixing of ω--phi in Odorico bootstrap model for pseudoscalar meson interactions, (T), 26:54323
  production in $\gamma + p$ interactions at 2 to 7.5 GeV in hydrogen bubble chamber, cross sections for, (E), 26:54175 (SLAC-143)
  production of ω^0 in $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, cross sections for, (E), 26:54207 (COO-3064-3)
  vertex function of nonrenormalizable ωrhoπ interaction, ladder approximation for, (T), 26:54322
MESONS (phi)
  coupling constant for γ phi, in relativistic extended quark model, 26:54283
  mixing of ω--phi in Odorico bootstrap model for pseudoscalar meson interactions, (T), 26:54323
MESONS (π)
  coupling constant for πN from test of analyticity of forward $\pi + N$ charge-exchange amplitude, (T), 26:54337
  dose computations and treatment planning in, therapy, 26:54876 (LA-4874, pp 145-52)
  dose distribution of, in therapy, treatment planning using, 26:54877 (LA-4874, pp 153-61)
  effectiveness for therapy of carcinomas, research programs on, 26:53398 (LA-4874, pp 79-83)
  form factor in $e + N \to \pi + N$ interactions at threshold, method for calculating electromagnetic, (T), 26:54247 (NP-19417)
  form factor of, Schwarz inequality for electromagnetic, (T), 26:54287 (LBL-766)
  form factors of, absence of zeros for electromagnetic, 26:54273
  interactions $\gamma + \pi \to \pi + \pi$ with soft pions, structure of observable amplitudes for, (T), 26:54265
  interactions $K + \pi$ at 0.640 to 1 GeV, dispersion relations for S and P waves for resonance behavior of phase shifts for, (T), 26:54315 (JINR-E2-6525)
  interactions $\pi + d$, recoil and Fresnel corrections to Glauber multiple-scattering model for, 26:54352
  interactions $\pi + N \to \pi + \Sigma(\Lambda)$ near threshold, cross sections and polarization phenomena from PCAC theory, (T), 26:54335
  interactions $\pi + N$ at 4.8 to 20 GeV, double Regge cuts in Regge pole--cut model for charge exchange, (T), 26:54324 (COO-1428-309)
  interactions $\pi + N$ at low energies, current algebra model with physical pions for scattering and energy dependence of S- and P-phase, (T), 26:54339
  interactions $\pi + N$, inequalities between relative phase of amplitudes and polarization in, (T), 26:54340
  interactions $\pi + N$, nonlocal separable potentials for, (T), 26:54724
  interactions $\pi + N$, πN coupling constant from test of analyticity of forward amplitude of charge-exchange, (T), 26:54337
  interactions $\pi + N$, urbaryon rearrangement diagrams for structures in elastic and inelastic, (T), 26:54342
  interactions $\pi + p$ at high energies with polarized target, design of equipment for measuring polarization of recoil protons in elastic, 26:54232
  interactions $\pi + p$ in colliding beams at ISABELLE, feasibility of, (E), 26:54200 (BNL-17069)
  interactions $\pi + p$, interference term effects in multiperipheral model for cross section energy dependence, pion multiplicities, and structures in correlation functions for, (T), 26:54329 (NYO-3533-265)
  interactions $\pi + \pi$ at low energies, Schwarz inequality for p-wave cross sections of, (T), 26:54287 (LBL-766)
  interactions $\pi + \pi$ in $\pi^- + d \to 2p + 2\pi^-$ at 7 GeV/c in deuterium bubble chamber, s- and d-wave phase shifts for, (E), 26:54208 (COO-3065-16)
  interactions $\pi + \pi$, epsilon and S*(980) contributions to broken scale invariance for low-energy theorems of, (T), 26:54319
  interactions $\pi + \pi$, review of dipion production, analyticity, crossing, unitarity, and inelastic channels for, (E/T), 26:54317 (RPP/T-27)
  mass differences of members of A_1, rho, and π isomultiplets, dynamic chiral symmetry and cancellation of divergences in, (T), 26:54321
  production in dual resonance model, statistical approach to calculation of multiple, (T), 26:54300 (ITF-72-53-E)
  production in $e + N \to \pi + N$ interactions at threshold, method for calculating axial nucleon form factor and pion electromagnetic form factor in, (T), 26:54247 (NP-19417)
  production in $p + p \to \pi +$ anything interactions at 12 to 30 GeV/c, Bose distribution and scaling behavior for, (T), 26:54349
  production in proton reactions with emulsion nuclei at 22.6 GeV/c, velocity distribution of secondary, 26:54196
  production in $\pi + p$ and $K + p$ interactions at 10 GeV/c symmetry of momentum distribution in, (E), 26:54222
  reactions with nuclei at 100 to 280 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609
  reactions with nuclei below 3 GeV, intranuclear-cascade evaporation calculations for nonelastic, (T), 26:54727
  scattering by nuclei, analysis of nuclear surface properties by elastic, (T), 26:54722
  vertex function of nonrenormalizable ωrhoπ interaction, ladder approximation for, (T), 26:54322
MESONS (π^-)
  capture by lithium-6, elementary particle theory for nuclear currents in, (T), 26:54238 (LYCEN-7211)
  dose distributions for radiobiology and radiotherapy, radiation transport codes for, (T), 26:54890 (ORNL-TM-3816)
  interactions $\pi^- + d \to 2p + 2\pi^- + m\pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
  interactions $\pi^- + d \to 2p + 2\pi^- + \pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections, upper limit for exotic multipion resonance production, and validity of spectator model for cross sections for Δ^0rho-channel in, (E), 26:54208 (COO-3065-16)
  interactions $\pi^- + d \to 2p + 2\pi^-$ at 7 GeV/c in deuterium bubble chamber, cross sections, upper limit for exotic multipion resonance production, and $\pi + \pi$ scattering phase shifts in, (E), 26:54208 (COO-3065-16)
  interactions $\pi^- + d \to 2p + \pi^+ + 3\pi^- + m\pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
  interactions $\pi^- + d \to 2p + \pi^+ + 3\pi^- + \pi^0$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
  interactions $\pi^- + d \to 2p + \pi^+ + 3\pi^-$ at 7 GeV/c in deuterium bubble chamber, cross sections and upper limit for exotic multipion resonance production in, (E), 26:54208 (COO-3065-16)
  interactions $\pi^- + d$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
  interactions $\pi^- + n$ at 40 GeV/c, average number of produced π^+--π^- pairs, coefficient of nucleon charge exchange, and identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
  interactions $\pi^- + n$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
  interactions $\pi^- + p \to$ eta $+ n$, Regge pole--cut model for, (E/T), 26:54230
  interactions $\pi^- + p \to K +$ anti K at 4 to 40 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
  interactions $\pi^- + p \to \Lambda + K$ at 4 to 40 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
  interactions $\pi^- + p \to \Lambda + K^*(1420)$ at 4.5 and 6 GeV/c, differential cross sections, Λ polarization, and $K^*(1420)$ density matrix elements for, (E), 26:54217
  interactions $\pi^- + p \to \Lambda(1405) + K^0$ at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
  interactions $\pi^- + p \to \Lambda(1520) + K^0$ at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
  interactions $\pi^- + p \to \Lambda(\Sigma^0) + K^*(890)$ at 4.5 and 6 GeV/c, differential cross sections, $\Lambda(\Sigma)$ polarization, and $K^*(890)$ density matrix elements from, (E), 26:54217
  interactions $\pi^- + p \to \Lambda(\Sigma^0) + K^0$ at 4.5 and 6 GeV/c, differential cross sections and $\Lambda(\Sigma)$ polarization for, (E), 26:54217
  interactions $\pi^- + p \to N + 2\pi$ at 1.6 to 2.0 GeV, energy-independent partial-wave analysis of baryon resonance production in, (T), 26:54328 (LBL-544)
  interactions $\pi^- + p \to n +$ anything at 2.4 GeV/c,

scintillation counter study of $M^0(1033)$ production in, (E), 26:54205 (COO-1428-311)

- interactions $\pi^- + p \to n + \pi^+ + \pi^- + m\pi^0 (m = 1$ to $5)$ at 5 GeV/c in propane bubble chamber, resonance production and partial cross sections for, (E), 26:54220
- interactions $\pi^- + p \to n + \pi^+ + \pi^-$ at 2.77 GeV/c, parametrization of nonevasive exchange processes and background contributions in, (E/T), 26:54214
- interactions $\pi^- + p \to p$ + anything at 25 and 40 GeV/c, triple-Pomeranchuk coupling and scaling in inclusive, (E/T), 26:54221
- interactions $\pi^- + p \to p$ + anything, triple-Regge formalism for analysis of, (T), 26:54332
- interactions $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ at 20 GeV/c in hydrogen bubble chamber, cross sections for resonance production in, (E), 26:54207 (COO-3064-3)
- interactions $\pi^- + p \to p + \pi^-$ at 5.91 to 13.73 GeV/c, extrapolation of asymptotic cross section for baryon-pole coupling in backward, (E/T), 26:54331
- interactions $\pi^- + p \to \pi^0 + n$, new Regge absorption model for cross sections and polarization in, (T), 26:54336
- interactions $\pi^- + p \to \pi^0 + n$, Regge pole--cut model for, (E/T), 26:54230
- interactions $\pi^- + p \to \pi^0$(eta) + n with small momentum transfer, method for determining differential cross sections for, 26:54209 (JINR-P1-6414)
- interactions $\pi^- + p \to \pi^- + p$ at 0.875 to 1.580 GeV/c, differential cross sections for forward, (E/T), 26:54224
- interactions $\pi^- + p \to \pi^- + \pi^+ + n$ at 8 GeV/c, production and decay angular distributions of rho^0, f^0, and g^0 in, (E), 26:54216
- interactions $\pi^- + p \to \pi^+(\pi^-)$ + anything at 16 GeV/c, differential cross sections and symmetry of π emission for, (E), 26:54222
- interactions $\pi^- + p \to \pi^+(\pi^-)$ + anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
- interactions $\pi^- + p \to$ rho^0 + n, contribution of unnatural parity exchanges to, (T), 26:54270
- interactions $\pi^- + p \to \Sigma(1385) + K^+$ at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
- interactions $\pi^- + p$ at 0.4 to 0.90 GeV/c, total cross sections for, (E), 26:54213
- interactions $\pi^- + p$ at 40 GeV/c, average number of produced π^+--π^- pairs, coefficient of nucleon charge exchange, and identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
- interactions $\pi^- + p$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
- interactions $\pi^+ + \pi^-$ from $\pi^+ + p \to \pi^+ + \pi^- + \Delta^{++}$ interactions at 13 GeV/c, phase shift analysis of, (E), 26:54223
- production in $\gamma + n \to \pi^- + p$ interactions at 600 to 1250 MeV, differential cross sections for, (E), 26:54179
- production in inclusive $e + p \to e + \pi^-$ + anything interactions at 6.5 GeV, momentum spectra of, (E), 26:54178
- production in inclusive hadron interactions with protons at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
- production in inclusive interactions, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
- production of π^+--π^- pairs in $\pi^- + p$ and $\pi^- + n$ interactions at 40 GeV/c, average number for, (T), 26:54327 (JINR-E2-6596)

MESONS (π^0)
- decay $\pi^0 \to \gamma + e^+ + e^-$, radiative corrections to, (T), 26:54277
- interactions $K^+ + \pi^0$, Schwarz inequality for cross sections for, (T), 26:54287 (LBL-766)
- production in e + N interactions at $q^2 = 0.6$ to 1.56 GeV^2, angular distributions for, (E), 26:54268

MESONS (π^+)
- decay $\pi^+ \to \mu^+ + \nu$, π^+ mass and upper limit on ν mass from μ^+ energy in, (E), 26:54189
- interactions $\pi^+ + d \to 2p + \pi^+ + \pi^-$ at 13 GeV/c, I = 0 S-wave phase shift from partial-wave analysis of $\pi\pi$ spectra and rho and f production cross sections in, (E/T), 26:54219
- interactions $\pi^+ + d$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
- interactions $\pi^+ + n$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
- interactions $\pi^+ + p \to K^+ + \Sigma^+$, new Regge absorption model for cross sections of, (T), 26:54336
- interactions $\pi^+ + p \to N + 2\pi$ at 1.6 to 2.0 GeV, energy-independent partial-wave analysis of baryon resonance production in, (E), 26:54328 (LBL-544)
- interactions $\pi^+ + p \to p + \pi^+$ at 5.91 to 13.73 GeV/c, extrapolation of asymptotic cross section for baryon-pole coupling in backward, (E/T), 26:54331
- interactions $\pi^+ + p \to \pi^-$ + anything at 7 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
- interactions $\pi^+ + p \to \pi^-$ + anything at 8 and 16 GeV/c, differential cross sections and symmetry of π emission for, (E), 26:54222
- interactions $\pi^+ + p \to \pi^+ + p + \pi^+ + \pi^-$ at 5.45 GeV/c, production properties of A_1^+ in, (E), 26:54227
- interactions $\pi^+ + p \to \pi^+ + \pi^- + \Delta^{++}$ at 13 GeV/c, phase shift analysis of $\pi^+\pi^-$ scattering from, (E), 26:54223
- interactions $\pi^+ + p \to \pi^+(\pi^-)$ + anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
- interactions $\pi^+ + p$ at 0.4 to 0.90 GeV/c, total cross sections for, (E), 26:54213
- interactions $\pi^+ + p$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
- interactions $\pi^+ + p$, identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
- interactions $\pi^+ + \pi^-$ from $\pi^+ + p \to \pi^+ + \pi^- + \Delta^{++}$ interactions at 13 GeV/c, phase shift analysis of, (E), 26:54223
- mass from $\pi^+ \to \mu^+ + \nu$ decay, (E), 26:54189
- production in e + p interactions, k^2 dependence of transverse cross section in generalized Born term model, (T), 26:54243 (DESY-72/30)
- production in $\gamma + p \to \pi^+ + n$ interactions at 0.5 to 2.2 GeV, magnetic spectrometer study of structure in target asymmetry in, (E), 26:54172 (NP-19415)
- production in inclusive $e + p \to e + \pi^+$ + anything interactions at 6.5 GeV, momentum spectra of, (E), 26:54178
- production in inclusive hadron interactions with protons at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
- production of π^+--π^- pairs in $\pi^- + p$ and $\pi^- + n$ interactions at 40 GeV/c, average number for, (T), 26:54327 (JINR-E2-6596)

MESONS (rho)
- coupling constants for γ rho, in relativistic extended quark model, 26:54283
- decay rho $\to \pi^+ + \pi^-$, I = 0 S-wave phase shift from partial-wave analysis of $\pi\pi$ spectra and angular distributions for, (E/T), 26:54219
- decay rho$^-$ $\to 2\pi$ in hydrogen bubble chamber, width of, (E), 26:54175 (SLAC-143)
- mass differences of members of A_1, rho, and π isomultiplets, dynamic chiral symmetry and cancellation of divergences in, (T), 26:54321
- production and decay angular distributions from $\pi^- + p \to \pi^- + \pi^+ + n$ interactions at 8 GeV/c, (E), 26:54216
- production in $\pi^+ + d \to 2p + \pi^+ + \pi^-$ interactions at 13 GeV/c, cross sections for, (E), 26:54219
- production of rho^0 and rho$^-$ in $\gamma + p$ interactions at 2 to 7.5 GeV, cross sections for, (E), 26:54175 (SLAC-143)
- production of rho$^-$ and rho^0 in $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ at 20 GeV/c in hydrogen bubble chamber, cross sections for, (E), 26:54207 (COO-3064-3)
- production of rho$^-$ in $\pi^- + d \to 2p + 2\pi^- + \pi^0$ interactions at 7 GeV/c in deuterium bubble chamber, validity of spectator model for cross sections for, (E), 26:54208 (COO-3065-16)
- vertex function of nonrenormalizable πrhoπ interaction, ladder approximation for, (T), 26:54322

MESONS, PSEUDOSCALAR
- interactions involving vector mesons and photons, ω--phi mixing angle from Odorico bootstrap of, (T), 26:54323
- production in ν + N interactions, quark-model predictions of cross sections for, (T), 26:54285 (DESY-72/32)
- vertex function of nonrenormalizable vector--pseudoscalar--pseudoscalar meson interaction, ladder approximation for, (T), 26:54322

MESONS, RESONANCE
- mass and width of broad S-wave (1305) in $K^+ + n \to K^+ + \pi^- + p$ interactions at 9 GeV/c, (E), 26:54203 (COO-1428-308)
- mass and width of $M^0(1033)$ in $\pi^- + p \to n$ + anything interactions at 2.4 GeV/c, scintillation counter study of, (E), 26:54205 (COO-1428-311)
- production of (2020) enhancement in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
- production of broad S-wave (1305) in $K^+ + n \to K^+ + \pi^- + p$ interactions at 9 GeV/c, (E), 26:54203 (COO-1428-308)
- production of exotic multipion, in $\pi^- + d$ interactions at 7 GeV/c in deuterium bubble chamber, upper limit for, (E), 26:54208 (COO-3065-16)
- production of F_1 in anti p + p interactions at 1.2 GeV/c, (E), 26:54199
- production of $M^0(1033)$ in $\pi^- + p \to n$ + anything interactions at 2.4 GeV/c, scintillation counter study of, (E), 26:54205 (COO-1428-311)
- properties of 3π, Kanti Kπ, and K$\pi\pi$, relativistic Faddeev-type approach to, (T), 26:54318

MESONS, RESONANCE (eta)
- decay f(1260) $\to \pi^+ + \pi^-$, I = 0 S-wave phase shift from partial-wave analysis of $\pi\pi$ spectra and angular distributions for, (E/T), 26:54219
- decay $f^0 \to K^+ + K^-$, cross sections, branching ratios, and angular distributions for, (E), 26:54218
- effects of epsilon and S*(980) on scale invariance breaking for low-energy theorems for $\pi\pi$ interactions, 26:54319
- interference of f^0 and $A_2{}^0$ in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
- production and decay angular distributions of $f^0(1260)$ from $\pi^- + p \to \pi^- + \pi^+ + n$ interactions at 8 GeV/c, (E),

- 26:54216
  - production of f(1260) in $\pi^+ + d \to 2p + \pi^+ + \pi^-$ interactions at 13 GeV/c cross sections for, (E), 26:54219
  - production of f^0(1260) and f'(1514) in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
- MESONS, RESONANCE (K)
  - decay of K(1760) and K(2200) in deuterium bubble chamber, proposed experiment for, (E), 26:54204 (COO-1428-310)
  - decay $Q \to K(890) + \pi^+$ from $K^+ + d$ interactions at 9 GeV/c, (E), 26:54228
  - mass and width of K^0(890) and K^0(1420) in $K^+ + n \to K^+ + \pi^- + p$ interactions at 3.8 GeV/c in deuterium bubble chamber, (E), 26:54202 (COO-1195-238)
  - production of K* in $K^+ + p$ interactions at 1.37 to 2.17 GeV/c, analysis of, (E), 26:54231
  - production of K*(890) and K*(1420) in $\pi^- + p$ interactions at 4.5 and 6 GeV/c, differential cross sections and density matrix elements for, (E), 26:54217
  - production of K(1760) and K(2200) in $K^+ + n \to p +$ anything interactions at 9 GeV/c in deuterium bubble chamber, proposed experiment for, (E), 26:54204 (COO-1428-310)
  - production of K(890) and K(1420) in $K^+ + n \to K^+ + \pi^- + p$ interactions at 9 GeV/c, (E), 26:54203 (COO-1428-308)
  - production of K^0(890) and K^0(1420) in $K^+ + n \to K^+ + \pi^- + p$ interactions at 3.8 GeV/c in deuterium bubble chamber, cross sections for, (E), 26:54202 (COO-1195-238)
  - production of K_1K_1(1440) in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
  - production of Q in $K^+ + d$ interactions at 9 GeV/c in deuterium bubble chamber, spin--parity analysis of, (E), 26:54228
  - spin density matrix elements of K^0(890) in $K^+ + n \to K^+ + \pi^- + p$ interactions at 3.8 GeV/c in deuterium bubble chamber, (E/T), 26:54202 (COO-1195-238)
- MESONS, RESONANCE (π)
  - decay $A_2^0 \to K^+ + K^-$, cross sections, branching ratios, and angular distributions for, (E), 26:54218
  - interference of f^0 and A_2^0 in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
  - mass differences of members of A_1, rho, and π isomultiplets, dynamic chiral symmetry and cancellation of divergences in, (T), 26:54321
  - production of A_1^0 and A_2^0 in $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, upper limits for cross sections for, (E), 26:54207 (COO-3064-3)
  - production of A_1^+ in $\pi^+ + p \to \pi^+ + p + \pi^+ + \pi^-$ interactions at 5.45 GeV/c, (E), 26:54227
  - production of A_2(1310) in $\gamma + p$ interactions at 2 to 7.5 GeV in hydrogen bubble chamber, (E), 26:54175 (SLAC-143)
  - production of A_2(1310) in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
  - properties of A_2(1310), spark chamber study of, (E), 26:54206(R) (COO-2009-36)
- MESONS, RESONANCE (rho)
  - production of B^-(1235) in $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, cross sections for, (E), 26:54207 (COO-3064-3)
  - production of g^0(1670) in $\pi^- + p \to \pi^- + \pi^+ + n$ interactions at 8 GeV/c, (E), 26:54216
  - production of rho^-(1250) and rho^-(1650) in $\gamma + p$ interactions at 2 to 7.5 GeV in hydrogen bubble chamber, cross sections for, (E), 26:54175 (SLAC-143)
  - production of rho^-(1700) in $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ interactions at 20 GeV/c, upper limits for cross sections for, (E), 26:54207 (COO-3064-3)
  - production of S(1070), g(1660), and rho(1710) in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
- MESONS, VECTOR
  - decays into pseudoscalar meson + photons, coupling constants for, (T), 26:54323
  - existence of high-mass, from $e^+ + e^-$ interactions in storage rings, (T), 26:54283
  - role of neutral, in $e^+ - e^-$ pair production in photon reactions with spin-$^1/_2$ point nuclei, angular dependence of cross sections for, (T), 26:54260
  - search for neutral, in K_2^0 decays, (E), 26:54291
  - vertex function of nonrenormalizable vector--pseudoscalar--pseudoscalar meson interaction, ladder approximation for, (T), 26:54322
- METALLOGRAPHY
  - sample preparation for, in hot cells, selection of cleaning solutions and lubricants for, 26:53729 (LA-DC-72-230)
- METALLURGICAL EQUIPMENT
  - description for examination of irradiated uranium dioxide NTR fuel particles, 26:53555 (RD/B/N-2214)
- METALLURGY
  - conference on uses of field-ion microscopy in, Atlanta, Georgia, May 15 to 17, 1968, 26:53647
  - research in India, 1971--1972, 26:55452(R) (NP-19407)
  - research on, compilation of projects on USAEC, 26:53600 (WASH-1181-72)
- METALS
  - abundance in galaxies, (T), 26:53977
  - abundance in globular clusters, (E), 26:53880
  - deformation of, structure dependence of high-temperature, 26:55613(R) (SU-326-P-17-X-2)
  - dislocations and stacking faults in, field-ion microscopy studies of, 26:53649
  - fabrication by rolling at high temperature under vacuum, 26:53630
  - grain boundary structures in, field-ion microscopy studies of, 26:53650
  - impurity distribution in, effects of thermal gradients on, 26:53665
  - positron correlation energy in, (T), 26:55066
  - radiation effects on spherical void growth in, effects of triaxial stress on, (T), 26:53702 (TID-26150)
  - radioinduced point defects in, field-ion microscopy studies of, 26:53704
  - radioinduced swelling of, dose and dose rate dependences of, (T), 26:53707
  - reactions with gases, field-ion microscopy studies of, 26:53657
  - sintering of, review on mechanism of activated, 26:53587
  - spectral lines in prominences and chromosphere due to, (E), 26:53949
  - welding of thick sheets of, equipment and methods for electron beam, 26:53633
  - metals--plastics, preparation and properties of, produced by radioinduced polymerization, 26:53722
- METEORITES
  - analysis for iodine and six metals by neutron activation and separation processes, 26:52906
  - cosmic-ray reactions in iron, (T), 26:53808(T) (ORNL-tr-2620)
  - isotopic abundances in iron, (T), 26:53808(T) (ORNL-tr-2620)
  - rare gases in Mokoia and Allende, isotopic composition of, (E), 26:53810
- METHACRYLIC ACID, METHYL ESTER POLYMERS
  - effects of Plexiglas ampoules on helium II superfluid film flow transfer, 26:54431
  - reactions with radicals produced by γ radiolysis of propene polymers, kinetics of, 26:53019
- METHANE
  - yields from argon- and xenon-sensitized radiolysis of gaseous ethylene, 26:53000
- METHANE, DICHLORODIFLUORO-
  - flow in heated loops, photographic study of post-burnout two-phase, 26:53122
- METHANE, IODO-
  - separation from fuel reprocessing off-gases, evaluation of silver-containing sorbents for, 26:53077 (CONF-720823-9)
  - sorption on commercial impregnated charcoals, efficiencies of, 26:53058 (CONF-720823-10)
- METHANE, NITRO-
  - photolysis of liquid, analysis of products from, 26:52978 (CEA-N-1528)
  - properties of, summary of chemical and physical, 26:52978 (CEA-N-1528)
  - radiolysis of liquid, analysis of products from, 26:52978 (CEA-N-1528)
  - reactions with methyl radicals, 26:52978 (CEA-N-1528)
- METHANESULFONIC ACID
  - hycanthone, effects on cultured mouse lymphoma cells in comparison to effects of EMS and x radiation, phenotypic method for determining frequency of mutagenic, 26:53361
- METHANESULFONIC ACID, ETHYL ESTER
  - effects on cultured mouse lymphoma cells in comparison to effects of hycanthone methane-sulfonate and x radiation, phenotypic method for determining frequency of mutagenic, 26:53361
- METHANOL
  - effects on γ-induced thermoluminescence of cyclohexene, 26:53010
  - radiolysis of glasses of, hydrogen abstraction by methyl radical in, 26:52990 (ORO-2968-78, Paper 5)
  - radiolysis of liquid, spin trapping studies on primary methoxy radicals from γ, 26:52988 (ORO-2968-78, Paper 2)
- METHYL RADICALS
  - reactions of photolytic, with nitromethane, 26:52978 (CEA-N-1528)
  - reactions of radiolytic, with hydrogen from methanol molecules, 26:52990 (ORO-2968-78, Paper 5)
  - thermal decay of radiolytic, in methanol glasses, ESR studies on, 26:52990 (ORO-2968-78, Paper 5)
- MICE
  - arsenic-74 distribution and metabolism in tissues of, following oral administration, time dependence of, 26:53538
  - determination of hematopoietic and pulmonary origins of alveolar macrophages in radiation chimeras of, 26:53492
  - radiation effects on alkaline phosphatase activity and chromosomes of, strontium-90 β and x, 26:53496
  - radiation effects on count of plaque-forming cells in spleen of antigen-stimulated, following whole-body exposure, effects of dose on γ and x, 26:53469
  - radiation effects on diurnal rhythm of neurosecretory activity in, following whole-body exposure, x,

26:53478

radiation effects on growth of goitrogen-stimulated thyroid gland in, effects of dose rate on RBE for internal iodine-131 or iodine-132 β and γ and external x, 26:53472

radiation effects on growth of thyroid gland in fetal and goitrogen-stimulated adult, following intravenous injection of iodine-131, β and γ, 26:53513

radiation effects on hematopoiesis and immune reactions in, following whole-body exposure, comparison of RBE for γ and high-intensity pulsed x, 26:53469

radiation effects on immune reactions to allogenic bone marrow transplants in, age dependence of lethal dose x, 26:53485

radiation effects on phagocytic activity of reticuloendothelial cells in, following whole-body exposure, effects of dose on x, 26:53468

radiation effects on ratio of erythrocytes to leukocytes in bone marrow of, evaluation for use as biological dosimeter, 26:53473

radiation effects on serum protein content and serum albumin-globulin ratio of, combined effects of cortisone on gamma, 26:53490

radiation effects on spleen colony formation by transplanted isogeneic hematopoietic stem cells in, lethal dose x, 26:53466

radiation effects on survival of embryos of, following acute or fractionated exposure in utero, comparison of RBE of fast neutron with x radiation, 26:53453 (NASA-TM-X-2440, pp 641)

radiation effects on survival of epidermal cells in skin of, following single local exposure, comparison of RBE for carbon, helium, and lithium charged particle with x radiation, 26:53456 (NASA-TM-X-2440, pp 652-8)

radiation effects on survival of erythropoietic stem cells in, following sublethal whole-body exposure, protective effects of AET and serotonin against proton, 26:53454 (NASA-TM-X-2440, pp 642-6)

radiation effects on survival of, following acute lethal whole-body exposure, comparison of RBE for californium-252 γ and neutron with cobalt-60 and radium-226 γ, 26:53484

radiation effects on survival of, following lethal whole-body exposure, protective effects of combined AET and pantothenic acid against x, 26:53481

radiation effects on survival of, protective effects of allogeneic bone marrow transplants against lethal x, 26:53485

radioinduced changes in pituitary gland of, following partial- or whole-body exposure, relation of ultrastructural changes to secretory changes in cells of, x, 26:53467

radioinduced digital malformations in fetal, following whole-body exposure in utero, effects of developmental stage, dose, and dose rate on incidence of γ, 26:53471

radioinduced inhibition of gastrulation in early embryos of, x, 26:53476

radioinduced leukemia in, following fractionated sublethal whole-body exposure, protective effects of cysteamine against, 26:53475

radioinduced leukemia in, following fractionated whole-body exposure, incidence and cytological characteristics of x, 26:53512

radioinduced leukemia in, following intraperitoneal injection of strontium-90, incidence and cytological characteristics of β, 26:53512

radioinduced leukemia in, following whole-body exposure, comparison of incidence of γ and x, 26:53469

radioinduced leukemia in, studies on transmission of strontium-90 β and x, 26:53496

radioinduced malformations of brain of, following prenatal exposure, effects of developmental stage at exposure on, 26:53437

radioinduced pathological changes in, effects of bathing in thermal spring water on recovery from mixed fast neutron and γ, 26:53465

radioinduced suppression of antibody-forming cells in spleen of, during response to antigen challenge, acute whole-body x, 26:53464

rotational tracer study using perturbed angular correlation of indium-111, 26:55058

MICROORGANISMS

radiation effects on, combined effects of space flight environment on mutagenesis and survival of, γ, 26:53365 (N-72-20065)

MICROWAVES

cosmic background, Compton scattering by relativistic cosmic electrons, (E/T), 26:54000

MILK

iodine-131 content of human, following injection of labeled pharmaceuticals for diagnostic scanning of kidneys, lungs, and placenta, 26:53524

radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)

radioisotope content of Norwegian, 1956 to 1970, cesium-137, iodine-131, and strontium-90, 26:53161

MILKY WAY

book: Galactic Astronomy, Vol. I, 26:53981

central region of, dynamics of, (T), 26:53983

Cepheid variables in, (T), 26:53986

continuum radiation from, thermal and nonthermal, (T), 26:53984

cosmic-ray confinement mechanisms, (T), 26:53865

dynamics of, (T), 26:53982

electron diffusion in, (T), 26:53809

gamma emission above 10 MeV from anticenter plane of, search for, (E), 26:53816

gamma flux from center region of, (E), 26:53818

gamma flux in, high-energy, (E), 26:53819

gamma-ray density in, (E/T), 26:53992

HI regions in, origin of, (T), 26:53983

hydrogen distribution in, (T), 26:53984

hydrogen in, angular distribution of atomic, (T), 26:53979

interstellar absorption of optical lines in, (T), 26:53985

kinematics of stellar motions in, (T), 26:53982

magnetic-field line wandering in, effects on cosmic-ray parameters, (T), 26:53864

rotation from 21-cm study, (T), 26:53984

spiral structure in, causes and effects of irregular, (T), 26:53987

spiral structure of, 21-cm line study of, (T), 26:53983

star distribution in, (E/T), 26:53992

supernovae in, rate of, (E), 26:53974

x-ray background in, origin of, (E), 26:53973

x-ray brightness of disc of, (T), 26:53853

MILLSTONE POINT POWER REACTOR, UNIT 1

coolant for, abnormal chemistry limits for, 26:55280 (DOCKET-50245-160)

cooling system for, abnormal leak rate for primary, 26:55280 (DOCKET-50245-160)

operation of, application for conversion from provisional to full term license for, 26:55279 (DOCKET-50245-159)

site for, environmental radiation survey during January to June 1972, 26:55246 (DOCKET-50245-158)

MINERALS

analysis by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)

analysis for iron, manganese, niobium, and tantalum by direct measurement of oxide ratios, spectroscopic, 26:52932

fission fragment tracks from heavier transuranium elements in natural, study of spontaneous, 26:54670

reactions of sulfide, with thiol reagents, 26:52954 (NIM-1439)

MINES

air in, electron-capture ionization detector for analyzing, 26:53287

radon daughter products in air of uranium, α-spectrometric method for determining content of, 26:53226

MITOCHONDRIA

radiation effects on respiration and ultrastructure of, in intestinal epithelial cells of rats during amino acid absorption, whole-body x, 26:53493

MOESSBAUER EFFECT

experiments on lifetime of excited nuclei, suggested, 26:55061

gamma laser based on long-lived isomers, feasibility of, (T), 26:55062

polarization effects in, (T), 26:54703

uses in analytical chemistry, 26:52942

uses in art identification, 26:52898 (COO-3034-2)

MOLECULAR STRUCTURE

wave functions in, spin-dependent operators in occupation-branching number representation for open-shell, (T), 26:55077

MOLECULES

atom reactions with diatomic, calculation of semiclassical S-matrix elements for transitions in inelastic and reactive, by integration along complex-valued trajectories, 26:54129

atom reactions with diatomic, effects of attractive Morse potential on quantum mechanical transition probabilities in, (T), 26:54132

atom reactions with diatomic, impulse approximation for vibrational-excitation probabilities in, using Morse potential, 26:54131

electromagnetic-field interactions with system of, semiclassical theory of, 26:55468 (AREAEE-136)

energy of degenerate levels of, with two perturbations, double perturbation form for second-order, 26:54152

expectation values for, calculation using spin-adapted antisymmetrized products, 26:54154

potentials for superheavy, formed in heavy-ion collisions, (T), 26:54111

reactions with atoms, ions, and molecules, bibliography and compilation of data on charge exchange, dissociations, excitation, and ionization, in, 26:54118

study of biological macro-, using indium-111 tracer and perturbed angular correlation, 26:55058

wave functions for, direct diagonalization method for generation of Serber-type simultaneous angular-momentum and spin eigenfunctions for use in expansion of, 26:54156

wave functions for, direct-diagonalization method for generation of Serber-type spin eigenfunctions for use in expansion of, 26:54155

wave functions for, expansion in terms of spin-adapted antisymmetrized products, 26:54154

wave functions for, instabilities associated with complex

and unrestricted Hartree--Fock, 26:54157
wave functions for, review of properties and uses of natural spin orbitals in construction of, 26:54150
MOLLUSCA
Lymnaea columella (snail), role as vector of fascioliasis in Puerto Rico, 26:53498(R) (PRNC-156)
Lymnaea cubensis (snail), role as vector of fascioliasis in Puerto Rico, 26:53498(R) (PRNC-156)
MOLTEN SALT BREEDER REACTOR
fuel reprocessing for, design and construction of molybdenum reductive extraction equipment for, pp. 11-12, 26:53081 (ORNL-4794, pp 1-14)
fuel reprocessing for, research progress on, 26:53081 (ORNL-4794, pp 1-14)
MOLTEN SALT REACTOR EXPERIMENT
control systems of, detailed design of, 26:55138 (ORNL-TM-729(Pt.2B))
coolant for, performance of eutectic mixture sodium fluoroborate and sodium fluoride secondary, (E), 26:55177 (ORNL-TM-3344)
electric circuitry of, detailed design of central and instrumentation, 26:55138 (ORNL-TM-729(Pt.2B))
fuel reprocessing systems for, detailed design of instrumentation for, 26:55138 (ORNL-TM-729(Pt.2B))
instrumentation of, detailed design of, 26:55138 (ORNL-TM-729(Pt.2B))
safety systems of, detailed design of instrumentation of, 26:55138 (ORNL-TM-729(Pt.2B))
MOLYBDENITES
processing of, separation of molybdenum and rhenium from scrubber solutions from, 26:52950(P)
reactions with thiol reagents, 26:52954 (NIM-1439)
MOLYBDENUM
book: Early Transition Metals, 26:52956
compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
content in rock, γ--γ selective method for determination of equivalence between other heavy element and, 26:52943
deformation of single-crystal, effects of surface orientation on, 26:53645
deposition by hydrogen reduction of chloride or fluoride, method for chemical vapor, 26:53622
determination in steel by potentiometric titration, 26:52924
determination in water, effects of large amounts of copper on spectrographic, 26:52927
determination using carminic acid, spectrophotometric, 26:52931
determinaton of trace amounts of, spectroscopic, 26:52929
effects on cohesion and structural stability of aluminum oxide composites with iron and nickel, 26:53589
embrittlement of, effects of carbon and oxygen on, 26:53682
fabrication by hot isostatic pressing, 26:53578
fabrication by rolling at high temperature under vacuum, 26:53630
fabrication for use as reductive extraction equipment in MSBR fuel reprocessing, pp. 11-12, 26:53081 (ORNL-4794, pp 1-14)
incorporation of reinforcing fibers of, in stainless steel with precise alignment and uniform distribution, method for, 26:53629
muon stopping and diffusion in hot foils of, in vacuum, production of muonium by, (E), 26:54096
photon reactions (γ,n) at 12 to 23 MeV, neutron spectra from, (E), 26:54563
radiation effects on structure of polycrystalline, x-ray diffraction studies on 60-keV helium ion, 26:53700(T) (SC-T-722540)
separation from indium by ion exchange chromatography, 26:52949
separation from molybdenite using thiol reagents, 26:52954 (NIM-1439)
separation from scrubber solutions from roasting of molybdenite by solvent extraction and crystallization, 26:52950(P)
sintering of powders of, at 1200 to 1450°C, kinetics and mechanism of, 26:53621
solvent properties for nitrogen, effects of temperature and pressure on, 26:53580
void lattice model, 26:55052
welding of, effects of contact surface and structure on diffusion, 26:53625
MOLYBDENUM ALLOYS AND SYSTEMS
composition and physical properties of composite powders of, 26:53680
preparation of composite powders of, by hydrogen reduction, 26:53680
Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
Al--Co--Cr--Mo--Ni-base--Ti, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
Al--Mo--Sn--Ti-base--Zr, creep rupture of, at 755 and 865°K, cyclic, 26:53690
Al--Mo--Ti-base--V, crack propagation and embrittlement by gaseous hydrogen, mechanism of, 26:53685
C--Mo, thermodynamic properties of liquid solutions of, 26:53588
Cr--Cu--Fe--Mo--Ni-base--Ti, corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
Cr--Mo--steel, corrosion by products of sodium--water reactions, 26:55154 (CONF-710546-, pp 105-28)
Cr-base--Mo--Ta, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
Fe-base--Mo, radiation effects on mechanical properties of, 2.3-MeV electron, 26:53706
Mn--Mo--Ni--steel, mechanical properties of pressure vessel, effects of quenching, tempering, and heat treatment on, 26:53646
Mo--N, degassing at 1200 to 3000°C in, equilibria and kinetics of, 26:53580
Mo--N--Nb, phase studies and thermodynamics of, as function of pressure and temperature, 26:53671
Mo--Nb-base, entropy of vortices in superconducting, (E), 26:54441
Mo--Ni--W-base, mechanical properties of, effects of heat treatments following sintering on, 26:53679
Mo--Ni--W-base, preparation and composition of, 26:53679
Mo--Ni-base, mechanical properties of, at 800 to 1200°C, 26:53667
Mo--O, thermodynamic properties of liquid solutions of, 26:53588
Mo--PuO_2, radiation emission by heat sources of, effects of age, fluorine-19, oxygen-17, oxygen-18, plutonium-236, and size on γ and neutron, 26:53336 (NASA-TM-X-2440, pp 853-8)
Mo--Si, diffusion of silicon in Mo_5Si_3 phase in, at high temperatures, 26:53583
Mo--U-base, corrosion of wires of, ion microscopy studies of stress, 26:53610
Mo--UO_2, fabrication of, review on methods for, 26:53592
Mo--W-base, compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
Mo--ZrO_2, oxidation of, effects of temperature on rate of, 26:53585
Mo-base--Re, compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
MOLYBDENUM ISOTOPES Mo-90
beta decay scheme, (E), 26:54613
MOLYBDENUM ISOTOPES Mo-92
alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
neutron radius of, determination from elastic scattering, (E), 26:54547
proton elastic and inelastic scattering at 12.0 MeV, differential cross sections for, (E), 26:54606 (ORNL-TM-3913)
proton elastic scattering at 11.2 to 12.4 MeV, excitation functions for, (E), 26:54467(R) (ORO-2972-204)
MOLYBDENUM ISOTOPES Mo-93
energy level at 1.69 MeV from molybdenum-95 (p,t) reactions, spin--parity assignment for, (E), 26:54612
MOLYBDENUM ISOTOPES Mo-94
proton elastic and inelastic scattering at 12.0 MeV, differential cross sections for, (E), 26:54606 (ORNL-TM-3913)
MOLYBDENUM ISOTOPES Mo-95
proton reactions (p,t) at 31 MeV, DWBA analysis of differential cross sections for, (E), 26:54612
MOLYBDENUM ISOTOPES Mo-96
proton elastic and inelastic scattering at 12.0 MeV, differential cross sections for, (E), 26:54606 (ORNL-TM-3913)
MOLYBDENUM ISOTOPES Mo-100
deuteron reactions (d,p) at 3.05 to 3.75 MeV, DWBA analysis of differential cross sections and excitation function for, (E), 26:54614
proton elastic and inelastic scattering at 12.0 MeV, differential cross sections for, (E), 26:54606 (ORNL-TM-3913)
MOLYBDENUM ISOTOPES Mo-101
energy levels from molybdenum-100 (d,p) reactions, spectroscopic factors and spin--parity assignments for, (E), 26:54614
nuclear spin, parity, and spectroscopic factor from molybdenum-100 (d,p) reactions, (E), 26:54614
MOLYBDENUM OXIDES
growth and hardness of spherical agglomerates of, produced from powders, 26:53577
production of microspheres of, from powders in rotating container, 26:53577
MOLYBDENUM SILICIDES
fabrication by casting of thermoplastic masses, 26:53586
Mo_5Si_3--ZrB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
$MoSi_2$--ZrB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
MONKEYS
plutonium removal from lungs of, following inhalation as oxide, effectiveness of pulmonary lavage for, 26:53528(T) (LF-tr-71)
radiation dose distribution in respiratory tract tissues of, following inhalation of strontium-90 as fused clay aerosols, β, 26:53536
radiation effects on ability to perform learned tasks

- following continuous whole-body exposure, effects of dose and dose rate on γ, 26:53452 (NASA-TM-X-2440, pp 633-40)
- radioinduced suppression of bone marrow hematopoietic function in, following continuous and subsequent fractionated whole-body exposures, effects of dose and dose rate on recovery from γ, 26:53452 (NASA-TM-X-2440, pp 633-40)

MONTICELLO POWER REACTOR, UNIT 1
- maintenance during January to June 1972, 26:55253 (DOCKET-50263-149)
- operations during January to June 1972, 26:55253 (DOCKET-50263-149)
- site for, environmental radiation survey during January to June 1972, 26:55253 (DOCKET-50263-149)
- valves for, verification of wall thicknesses for nuclear service, 26:55288 (DOCKET-50263-150)

MOON
- charged-particle shadowing by, (T), 26:53943
- interactions with near magnetic fields and plasmas, Apollo-15 subsatellite observations of, (E), 26:54072
- tides in, effects on seasonal and daily variations in Peruvian equatorial electrojets, (E), 26:54041

MOUTH
- radiation effects on tissues of, in patients during tumor therapy in head and neck region, construction of prosthesis shield for protection against, 26:53410

MUONIC ATOMS
- energy-level transitions of heavy, corrections to long-wavelength approximation for x radiation from electric multipole, 26:54098

MUONIUM
- conversion to antimuonium, method of search for, 26:54096
- production in vacuum by diffusion of muons stopped in hot metal foils, (E), 26:54096

MUONS
- anisotropy of cosmic, sidereal, (E), 26:53846
- betatron oscillations in g - 2 experiment in storage rings, 26:53763
- detection and discrimination from pions using multiwire proportional counters, 26:53282
- gyromagnetic ratio of, sixth-order contribution to anomalous, (T), 26:54271
- intensity variations of cosmic, sidereal, (E), 26:53847
- interactions $\mu + p \to \mu^+ + \mu^- + e + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
- interactions $\nu + \mu$ with bremsstrahlung, four-component neutrino theory for e and μ polarization effects on form of photon and electron spectra from inelastic, (T), 26:54290
- magnetic moment of, Schwarz inequality for lower bound on hadronic contribution to, 26:54287 (LBL-766)
- production of intense beams of, CERN II Synchrotron facility for, 26:53783 (DNPL/P-131)
- stopping and diffusion in hot metal foils in vacuum, production of muonium by, (E), 26:54096

MUONS (μ^-)
- capture by carbon-12, gamma yields, rates, and weak-magnetism coupling constant from, (E), 26:54537
- capture by magnesium-24 and silicon-28, γ-ray yields from, (E), 26:54555
- capture by nuclei, elementary particle theory for nuclear currents in, (T), 26:54238 (LYCEN-7211)
- capture by nuclei, polarization of emitted neutron in, (T), 26:54564
- depolarization in aqueous solutions and water in magnetic fields, effects of chemical reactions, hydrogen peroxide concentration, and temperature on, (E), 26:54099
- interactions $\mu^- + p \to \mu^- +$ anything in scaling region, differential cross sections and detection and isolation of neutral weak currents for, (T), 26:54288 (RPP/T-26)
- interactions $\mu^- + p \to \mu^+ + \mu^- + \mu^- + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
- production in $e + p \to e + \mu^+ + \mu^- +$ anything interactions, test of bilocal operators from, (T), 26:54253
- production in p + p interactions in colliding beams at ISABELLE, forward, (E/T), 26:54181 (BNL-16977)
- production of μ^+ -- μ^- pairs in $p + p \to \mu^+ + \mu^- +$ anything interactions, neutral weak currents in, (E/T), 26:54182 (BNL-17092)
- production of μ^+ -- μ^- pairs in p + p interactions in colliding beams at ISABELLE, forward, (E/T), 26:54181 (BNL-16977)

MUONS (μ^+)
- energy in $\pi^+ \to \mu^+ + \nu$ decay, (E), 26:54189
- interactions $\mu^+ + p \to \mu^+ + \mu^- + \mu^+ + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
- production in $e + p \to e + \mu^+ + \mu^- +$ anything interactions, test of bilocal operators from, (T), 26:54253
- production in p + p interactions in colliding beams at ISABELLE, forward, (E/T), 26:54181 (BNL-16977)
- production of μ^+ -- μ^- pairs in $p + p \to \mu^+ + \mu^- +$ anything interactions, neutral weak currents in, (E/T), 26:54182 (BNL-17092)
- production of μ^+ -- μ^- pairs in p + p interactions in colliding beams at ISABELLE, forward, (E/T), 26:54181 (BNL-16977)

MUSCLES
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538

MUTATIONS
- Escherichia coli, use of tritium suicide method for selective enrichment of altered acyl CoA synthetase in, 26:53518
- induced in Aspergillus niger by colchicine and nitrogen mustards for citric acid production, comparison of, 26:53380
- induced in cultured Chinese hamster cells by chemical mutagens, uv radiation, and x radiation, effects of dose and post-exposure culture medium on frequencies of, 26:53362
- induced in cultured mouse lymphoma cells by chemical mutagens and x radiation, phenotypic method for comparing frequency of, 26:53361
- induced in Eremothecium ashbyii (fungi) by diethyl sulfate and nitrosoguanidine for increased riboflavin production, 26:53374
- models for selection and, in multi-locus systems, mathematical, 26:55487(R) (COO-1437-8)
- radioinduced dominant and recessive lethal, in mature spermatozoa of Drosophila melanogaster, effects of dactinomycin on post-fertilization expression of x, 26:53502
- radioinduced reversion, in Escherichia coli, effects of tryptophan starvation on uv, 26:53379
- radioinduced reversion, in Saccharomyces cerevisiae, effects of photoreactivation repair mechanism on frequency of uv, 26:53375
- radioinduced, for antibiotic production in Aspergillus, gamma and uv, 26:53393
- radioinduced, in Aspergillus niger for citric acid production, comparison of γ and uv, 26:53380
- radioinduced, in Eremothecium ashbyii (fungi) for increased riboflavin production, uv, 26:53374
- use of radioinduced, for improvement of crops and domestic animals, 26:53459(R) (NP-19403)

MYOGLOBIN
- radiation effects on bovine ferri-, in anoxic and oxygenated solutions, comparison of γ, 26:53346

N

NAGASAKI
- atomic bombing of, incidence of chromosome aberrations in lymphocytes of man exposed to residual fallout from, 26:53414
- radiation dose to residents of, comparison for diagnostic radiographic examinations and A-bomb survivors, 26:53434
- radioinduced neoplasms in human survivors of atomic bombing of, 10 to 25 years following exposure as children, effects of dose on incidence of, 26:53442

NAILS
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538

NAPHTHALENE
- radioinduced electric conductivity of, electron, (E/T), 26:54968(R) (AD-737312)

NAPHTHALENEACETIC ACID
- radiolysis of aqueous solutions of, rate constants for reaction of hydrogen atoms, hydroxyl radicals, and hydrated electrons in, 26:53015

NATIONAL RADIOACTIVE WASTE REPOSITORY
- radioactive waste storage in, effects of adjacent American Salt Corp. mining activities on high-level, 26:53725 (ORNL-TM-3903)

NATURAL BACKGROUND RADIATION
- monitoring of gamma, ionization chamber for, 26:53218

NATURAL GAS
- radioactivity of, stored in underground nuclear explosion cavities, hazards to commercial users from, 26:53132(T) (UCRL-Trans-10617-2)
- storage in cavities in salt domes, cavity construction for, 26:53115
- tritium content of nuclearly stimulated, development of radiation standard for, 26:53134
- tritium removal from, stored in nuclear cavities, method for, 26:53128 (ORNL-4794, pp 63-4)

NATURAL WATERS
- plutonium in, possibility of pentavalent, 26:52935(R) (MLM-1888)

NAVIGATION
- Geographical Position Locator (GPL) for inertial, equipment and methods for testing mathematical error-reduction techniques for, 26:53311 (UCRL-51130(Vol.8))

NAVIGATIONAL INSTRUMENTS
- accuracy testing of Geographic Position Locator, 26:55631 (UCRL-74039)
- radiation effects on photomultiplier star sensor system for attitude determination for space vehicles, 26:53293 (NASA-TM-X-2440, pp 735-43)

NEBULAE
- spectra of, Z dependence of level intervals in $2s^22p^2$,

- $2s^22p^3$, and $2s^22p^4$, (E), 26:53954
- structure of, (T), 26:53985

NEMATODA
- Dictyocaulus viviparus, radiation effects on infectivity of larvae of, for immunization of cattle, x, 26:53503

NEODYMIUM
- abundance in 21 sharp-lined nonvariable cool peculiar A stars, (E), 26:53882
- ionization of surfaces of, 26:53033 (EUR-4765, pp 117-30)
- magnetoresistance at 1.4 to 20°K, 26:55021
- solubility in bismuth--thorium solutions, free energies of formation for compounds produced by, 26:53664

NEODYMIUM ISOTOPES Nd-138
- energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)

NEODYMIUM ISOTOPES Nd-141
- beta and electron-capture decay of, β, γ, and conversion electron spectra from, (E), 26:54604 (JINR-P6-6519)

NEODYMIUM ISOTOPES Nd-142
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM ISOTOPES Nd-143
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM ISOTOPES Nd-144
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM ISOTOPES Nd-145
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM ISOTOPES Nd-146
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM ISOTOPES Nd-148
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM ISOTOPES Nd-150
- photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)

NEODYMIUM OXIDES
- spectra and structure of, vibrational, 26:55031

NEON
- abundance in extreme Population I stars and Sun, (T), 26:53892
- abundance in NGC 7662, (E/T), 26:53873
- carbon-ion reactions at 40 to 140 keV with, cross sections for charge exchange in, (E), 26:54137
- electron reactions with, Auger and direct ionization processes in, 26:54103 (FRNC-CONF-51)
- helium-atom and -ion reactions at 100 to 5000 eV with, angular and energy distributions of electrons from ionization and autoionization in, (E), 26:54141
- hydrocarbon-ion (CH/sub n/+) reactions at 40 to 140 keV with, cross sections for dissociation and production of hydrogen atoms in, (E), 26:54137
- ion scattering at 8 to 25 keV by, total cross sections and interatomic potentials for, (E), 26:54139
- ionization balance in solar atmosphere, density dependent, (E), 26:53969
- plasma of, constant-wavelength oscillations in bounded positive column, (E/T), 26:54859
- proton reactions at 500 to 3000 eV with, differential cross sections for charge exchange, elastic scattering, excitation to autoionizing levels, and simple excitation in, (E/T), 26:54122
- scattering by lithium fluoride surfaces, calculation of angular distributions from, as functions of beam temperature and angle and plane of incidence, 26:54088
- scattering by lithium fluoride surfaces, determination of potential parameters from data on, 26:54087

NEON IONS
- reactions with aluminum and magnesium at 0.7 to 4 MeV, neon-isotope effects on cross sections for K-shell ionization in, (E), 26:54114
- scattering by tungsten polycrystalline surfaces at 150 to 1000 eV, angular and energy distributions and cross sections for, (E), 26:54083

NEON ISOTOPES
- abundance in Mokoia and Allende chondrites, (E), 26:53810

NEON ISOTOPES Ne-20
- deuteron reactions (d,α) at 3.5 to 8 MeV, excitation functions for, (E), 26:54467(R) (ORO-2972-204)
- effects on K-shell ionization of aluminum and magnesium by neon-ion bombardment at 0.7 to 4 MeV, (E), 26:54114
- energy levels of, calculation of rotational, (T), 26:54562
- helium-3 reactions (He-3,nγ) at 4.3 to 11.5 MeV, coincidence and angular correlation measurements for, (E), 26:54559
- proton inelastic scattering by, coupled-channel treatment with projected Hartree--Fock wave functions, (T), 26:54565
- reactions with aluminum-27 at 85 to 206 MeV, direct-reaction effects in excitation functions and gamma spectra from, (E), 26:54558

NEON ISOTOPES Ne-22
- effects on K-shell ionization of aluminum and magnesium by neon-ion bombardment at 0.7 to 4 MeV, (E), 26:54114

NEOPLASMS
- carcinoma, radiotherapy of human skin, description of equipment for, 26:53341
- carcinomas, radioinduced, in human survivors of atomic bombing of Nagasaki 10 to 25 years following exposure as children, effects of dose on incidence of, 26:53442
- carcinomas, radioinduced, in kidneys of parabiosed rats, x, 26:53449 (COO-3017-4)
- carcinomas, radiotherapy of human, research programs on use of pion beam for, 26:53398 (LA-4874, pp 79-83)
- electron integral absorbed dose in therapy of, (T), 26:54909
- leukemia, radioinduced in human children following exposure in utero, review of epidemiological studies on, 26:53435
- leukemia, radioinduced, in human survivors of atomic bombing of Nagasaki 10 to 25 years following exposure as children, effects of dose on incidence of, 26:53442
- leukemia, radioinduced, in mice following fractionated sublethal whole-body exposure, protective effects of cysteamine against, 26:53475
- leukemia, radioinduced, in mice following fractionated whole-body exposure, incidence and cytological characteristics of x, 26:53512
- leukemia, radioinduced, in mice following intraperitoneal injection of strontium-90, incidence and cytological characteristics of β, 26:53512
- leukemia, radioinduced, in mice following whole-body exposure, comparison of incidence of γ and x, 26:53469
- leukemia, radioinduced, in mice, studies on transmission of strontium-90 β and x, 26:53496
- lymphomas, occurrence in atomic bomb survivors of Hiroshima and Nagasaki in relation to radiation exposure dose, 26:53432
- radioinduced in human children following exposure in utero, review of epidemiological studies on, 26:53435
- radioinduced mammary, in rats following acute whole-body exposure, comparison of γ and proton, 26:53455 (NASA-TM-X-2440, pp 647-51)
- radioinduced, in respiratory and gastrointestinal tracts of miners in relation to exposure to radon and radon daughters in air, 26:53412
- radiosensitivity of cells of human, relation of anoxia to response to TAN, 26:53430
- sarcomas, implantation in rats, inhibitory effects on regeneration of thyroid gland, effects of whole-body x irradiation on, 26:53494

NEPHELINE SYENITES
- mineralogy of southwest Aswan radioactive, 26:53142 (AREAEE-138)

NEPTUNIUM
- ionization of surfaces of, 26:53033 (EUR-4765, pp 117-30)
- neutron reactions with, in neptunium oxide, production of plutonium-238 by, 26:53073
- separation from plutonium in MILLI laboratory by solvent extraction using TBP, 26:53073
- separation of protactinium from, by anion exchange, 26:52903

NEPTUNIUM ISOTOPES Np-239
- content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)

NERVES
- radioinduced degeneration of human optic, following therapy of nasal cavity and paranasal sinus carcinomas, dose and time dependence of γ and x, 26:53444

NERVOUS SYSTEM
- radiosensitivity of rat, relation of content of acetylcholine to, 26:53461(R) (UCB-34-P-82-13)

NETHERLANDS
- applications of radiation in agricultural research in, 26:53459(R) (NP-19403)
- fast reactor development in, progress on, 26:55083(R) (EURFNR-1001)

NEUTRINOS
- emission from sun, effects of resonance in $^3He + {}^3He$ system on, (T), 26:54508
- interactions $\nu + d \rightarrow 2p + e$ near 50 MeV, cross section calculations for, (T), 26:54233 (LA-DC-72-848)
- interactions $\nu + \mu$ with bremsstrahlung, four-component neutrino theory for e and μ polarization effects on form of photon and electron spectra from inelastic, (T), 26:54290
- interactions $\nu + N \rightarrow \nu + N'$ as test of new Nagoya and Hiroshima models for urbaryons, 26:54297
- interactions ν + N, quark-model predictions of cross sections for production of pseudoscalar mesons in, (T), 26:54285 (DESY-72/32)
- interactions with gravitational radiation in expanding universe, (T), 26:53997
- mass of, weak interaction as origin of, (T), 26:54294
- production of ν--anti ν pairs as energy loss mechanism in stars, Weinberg theory of weak and electromagnetic interactions for, (T), 26:53893
- properties of cosmic, review of solar neutrinos, Fermi interaction, and stellar evolution for, (E/T), 26:54185 (NEIC-RR-47)
- reactions with carbon-12, cross sections for, (T), 26:54541

NEUTRINOS (ANTI ν)
- production of ν--anti ν pairs as energy loss mechanism in stars, Weinberg theory of weak and electromagnetic interactions for, (T), 26:53893

- NEUTRINOS (ν/sub e/)
  - mass upper limits from double magnetic spectrometer study of $K_2^0 \to \pi + l + \nu$ decay, (E), 26:54184 (LBL-4)
- NEUTRINOS (ν/sub μ/)
  - mass from $\pi^+ \to \mu^+ + \nu$ decay, upper limit on, (E), 26:54189
  - mass upper limits from double magnetic spectrometer study of $K_2^0 \to \pi + l + \nu$ decay, (E), 26:54184 (LBL-4)
- NEUTRON BEAMS
  - production of monoenergetic, using ISABELLE in Whiplash mode, feasibility of, 26:53775 (BNL-17057)
  - production using beryllium-9 (d,n) reactions, biological implications of intensity estimates from, (E/T), 26:53804
- NEUTRON CROSS SECTIONS
  - bibliography on thermal, 26:54602 (JAERI-M-4666)
  - computer processing of ENDF/B, test of codes using idealized data, 26:54475 (CONF-720901-(Bks.1 and 2), pp 1048-60)
  - data analysis of, computer program for, 26:54468 (ANCR-1042)
  - data files for, description of ENDF/B III, 26:54478 (CONF-720901-(Bks.1 and 2), pp 1127-51)
  - evaluation of ENDF/B data with fast reactor measurements, 26:55125 (CONF-720901-(Bks.1 and 2), pp 1033-47)
  - evaluation with integral data measurements in fast reactors, 26:55385 (CONF-720901-(Bks.1 and 2), pp 623-35)
  - evaluation with integral data measurements in fast reactors, 26:55384 (CONF-720901-(Bks.1 and 2), pp 613-22)
  - evaluation with integral data measurements in fast reactors, 26:55436 (CONF-720901-(Bks.1 and 2), pp 599-612)
  - measurement of interaction, review of developments in, 26:55140 (CONF-720901-(Bks.1 and 2), pp 295-315)
  - survey on fast, 26:54476 (CONF-720901-(Bks.1 and 2), pp 1063-74)
- NEUTRON DIFFRACTOMETERS
  - crystal mount for, engineering drawings for, 26:53319
- NEUTRON SOURCES
  - composition of matter in, (T), 26:53908
  - design for use in interrogation determination of U-235 in containers, engineering drawings for, 26:53217
  - equation of state for, (T), 26:53908
  - intensity of beryllium-9 (d,n), biological implications of, (E/T), 26:53804
  - neutron spectra from liquid hydrogen and deuterium moderated cold, measurements and Monte Carlo calculations of, (E/T), 26:54493
  - reactivity calculations for VINS, using Monte Carlo transport codes, 26:54469 (ANCR-1071)
  - structure of, internal, (T), 26:53908
- NEUTRON SPECTROMETERS
  - design and operation of stilbene scintillation, with double compensation circuit for gamma discrimination, 26:53251 (AREAEE-137)
  - development for pulsed-beam time-of-flight studies, 26:54467(R) (ORO-2972-204)
  - performance of time-of-flight, for fast neutrons, 26:53260
- NEUTRON SPECTROSCOPY
  - spectral unfolding codes in, evaluation of, 26:53252 (CONF-720901-(Bks.1 and 2), pp 524-40)
- NEUTRON STARS
  - gravitational wave emission and scattering by relativistic, nonradial vibrational modes from, (T), 26:53894
  - x-ray emission from, detection of, (E/T), 26:53907
- NEUTRONS
  - absorption by fissionable materials, summary of resonance and Doppler theory for, 26:54480 (CONF-720901-(Bks.1 and 2), pp 1166-82)
  - attenuation by sodium slabs, benchmark measurements of, (E/T), 26:55142 (CONF-720901-(Bks.1 and 2), pp 418-30)
  - capture by dysprosium-163 up to 200 eV, correlation of partial radiative and neutron widths in resonance, (E), 26:54631(T) (BNL-tr-490)
  - capture by indium, tantalum-181, gold-197, and uranium-238 at 24.3 keV, TOF cross-section measurements using iron-filtered beam, (E), 26:54597 (CONF-720901-(Bks.1 and 2), pp 1107-14)
  - capture by mixed oxide reactor fuels, effects of particle size on resonance, (E/T), 26:55425 (CONF-720901-(Bks.1 and 2), pp 108-13)
  - capture by nuclei, radiative decay of resonant states in, 26:54675 (BNL-17029)
  - capture by silver-107, silver-109, gold-197, thorium-232, and uranium-238, survey of cross section data on, 26:54657 (FEI-292)
  - capture by space shielding materials, cascade calculation of gamma-ray yields from, 26:54961 (NASA-TM-X-2440, pp 527-8)
  - capture by Z = 29 to 79 nuclei at 1 keV to 10 MeV, cross-section calculations using Hauser--Feshbach--Margolis method, (T), 26:54700 (RT/FI-(72)6)
  - cross-section sensitivity analysis for sodium/iron shielding, 26:54940 (CONF-720901-(Bks.1 and 2), pp 512-23)
  - detection of monoenergetic, from radioisotope thermoelectric generator, Monte Carlo calculation of response of silicon detectors for, 26:53291 (NASA-TM-X-2440, pp 708-13)
  - detection of, description of multiwire proportional counter for, 26:53200 (LBL-707(Summ.))
  - diffusion equation for hexagonal reactor lattices, simultaneous line over-relaxation method for solution of, 26:55433 (CONF-720901-(Bks.1 and 2), pp 253-65)
  - diffusion equation in polar geometry, computer code for calculation of two-group, 26:54471 (CISE-R-252)
  - diffusion equations for cylindrical reactors, variational synthesis analysis of two-group, 26:55422 (CISE-R-243)
  - diffusion equations for finite cylindrical reactors, iterative solution of, 26:55423 (CISE-R-273)
  - diffusion in gas cooled fast breeder reactors, calculation of anisotropic, (T), 26:55126 (KFK-1577)
  - diffusion of, computer program for calculation of anisotropic, 26:54488 (RT/FI-(72)1)
  - diurnal variation of cosmic, temperature effects on, (E), 26:53811
  - dose changes due to shield layer changes, use of perturbation theory to determine, 26:54941 (CONF-720901-(Bks.1 and 2), pp 541-58)
  - dose distribution in cylinders similar to rats, rabbits, and humans, effects of secondary components on, (E), 26:54871 (CEA-CONF-1976)
  - dose distributions for radiobiology and radiotherapy, radiation transport codes for, (T), 26:54890 (ORNL-TM-3816)
  - dose to Thermoelectric Outer Planet Spacecraft from radioisotope thermoelectric generator, environmental analysis of, 26:53338 (NASA-TM-X-2440, pp 862-5)
  - dosimetry in tissues in gamma fields, tissue-equivalent plastic ionization chamber for, 26:53234 (NASA-TM-X-2440, pp 609-13)
  - dosimetry simultaneously with gamma rays, effects of ^{6}Li content in mixture of natural fluorite and LiF for thermoluminescence, 26:53240
  - effects on copper phthalocyanine, chemical state of recoil copper-64 from, 26:53032
  - effects on electric conductivity of gallium arsenide, tunnel-assisted hopping in, 26:54982
  - effects on fatigue crack propagation in Types 304 and 316 stainless steel at 427 to 593°C, 26:53698 (NRL-7446)
  - effects on materials, instrument for detecting cracks from, 26:53317
  - effects on mechanical properties and structure of stainless steel, 26:53701 (STU-70-419/U-350(Pt.1.1))
  - effects on p-dichlorobenzene crystals, 26:52984 (FRNC-TH-262)
  - effects on semiconductor devices, hardening against, 26:53289 (NASA-TM-X-2440, pp 481-6)
  - effects on silicon, (E/T), 26:54968(R) (AD-737312)
  - effects on silicon, EPR spectra of defects produced in, 26:55006
  - effects on spacecraft instruments, program for studying, 26:53294 (NASA-TM-X-2440, pp 866-72)
  - effects on strengthening of chromium--iron welds, iron, and pressure vessel steel, effects of carbon, copper, nickel, phosphorus, and vanadium additions on, 26:53710
  - effects on survival of mice following acute lethal whole-body exposure, RBE for californium-252, in comparison with cobalt-60 and radium-226 γ, 26:53484
  - effects on swelling of metals, dose and dose rate dependences of, (T), 26:53707
  - effects on vibrational spectra of gallium arsenide containing silicon and boron, 26:54984
  - emission from molybdenum--plutonium dioxide heat sources, effects of age, fluorine-19, oxygen-17, oxygen-18, plutonium-236, and size on, 26:53336 (NASA-TM-X-2440, pp 853-8)
  - emission time in sodium assembly, 26:54656(R) (COO-3058-21)
  - flux distribution and profile measurements, use of indium, gold, manganese, and depleted uranium foils for, 26:55137 (JAERI-Memo-3893)
  - flux of solar, (E), 26:53967
  - form factor of, analysis of available data on $e + d \to e + d$ interactions for magnetic, (E), 26:54169 (JINR-E1-6647)
  - generation time in subcritical fast reactors, transfer and scattering kinetics scheme for determination of, 26:55437 (CONF-720901-(Bks.1 and 2), pp 713-23)
  - interactions anti $p + n \to \pi^+ + \pi^- + \pi^-$ at 1.2 GeV, Veneziano model with satellites and dual amplitude with Mandelstam analyticity for, (T), 26:54320
  - interactions $\gamma + n \to n + \eta$ at threshold to 1.1 GeV, transition amplitudes and cross sections for N resonance production in, (E), 26:54166 (CALT-68-322)
  - interactions $\gamma + n \to p + \pi^-$ up to 1 GeV in deuterium bubble chamber, spectator-model analysis of differential and total cross sections for, (E/T), 26:54171 (LNF-72/31)
  - interactions $\gamma + n \to \pi^- + p$ at 600 to 1250 MeV, differential cross sections for, (E), 26:54179
  - interactions $\gamma + n \to \pi^- + p$ in 3,3 resonance region, discrepancy between dispersion relation predictions and experiment, 26:54261
  - interactions γ + n, evaluation of J = 0 fixed pole in Compton, 26:54254
  - interactions $K^+ + n \to K^+ + \pi^- + p$ at 3.8 GeV/c in deuterium bubble chamber, cross sections and quasi-two-

body interaction cross sections for K^0(890) and K^0(1420) production in, (E), 26:54202 (COO-1195-238)
interactions $K^+ + n \to K^+ + \pi^- + p$ at 9 GeV/c, resonance production in, (E), 26:54203 (COO-1428-308)
interactions $K^- + n \to \Lambda + \pi + K^0$ + anti K^0 at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^-$ + eta at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^-$ + missing mass at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^- + \pi^0$ at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^- + n \to \Lambda + \pi^-$ at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions $K^+ + n \to p$ + anything at 9 GeV/c in deuterium bubble chamber, proposed experiment for K(1760) and K(2200) production in, (E), 26:54204 (COO-1428-310)
interactions $K^- + n \to \Sigma^0 + \pi^-$ at 4.9 GeV/c, total and differential cross sections for, (E), 26:54229
interactions n + d, calculation of breakup cross section with separable potentials, 26:54520
interactions n + d, calculation of doublet scattering length using Skornyakov--Ter-Martirosyan equations, 26:54344 (ITF-72-10-P)
interactions n + n, scattering length from final state, (T), 26:54503 (UCRL-74069)
interactions $n + p \to p + n$, contribution of unnatural parity exchanges to charge-exchange, (T), 26:54270
interactions n + p, effects on low-momentum transfer cross sections for anti $p + d \to$ anti $p + p + n$ interactions from final-state, (E), 26:54347 (UM-P-72-6)
interactions $\pi^- + n$ at 40 GeV/c, average number of produced π^+--π^- pairs, coefficient of nucleon charge exchange, and identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
interactions $\pi^+ + n$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
interactions $\pi^- + n$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
interactions with protons in nuclei, mass number dependence of residual, (T), 26:54739
magnetic moment of, Markoffian model for, 26:54308
mass difference (n - p), deep inelastic contribution to electromagnetic, (T), 26:54257
noise analysis in reactors, state of the art in 1971 of, 26:55442 (RT/FI-(72)11)
orbital momenta of, of anti pn bound states, recoil proton momentum spectrum in anti $p + d \to p$ + anything interactions for nonzero, 26:54334
production by 10.4-MeV/nucleon ions in copper and tantalum, extrapolation to space energies, 26:54881 (NASA-TM-X-2440, pp 520-2)
reactions (n,2n) with cadmium-116, isomer ratios in, (E), 26:54628
reactions (n,α) with tin-118, isomer ratios in, (E), 26:54628
reactions (n,f) at 14.8 MeV with thorium-232 and uranium-238, cadmium-115 isomer ratios in, (E), 26:54628
reactions (n,f) with uranium-235 and plutonium-239, survey of cross section data on, 26:54657 (FEI-292)
reactions with aluminum, iron, tungsten, and uranium-238 at thermal to 16 MeV, cross sections for gamma-ray production in, 26:54960 (NASA-TM-X-2440, pp 500-11)
reactions with bare fast multiplying systems of uranium, Storrer--Stievenart analysis of pulsed, (T), 26:54483 (JAERI-M-4652)
reactions with cadmium-112, resonance parameters for, (E), 26:54599 (IAE-2116)
reactions with calcium-46, strontium-84, barium-130, gadolinium-152, and gadolinium-150, resonance activation integrals for, (E), 26:54585
reactions with carbon, silicon, iron, and tantalum-181 up to 20 MeV, γ production cross sections for, (E), 26:54523 (CONF-720901-(Bks.1 and 2), pp 325-34)
reactions with iron-54, iron-57, and natural iron at 10 to 1000 keV, total cross sections for, (E), 25:54566 (CONF-720901-(Bks.1 and 2), pp 1075-86)
reactions with nuclei, strength function evaluation for a small number of resonances in, (T), 26:54720
reactions with tissues, local dose from neutron-produced recoil ions in therapeutic ^{252}Cf, 26:54902
resonance self-shielding coefficients for, interpolation formula for published data on, 26:54489 (ZJE-124)
scattering by nuclei, optical model calculations for, (T), 26:54677 (CONF-720701-3)
slowing down in pulsed heavy media, Green function coupling method for calculation of time-dependent, 26:55428 (CONF-720901-(Bks.1 and 2), pp 179-94)
slowing down theory for, review on continuous, 26:54472 (CONF-720901-(Bks.1 and 2), pp 143-61)
spectra and age in pulsed carbon sphere, sensitivity to carbon cross sections in calculation of, 26:54474 (CONF-720901-(Bks.1 and 2), pp 409-17)
spectra from homogeneous spheres containing uranium-235 and plutonium-239, benchmark calculations for, 26:54486 (RISO-M-1526)
spectra in reactors, many-resonance approximation of energy, 26:55429 (CONF-720901-(Bks.1 and 2), pp 195-206)
spectra measurements in fast reactor, use of proton-recoil spectrometry for, 26:55122 (CONF-720901-(Bks.1 and 2), pp 959-72)
spectra measurements in upper atmosphere, 26:54066 (NASA-TM-X-2440, pp 922-5)
spectra measurements, use of indium, gold, manganese, and depleted uranium foils for, 26:55137 (JAERI-Memo-3893)
spectra of, exit tube effect on measured, (E), 26:54470 (AREAEE-133)
total cross sections for stainless steel, experimental check for 1.2- to 11-MeV, 26:54965 (ORNL-TM-3871(Rev.))
transmission and self-indication ratio measurements in depleted uranium, time-dependent, (E), 26:54477 (CONF-720901-(Bks.1 and 2), pp 1115-26)
transmission by lithium hydride slabs, analysis of Shield Test Facility measurements of, 26:54944 (NAA-SR-Memo-8597)
transmission in gold at unresolved resonance energies, effect of temperature on, (E/T), 26:54484 (KFK-1519)
transport calculations for reactors, optimum angular segmentations in, 26:55434 (CONF-720901-(Bks.1 and 2), pp 266-74)
transport calculations for, predetermination of statistical errors in Monte Carlo, 26:55430 (CONF-720901-(Bks.1 and 2), pp 207-10)
transport equation in plane geometry, reflection function method analysis of multigroup, 26:55440 (INIS-mf-195)
transport equation with anisotropic scattering, system of elementary solutions for, 26:54492
transport equations for reactors, improved S/sub N/ inner iteration convergence criterion for, 26:55435 (CONF-720901-(Bks.1 and 2), pp 275-92)
transport in air and liquid nitrogen, calculation for evaluation of nitrogen neutron cross section sets, 26:54485 (ORNL-TM-3768)
transport in carbon, carbon shielding benchmark problem and other calculations for, 26:54939 (CONF-720901-(Bks.1 and 2), pp 397-408)
transport in multilayer slabs with isotropic scattering, computer program for J/sub N/ solution of, 26:54481 (EUR-4839)
transport in shielding, integral experiments and philosphy of ''benchmark'' calculations in, 26:54937 (CONF-720901-(Bks.1 and 2), pp 349-84)

NEUTRONS, COLD
attenuation in air and helium, measurement using manganese activation, (E), 26:54490
scattering by deuterium at zero energy, method of moments for solution of Faddeev equations for elastic, (T), 26:54715

NEUTRONS, DELAYED
fraction in plutonium fueled fast critical assemblies, measurement of effective, 26:55389 (CONF-720901-(Bks.1 and 2), pp 700-12)
fraction measurements in FCA, use of pulsed neutron technique and eigenvalue calculations for effective, 26:55403 (JAERI-Memo-4004)

NEUTRONS, FAST
absorption by elements, survey of data on Doppler effect in, 26:54479 (CONF-720901-(Bks.1 and 2), pp 1152-65)
absorption by uranium-238, Doppler effect in, 26:54479 (CONF-720901-(Bks.1 and 2), pp 1152-65)
capture by lead-208 at 6.2 to 14.7 MeV, cross section for, (E), 26:54662
cross section generation methods for, effects on fast reactor physics calculations of multigroup, 26:55113 (CONF-720901-(Bks.1 and 2), pp 211-28)
distributions behind three-layer barriers, spatial, energy, and angular, 26:54966
dose distributions for radiotherapy, 26:54893
dosimetry of, design of tissue-equivalent microcalorimeter for, 26:53250
effects on anthracene crystals for dosimetry, 26:53229 (COO-1105-172)
effects on chromosomes in rat embryos following exposure in utero, time dependence of aberrant, 26:53470
effects on development of rat embryos following exposure in utero, role of chromosome damage and repair errors in teratogenic, 26:53470
effects on electrical properties of n-type doped germanium, 26:54981
effects on Ge(Li) detectors, fission foil detector for flux monitoring for preventing deleterious, 26:53223
effects on Incoloy 800 and stainless steels Type 316, Type 321, and Type 347, 26:55189(R) (GEAP-10028-39)
effects on lower yield strength of iron, relations with spectra, 26:53705
effects on mechanical properties of carbon fibers, 26:53717
effects on mice, effects of bathing in thermal spring water on recovery from pathological mixed γ and, 26:53465
effects on mouse embryos following acute or fractionated exposure in utero, comparison of RBE with x rays for lethal, 26:53453 (NASA-TM-X-2440, pp 641)
effects on silicon and germanium single crystals, proton-channeling study of, 26:55004
effects on space vehicle components and subsystems,

  - design parameters and test facilities for testing, 26:53695 (NASA-TM-X-2440, pp 570-6)
  - effects on structure of lead titanate, 26:55020
  - effects on tensile properties of A-286, aluminum--boron carbide--titanium hydride, beryllium, and copper boride at cryogenic temperatures for use in NERVA Program, 26:53696 (NASA-TM-X-2440, pp 595-602)
  - effects on tensile properties of NERVA structural alloys at cryogenic temperatures, 26:53697 (NASA-TM-X-2440, pp 603-8)
  - energy transfer to soft tissue, microdosimetric studies of, 26:54873 (EUR-4787)
  - radiation effects on stainless steels Type-304, Type-316, Type-321, and Type-321-H, 26:55190(R) (GEAP-10028-42)
  - reactions (n,2nf) with uranium-238 at 14 MeV, method for determining lifetime of compound nucleus in, (E), 26:54669
  - reactions (n,α) with deformed doubly even nuclei, knock-on mechanism for, (T), 26:54707
  - reactions (n,f) with uranium-235, uranium-238, and plutonium-239 at 14 MeV, delayed neutron spectra from, (E), 26:54655 (CONF-720901-(Bks.1 and 2), pp 687-99)
  - reactions in homogeneous spheres, calculation of reaction rate neglecting elastic scattering, 26:54491
  - reactions of D--T produced, in thermonuclear reactors, problems from, 26:54826 (CONF-720901-(Bks.1 and 2), pp 559-73)
  - reactions with helium and lithium-6 at 0.7 to 30 MeV, total cross sections for, (E), 26:54656(R) (COO-3058-21)
  - reactions with iron-54 and natural iron at 0.8 to 20 MeV, data tabulation on γ production cross sections for, 26:54569 (ORNL-4798)
  - spectra in fast reactors, review of measurements of, 26:55438 (CONF-720901-(Bks.1 and 2), pp 943-58)
  - transport in iron, analysis of mechanism in, 26:54473 (CONF-720901-(Bks.1 and 2), pp 335-48)
  - transport in shielding, developments in integral experiments for, 26:54938 (CONF-720901-(Bks.1 and 2), pp 385-96)
- NEUTRONS, FISSION
  - effects on skin of swine, dose dependence of reproductive kinetics of cells, 26:53450 (LA-4874, pp 126-44)
- NEUTRONS, INTERMEDIATE
  - capture by A = 74 to 164 nuclei at 25 keV, model analysis of isomeric cross section ratios for, (E/T), 26:54589
  - capture by indium, tantalum-181, gold-197, and uranium-238 near 24.3 keV, pulse height spectra and relative cross sections for, (E), 26:54656(R) (COO-3058-21)
  - reactions with iron at 22 to 25 keV, R-matrix fit to total cross section for, 26:54656(R) (COO-3058-21)
  - transmission and self-indication ratio in depleted uranium, 26:54656(R) (COO-3058-21)
- NEUTRONS, PILE
  - absorption by californium-252 and -253, effective cross sections for, (E), 26:54668
  - effects on graphite, relations of flux density and temperature to, 26:53713 (CEA-CONF-1894)
  - reactions with heavy actinides, status of cross-section data for, 26:54654 (CONF-720901-(Bks.1 and 2), pp 97-107)
- NEUTRONS, THERMAL
  - capture by gadolinium-152, cross section for thermal, (E), 26:54585
  - capture by rhenium-187, γ singles and coincidence spectra from, (E), 26:54637
  - capture by Z = 1 to 82 nuclei, comparison of ENDF/B III and published data for, 26:54501 (ORNL-TM-3910)
  - capture in reactor cores, γ spectra from, (T), 26:55444 (TRG-2189)
  - detection in gamma fluxes, standard for performance of BF$_3$ proportional counter for, 26:53204 (RDT-C-15-11-T(8-72))
  - effects on Chlorella, in nitrogen-14 media, reaction mechanisms for, 26:53394
  - effects on maize, effects of dose and genotype on sensitivity to, 26:53383
  - effects on skin of swine, dose dependence of reproductive kinetics of cells, 26:53450 (LA-4874, pp 126-44)
  - reactions (n,f) with uranium-235, delayed neutron spectra from, (E), 26:54655 (CONF-720901-(Bks.1 and 2), pp 687-99)
  - reactions (n,f) with uranium-235, delayed neutron spectra from, (E), 26:54660(R) (RLO-2225-T-17-4)
  - reactions (n,f) with uranium-235, independent yields of krypton and xenon isotopes in, (E), 26:54667
  - reactions with heavy nuclei, interpretation of energy-dependent cross sections for, 26:54653 (CONF-720901-(Bks.1 and 2), pp 81-96)
  - scattering by nuclei, bibliography on elastic, 26:54602 (JAERI-M-4666)
  - scattering by phonons in zinc, neutron groups from inelastic, (E), 26:54487 (RT/FI-(71)37)
- NEVADA TEST SITE
  - geologic faults at, effects of eight 1971 underground nuclear explosions on displacement of, 26:53133 (USGS-474-155)
  - surface fractures at, effects of eight 1971 underground nuclear explosions on, 26:53133 (USGS-474-155)

  - sandstone--uranium deposits in Grants Region of, trend orebody studies on formation of, 26:53144 (GJO-936-2)
- NEWBOLD ISLAND POWER REACTOR, UNIT 1
  - site for, human population distribution surrounding, 26:55336 (DOCKET-50354-28)
- NEWBOLD ISLAND POWER REACTOR, UNIT 2
  - site for, human population distribution surrounding, 26:55336 (DOCKET-50354-28)
- NICKEL
  - abundance in γ Cap, (E), 26:53888
  - abundance in solar corona, (E), 26:53957
  - determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  - determination in samples from boreholes, neutron activation method for, 26:53174
  - determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  - determination in water, effects of large amounts of copper on spectrographic, 26:52927
  - effects on cohesion and structural stability of aluminum oxide composites with iron, 26:53589
  - effects on hydrogen reduction of tungsten oxide and sintering of tungsten powders, 26:53579
  - effects on neutron radioinduced strengthening of chromium--iron welds, iron, and pressure vessel steel, 26:53710
  - helium release in annealing of, 26:53709
  - ion emission by electron-bombarded, mass-spectral analysis of, 26:54084
  - ion implantations in, release of low-energy helium, 26:53709
  - radiation damage in, electron microscopic study of 650-kV electron, 26:54972 (COO-2119-2)
  - radiation effects on structure of polycrystalline, x-ray diffraction studies on 60-keV helium ion, 26:53700(T) (SC-T-722540)
  - separation from indium by ion exchange chromatography, 26:52949
  - spectral lines in Vega due to, (E), 26:53887
- NICKEL ALLOY COUPLES
  - Inconel/Zircaloy-2, corrosion by air, nitrogen, and water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
- NICKEL ALLOYS AND SYSTEMS
  - composition and physical properties of composite powders of, 26:53680
  - preparation of composite powders of, by hydrogen reduction, 26:53680
  - production and properties of high-density powder metallurgy components of, for use at high temperatures, 26:53631
  - Al$_2$O$_3$--Ni, cohesion and structural stability of composites of, effects of chromium, manganese, and molybdenum additions on, 26:53589
  - Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  - Al--Co--Cr--Mo--Ni-base--Ti, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  - Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  - Al--Ni-base--W--Zr, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  - Co-base--Cr--Ni--ThO$_2$, mechanical properties and microstructure of dispersion-hardened, 26:53675
  - Co-base--Ni--ThO$_2$--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675
  - Cr--Cu--Fe--Mo--Ni-base--Ti, corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
  - Cu--Ni--Tb, magnetic structures in TbNi/sub 1-x/Cu/sub x/ below ordering temperature, stability of sinusoidal-wave, 26:55039
  - Cu--Ni--Zn, analysis of nickel silver for copper by amperometric titration, 26:52924
  - Mn--Mo--Ni--steel, mechanical properties of pressure vessel, effects of quenching, tempering, and heat treatment on, 26:53646
  - Mo--Ni--W-base, mechanical properties of, effects of heat treatments following sintering on, 26:53679
  - Mo--Ni--W-base, preparation and composition of, 26:53679
  - Mo--Ni-base, mechanical properties of, at 800 to 1200°C, 26:53667
  - Ni--rare earth, magnetic properties of R$_3$Ni, pulsed-field magnetometer measurements of, 26:55050
  - Ni--transition metal carbides, erosion resistance of anodes of, 26:53568
  - Ni--V, ordering transformation in Ni$_2$V, 26:53659
- NICKEL IONS
  - scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139
- NICKEL ISOTOPES
  - energy levels of even, self-consistent Hartree--Fock, Hartree--Fock--Bogolyubov, and spherical BCS calculations using central Yukawa interaction and Hamada--Johnston and Tabskin potentials, (T), 26:54583
- NICKEL ISOTOPES Ni-56
  - energy levels of, shell-model study of, (T), 26:54570
- NICKEL ISOTOPES Ni-58
  - alpha elastic scattering at 166 MeV, angular distribution

  - for, (E), 26:54547
  - energy levels from proton inelastic scattering, spin--parity assignments and branching ratios for, (E), 26:54587 (FRNC-TH-240)
  - energy levels of, shell-model study of, (T), 26:54570
  - lithium-6 reactions (Li-6,d) at 38 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 26:54586
  - neutron radius of, determination from α elastic scattering, (E), 26:54547
  - proton inelastic scattering at 12 MeV, proton angular distributions and γ spectra from, (E), 26:54587 (FRNC-TH-240)
  - proton reactions at 5 to 56 MeV, cross sections for, (E), 26:54591
- NICKEL ISOTOPES NI-60
  - alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  - energy level transitions from copper-60 decay, (E), 26:54593
  - energy levels from proton inelastic scattering and cobalt-59 (He-3,dγ) reactions, spin--parity assignments and branching ratios for, (E), 26:54587 (FRNC-TH-240)
  - neutron radius of, determination from elastic scattering, (E), 26:54547
  - proton inelastic scattering at 12 MeV, proton angular distributions and γ spectra from, (E), 26:54587 (FRNC-TH-240)
  - proton reactions at 5 to 56 MeV, cross sections for, (E), 26:54591
- NICKEL ISOTOPES NI-61
  - proton reactions at 5 to 56 MeV, cross sections for, (E), 26:54591
- NICKEL ISOTOPES NI-62
  - alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  - deuteron reactions (d,p) at 12 MeV, angular distributions for, (E), 26:54587 (FRNC-TH-240)
  - energy levels from proton inelastic scattering, spin--parity assignments and branching ratios for, (E), 26:54587 (FRNC-TH-240)
  - neutron radius of, determination from elastic scattering, (E), 26:54547
  - proton inelastic scattering at 12 MeV, proton angular distributions and γ spectra from, (E), 26:54587 (FRNC-TH-240)
  - proton reactions at 5 to 56 MeV, cross sections for, (E), 26:54591
- NICKEL ISOTOPES NI-63
  - diffusion in polycrystalline α-titanium and α-zirconium, mechanism of, 26:53666
- NICKEL ISOTOPES NI-64
  - deuteron reactions (d,p) at 12 MeV, angular distributions for, (E), 26:54587 (FRNC-TH-240)
  - energy levels from proton inelastic scattering, spin--parity assignments and branching ratios for, (E), 26:54587 (FRNC-TH-240)
  - lithium-6 reactions (Li-6,d) at 38 MeV, cross sections for, (E), 26:54586
  - proton inelastic scattering at 12 MeV, proton angular distributions and γ spectra from, (E), 26:54587 (FRNC-TH-240)
  - proton inelastic scattering at 3.1 to 5.3 MeV, angular distributions and excitation functions for, (E), 26:54590
  - proton reactions at 5 to 56 MeV, cross sections for, (E), 26:54591
- NICOTINAMIDE, N-METHYL-
  - uptake by rat kidneys following injection, effects of uranyl nitrate on, 26:53537
- NICOTINIC ACID
  - radiation effects on content of, in wheat, wheat bread, and wheat flour, gamma, 26:53344
- NIMONIC PE 16
  - helium release in annealing of, 26:53709
  - irradiation using high-voltage electron microscope, high-flux, 26:53708
- NINE MILE POINT POWER REACTOR, UNIT 2
  - site for, additional data on alternate, 26:55351 (DOCKET-50410-10)
  - transmission lines for, additional data on, 26:55351 (DOCKET-50410-10)
- NIOBIUM
  - book: Early Transition Metals, 26:52956
  - complexes with Alizarin Red S, spectrophotometric studies on formation of, 26:52926
  - content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
  - deposition of thin films of, ultrahigh vacuum evaporation unit with high-speed cryopump for, 26:53139
  - determination in minerals by direct measurement of oxide ratios, spectroscopic, 26:52932
  - determination using Alizarin Red S, spectrophotometric, 26:52926
  - diffusion in aluminum nitride, silicon nitride, and titanium dioxide, 26:53677
  - energy gaps, ultrasonic evidence against multiple, (E), 26:54437
  - fabrication by rolling at high temperature under vacuum, 26:53630
  - performance of superconducting helix resonator cavity of, tests of, 26:53750
  - separation from tantalum, titanium, and zirconium by solvent extraction, hydrolysis, and extraction, 26:52947 (BM-RI-7671)
  - separation of protactinium from, by anion exchange, 26:52903
  - superconducting transition in, use of acoustical measurements for, 26:54439
- NIOBIUM ALLOYS AND SYSTEMS
  - Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  - Mo--N--Nb, phase studies and thermodynamics of, as function of pressure and temperature, 26:53671
  - Mo--Nb-base, entropy of vortices in superconducting, (E), 26:54441
  - N--Nb-base--Zr, internal friction of, effects of nitrogen content on, 26:53692
  - Nb--Si, diffusion of silicon in Nb_5Si_3 phase in, at high temperatures, 26:53583
  - Nb--Ti, superconducting transition temperature and upper critical field, data on, 26:54464 (ORNL-TM-3921)
  - Nb--U-base, stress corrosion cracking by sodium chloride sprays, protective effects of epoxy-primed polyurethane-painted surface on, 26:53607 (RFP-1891)
  - Nb--U-base, stress corrosion cracking of overaged and underaged, by aqueous chloride solutions, 26:53608 (RFP-1904)
  - Nb--U-base--Zr, tensile properties of polycrystalline, as function of strain rate, 26:53691
- NIOBIUM CARBIDES
  - fabrication by casting of thermoplastic masses, 26:53586
  - mechanical properties and microstructure of, effects of hot working on, 26:53581
  - sorptive properties of, effects of electronic structure on, 26:53593
- NIOBIUM ISOTOPES Nb-90
  - energy levels for zirconium-90 (p,n) reactions, (E), 26:54613
- NIOBIUM ISOTOPES Nb-91
  - energy level of, shell-model calculation of isomeric, (T), 26:54611
- NIOBIUM ISOTOPES Nb-93
  - nuclear electric quadrupole and magnetic dipole moments of, (E), 26:54605 (KFK-1602)
  - photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
  - x-ray spectra from μ-mesic atoms of, (E), 26:54605 (KFK-1602)
- NIOBIUM ISOTOPES Nb-95
  - content in agricultural products, atmosphere, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  - isomer ratios of, formed in fission of bismuth-209, (E), 26:54627
- NIOBIUM NITRIDES
  - sorptive properties of, effects of electronic structure on, 26:53593
- NIOBIUM OXIDES
  - compression of Nb_2O_5, formation of Nb/sub x/O_2 phase by shock, 26:53561
- NITRIC ACID
  - radiolysis of deuterated and normal at 77°K, ESR and ir spectral studies on products of γ, 26:53009
  - $Al(NO_3)_3$--HNO_3--NH_4F, corrosive effects on Corronel 230, HAPO-20 alloy, and Type 304L stainless steel, 26:53604 (BNWL-CC-449)
- NITRIDES
  - formation energy of, relations with fuel capsule corrosion and deterioration, 26:53330(R) (BNWL-1308-10)
  - sorptive properties of, effects of electronic structure on, 26:53593
- NITROGEN
  - abundance in primary cosmic radiation from 10 to 1000 MeV/N, (E), 26:53835
  - carbon-ion reactions at 40 to 140 keV with molecular, cross sections for charge exchange in, (E), 26:54137
  - corrosive effects on copper/steel, Inconel/Zircaloy-2, and Zircaloy-2/Zircaloy-2 couples, fretting, 26:53609 (RT/ING-(72)7)
  - effects of interstitial, on asymmetry of yield stress in single-crystal tantalum, 26:53643
  - effects on corrosion resistance of zirconium and zirconium alloys in high-temperature water, 26:53614
  - effects on yields from γ radiolysis of gaseous hydrogen sulfide, 26:53011
  - electron reactions with molecular, calculation of excitation cross sections for, using Gaussian orbitals, 26:54108
  - electron reactions with molecular, dependence of computed excitation cross sections for, on accuracy of wave functions used, 26:54108
  - electron scattering by molecular, method of linear combination of scaled atomic charge distributions for calculation of static potential for, 26:54125
  - excitation of N_2 in ionosphere, rates for vibrational, (T), 26:54022
  - hydrocarbon-ion (CH/sub n/$^+$) reactions at 40 to 140 keV with molecular, cross sections for dissociation and production of hydrogen atoms in, (E), 26:54137
  - hydrocarbon-ion (CH/sub n/$^+$) reactions with molecular,

  energy spectra of dissociation products from, (E), 26:54102 (EUR-CEA-FC-644)
  hydrogen-atom reactions with molecular, free-collision-model calculations of cross sections for electron loss in, 26:54121
  neutron and secondary gamma spectra in liquid, calulation for evaluation of neutron cross section sets, 26:54485 (ORNL-TM-3768)
  radiolysis of, determination of short-lived species from electron pulse, 26:52980(R) (COO-3461-1)
  reactions of muonic, with hydrogen peroxide in aqueous solutions, (E), 26:54099
  solubility in molybdenum, rhenium, and tungsten, effects of temperature and pressure on, 26:53580
  spectral emission during arc event of Mar. 8--9, 1970, spectroscopy of $N(^2D)$ state, (E), 26:54014
  spectral emission volume of N_2 3371 A in overhead auroral zone, March 19 and 27, 1971, (E), 26:54012 (SC-RR-720543)

NITROGEN IONS
  abundance of N^{7+} in microamp beams of, time-of-flight method for measurement of, 26:54077 (CEA-CONF-2048)
  detection of multicharged, using x-ray-spectroscopy at 1 to 20 A, 26:54078 (CEA-CONF-2050)
  effects of implanted, on Doppler broadening of positron annihilation photons in silver halide crystals, 26:54097
  reactions with copper and tantalum at 10.4 MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
  spectral lines in zeta Oph due to interstellar, (E), 26:53875

NITROGEN IONS (N_2^+)
  spectral emission volume of 3914 A in overhead auroral zone, March 19 and 27, 1971, (E), 26:54012 (SC-RR-720543)

NITROGEN ISOTOPES N-12
  nuclear dynamics of, particle--hole description of semileptonic electromagnetic and weak interactions in, (T), 26:54541

NITROGEN ISOTOPES N-14
  energy level at 10.81 MeV from carbon-12 (He-3,$p\gamma$) and (He-3,p) N-14 (p') reactions, spin--parity assignments for, (E), 26:54542
  energy-level transitions from carbon-12 (He-3,$p\gamma$) and (He-3,p) N-14 (p') reactions, branching ratios for, (E), 26:54542
  helium-3 reactions (He-3,p) with, contributions of rectangular graphs in, (T), 26:54533
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  reactions (N-14,xn) with lead-208 at 80 to 100 MeV, excitation functions and spectrum from, (E), 26:54651

NITROGEN ISOTOPES N-15
  lithium-6 reactions (Li-6,t) at 30 MeV, angular distributions and energy spectra from, (E), 26:54549
  lithium-7 reactions (Li-7,t) with, finite-range DWBA analysis of, (T), 26:54708
  photon reactions with giant resonance excitation, continuum shell-model calculation of, (T), 26:54545
  proton reactions (p,γ) at 7.4 to 15.0 MeV, analyzing power angular distributions and T-matrix elements for polarized, (T), 26:54531

NITROGEN MUSTARDS
  effects on Aspergillus niger, mutagenic for citric acid production, 26:53380

NITROGEN OXIDES
  radiosensitizing effects of, on DNA, review of x, 26:53352

NITROGEN OXIDES N_2O
  electron reactions at 278 to 355°K with, effects of dilution with ethane, hydrogen, nitrogen, or propane on rate constants for dissociative electron attachment and subsequent electron detachment in, (E), 26:54135

NITROGEN SYSTEMS
  Ar--N, radiolysis of, determination of short-lived species from electron pulse, 26:52980(R) (COO-3461-1)
  Fe-base--N, radiation damage in, electric resistivity study of 4.5°K fast-neutron, 26:54989
  He--N, radiolysis of, determination of short-lived species from electron pulse, 26:52980(R) (COO-3461-1)
  Mo--N, degassing at 1200 to 3000°C in, equilibria and kinetics of, 26:53580
  Mo--N--Nb, phase studies and thermodynamics of, as function of pressure and temperature, 26:53671
  N--Nb-base--Zr, internal friction of, effects of nitrogen content on, 26:53692
  N--Re, degassing at 1200 to 3000°C in, equilibria and kinetics of, 26:53580
  N--W, degassing at 1200 to 3000°C in, equilibria and kinetics of, 26:53580

NORTH ANNA POWER REACTOR, UNIT 1
  transmission lines for, requested additional data on, 26:55332 (DOCKET-50338-51)

NORTH ANNA POWER REACTOR, UNIT 2
  transmission lines for, requested additional data on, 26:55332 (DOCKET-50338-51)

NORTH ANNA POWER REACTOR, UNIT 3
  accident analysis for, requested information on, 26:55349 (DOCKET-50404-22)
  containment depressurization system for, requested information on, 26:55349 (DOCKET-50404-22)
  equipment for, earthquake stress limits for Class 1, 26:55349 (DOCKET-50404-22)
  owners of, financial data on, 26:55263 (DOCKET-50404-24)
  pipes for, mechanical properties of stainless steel, 26:55349 (DOCKET-50404-22)
  quality assurance program for, requested information on, 26:55349 (DOCKET-50404-22)
  service water reservoir for, requested information on, 26:55349 (DOCKET-50404-22)
  transmission lines for, requested additional data on, 26:55332 (DOCKET-50338-51)

NORTH ANNA POWER REACTOR, UNIT 4
  accident analysis for, requested information on, 26:55349 (DOCKET-50404-22)
  containment depressurization system for, requested information on, 26:55349 (DOCKET-50404-22)
  equipment for, earthquake stress limits for Class 1, 26:55349 (DOCKET-50404-22)
  owners of, financial data on, 26:55263 (DOCKET-50404-24)
  pipes for, mechanical properties of stainless steel, 26:55349 (DOCKET-50404-22)
  quality assurance program for, requested information on, 26:55349 (DOCKET-50404-22)
  service water reservoir for, requested information on, 26:55349 (DOCKET-50404-22)
  transmission lines for, requested additional data on, 26:55332 (DOCKET-50338-51)

NORWAY
  radioactivity monitoring in environment of, 1956 to 1970, 26:53161

NOZZLES
  stresses in reactor pressure vessel, effects of attachment configuration on, (E/T), 26:55207(R) (ORNL-TM-3900)
  uranium enrichment using separation, review of developments in, 26:53328

NUCLEAR AUXILIARY POWER SYSTEMS
  development of radioisotope- and reactor-powered, for manned space stations, 26:53094 (NASA-TM-X-2440, pp 26-33)
  radiation dose during constant-velocity motion near reactor, (T), 26:55363 (NASA-TM-X-2440, pp 270-6)
  shielding of thermionic reactor, for integration with manned space station, (T), 26:55365 (NASA-TM-X-2440, pp 299-306)

NUCLEAR BINDING ENERGY
  Hartree--Fock calculations for superheavy nuclei, 26:54726

NUCLEAR ELECTRIC MOMENTS
  theory of quadrupole interactions in terms of irreducible tensors, 26:55063

NUCLEAR EMULSIONS
  description for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)

NUCLEAR EXPLOSIONS, HIGH-ALTITUDE
  electron belts and effects on Van Allen belts of Starfish and Soviet, 26:54044 (NASA-TM-X-2440, pp 178-92)

NUCLEAR EXPLOSIONS, UNDERGROUND
  blowoff impulse from, development of probe velocity transducer for measuring x-ray-produced, 26:53303 (LA-4999)
  cavities and fracture zones from, in granite, content and size of, (E/T), 26:53130(T) (UCRL-Trans-10616-4)
  cavities from contained, radiological risks to users of natural gas stored in, 26:53132(T) (UCRL-Trans-10617-2)
  chemical uses of, research progress on, 26:53128 (ORNL-4794, pp 63-4)
  effects of close-in, in granite, calculation and measurement of mechanical, 26:53131(T) (UCRL-Trans-10616-5)
  effects of selected 1971 Nevada Test Site, on surface fractures, (E), 26:53133 (USGS-474-155)
  effects on structures beyond close-in zone, measurement of mechanical, 26:53129(T) (UCRL-Trans-10616-2)
  impulse gage for, design of passive, 26:53316
  natural gas production stimulation using, development of radiation standard for tritium contamination of gas from, 26:53134
  radioactivity from March 23, 1971 USSR, Swedish detection and monitoring of airborne, 26:53158 (FOA-4-4502-A-1)
  temperature distribution in granite terrain following, effects of heat transfer properties on, 26:53127 (CEA-R-4288)

NUCLEAR FORCES
  neutron-proton residual interaction in mirror nuclei, 26:54721
  nucleon--nucleon, nucleon form factors in generalized field theory for, 26:54382
  potential for, derivation of separable nonlocal, including phase shifts for S, P, and D waves, (T), 26:54683 (FRNC-TH-180)
  theory of, review of problems in, 26:54688 (ITF-71-77-P)

NUCLEAR MAGNETIC MOMENTS
  calculations for odd-A nuclei, corrections for core polarization and mesonic currents in, (T), 26:54679 (COO-3001-17)

NUCLEAR MATERIALS MANAGEMENT
  safeguards system for, during fuel fabrication, automatic on-line weighing and recording equipment for, 26:53723

NUCLEAR MATTER
- binding energy of, calculations using separable nonlocal potential, (T), 26:54683 (FRNC-TH-180)
- binding energy of, deficiency of OBE potentials for, (T), 26:54744

NUCLEAR MODELS
- collective, algebraic approach to spherical to deformed transition in, 26:54681 (COO-3071-9)
- optical, calculations for neutron scattering by nuclei, (T), 26:54677 (CONF-720701-3)
- optical, energy dependence of helium-3 potential in, (E/T), 26:54580
- particle--hole, inclusion of hole-state widths in calculations in, (T), 26:54714
- rotational, formulation of cranking, 26:54692 (JINR-P4-6543)
- rotational, formulation of governor, 26:54719
- shell, comparison of approximation schemes for continuum, (T), 26:54729
- shell, correlated wave functions and effective operators for, (T), 26:54728
- shell, fractional parentage coefficients for J = 11/2 orbitals in, 26:54686 (INR-1406)
- single-particle, nonlocal potential for, (T), 26:54746
- variable moment of inertia, extension to odd-A nuclei with weak Coriolis coupling, (T), 26:54710
- variable moment of inertia, generalization for phenomenological description of rotational states, (T), 26:54712

NUCLEAR PHYSICS
- book: Atomic Nucleus, 26:54738
- funding and outlook for medium energy, 26:53740 (LA-4874, pp 21-33)
- macroscopic approach to heavy-ion, 26:54694 (LBL-972)
- research in South Africa, 1971, 26:55453(R) (NP-19410)
- research on theoretical, Flinders Univ. of South Australia, 26:54779(R) (NP-19393)
- review of 1971 activities at Sydney Univ, 26:53993 (INIS-mf-252)

NUCLEAR POWER
- book: Conception on Nuclear Energy Till 2000 AD, in Japanese, 26:55090
- development and research in South Africa, 1971, 26:55453(R) (NP-19410)
- development in India, 1971--1972, 26:55452(R) (NP-19407)
- development in Japan, status of, 26:55089
- development in US, 26:55085
- developments in U.K. during 1970-71, survey of, 26:55084(R) (INIS-mf-212)
- growth in United Kingdom, 26:55088
- requirements in Sweden and UK, 26:53102

NUCLEAR POWER PLANTS
- costs for, computer program for calculation of capital, 26:55265 (ORNL-TM-3743)
- development during 1972 to 1985, 26:55267 (WASH-1139(Rev.1))
- development in Japan for domestic use and export, 26:55094
- development in Japan, survey of sites and needs for, 26:55092
- economics of integration in utility system, 26:55197 (ORNL-4794, pp 96-7)
- economics of mix in power grid of, RELIP code for, (T), 26:55266 (RD/B/N-2261)
- maintenance standards for equipment in, development of, 26:55201 (DUN-SA-168)
- safety of Czech, problems of, 26:55210
- testing of U. S., table of, 26:55214 (WASH-1208(9-72))
- thermal efficiency of closed-cycle MHD, using cesium--neon working fluid, (T), 26:53091 (IPP-IV-36)
- thermal efficiency of, calculation of, 26:53107
- thermal effluents from, feasibility of useful heat extraction from, 26:55212 (CONF-720925-2)
- waste heat from, feasibility for use for urban space heating, industrial and sewage processing, and agricultural purposes of, 26:55212 (CONF-720925-2)

NUCLEAR QUADRUPOLE RESONANCE
- theory of pure and Zeeman spectra of, using irreducible tensors, 26:55063

NUCLEAR REACTIONS
- compound nucleus, computer programs for calculation in continuum region, 26:54701 (RT/FI-(72)7)
- Coulomb excitation in inelastic scattering, heat-flow analysis of temperature spikes following, (E/T), 26:54646
- currents for, elementary particle theory for second-class, (T), 26:54238 (LYCEN-7211)
- DWBA analysis of sub-Coulomb multi-transfer, (T), 26:54695 (LYCEN-7213)
- DWBA treatment of cluster transfer reactions, (T), 26:54706
- DWBA treatment of Coulomb deuteron break-up, 26:54743
- giant resonance in, Fermi-fluid drop model for intermediate and heavy nuclei, (T), 26:54689 (ITF-72-12-P)
- heavy-ion induced, macroscopic approach to, 26:54694 (LBL-972)
- high-energy approximation and generalized Huygen's principle in, (T), 26:54690 (ITF-72-57-P)
- isomer ratios from low primary excitation in, method for calculation of, (T), 26:54725
- knock-on mechanism for (n,α) reactions on deformed doubly even nuclei, (T), 26:54707
- nuclear reactions with intermediate and heavy, Fermi-fluid drop model for giant resonance in, (T), 26:54689 (ITF-72-12-P)
- potentials for (p,2p), 26:54699 (ORO-4317-11)
- rescattering in 3-particle-final-state, triangle graphs and isospin violation in, (T), 26:54716
- theory for one-nucleon transfer, semiclassical, 26:54742

NUCLEAR STRUCTURE
- calculations for even--even nuclei using rotational model with rotationally invariant core, 26:54719
- Coriolis anti-pairing transition in, microscopic model for, (T), 26:54680 (COO-3071-7)
- description of band structure in rotating nuclei using rotor-particle coupling, (T), 26:54733
- effect of quadrupole pairing field on 0+ vibrations in shape deformed nuclei, 26:54731
- fermion operators in, transition operator boson expansion of, (T), 26:54682 (COO-3071-10)
- wave functions for, extraction from particle transfer data, (T), 26:54693 (LA-DC-72-954)
- wave functions in, spin-dependent operators in occupation-branching number representation for open-shell, (T), 26:55077

NUCLEAR THEORY
- Hartree--Bogolyubov calculations in, boson expansion method for, 26:54741
- local density approximation in, spurious center-of-mass effect from, 26:54734
- many body problem in, analysis using variationally determined transformation, 26:54718
- many-fermion systems in, intermediate state single-particle energies in two-hole-line approximation for, 26:54717
- nuclear densities in a model well of arbitrary shape, 26:54704
- Strutinsky shell correction method in, 26:54684 (IAE-2115)
- three body systems in, effect of off-shell 2-body t-matrix on, 26:54697 (ORO-4317-7)

NUCLEAR WEAPONS
- effects on aerospace personnel and their task performance, modular analysis of radiobiological, 26:54880 (NASA-TM-X-2440, pp 364-7)
- safeguarding of, equipment and methods for testing mathematical error-reduction techniques for Geographical Position Locator (GPL) for, 26:53311 (UCRL-51130(Vol.8))

NUCLEI
- abundances of light and heavy, in primary cosmic radiation, (E), 26:53835
- abundances of Z = 1 to 26, in primary cosmic radiation, (E), 26:53836
- acceleration of high Z, in pulsar vicinity, (T), 26:53857
- alpha decay of, pulsed-beam technique for measuring half-life for, 26:54651
- book: Atomic Nucleus, 26:54738
- cascades from Z greater than or equal to 3 primary cosmic, in iron absorber, (E), 26:53832
- charge composition of heavy cosmic primary, (E), 26:53842
- charge composition of primary cosmic, (E), 26:53839
- charge composition of primary cosmic, (E), 26:53830
- charge composition of primary cosmic, up to Z = 28, (E), 26:53837
- charge composition of Z = 2 to 30 primary cosmic, (E), 26:53838
- charge composition of Z = 4 to 30 primary cosmic, (E), 26:53840
- charge of heavy and superheavy cosmic, calculation of delta electrons formed in stopping media as aid in determination of, 26:53805(T) (N-71-30295)
- charged-particle elastic scattering at low energy, forward dispersion relation including Coulomb interaction for, (T), 26:54711
- chemical composition of low-energy L and M, in primary cosmic radiation, (E), 26:53841
- cosmic particle reactions with primary cosmic, cross sections for, (T), 26:53845
- decay of, review of impact of advances in instrumentation on measurement of, 26:53263
- electron elastic scattering by, contributions of time reversal noninvariant terms in, (T), 26:54363 (IS-T-536)
- electron scattering at high energy, analysis of short-range correlations by, 26:54687 (ISS-71/29)
- energy levels of single-closed-shell, relations among magnetic moments and rates for M1 transitions of, (T), 26:54702
- energy levels of, generalized variable-moment-of-inertia models for rotatonal, (T), 26:54712
- energy levels of, method for measuring magnetic moments of short-lived, using Coulomb excitation by polarized heavy-ion beams, (E/T), 26:54630
- energy levels of, shell effects on spin determination by spectroscopic factor ratios, (E/T), 26:54612
- energy spectra of heavy cosmic primary, (E), 26:53842
- energy spectra of low-energy L and M, in primary cosmic radiation, (E), 26:53841
- energy spectra of primary cosmic, effects of Fermi

- acceleration on, (T), 26:53862
- energy spectra of VH and VVH primary, (E), 26:53843
- hadron interactions with, diffraction emission in, (T), 26:54690 (ITF-72-57-P)
- heavy-ion elastic scattering by, analysis of absorptive potentials for, (T), 26:54678 (COO-535-672)
- heavy-ion scattering above Coulomb barrier, coupled-channel analysis of, (T), 26:54736
- mass of primary cosmic, method for determining mean, (E/T), 26:53824
- meson (K^-) capture by, gamma yields for different final states in, (T), 26:54536
- meson (π) elastic scattering by, analysis of nuclear surface properties by, (T), 26:54722
- meson (π) reactions below 3 GeV, intranuclear-cascade evaporation calculations for nonelastic, (T), 26:54727
- meson (π^+ and π^-) reactions at 0.7 to 2 GeV/c, cross-section ratios for, (E), 26:54529 (RPP/NS-8)
- muon (μ^-) capture by, elementary particle theory for nuclear currents in, (T), 26:54238 (LYCEN-7211)
- muon (μ^-) capture by, polarization of emitted neutron in, (T), 26:54564
- neutron and proton residual interaction in, mass number dependence of, (T), 26:54739
- neutron capture at 1 keV to 10 MeV by Z = 29 to 79, cross-section calculations using Hauser--Feshbach--Margolis method, (T), 26:54700 (RT/FI-(72)6)
- neutron capture by, radiative decay of resonant states in, 26:54675 (BNL-17029)
- neutron elastic scattering by, bibliography on, 26:54602 (JAERI-M-4666)
- neutron reactions with, strength function evaluation for a small number of resonances in, (T), 26:54720
- nucleon reactions below 3 GeV, intranuclear-cascade evaporation calculations for nonelastic, (T), 26:54727
- photon reactions (γ,π^0) with, calculation of absorption in, 26:54691 (JINR-P2-6539)
- photon reactions with spin-$^1/_2$ point, differential cross sections for $e^+ - e^-$ pair production and effects of neutral vector mesons on angular dependence of cross sections for, (T), 26:54260
- proton reactions at 22.6 GeV/c with emulsion, velocity distribution of secondary π production from, (E), 26:54196
- rigidity spectra of Z greater than or equal to 2 primary cosmic, (E), 26:53826
- rigidity spectra of Z greater than or equal to 3 primary cosmic, at 5 to 300 GeV, (E), 26:53834
- single-particle properties of, nonlocal potential for, (T), 26:54746
- x-ray disintegration of high Z, in pulsar environment, (T), 26:53857
- xenon reactions with, review of experiments on, 26:54658 (JINR-P7-6523)

NUCLEI, EVEN-EVEN
- energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)
- neutron reactions (n,α) with deformed, knock-on mechanism for, (E), 26:54707

NUCLEI, EVEN-ODD
- energy levels of, extension of variable-moment-of-inertia model to, (T), 26:54710

NUCLEI, HEAVY
- beta decay of neutron-rich Z > 90, half-life calculations based on nuclear potential energy surface from modified harmonic oscillator potential, (T), 26:54663
- density of deformed, (T), 26:54704
- fission of neutron-rich Z > 90, half-life calculations based on nuclear potential energy surface from modified harmonic oscillator potential for neutron-induced and spontaneous, (T), 26:54663
- neutron reactions with, interpretation of energy-dependent cross sections for, 26:54653 (CONF-720901-(Bks.1 and 2), pp 81-96)
- octupole deformations in A > 208, (T), 26:54732

NUCLEI, INTERMEDIATE
- energy levels of odd A = 153 to 177, equilibrium deformations of, (T), 26:54640
- helium-3 elastic scattering at 10 to 85 MeV, energy dependence in optical-model analysis of, (T), 26:54580

NUCLEI, LIGHT
- alpha-cluster structure of ground states for self-conjugate 4n, (T), 26:54723
- binding and separation energies, rms radii, and electric quadrupole moments of, unrestricted Hartree--Fock calculations of, (T), 26:54745
- energy levels of deformed odd--odd, properties of effective neutron--proton interaction in rotational, (T), 26:54747
- energy levels of exotic, shell-model calculations of spin--parity assignments and wave functions for, (T), 26:54351
- giant dipole resonance in, inclusion of hole-state widths in particle--hole calculations of, (T), 26:54714
- hyperon (Λ) binding energies in exotic, shell-model analysis of, (T), 26:54351

NUCLEI, ODD-EVEN
- energy levels of, extension of variable-moment-of-inertia model to, (T), 26:54710

NUCLEI, ODD-ODD
- energy levels of deformed light, properties of effective neutron--proton interaction in rotational, (T), 26:54747

NUCLEIC ACID, DEOXYRIBO-
- preparation and structure of single molecules of, Kleinschmidt's method for, 26:55530 (ISS-71/22)
- radiation effects on circadian changes in synthesis of, in cells of rat gastric glands following oral administration of radon water, effects of dose on α, 26:53514
- radiation effects on content of, in human epidermis during atrophic and dermatitis reactions to chronic therapeutic exposure, x, 26:53441
- radiation effects on metabolism of, in L cells infected with rickettsiae, effects of cycloheximide on gamma, 26:53360
- radiation effects on replication of, in bacteria and bacteriophages, role in molecular repair mechanisms, 26:53348
- radiation effects on sedimentation properties of single-stranded, in bacteriophages in relation to molecular structure, uv, 26:53373
- radiation effects on single-strand breaks in, γ, 26:52981 (COO-3571-3)
- radiation effects on synthesis and degradation of, in liver, spleen, and thymus of rats, x, 26:53489
- radiation effects on, in microorganisms, review of role of enzymes in repair of uv, 26:53351
- radiation effects on, in organisms, comparison of RBE for high with low LET, 26:53345 (NASA-TM-X-2440, pp 222-8)
- radiation effects on, review of effects of sensitizing agents on, 26:53352
- radioinduced double-strand breaks in, of Micrococcus radiodurans, inhibitory effects of chloramphenicol, dactinomycin, and tetracycline on repair of γ, 26:53349
- radioinduced lesions in, following incorporation of β-emitting radioisotopes, repair processes for β, 26:53505
- radioinduced lesions in, of cultured mammalian cells and microorganisms, role of repair processes in recovery from lethal and mutagenic, γ, uv, and x, review of, 26:53357
- radioinduced lesions in, of microorganisms, role of enzymes in repair of uv, 26:53350

NUCLEIC ACID, RIBO-
- radiation effects on content of, in human epidermis during atrophic and dermatitis reactions to chronic therapeutic exposure, x, 26:53441

NUCLEOGENESIS
- γ-process, production of transactinide elements in, (T), 26:53867

NUCLEONS
- coupling constant for πN from test of analyticity of forward π + N charge-exchange amplitude, (T), 26:54337
- form factor in e + N → π + N interactions at threshold, method for calculating axial, (T), 26:54247 (NP-19417)
- form factors in generalized field theory for nuclear forces, 26:54382
- interactions anti N + N, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342
- interactions e + N → π + N at threshold, method for calculating axial nucleon form factor and pion electromagnetic form factor in, (T), 26:54247 (NP-19417)
- interactions e + N at high energies, review of kinematics, scaling, scattering from deuterons and complex nuclei, sum rules, single π^+ production, vector meson diffractive production, and coincidence measurements in inelastic, (E), 26:54173 (RPP/H-97)
- interactions e + N at q^2 = 0.6 to 1.56 GeV^2, angular distributions for π^0 production in, (E), 26:54268
- interactions e + N in quark--parton model, bare quark mass and structure function for, (T), 26:54282
- interactions e + N, relation between prominent resonances and limiting scaling data in inelastic, (T), 26:54258
- interactions e + N, sum rule and model for S-matrix elements in presence of standing-wave states as shadow quarks in Bjorken limit of deep inelastic, (T), 26:54248 (ORO-3992-106)
- interactions K^+ + N, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342
- interactions K^- + N, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342
- interactions l + N, asymmetries for models for spin-averaged cross sections and spin effects in Bjorken scaling region for polarization effects in deep inelastic, (T), 26:54244 (DESY-72/36)
- interactions N + N at 50 to 1200 GeV, model for multiple production in, (T), 26:54314
- interactions N + N, explicit damped phase shifts for one-plus two-pion-exchange and pseudoscalar vector meson models and radiation damping effects on amplitudes and phase parameters of, (T), 26:54350
- interactions N + N, factorization of pair potential by Bateman modified method for behavior of approximated phases of, (T), 26:54345 (JINR-P4-6505)
- interactions N + N, Gelfand--Levitan unitary-transform method for extension of T matrix off the energy shell, 26:54698 (ORO-4317-8)
- interactions N + N, hard-core radius of, 26:54251
- interactions N + N, phase shifts and coupling parameters from damped pseudoscalar- and vector-meson model for

elastic, 26:54348
  interactions N + N, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342
  interactions ν + N, quark-model predictions of cross sections for production of pseudoscalar mesons in, (T), 26:54285 (DESY-72/32)
  interactions $\pi + N \rightarrow \pi + \Sigma(\Lambda)$ near threshold, cross sections and polarization phenomena from PCAC theory, (T), 26:54335
  interactions π + N at 4.8 to 20 GeV, double Regge cuts in Regge pole--cut model for charge exchange, (T), 26:54324 (COO-1428-309)
  interactions π + N at low energies, current algebra model with physical pions for scattering and energy dependence of S- and P-phase, (T), 26:54339
  interactions π + N, inequalities between relative phase of amplitudes and polarization in, (T), 26:54340
  interactions π + N, nonlocal separable potentials for, (T), 26:54724
  interactions π + N, πN coupling constant from test of analyticity of forward amplitude of charge-exchange, (T), 26:54337
  interactions π + N, urbaryon rearrangement diagrams for structures in elastic and inelastic, (T), 26:54342
  reactions with nuclei below 3 GeV, intranuclear-cascade evaporation calculations for nonelastic, (T), 26:54727
  scattering by deuterium at 10.85 MeV, agreement of exact calculations of polarization in elastic, (T), 26:54509
  structure functions in parton model, (T), 26:54311
NUCLEONS (anti N)
  interactions anti N + N, urbaryon rearrangement diagram for structures in elastic and inelastic, (T), 26:54342

O

OCEANOGRAPHY
  conference on, American Geophysical Union annual, Washington, D. C., 4/71, 26:54010
OCONEE POWER REACTOR, UNIT 1
  cooling system for, hydraulic stress failures of internal components of, 26:55225 (BAW-10050)
OILS
  analysis of pump, for tritium by bremsstrahlung counting, 26:52934 (MLM-1368)
OLDBURY REACTORS
  performance of, methods for improvement of, 26:55270
OOCYTES
  radioinduced chromosome aberrations in mature, of Drosophila melanogaster, effects of premeiotic breakage and interchanges on types of x, 26:53501
  radiosensitivity of grain moth, effects of meiotic stage on γ, 26:53499
OREGON
  zinc-65 distribution and concentration in benthic fauna from continental shelf of, 26:53149 (RLO-2227-T-12-26)
ORES
  analysis for thorium by neutron activation, anion exchange purification of protactinium for, 26:52903
ORGANIC COMPOUNDS
  radioinduced preparation of, review on methods for, 26:53023
ORGANISMS
  radiation effects on DNA in, comparison of RBE for high with low LET, 26:53345 (NASA-TM-X-2440, pp 222-8)
  radioisotope distribution and metabolism in, development of kinetic models for multi-parameter analysis of, 26:53519
  thermal effects on aquatic, 1971 bibliography on, 26:53190 (ORNL-EIS-72-28)
ORNL HIGH-FLUX ISOTOPE REACTOR
  activation analysis facility at, features and tests of, 26:52897 (CONF-721010-3)
  startup of, model for on-line reactivity balance calculations during, (E/T), 26:55407 (ORNL-TM-3769)
OSMIUM
  determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  determination in residues from leaching of mattes by distillation and colorimetry, 26:52919 (NIM-1432)
OSMIUM ISOTOPES Os-184
  energy level from Coulomb excitation, quadrupole moment and transition probability of first 2^+, (E), 26:54638
OSMIUM ISOTOPES Os-185
  electron-capture decay of, γ-γ angular correlations from, (E), 26:54644
OSMIUM ISOTOPES Os-186
  energy level from Coulomb excitation, quadrupole moment and transition probability of first 2^+, (E), 26:54638
  energy levels from iridium-186 decay, spin-parity assignments for, (E), 26:54633 (COO-3255-3)
OSMIUM ISOTOPES Os-188
  energy level from Coulomb excitation, quadrupole moment and transition probability of first 2^+, (E), 26:54638
OSMIUM ISOTOPES Os-190
  energy level from Coulomb excitation, quadrupole moment and transition probability of first 2^+, (E), 26:54638
OSMIUM ISOTOPES Os-192
  energy level from Coulomb excitation, quadrupole moment and transition probability of first 2^+, (E), 26:54638
OSTEICHTHYES
  abundance of, relations with discharge cooling water temperature from Point Beach Power Plant, 26:53185 (ANL-7860(Pt.3), pp 118-20)
  distribution in vicinity of thermal plume, acoustic location method for studying, 26:53186 (ANL-7860(Pt.3), pp 121-30)
  hematopoiesis in, bibliography on, 26:53447 (CONF-720822-2)
  Lepomis macrochirus (bluegill), cesium-137 content of, in White Oak Lake in relation to content of stable cesium and potassium and seasonal changes in food consumption, 26:53535
  radiation effects on function of hematopoietic tissues in, effects of dose, dose rate, and species on acute and chronic γ, 26:53447 (CONF-720822-2)
  radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  radioisotope content in Lake Michigan, from Big Rock Point and Point Beach Nuclear Power Plant effluents, 26:53169 (ANL-7860(Pt.3), pp 141-50)
OTTO HAHN REACTOR
  coolant for, radiation dose from oxygen activation in secondary, (T), 26:55356 (CONF-720901-(Bks.1 and 2), pp 471-9)
OXIDES
  formation energy of, relations with fuel capsule corrosion and deterioration, 26:53330(R) (BNWL-1308-10)
  sintering of, review on mechamism of activated, 26:53587
  sorptive properties of, effects of electronic structure on, 26:53593
OXONIUM IONS
  reactions with radiolytic hydrated electrons, kinetics of, 26:53006
OXYFLUOROURANATES
  complexes with organic basic cations, thermogravimetric studies on, 26:53043
OXYGEN
  abundance in NGC 7662, (E/T), 26:53873
  abundance in primary cosmic radiation from 10 to 1000 MeV/N, (E), 26:53835
  chemical demand for, in water, use of perchloratocerate reagent and fluorometric determination of cerium as measure of, 26:52915 (CONF-720827-2)
  determination of surface and body concentrations of, in materials by helium-3 activation, 26:52899 (LA-DC-72-809)
  determination of trace amounts in liquid sodium, vacuum distillation method for, 26:55170 (CONF-710959-, Paper 14)
  effects on brittleness of molybdenum, 26:53682
  effects on corrosion resistance of zirconium and zirconium alloys in high-temperature water, 26:53614
  effects on sintering and stress-rupture properties of nickel-base alloys, 26:53674
  effects on tantalum compatibility with sodium at 600°C, 26:53688
  emission in nightglow, altitude distribution of $O_2(^1\Delta)$ 1.27-μ, (E), 26:54042
  excitation of atomic, ^1D state in ionosphere, calculations of electron, (T), 26:54022
  excitation of O_2 in ionosphere, rates for vibrational, (T), 26:54022
  hydrogen-atom reactions with molecular, free-collision-model calculations of cross sections for electron loss in, 26:54121
  ionization balance in solar atmosphere, density dependent, (E), 26:53969
  light absorption by solid crystals of alpha-, 26:55531 (ITF-71-95-P)
  radiosensitizing effects of, on DNA, review of x, 26:53352
  reactions with dysprosium and gadolinium under controlled partial pressures at 727 to 1327°C, self-diffusion coefficients for, 26:53550 (IS-T-540)
  solubility in sodium, 26:55154 (CONF-710548-, pp 105-28)
  spectral emission at 1304 and 1356 A in tropical ionospheric F region, theoretical time-dependent behavior of far-uv airglow intensity from, 26:54031
  spectral emission during arc event of Mar. 8--9, 1970, spectroscopy of $O(^1D)$ and $O(^1S)$ states, (E), 26:54014
  spectral emission volume of O 5577 A in overhead auroral zone, March 19 and 27, 1971, (E), 26:54012 (SC-RR-720543)
  spectral lines in zeta Oph due to interstellar, (E), 26:53875
OXYGEN IONS
  effects of implanted, on Doppler broadening of positron annihilation photons in silver halide crystals, 26:54097
  effects on silver-activated phosphate glass at 200 to 400 keV, depth distribution of photoluminescence induced by, 26:55009
  reactions with aluminum, calcium, and copper at 7.5 to 40 MeV, cross sections for K x-ray production in, (E), 26:54467(R) (ORO-2972-204)
  reactions with copper and tantalum at 10.4 MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
  reactions with magnesium at 21 MeV, Kα x-ray spectra from, (E), 26:54467(R) (ORO-2972-204)
  reactions with silicon and iron at 30 MeV, Kα x-ray

    spectra from, (E), 26:54467(R) (ORO-2972-204)
  spectral Lamb shift in $^{16}O^{7+}$, quantum electrodynamics test in, (E), 26:54375(R) (COO-1811-3)
OXYGEN IONS (O_2^+)
  reactions with helium, impulse approximation for vibrational excitation in, using Morse potential, 26:54131
OXYGEN ISOTOPES O-14
  beta decay of, electromagnetic corrections to ft values for, (T), 26:54713
OXYGEN ISOTOPES O-16
  content ratio to oxygen-18 in biogenic silica, 26:53178
  deuteron reactions (d,Li-6) at 28 MeV, angular distributions and spectroscopic factors for, (E), 26:54527 (LYCEN-7219)
  energy levels of, evaluation of Hartree-Fock calculations for, (T), 26:54524 (COO-2171-14)
  lithium-7 reactions (Li-7,t) with, finite-range DWBA analysis of, (T), 26:54708
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  nuclear charge form factor of, effects of center-of-mass spuriosity on, (T), 26:54507
  oxygen-16 elastic scattering by, statistical calculation of adiabatic potential for, (T), 26:54544
  reactions (O-16,C-12) with iron-54 at 46 MeV, analysis for reaction mechanism in, (E), 26:54579
  reactions with aluminum-27 at 96 to 165 MeV, direct-reaction effects in excitation functions and gamma spectra from, (E), 26:54558
  scattering by calcium near the Coulomb barrier, incoming wave boundary condition for elastic, (T), 26:54705
  scattering by carbon-12 at 5 to 14 MeV, optical-model analysis of effects of quasi-molecular states in cross sections for elastic, (T), 26:54534
  scattering by oxygen-16, statistical calculation of adiabatic potential for elastic, (T), 26:54544
OXYGEN ISOTOPES O-17
  effects on γ and neutron spectra of molybdenum--plutonium dioxide heat sources, 26:53336 (NASA-TM-X-2440, pp 853-8)
OXYGEN ISOTOPES O-18
  content in marine sulfates, (E), 26:53180
  content ratio to oxygen-16 in biogenic silica, 26:53178
  effects on γ and neutron spectra of molybdenum--plutonium dioxide heat sources, 26:53336 (NASA-TM-X-2440, pp 853-8)
  energy levels of, calculations using separable nonlocal potential, (T), 26:54683 (FRNC-TH-180)
  energy levels of, off-shell effects in two-particle shell-model calculation of, (T), 26:54538
OXYGEN ISOTOPES O-19
  energy levels of, calculations using separable nonlocal potential, (T), 26:54683 (FRNC-TH-180)
OXYGEN ISOTOPES O-20
  energy levels of, calculations using separable nonlocal potential, (T), 26:54683 (FRNC-TH-180)
OXYGEN SYSTEMS
  C--O--Zr, reactions in, stability of phases produced by, 26:53581
  Mo--O, thermodynamic properties of liquid solutions of, 26:53588
OYSTER CREEK POWER REACTOR, UNIT 1
  maintenance during January to June 1972, 26:55242 (DOCKET-50219-213)
  operations during January to June 1972, 26:55242 (DOCKET-50219-213)

P

PACIFIC OCEAN
  Columbia River water and sediment distribution and transport in northeast, 26:53165(R) (RLO-2225-T-25-6)
PAINTS
  radiation resistance of selected, evaluation of, p. 98-100, 26:52986 (ORNL-4794, pp 98-101)
PALISADES POWER REACTOR
  control rod drives for, test failure of, 26:55251 (DOCKET-50255-99)
  valves for, verification of wall thicknesses for nuclear service, 26:55278 (DOCKET-50155-125)
PALLADIUM
  recovery of fission product, for commercial uses, feasibility of, 26:53330(R) (BNWL-1308-10)
PALLADIUM ALLOYS AND SYSTEMS
  Pd--Ti, diffusion measurements on, at 600 to 1000°C, 26:53677
  Pd--V, diffusion measurements on, at 608 to 1300°C, 26:53677
PALLADIUM CHLORIDES
  $PdCl_2$--W, sintering of powders of, mechanism of material transport by dislocation motion in, 26:53620
PALLADIUM ISOTOPES Pd-108
  energy levels from rhodium-108 decay, collective model analysis of, (E/T), 26:54596 (CEA-R-4286)
PALLADIUM ISOTOPES Pd-110
  energy levels from rhodium-110 decay, collective model analysis of, (E/T), 26:54596 (CEA-R-4286)
PANCREAS
  scintiscanning of human, for diagnosis of neoplasms, use of gamma camera in, 26:53214
PARTICLE TRACK MEASURING EQUIPMENT
  circuits for DOLLY CRT flying spot scanner, digital-to-analog converter, 26:53278
  data processing program for HPD, for bubble chamber film, 26:53274 (RHEL/R-241)
PARTICLE TRACKS
  sizes of proton and alpha-, in sodium chloride monocrystals, (E), 26:55016
PARTICLES
  betatron oscillations in two dimensions in nearly periodic system, perturbed equations for, 26:53763
  time reversal operator for unstable, definition for decays in media without intrinsic T violation, (T), 26:54366
PEACH BOTTOM POWER REACTOR, UNIT 1
  maintenance during January to June 1972, 26:55238 (DOCKET-50171-106)
  operations during January to June 1972, 26:55238 (DOCKET-50171-106)
PEACH BOTTOM POWER REACTOR, UNIT 2
  circulating water system for, possible failure of expansion bellows for, 26:55292 (DOCKET-50277-56)
  containment structure for, effects of coolant loss accidents on atmosphere in, 26:55293 (DOCKET-50277-57)
  cooling system for, vibration testing of components of, 26:55293 (DOCKET-50277-57)
  emergency core cooling system for, requested data on performance evaluation of, 26:55293 (DOCKET-50277-57)
  radioactive effluents from, requested and revised data on, 26:55293 (DOCKET-50277-57)
PEACH BOTTOM POWER REACTOR, UNIT 3
  circulating water system for, possible failure of expansion bellows for, 26:55292 (DOCKET-50277-56)
  containment structure for, effects of coolant loss accidents on atmosphere in, 26:55293 (DOCKET-50277-57)
  cooling system for, vibration testing of components of, 26:55293 (DOCKET-50277-57)
  emergency core cooling system for, requested data on performance evaluation of, 26:55293 (DOCKET-50277-57)
  pressure vessel for, damage report for top fuel guide of, 26:55294 (DOCKET-50278-58)
  radioactive effluents from, requested and revised data on, 26:55293 (DOCKET-50277-57)
PEOPLE'S DEMOCRATIC REPUBLIC OF GERMANY
  fallout monitoring in, during 1970, 26:53156 (SZS-128)
PEROVSKITES
  magnetic moment direction in rare-earth, crystal-field calculation of, 26:55054
PERSONNEL
  card files for, use of PL/1 as interrogation language for, 26:55450 (CEA-CONF-2005)
  management of, universal time administration in real time system for, 26:55541 (KFK-1526)
  mortality of mining, in relation to exposure to radon and radon daughters in air, epidemiological survey of contribution of neoplasms of respiratory and gastrointestinal tract and tuberculosis to, 26:53412
  radiation dose to various body parts of betatron, comparison of actual and phantom measurements of beta and gamma, 26:53426
  radiation dose to, criteria for maximum permissible, 26:53436
  radiation protection programs for, in German Federal Republic, 26:55456 (SZS-136)
PERTURBATION THEORY
  continued-fraction method for Mathieu equation and anharmonic-oscillator equation in, 26:55078
  energy of degenerate levels in Rayleigh--Schroedinger single, expression of second-order, in double perturbation form, 26:54152
  formalism of time-dependent, for quantum-mechanical systems, 26:55073
PETROLEUM
  analysis for vanadium by neutron activation, 26:52905
PHANTOMS
  evaluation for measurement of radiation dose to various body parts of personnel, beta and gamma, 26:53426
  neutron dose distribution in rat, rabbit, and human, effects of secondary components on, (E), 26:54871 (CEA-CONF-1976)
  radiation isodose curves in water, automatic system for measuring, 26:53243
  use for predetermination of absorbed x-ray dose to man during diagnostic radiography, 26:53416
  use of Alderson Rando, with lithium fluoride dosimeters for calculation of γ dose to human bone marrow following whole-body exposure, 26:53406 (NASA-TM-X-2440, pp 974-80)
  x-ray absorbed dose and effective energy distribution under screen filters in tissue-equivalent, 26:54911
  x-ray scattering by tissue-equivalent, from 50 to 300 kVp, (E), 26:54905
PHENIX FAST REACTOR
  fuel element failures in, radioactive tracer technique for locating, 26:55185 (CONF-710959-, Paper 1)
  rare gas transport in, 26:55185 (CONF-710959-, Paper 1)
  steam generator for, effects of sodium--water reactions on, 26:55150 (CONF-710548-, pp 1-16)
PHENOL, p-NITRO-
  radiation effects on antibacterial activity of, and in

    mixtures with 2,2-dichloro-N-[2-hydroxy-1-(hydroxymethyl)ethyl]acetamide, γ, 26:52998
PHONONS
  production in lithium-ion-doped and hydroxide-ion-doped potassium chlorides, with pulsed electric fields, (E/T), 26:55512 (COO-3151-139)
  resonant scattering by impurities in crystals, review, 26:55511 (COO-3151-8)
PHOSPHENES
  radioinduced, in eyes of astronauts during space flight, cosmic, 26:53407 (NASA-TM-X-2440, pp 1002-6)
PHOSPHORIC ACID, TRIBUTYL ESTER
  solvent properties for neptunium and plutonium, 26:53073
PHOSPHORUS
  determination as orthophosphate using molybdenum and carminic acid, spectrophotometric, 26:52931
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  effects on neutron radioinduced strengthening of chromium--iron welds, iron, and pressure vessel steel, 26:53710
  ionization in biological materials, relation of energy level transitions to changes in molecular structure, 26:53376
  separation from uranium by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)
  toxicity of elemental, bibliography on, 26:55586 (ORNL-TIP/TIRC-72-63)
PHOSPHORUS IONS
  implantation in silicon, precipitation upon annealing after, 26:54994
  scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139
PHOSPHORUS ISOTOPES P-29
  energy levels from silicon-28 (p,γ) reactions, lifetimes and spin-parity assignments for, (E), 26:54552 (FRNC-TH-227)
  energy-level transitions from silicon-28 (p,γ) reactions, branching and mixing ratios for, (E), 26:54552 (FRNC-TH-227)
PHOSPHORUS ISOTOPES P-32
  effects on cells following incorporation into DNA, role of transmutation in lethal and mutagenic, 26:53505
  effects on embryonic development, hatchability, and growth of chicks, 26:53517
  production from neutron-irradiated sulfur in hot toluene, extraction methods for, 26:53069
  use of colloids of, for treatment of malignant pleural effusions in man, measurement of dose distribution with time following, beta, 26:53509
PHOTOELECTRIC EFFECT
  electron emission by copper, model calculations of angular and energy distributions of secondary, 26:54885 (NASA-TM-X-2440, pp 792-800)
PHOTOGRAPHIC FILM
  radiation shielding on Skylab space station, 26:54049 (NASA-TM-X-2440, pp 748-55)
PHOTOGRAPHY
  performance of high-speed, for studying post-burnout two-phase Freon-12 flow, 26:53122
PHOTOMULTIPLIER TUBES
  radiation effects on star sensor system using, for attitude determination for spacecraft, 26:53293 (NASA-TM-X-2440, pp 735-43)
PHOTONS
  cosmic effects of finite rest mass of, (T), 26:53866
  coupling constant for γ phi, in relativistic extended quark model, 26:54283
  coupling constants for γ rho, in relativistic extended quark model, 26:54283
  coupling constants for $\gamma\omega$, in relativistic extended quark model, 26:54283
  detection at high energies, fabrication of total-absorption detector using condensed xenon for, 26:53272 (JINR-P13-6541)
  detection of pulsed, time response of L-125A Compton diodes for, (E/T), 26:53197 (EGG-1183-2277)
  interactions $\gamma + d \to p + p + \pi^-$ up to 1 GeV in bubble chamber, angular distributions and total cross sections for, (E/T), 26:54171 (LNF-72/31)
  interactions $\gamma + e$, differential cross sections and left--right asymmetry in Compton, (T), 26:54256
  interactions $\gamma + e$, hypothesis consistency and relation with behavior of electromagnetic current commutator near light cone for automodel asymptotic of spectral functions of virtual Compton, (T), 26:54246 (JINR-P2-6636)
  interactions $\gamma + e$, Schwinger source theory for calculation of spectral forms for invariant amplitudes of order e^4 for Compton, (T), 26:54255
  interactions $\gamma + \gamma \to m\pi(m = 2 \text{ or } 3)$ with soft pions, structure of observable amplitudes for, (T), 26:54265
  interactions $\gamma + \gamma \to \pi + \pi + \pi$, photon reactions $(\gamma,3\pi)$ with lead for test of low-energy theorem for, (T), 26:54252
  interactions $\gamma + n \to n + $ eta at threshold to 1.1 GeV, transition amplitudes and cross sections for N resonance production in, (E), 26:54166 (CALT-68-322)
  interactions $\gamma + n \to p + \pi^-$ up to 1 GeV in deuterium bubble chamber, spectator-model analysis of differential and total cross sections for, (E/T), 26:54171 (LNF-72/31)
  interactions $\gamma + n \to \pi^- + p$ at 600 to 1250 MeV, differential cross sections for, (E), 26:54179
  interactions $\gamma + n \to \pi^- + p$ in 3,3 resonance region, discrepancy between dispersion relation predictions and experiment, 26:54261
  interactions $\gamma + n$, evaluation of $J = 0$ fixed pole in Compton, 26:54254
  interactions $\gamma + p \to p + $ eta at threshold to 1.1 GeV, recoil proton polarization, transition amplitudes, and cross sections for N resonance production in, (E), 26:54166 (CALT-68-322)
  interactions $\gamma + p \to p + \pi^+ + \pi^-$ at 2 to 5 GeV in hydrogen bubble chamber, cross sections and resonance production in, (E), 26:54175 (SLAC-143)
  interactions $\gamma + p \to p(n) + \pi^+ + \pi^- + \pi^0(\pi^+)$ at 4.3 to 7.5 GeV, cross sections and resonance production in, (E), 26:54175 (SLAC-143)
  interactions $\gamma + p \to \pi^0(\gamma) + p$ at 3 to 7 GeV, polarization of recoil proton in, (E), 26:54167 (COO-3069-71)
  interactions $\gamma + p \to \pi^- + $ anything at 9.3 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
  interactions $\gamma + p \to \pi^+ + n$ at 0.5 to 2.2 GeV, magnetic spectrometer study of structure in target asymmetry in, (E), 26:54172 (NP-19415)
  interactions $\gamma + p \to \pi^+ + n$ in 3,3 resonance region, discrepancy between dispersion relation predictions and experiment, 26:54261
  interactions $\gamma + p \to \pi^+ + n$, contribution of unnatural parity exchanges to, (T), 26:54270
  interactions $\gamma + p \to \pi^+(\pi^-) + $ anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
  interactions $\gamma + p$ in $\Delta(1236)$ resonance region, differential cross sections for elastic Compton, (E), 26:54180
  interactions $\gamma + p$, proposed experiment using multiwire proportional chambers and wide-gap spark chambers for charged-particle multiplicity and angular correlations in, (E), 26:54192 (BNL-17141)
  interactions $\gamma + \pi \to \pi + \pi$ with soft pions, structure of observable amplitudes for, (T), 26:54265
  interactions with charged fermions with intrinsic dipole moments, effective differential cross sections for Compton, (T), 26:54278
  interactions with photons, effects of velocity on, (T), 26:53866
  production in inelastic $\nu + \mu$ interactions with bremsstrahlung, four-component neutrino theory for e and μ polarization effects on form of spectra for, (T), 26:54290
  production of soft, in $p + p \to \pi^+ + d + \gamma$ interactions, amplitudes of, (T), 26:54250
  reactions $(\gamma,3\pi)$ with lead, test of low-energy theorem for $\gamma + \gamma \to \pi + \pi + \pi$ interactions from, (T), 26:54252
  reactions (γ,π^0) with nuclei, calculation of absorption in, 26:54691 (JINR-P2-6539)
  reactions (γ,xn) with $Z = 37$ to 79 nuclei, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
  reactions with helium triplet metastable atoms, light-intensity dependence of probability of ionization in, (E), 26:54094
  reactions with nitrogen-15 with giant resonance excitation, continuum shell-model calculation of, (T), 26:54545
  reactions with singly excited hydrogen molecules, calculation of cross sections for ionization in, using phase shifts for electron scattering by hydrogen ions (H_2^+), 26:54091
  reactions with spin-$^1/_2$ point nuclei, differential cross sections for $e^+ - e^-$ pair production and effects of neutral vector mesons on angular dependence of cross sections for, (T), 26:54260
  scattering by K-shell electrons, nonrelativistic dipole approximation for Compton, (T), 26:54280
  scattering by K-shell electrons, nonrelativistic theory with retardation for Compton-type inelastic, 26:54279
  stability against decay, 26:54274
PHOTOSPHERE
  magnetic field distribution in, (E), 26:53947
  magnetic fields in weak-plage regions of, diffusion of, (E), 26:53933
  magnetic fields in, associated with quiescent prominences, (T), 26:53950
  oscillations in, velocity, (E/T), 26:53946
  oscillations of, spatial properties of five-minute, (E/T), 26:53945
  spectroheliograms of, (E), 26:53947
PHYSICS
  research in India, 1971--1972, 26:55452(R) (NP-19407)
PICOLINE
  complexes with oxyfluorouranate ions, thermogravimetric studies on, 26:53043
PILGRIM POWER REACTOR
  equipment for, evaluation of possible flooding of Class 1, 26:55304 (DOCKET-50293-88)
  operation of, license for, 26:55305 (DOCKET-50293-90)
  technical specifications for, 26:55305 (DOCKET-50293-90)
PINCH DEVICES
  plasma confinement in theta-, low-density limit for, (T),

26:54754 (LA-5019)
  plasma halo development in ISAR I linear theta-, properties of, (E), 26:54784 (IPP-1/125)
  plasma stabilization in theta-, transverse dynamic, (T), 26:54808 (LRP-51/72)
  review of Scyllac experiments, 26:54828 (LA-DC-72-896)
PINCH EFFECT
  plasma heating processes in z, gas kinetic relations for, (T), 26:54749(T) (AEC-tr-7330)
PIPE FITTINGS
  rupture studies of long radius elbow, 26:55175(R) (GEAP-10207-26)
PIPES
  design criteria for nuclear service, development program for, 26:55207(R) (ORNL-TM-3900)
  dismantling of sodium cooled reactor, removal of sodium and decontamination during, 26:55147 (AI-AEC-Memo-12736)
  effects of ducts on space nuclear shield, (E/T), 26:54958 (NASA-TM-X-2440, pp 375-82)
  fatigue testing of stainless steel Type-304 and Type-304L, Inconel-600, and carbon steel, fatigue rates from, 26:55175(R) (GEAP-10207-26)
  rupture studies of welded, 26:55175(R) (GEAP-10207-26)
  tees for nuclear service, stress testing of, 26:55207(R) (ORNL-TM-3900)
PISTON ENGINES
  piston ring and ring groove wear in 6-cylinder Diesel, neutron activation measurements of, 26:53339 (KFK-1568)
PITUITARY GLAND
  radioinduced changes in, ultrastructure and secretory activity of cells in mice following partial- or whole-body exposure, γ, 26:53467
PLANETARY NEBULAE
  formation from final phase of mass loss on red-giant branch, (T), 26:53874
  model for NGC 7662, consistent, (E/T), 26:53873
  structure of, (T), 26:53985
PLANETS
  formation from solar nebula, (T), 26:54005
PLANTS
  analysis for trace amounts of cobalt by instrumental neutron activation, 26:52904
  cesium-137 distribution in Puerto Rican, 26:53162 (ANL-7860(Pt.3), pp 1-13)
  cesium-137 uptake by, in Georgia during 1971 in comparison with 1965, fallout, 26:53539(R) (SRO-641-4)
  radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  radioisotope uptake and retention in, following release to environment, bibliography on, 26:53530 (TID-3915(Suppl.1))
  radioisotope uptake by marine, from seawater, strontium-90 and zinc-65, 26:53532
  uptake of radioisotopes by, 26:53459(R) (NP-19403)
PLANTS (INDUSTRIAL)
  heat sources for, feasibility of use of power plant waste heat for, 26:55212 (CONF-720925-2)
PLASMA
  bibliography on plasma physics and fusion reactors, 26:54748
  book: Kinetic Equations, 26:54797
  collision frequency during rf heating in Q devices, effective, (E), 26:54750 (CONF-720705-2)
  collision of trapped particles in toroidal, resonant, (T), 26:54792
  confinement in circulary polarized magnetic fields and additional electromagnetic fields, (T), 26:54761
  confinement in FM-1 device, anomalous and pseudoclassical, 26:54753 (CONF-720804-5)
  confinement in hybrid mirror fields with quadrupole and quadrupole-cusp geometries, 26:54756
  confinement in theta pinches, low-density limit for, (T), 26:54754 (LA-5019)
  confinement in toroidal magnetic geometries, effect of laminar flow on, (T), 26:54755
  confinement of ionized residual gas at bottom of potential well, (E), 26:54800(T) (AEC-tr-7350)
  diffusion coefficients for argon in shf discharges, longitudinal and transverse, (E), 26:54776(T) (AEC-tr-7332)
  diffusion during strong turbulence, resonant, (T), 26:54791
  diffusion in afterglows, electron temperature changes in, (E), 26:54786
  electromagnetic field penetration into nontransparent, traveling hf, (T), 26:54843 (AREAEE-124)
  electron beam interactions with, dispersion equation for multiloop, (T), 26:54793
  electron beam interactions with, ion heating by oscillations, (E), 26:54762
  electron beam interactions with, modulation of lf oscillations from, 26:54782
  electron beam interactions with, nonlinear interaction of waves from, (T), 26:54795
  electron beam interactions with, steady-state beam shape in, (T), 26:54794
  electron--ion recombination and ionization coefficients for helium, collisional--radiative, 26:54788 (EUR-CEA-FC-642)
  equilibrium in magnetic configurations with helical axis, toroidality effects on, (T), 26:54815
  heating at cyclotron resonance, asymptotic particle distribution function for, (T), 26:54759
  heating by carbon dioxide laser, effects of magnetic field on, (T), 26:54760
  heating by excited waves near ion cyclotron frequency in ST Tokamak, (E), 26:54752 (CONF-720804-4)
  heating by microwaves in Tuman-2 device, (E), 26:54758
  heating by rf fields in Q devices, effective collision frequency in, (E), 26:54750 (CONF-720705-2)
  heating by parametric instabilities during hf excitation, (E), 26:54751 (CONF-720705-3)
  heating of ions by collisionless shock waves, (E), 26:54766
  heating of ions by ion beam, possibility of collisionless, (E/T), 26:54767
  heating of ions in plasma--beam discharge by oscillations, (E), 26:54762
  heating of superdense, by laser, (T), 26:54764
  heating of turbulent, theory for stochastic, (T), 26:54765
  heating processes in pulsed z discharges, gas kinetic relations for, (T), 26:54749(T) (AEC-tr-7330)
  injection of atomic and cluster ion beams into mirror geometries, (T), 26:54757
  interaction with dipole field magnetic field in presence of radial electric field, simulation of steady-flow, (E), 26:54056
  interactions with high-frequency fields, circuits for studying, 26:54775(T) (AEC-tr-7326)
  ion energies from laser-irradiated solid target, (E/T), 26:54802
  ionization processes in hot, collisional, (T), 26:54778 (CEA-CONF-2047)
  kinetic equations for classical, derivation of, (T), 26:54789 (ITF-71-96-P)
  laser beam interactions in, kinetic processes in high temperature, (T), 26:54799
  laser beam scattering on, induced Compton effect in, (T), 26:54798
  laser beam transmission through high-power discharge, absorptive properties in, (E), 26:54785
  magnetosonic waves in, nonlinear, (T), 26:53941
  motion in toroidal magnetic geometries, laminar flow effects on confinement in, (T), 26:54755
  pinch halo development and properties in ISAR I, (E), 26:54784 (IPP-1/125)
  radiations from laser-produced nonuniform, second harmonic, (T), 26:54790(T) (JPRS-56713)
  radiations from relativistic particles in turbulent, bremsstrahlung, (T), 26:54774(T) (AEC-tr-7323)
  research at Wills Plasma Physics Department, Jan.--June 1972, 26:54780(R) (NP-19414)
  research on discharge, Flinders Univ. of South Australia, 26:54779(R) (NP-19393)
  review of 1971 activities at Sydney Univ, 26:53993 (INIS-mf-252)
  spectra of shock-heated krypton and xenon, continuum, (E), 26:54777 (BMBW-FBK-72-8)
  spectral shifts of Stark broadened Lyman-alpha lines of hydrogen, (T), 26:54796
  thermonuclear reactions from spherical hot-spot in deuterium--tritium, (T), 26:54831
PLASMA ACCELERATORS
  jet diagnostics from pulsed erosive, using high-speed spectrography, 26:54773
PLASMA DIAGNOSTICS
  interferometer measurements of electron density, circuit for direct, 26:54770
  laser-beam refraction measurements for electron density, 26:54769
  measurements of density and skin-layer thickness in strong hf discharges, (E), 26:54768(T) (AEC-tr-7329)
  methods for measuring transient properties of dense aluminum plasmas, (E/T), 26:54771
  spectra analysis for magnetic field determination, hydrogen line contours for, 26:54772
PLASMA INSTABILITIES
  current-driven instabilities in plasma, linear theory for, (T), 26:54810
  dissipative instabilities due to supersonic ion motion, (T), 26:54812
  electron-cyclotron drift instabilities in plasma, growth rates for, (T), 26:54811
  electrostatic instabilities of hot-electron plasma in hf fields, (T), 26:54817
  excitation in beam--plasma system, control using electrodes, (E), 26:54819
  magnetohydrodynamic equilibria of plasma, determination of vacuum magnetic field for two-dimensional, 26:54814
  magnetohydrodynamic instabilities in tokamaks, growth rates for, (T), 26:54813
  magnetohydrodynamic instability in Tokamaks, toroidal effects on, (T), 26:54806 (CONF-720804-6)
  parametric instabilities during hf excitation, effect on heating, (E), 26:54751 (CONF-720705-3)
  parametric instabilities in magnetoplasma, excitation by vhf waves, (E), 26:54809 (NP-19406)
  parametric instabilities near lower hybrid frequency, (E), 26:54805 (CONF-720705-4)
  research in collisionless plasma in magnetic mirrors,

(T), 26:54807(R) (COO-3497-2)
  stabilization in mirror machines, method and apparatus for, 26:54823(P)
  stabilization in theta pinches, transverse dynamic, (T), 26:54808 (LRP-51/72)
  stabilization of beam instabilities in plasma--beam system, nonlinear, (T), 26:54821
  surface-wave instability in ion-beam--plasma system, longwave, (T), 26:54816
  synchrotron instabilities for plasma waves, (T), 26:54820
  tearing instabilities in tokamaks, growth rates for, (T), 26:54813
  transverse instability of hot-electron plasma in cylindrical resonator, (T), 26:54818
  two-stream instabilities in spatially separated plasma beams, quasi-hydrodynamic approximation for, (T), 26:54822
PLASMA JETS
  flow around conducting cylinders, potential measurements for ionospheric applications, (E/T), 26:54011 (ONERA-Publ.-137)
PLASMA PRODUCTION
  electron beam interactions for, heating processes in, (E/T), 26:54763
  ionization and accumulation at bottom of potential well, (E), 26:54800(T) (AEC-tr-7350)
  laser beam irradiation for, self-igniting pulsed optical discharges from, (E), 26:54803
  laser beam irradiation of metallic targets, analysis of heavy ions from, (E), 26:54801 (CEA-CONF-2049)
  laser beam irradiation of solid target for, ion energies from, (E/T), 26:54802
  laser beam reactions with deuterated polyethylene for, nanosecond and picosecond, 26:54804
  laser beam reactions with solid targets of deuterium--tritium, fusion reactions from, 26:54830
PLASMA WAVE PHENOMENA
  Alfven wave propagation in incompressible beam--plasma systems, (T), 26:54857
  blast wave generation in pulsed electric discharges, (E), 26:54856
  electromagnetic wave absorption in linear plasma layer in hybrid resonance region, extraordinary, (T), 26:54864
  electromagnetic wave diffraction by magnetoactive plasma cylinder, (T), 26:54847
  electromagnetic wave excitation in plasma by relativistic electron beams, (T), 26:54837(T) (AEC-tr-7333)
  electromagnetic wave interactions with collisionless plasma, generation of fast electrons in, (E), 26:54836(T) (AEC-tr-7331)
  electromagnetic wave reflection at oblique incidence on sharp plasma boundary formed by ionization source moving with constant velocity, (T), 26:54865
  electromagnetic wave scattering on plasma in flat waveguides, effect of electron charge fluctuations on, (T), 26:54848
  electron wave echoes in plasma, saturation effects of, (E/T), 26:54846 (EUR-CEA-FC-639)
  excitation of quasi-static surface waves by weak high-frequency electric field in semi-finite plasma, theory of parametric, 26:54867
  ion oscillations in, automodulation of, 26:54851
  oscillations in bounded neon positive column, constant-wavelength, (E/T), 26:54859
  oscillations in inhomogeneous plasma, theory of parametric excitation of, (T), 26:54844 (AREAEE-125)
  oscillations in plasma, effect of hf wave potential on, (T), 26:54840(T) (AEC-tr-7337)
  oscillations in weakly ionized plasma in hf discharges in magnetic fields, (E), 26:54849
  shock wave investigation of equation of state of nonideal cesium plasma on heated shock tube, (E), 26:54866
  shock wave propagation in collisionless magnetized plasma, oblique, (T), 26:54852
  shock wave propagation in low-density discharge plasma, turbulence in electrostatic, (E/T), 26:54855
  sound wave propagation in nonisothermal fully ionized gas, dispersion relation for, (T), 26:54858
  wave damping in one- and two-component cold and hot plasmas, formulas for long-, (T), 26:54869
  wave excitation and interactions in beam--plasma system, nonlinear, (T), 26:54795
  wave interactions in cylindrical column of magneto-active plasma, hydrodynamic approximation for nonlinear electromagnetic, (T), 26:54863
  wave interactions with magnetohydrodynamic wave radiation in anisotropic plasma, nonlinear high-frequency, (T), 26:54862
  wave interactions with trapped particles in toroidal plasma, resonant, (T), 26:54792
  wave propagation along magnetized plasma layer, effect of electromagnetic field pressure on, (T), 26:54839(T) (AEC-tr-7336)
  wave propagation in magneto-active plasma near electron gyrofrequency harmonics, relativistic and collision effects on, (T), 26:54860
  wave propagation in plasma along magnetic field, nonlinear evolution of quasi-monochromatic packet of helical, (E/T), 26:54868
  wave propagation in plasma sheath, nonlinear space-charge, (T), 26:54853
  wave propagation in plasma, stability of monochromatic against induced scattering, (T), 26:54854
  wave propagation near lower hybrid resonance frequency, nonlinear effects of, (E), 26:54845 (CONF-720804-3)
  wave transformation conditions for plasma with nonmonotonic longitudinal distributon, (E/T), 26:54841(T) (AEC-tr-7338)
  wave transformation in cylinder with spirally conducting surface, volume and surface, (T), 26:54861
  wave transformation into longitudinal oscillations in surface of plasma waveguides, (T), 26:54838(T) (AEC-tr-7335)
  wave transformation region in shf discharges, localization of, (E), 26:54842(T) (AEC-tr-7339)
  wave--wave interactions in plasma, nonlinear kinetics of, (T), 26:54850
PLASMAPAUSE
  phenomena of, from simulated steady-flow interaction of charged particles with geomagnetic dipole field, (E), 26:54056
PLASTICS
  neutron distributions behind Fe/plastic/Fe barriers, spatial, angular, and energy, 26:54966
  preparation of air-equivalent, for ionization chambers, 26:53196(R) (COO-323-28)
  radiation effects on, ir spectral studies on γ, 26:52983 (EUR-4828)
  glass textiles--plastics, preparation and properties of, produced by radioinduced polymerization, 26:53722
  metals--plastics, preparation and properties of, produced by radioinduced polymerization, 26:53722
  plastics--wood, preparation and properties of, produced by radioinduced polymerization, 26:53722
PLATES
  fusion of semi-infinite, model for dynamic edge, 26:55611 (SCL-RR-710113)
  liquid flow due to time-varying motion of infinite flat, MHD incompressible viscous, (T), 26:54158
PLATING
  performance of high-energy ion method for, 26:53615 (SC-DC-722284)
PLATINUM
  muon stopping and diffusion in hot foils of, in vacuum, production of muonium by, (E), 26:54096
  radiation effects on, comparison of stage I annealing with interstitial-migration theories for electron, 26:55011
  radiation effects on, recovery in stage I of annealing of electron, (E), 26:55010
PLATINUM ALLOYS AND SYSTEMS
  Ce--Pt--Ru, thermal capacity of CeRu/sub 2-x/Pt/sub x/ at 1.3 to 9°K, 26:55047
  Co--Pt, microstructure of intermetallic compounds of, methods for ion microscopy imaging of, 26:53655
PLATINUM ISOTOPES
  proton reactions at 3 GeV, time-of-flight measurements of neutron spectra from, (E), 26:54528 (NASA-TM-X-2440, pp 523-6)
PLATYHELMINTHES
  Fasciola hepatica (liver fluke), determination of life cycle of, in snails, mice, and rats, 26:53498(R) (PRNC-156)
  Fasciola hepatica (liver fluke), radiation effects on metacercariae of, for immunization of cattle and rats, 26:53498(R) (PRNC-156)
PLUMES
  rise of, Tabulation Prediction Technique for determining, 26:53152 (ANL-7860(Pt.3), pp 230-49)
PLUTONIUM
  activity concentrations of aerosols of, generated in processing and producing plutonium, 26:53062 (LA-DC-72-920)
  chemical state in solutions, effects of hydrolysis on, 26:52935(R) (MLM-1888)
  content of pentavalent, in natural waters, possibility of, 26:52935(R) (MLM-1888)
  criticality of high burnup fuel of, effects of plutonium isotopic composition in, 26:55416(R) (BNWL-1522-5)
  determination in soil, sample size for fusion method for, 26:52935(R) (MLM-1888)
  determination in urine by radiochemical methods using ion exchanger filters, 26:52940
  fabrication by rolling at high temperature under vacuum, 26:53630
  hydrolysis of tetravalent, solvent extraction studies on, 26:53034(T) (MLM-1964(tr))
  ionization of surfaces of, 26:53033 (EUR-4765, pp 117-30)
  polymerization of tetravalent, spectrophotometric study of, pp. 81, 26:53036 (ORNL-4794, pp 81-3)
  production by bomb reduction of plutonium tetrafluoride, estimation of minimum temperatures in, 26:53037 (RFP-1455)
  purification by extraction with amines, research progress on, p. 55, 26:53084 (ORNL-4794, pp 54-62)
  removal from lungs of monkeys following inhalation as oxide, effectiveness of pulmonary lavage for, 26:53528(T) (LF-tr-71)
  requirements in power production 1980 to 2000, calculations of, 26:55093
  separation from neptunium in MILLI laboratory by solvent

  extraction using TBP, 26:53073
  separation from uranium, residue adsorption and anion exchange methods for, 26:52935(R) (MLM-1888)
  separation from Zircaloy-clad oxide fuels, head-end pyrochemical Saltex process for, 26:53079 (EUR-4812)
  separation of tetravalent, from aqueous solutions by solvent extraction using isopropyltropolone, 26:53034(T) (MLM-1964(tr))
  shipping of, severe-environment testing of 6M, L-10, and SP5795 containers for, 26:53736 (SC-DR-720597)
  size characteristics of aerosols generated in processing and production of, 26:53062 (LA-DC-72-920)
  storage of, evaluation of PVC bags for, 26:52992 (RFP-1924)

PLUTONIUM CARBIDES
  preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)
  PuC--UC, preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)

PLUTONIUM CARBONITRIDES
  preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)
  PuCN--UCN, preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)

PLUTONIUM FLUORIDES PuF_4
  production by fluorination of plutonium dioxide in fluidized bed reactor, comparison of hydrofluorination process with, 26:53039 (RFP-1890)
  production by fluorination of plutonium dioxide using fluorine in fluidized bed reactor, 26:53038 (RFP-1889)
  reduction using calcium, estimation of minimum temperatures in bomb, 26:53037 (RFP-1455)

PLUTONIUM ISOTOPES Pu-236
  effects on γ and neutron spectra of molybdenum--plutonium dioxide heat sources, 26:53336 (NASA-TM-X-2440, pp 853-8)

PLUTONIUM ISOTOPES Pu-238
  analysis for uranium-232 and uranium-234 by hydrolysis, residue adsorption, and α spectroscopy, 26:52935(R) (MLM-1888)
  content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  content in off-gases from combustion of HTGR graphite fuels, 26:53060 (CONF-720823-14)
  fabrication and safety of sealed sources of, for cardiac pacemakers, 26:53331 (CEA-CONF-2026)
  fuel forms of, for radioisotope heat sources, evaluation of, 26:53333 (MLM-1213)
  preparation of metallic, equipment and methods for, 26:53332 (MLM-1150)
  production by neutron irradiation of neptunium oxide and TBP solvent extraction in MILLI laboratory, 26:53073
  production, processing, and properties of, for use in space research, 26:53337 (NASA-TM-X-2440, pp 859-61)
  radiation properties of, for use in space research, 26:53337 (NASA-TM-X-2440, pp 859-61)

PLUTONIUM ISOTOPES Pu-239
  content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  energy level at 57.3 keV from neptunium-239 beta decay, Moessbauer-effect measurement of lifetime of, (E), 26:54661
  Moessbauer effect in plutonium dioxide, spectrum from, (E), 26:54661
  neutron fission at 14 MeV, delayed neutron spectra from, (E), 26:54655 (CONF-720901-(Bks.1 and 2), pp 687-99)
  neutron fission of, survey on cross section data for, 26:54657 (FEI-292)
  neutron spectra from homogeneous sphere containing, benchmark calculations for, 26:54486 (RISO-M-1526)
  release to environment as oxide aerosols during fast reactor accidents, hazards to human population, 26:53511 (TID-26142)
  uptake and retention in liver of mammals, mechanisms for, 26:53526(T) (BNWL-tr-71)
  uptake and retention in tissues of animals following inhalation as oxide aerosols, extrapolation of pathological data to man, 26:53511 (TID-26142)

PLUTONIUM ISOTOPES Pu-240
  decay of, γ-ray energies and intensities from, (E), 26:54652 (ANCR-1069)
  energy levels in isomeric, from uranium-238 (α,2n) reactions, rotation constant for, (E), 26:54664
  energy-level transitions in isomeric, from uranium-238 (α,2n) reactions, intensities of, (E), 26:54664

PLUTONIUM ISOTOPES Pu-241
  decay of, γ-ray energies and intensities from, (E), 26:54652 (ANCR-1069)

PLUTONIUM NITRATES
  purification and concentration by anion exchange using small resins, p. 91-3, 26:53085 (ORNL-4794, pp 91-5)

PLUTONIUM OXIDES PuO_2
  compatibility of plutonium-238 enriched fuels of, with molybdenum, rhenium, tungsten, and their alloys, T-111, and TZM, 26:53551(R) (MDC G-3153)
  fluorination in fluidized bed reactor using fluorine, production of plutonium tetrafluoride by, 26:53038 (RFP-1889)
  fluorination using fluorine and fluidized bed reactor, comparison of plutonium tetrafluoride production by hydrofluorination or, 26:53039 (RFP-1890)
  plutonium-239 Moessbauer effect in, spectrum from, (E), 26:54661
  release of plutonium-239 aerosols of, to environment during fast reactor accidents, hazards to human population, 26:53511 (TID-26142)
  Mo--PuO_2, radiation emission by heat sources of, effects of age, fluorine-19, oxygen-17, oxygen-18, plutonium-236, and size on γ and neutron, 26:53336 (NASA-TM-X-2440, pp 853-8)
  PuO_2--UO_2, corrosive effects on stainless steel of fission products of, effects of burnup on, 26:55187 (EURFNR-989)
  PuO_2--UO_2, oxidation of unirradiated fuels of, p. 84-5, 26:53554 (ORNL-4794, pp 84-7)
  PuO_2--UO_2, preparation of by sol-gel process, research progress on, p. 85-6, 26:53554 (ORNL-4794, pp 84-7)
  PuO_2--UO_2, properties of fuels of, mechanical, physical, and thermal, (E), 26:55189(R) (GEAP-10028-39)
  PuO_2--UO_2, radiation effects testing of fuels of, 26:55189(R) (GEAP-10028-39)
  PuO_2--UO_2, reactivity of fuel elements of, effects of grain size of plutonium oxide in, 26:55416(R) (BNWL-1522-5)
  PuO_2--UO_2-base, deformation and fracture of, effects of temperature and strain rate on, 26:53545 (ANL-7945)

POINT BEACH POWER REACTOR, UNIT 1
  emergency core cooling system for, elimination of hot leg injection, 26:55289 (DOCKET-50266-79)
  radioactive effluents from, effects on radioisotope content in Lake Michigan fish, 26:53169 (ANL-7860(Pt.3), pp 141-50)
  thermal effluents from, correlation of type and quantity of fish collected with temperature of, 26:53185 (ANL-7860(Pt.3), pp 118-20)
  thermal effluents from, ecological studies on effects of, 26:53182 (ANL-7860(Pt.3), pp 101-2)
  thermal effluents from, effects on inshore biological communities of Lake Michigan, 26:53184 (ANL-7860(Pt.3), pp 109-17)
  thermal effluents from, effects on major nutrients and water quality parameters of, 26:53183 (ANL-7860(Pt.3), pp 103-8)
  valves for, verification of wall thicknesses for nuclear service, 26:55290 (DOCKET-50266-80)

POINT BEACH POWER REACTOR, UNIT 2
  emergency core cooling system for, elimination of hot leg injection, 26:55289 (DOCKET-50266-79)
  valves for, verification of wall thicknesses for nuclear service, 26:55290 (DOCKET-50266-80)

POLAND
  radium-226 content of foods, human diet, and urine in, relation between, 26:53525

POLARIMETERS
  design for spin-rotation measurements in elastic $\pi + p$ interactions at high energies, 26:54232

POLONIUM ISOTOPES Po-210
  properties for use in SNAP heat sources, 26:53334 (MLM-1228)

POLONIUM ISOTOPES Po-218
  content in uranium mine air, α-spectrometric method for determining, 26:53226

POLYMERS
  mechanical properties of particulate-filled, 26:55603 (SC-DR-70-617)
  spectra of molecular dimers, vibronic absorption, 26:55534 (ITF-72-27-P)
  concretes--polymer, development of composite materials of, 26:55473 (BNL-16609)
  concretes--polymers, preparation and properties of, produced by radioinduced polymerization, 26:53722

POPULATIONS
  radiation dose to human, following nuclear explosion, evaluation of use of chromosome aberrations in leukocytes to estimate, 26:53397 (FOA-4-4500-A-3)
  radiation dose to human, following release of radioisotopes to environment, criteria for maximum permissible, 26:53523
  radiation dose to human, of Hiroshima and Nagasaki, comparison of, for diagnostic radiographic examinations with A-bomb survivors, 26:53434
  radiation hazards to human, following release of plutonium-239 oxide aerosols to environment during fast reactor accidents, guidelines for estimation of, 26:53511 (TID-26142)
  radioinduced neoplasms in human, following exposure in utero, review of epidemiological studies on, 26:53435

POSITRON BEAMS
  production of 1-eV, by backscattering of sodium-22 positrons by magnesium-oxide-coated gold surface, 26:54119

POSITRONIUM
  formation and lifetime of ortho-, in liquid and solid amides, effects of dipolar electric fields of amide groups on, (E), 26:54100

POSITRONS
  annihilation in ion-implanted silver halide crystals, measurement of Doppler broadening of photons from, using Ge(Li) detector, 26:54097
  correlation energy in metals, (T), 26:55066
  energy spectra of primary cosmic, (E), 26:53855
  interactions $e^+ + e^- \to$ hadrons, perturbation theory for relation to deep inelastic $e + p$ scattering, (T),

26:54262
  interactions $e^+ + e^- \rightarrow$ hadrons, review of total cross sections, SU(3) ratios, SU(6) quark model predictions, multiplicities, transverse momentum distributions, resonance production, and $\gamma + \gamma$ processes for annihilation, (E/T), 26:54176 (SLAC-PUB-1043)
  interactions $e^+ + e^- \rightarrow W^- + e^+ + \nu$, total cross section and angular and energy distributions of e^+ and W^- production in, (T), 26:54277
  interactions $e^+ + e^- \rightarrow W^- + \mu^+ + \nu$, W^- production in, (T), 26:54277
  interactions $e^+ + e^-$ in storage rings, test for existence of high-mass vector mesons in, (T), 26:54283
  interactions $e^+ + e^-$, angular distributions in annihilation, (T), 26:54281
  interactions $e^+ + e^-$, Schwarz inequality for asymptotic behavior of cross sections for annihilation, (T), 26:54287 (LBL-766)
  interactions $e^+ + p \rightarrow e^+ + e^- + e^+ + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
  lifetime in liquid and solid amides, effects of dipolar electric fields of amide groups on, (E), 26:54100
  lifetimes in ammonium chloride NH_4Cl and nitrate glasses, measurement of temperature-dependent, (E), 26:55064
  reactions with argon at 8 eV, total cross sections for, (E), 26:54119
  reactions with helium at 2 to 20 eV, total cross sections for, (E), 26:54119
POTASSIUM
  determination of, radiometric, 26:52942
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  scattering by carbon tetrachloride, sulfur hexafluoride, and tin chloride at thermal energies, effects of temperature and internal and translational energy on differential cross sections for nonreactive, (E), 26:54136
  thermal conductivity at 1.5 to 15°K, effects of magnetic field and impurities on, (E/T), 26:55507 (COO-3150-6)
POTASSIUM ALCOHOLATES
  description of low-temperature, for production of electricity, 26:53108(P)
POTASSIUM BROMIDES
  charged-particle dechanneling at 1.5 MeV, proton, deuteron, and helium-ion, 26:54988
  radioinduced color centers in, by 10- to 50-keV electron beams, (E), 26:54973 (FRNC-TH-210)
  radioinduced fast recombination luminescence in, lifetime and temperature dependence of proton-pulse, 26:55000
POTASSIUM CHLORIDES
  charged-particle dechanneling at 1.5 MeV, proton, deuteron, and helium-ion, 26:54988
  phonon generation in Li^+- and OH^--doped, with pulsed electric fields, (E/T), 26:55512 (COO-3151-139)
  radiation effects on spectra of hexacyanocobaltate-doped, x, 26:55001
  radioinduced color centers in, by 10- to 50-keV electron beams, (E), 26:54973 (FRNC-TH-210)
POTASSIUM HYDROXIDES
  properties for use as electrolyte in magnetohydrodynamic generator working fluids, 26:53108(P)
  radiolysis of aqueous solutions of, kinetics of hydrated electron disappearance in pulse, 26:53018
POTASSIUM IODATES
  toxicity in animals and man, bibliography on, 26:55575 (ORNL-TIP/TIRC-72-10)
POTASSIUM IODIDES
  properties for use as electrolyte in magnetohydrodynamic generator working fluids, 26:53108(P)
  radioinduced color centers in, by 10- to 50-keV electron beams, (E), 26:54973 (FRNC-TH-210)
  radioinduced fast recombination luminescence in, lifetime and temperature dependence of proton-pulse, 26:55000
  radiolysis of crystalline, effects of water vapor on γ, 26:53017
POTASSIUM ISOTOPES K-39
  energy levels of, intermediate coupling calculation of, (T), 26:54685 (INP-795)
POTASSIUM ISOTOPES K-40
  abundance in iron meteorites, (T), 26:53808(T) (ORNL-tr-2620)
  content in Lake Michigan fish, 26:53169 (ANL-7850(Pt.3), pp 141-50)
POTASSIUM OXIDES
  K_2O--SiO_2--SrO, diffusion in, electrostatic effects and mobility in, 26:53598
POTASSIUM SODIUM TARTRATES
  proton reactions at 660 MeV, properties of Cherenkov radiation from, (E), 26:54875 (JINR-P1-6552)
POTENTIOMETERS
  design of chrono-, for analysis of molten salts, engineering drawings for, 26:52957
POWDER METALLURGY
  conference on high-temperature materials, Reutte/Tyrol, Austria, June 21 to 25, 1971, Vol. 3, 26:53584
  conference on high-temperature materials, Reutte/Tyrol, Austria, June 21 to 25, 1971, Vol. I, 26:53601
  conference on high-temperature materials, Reutte/Tyrol, Austria, June 21 to 25, 1971, Vol. 2, 26:53602
  conference on high-temperature materials, Reutte/Tyrol, Austria, June 21 to 25, 1971, Vol. 4, 26:53603
  review on high-temperature materials, 26:53590
POWDERS
  mixing of metal and refractory compound, effects of friction on, 26:53617
  production of, Coldstream process for, 26:53591
POWER CYCLES
  efficiency of nonconventional two-phase, for automobile engines, (T), 26:53103
POWER PLANTS
  thermal effluents from, feasibility of useful heat extraction from, 26:55212 (CONF-720925-2)
  waste heat discharges from, to surface waters, environmental effects of, 26:53194
  waste heat from, feasibility for use for urban space heating, industrial and sewage processing, and agricultural purposes of, 26:55212 (CONF-720925-2)
POWER SUPPLIES
  design for beam preinjector of I-100 linac, 26:53751(T) (BNL-tr-498)
PRAIRIE ISLAND POWER REACTOR, UNIT 1
  auxiliary systems for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  containment system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  cooling system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  electrical systems for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  engineered safeguards for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  instrumentation for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  operations for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  power conversion system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  radioactive waste disposal system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  safety analysis for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  site for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  testing program for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  valve torque switches for, failure of motor operated, 26:55258 (DOCKET-50282-74)
  valves for, verification of wall thicknesses for nuclear service, 26:55298 (DOCKET-50282-72)
PRAIRIE ISLAND POWER REACTOR, UNIT 2
  auxiliary systems for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  containment system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  cooling system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  electrical systems for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  engineered safeguards for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  instrumentation for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  operations for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  power conversion system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  radioactive waste disposal system for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  safety analysis for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  site for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  testing program for, revised and additional data on, 26:55299 (DOCKET-50282-73)
  valves for, verification of wall thicknesses for nuclear service, 26:55298 (DOCKET-50282-72)
PRASEODYMIUM ISOTOPES
  proton decay of light, search for, (E), 26:54608(T) (UCRL-Trans-1473)
PRASEODYMIUM ISOTOPES Pr-141
  energy levels from neodymium-141 decay, properties of quasi-proton, (E), 26:54604 (JINR-P6-6519)
  photon reactions (γ,xn) at 8 to 24 MeV, cross sections for, (E), 26:54629
  photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
  proton reactions (p,t) at 40 MeV, analysis of angular distributions for collective effects, (E), 26:54615
PRASEODYMIUM ISOTOPES Pr-142
  concentration by (n,γ) reactions in molecular sieves, 26:53067 (ORNL-4794, pp 88-90)
PRASEODYMIUM ISOTOPES Pr-143
  energy levels from cerium-142 proton resonances, isobaric analog, (E), 26:54618
PRASEODYMIUM OXIDES
  spectra of nonstoichiometric, 4.2°K far-infrared, (E/T), 26:55032
PREAMPLIFIERS
  design of high-rate direct-coupled, for Ge(Li) detector, engineering drawings for, 26:53219
PRESSURE DROP
  coefficients in liquid systems, effects of rod

configuration and spacing on, 26:55174(T) (EURFNR-986)

PRESSURE VESSELS
  defects in reactor, capabilities for in-service detection and analysis of, 26:55222(R) (NP-19338(Vol.2))
  defects in reactor, capabilities for in-service detection and analysis of, 26:55221 (NP-19338(Vol.1))
  design of reactor steel, survey of, 26:55224
  fabrication of reactor steel, survey of, 26:55224
  fracture toughness of heavy section steel, (E), 26:55207(R) (ORNL-TM-3900)
  inspection of reactor, development of methods for in-service, 26:55222(R) (NP-19338(Vol.2))
  inspection of reactor, development of methods for in-service, 26:55221 (NP-19338(Vol.1))
  nozzles for, effects of attachment configuration on stresses in, (E/T), 26:55207(R) (ORNL-TM-3900)

PRESSURE WAVES
  propagation in coolant pipe rupture accidents in water cooled reactors, BURST code analysis of, 26:55203 (JAERI-M-4473)

PROCESS EQUIPMENT
  circuits for computer controlled in-line monitoring of radioisotope in chemical process streams, engineering drawings for, 26:53220

PROMETHIUM OXIDES
  properties of, chemical and physical, 26:53596

PROPANE
  radiolysis of liquid, time dependence of spectra of solvated electrons from, 26:53007

1,3-PROPANEDIONE, 1,3-DIPHENYL-
  solvent properties for tetravalent plutonium, 26:53034(T) (MLM-1964(tr))
  uses in spectrophotometric determination of hexavalent uranium, 26:52920 (RT/CHI-(72)3)

PROPENE POLYMERS
  radiolysis of, kinetics of reactions at 300°K of methyl methacrylate with radicals produced by γ, 26:53019

PROSPECTING
  developments in India, for nuclear materials, 26:55452(R) (NP-19407)

PROTACTINIUM
  precipitation as oxide from molten salts, pp. 5-6, 26:53081 (ORNL-4794, pp 1-14)
  separation from actinium, niobium, and neptunium, by anion exchange, 26:52903
  separation from spent molten salt fuel by reductive extraction, 26:53086(P)

PROTEINS
  production of nervous-system-specific (14-3-2), by human neuroblastoma cells in culture, 26:55621 (UCLA-12-877)
  radiation effects on content of, in blood of rats following intratracheal administration of cerium-144, 26:53516
  radiation effects on content of, in serum of mice, combined effects of cortisone on gamma, 26:53490
  radiation effects on metabolism of, in L cells infected with rickettsiae, effects of cycloheximide on gamma, 26:53360
  radioisotope binding by blood, relation to uptake and retention in liver of mammals, americium-241 and plutonium-239, 26:53526(T) (BNWL-tr-71)

PROTON BEAMS
  acceleration in Saturne, method for preserving beam polarization during, 26:53762
  effects on human brain following use for hypophysectomy, 26:53446
  energy measurement of 665-MeV, using Cherenkov radiation, performance of monochromatic method for, 26:53800
  interactions with electron beams, calculation of luminosity of, 26:53777 (BNL-17067)
  production of polarized, using ISABELLE in Whiplash mode, feasibility of, 26:53775 (BNL-17057)

PROTONS
  bremsstrahlung from suprathermal cosmic, (E/T), 26:53820
  cascades in iron due to 30- to 300-GeV/N cosmic, (E), 26:53832
  channeling in thin gold crystals, 26:54974 (LYCEN-7228)
  channeling of 1-MeV, in fast neutron-irradiated silicon and germanium single crystals, 26:55004
  charge radius in nonlinear sigma model, 26:54251
  dechanneling at 1.5 MeV in diamond lattices, 26:54988
  diffusion into polar-cap regions of 1.2- to 40-MeV solar, from interplanetary space, (E), 26:54069
  dose calculations for space missions, using USAF--NASA model man, 26:54883 (NASA-TM-X-2440, pp 773-80)
  dose distributions for radiobiology and radiotherapy, radiation transport codes for, (T), 26:54890 (ORNL-TM-3816)
  effects of 17.0- and 18.3-MeV, on optical spectra of Type-I diamonds, 26:54991
  effects of 2-MeV pulses of, on alkali metal halides, lifetime of fast recombination luminescence transitions induced in, 26:55000
  effects of Jupiter-belt, on fly-by space missions, 26:54002 (NASA-TM-X-2440, pp 781-4)
  effects on lymphatic organs following acute sublethal exposure of young chickens, comparison of RBE for 2.2 GeV with x radiation, 26:53457 (NASA-TM-X-2440, pp 659-64)
  effects on mice, effects on survival of erythropoietic stem cells following sublethal whole-body exposure, protective effects of AET and serotonin against high-energy, 26:53454 (NASA-TM-X-2440, pp 642-6)
  effects on rats following acute whole-body exposure, comparison with effects of γ rays for lethal and neoplastic, 26:53455 (NASA-TM-X-2440, pp 647-51)
  effects on silver-activated phosphate glass at 200 to 400 keV, depth distribution of photoluminescence induced by, 26:55009
  effects on young chickens following acute whole-body exposure, lethal, 26:53457 (NASA-TM-X-2440, pp 659-64)
  energy spectra of primary cosmic, at 50 to 2000 GeV, (E), 26:53829
  flux during energetic storm particle event, (E), 26:53966
  flux measurements at ATS-5 satellite at synchronous altitude of low-energy, effects of magnetic activity on, 26:54045 (NASA-TM-X-2440, pp 530-8)
  fluxes in Jupiter radiation belt, models of, 26:54001 (NASA-TM-X-2440, pp 556-60)
  fluxes of trapped, in Jovian magnetosphere, (E/T), 26:54006
  form factors of, anomalous dimensions for relation of $p + p \rightarrow p + p$ interactions at high energies and large angles with electromagnetic, (T), 26:54343 (DESY-72/35)
  geomagnetic cutoff-rigidity calculations for Fort Churchill, Canada, daily variations of, (E/T), 26:54065
  interactions anti $p + p \rightarrow \pi^-$ + anything at 5.6 to 70 GeV/c, uncorrelated jet model predictions for pion multiplicity distribution in annihilation, (T), 26:54316 (RPP/T-24)
  interactions anti p + p at 1.2 GeV/c, analysis of K anti K and K anti Kπ resonances in annihilation, (E), 26:54199
  interactions anti p + p at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
  interactions anti p + p at 7 GeV/c in deuterium bubble chamber, anti p--p and K^+--K^- pair and resonance production, f^0--A_2^0 interference, and cross sections for three- and four-prong, (E), 26:54218
  interactions anti p + p at very low energy, research proposal for ISABELLE for, 26:53766 (BNL-16818)
  interactions anti p + p, description of annihilation spectrometer for measuring cross sections for, 26:53279
  interactions anti p + p, identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
  interactions at high energies, design of 4π Porcupine detector for detecting products from high-multiplicity, 26:53266 (BNL-17020)
  interactions $e + p \rightarrow e + K^+(K^-)$ + anything at 6.5 GeV, momentum spectra of K in inclusive, (E), 26:54178
  interactions $e + p \rightarrow e + \mu^+ + \mu^-$ + anything, test of algebra of bilocal operators from, (T), 26:54253
  interactions $e + p \rightarrow e + p$ + anything at 6.5 GeV, momentum spectra of protons in inclusive, (E), 26:54178
  interactions $e + p \rightarrow e + \pi^+(\pi^-)$ + anything at 6.5 GeV, momentum spectra of π in inclusive, (E), 26:54178
  interactions $e + p \rightarrow e^+ + e^- + e + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
  interactions $e + p \rightarrow \mu^+ + \mu^- + e + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
  interactions e + p at $q^2 = 1(\mathrm{GeV}/c)^2$ in resonance region, separation of longitudinal contribution from total cross sections of virtual $\gamma + p$ interactions in inelastic, (E), 26:54168 (DESY-72/38)
  interactions e + p in spin-$^1/_2$ parton model, two-photon exchange effects in deep inelastic, (T), 26:54269
  interactions e + p, k^2 dependence of transverse cross section for meson (π^+) production in generalized Born term model, (T), 26:54243 (DESY-72/30)
  interactions e + p, perturbation theory for $e^+ + e^- \rightarrow$ hadrons relation to deep inelastic, (T), 26:54262
  interactions $e^+ + p \rightarrow e^+ + e^- + e^+ + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
  interactions $\gamma + p \rightarrow p$ + eta at threshold to 1.1 GeV, recoil proton polarization, transition amplitudes, and cross sections for N resonance production in, (E), 26:54166 (CALT-68-322)
  interactions $\gamma + p \rightarrow p + \pi^+ + \pi^-$ at 2 to 5 GeV in hydrogen bubble chamber, cross sections and resonance production in, (E), 26:54175 (SLAC-143)
  interactions $\gamma + p \rightarrow p(n) + \pi^+ + \pi^- + \pi^0(\pi^+)$ at 4.3 to 7.5 GeV, cross sections and resonance production in, (E), 26:54175 (SLAC-143)
  interactions $\gamma + p \rightarrow \pi^0(\gamma) + p$ at 3 to 7 GeV, polarization of recoil proton in, (E), 26:54167 (COO-3069-71)
  interactions $\gamma + p \rightarrow \pi^-$ + anything at 9.3 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
  interactions $\gamma + p \rightarrow \pi^+ + n$ at 0.5 to 2.2 GeV, magnetic spectrometer study of structure in target asymmetry in, (E), 26:54172 (NP-19415)
  interactions $\gamma + p \rightarrow \pi^+ + n$ in 3,3 resonance region,

discrepancy between dispersion relation predictions and experiment, 26:54261
interactions $\gamma + p \to \pi^+ + n$, contribution of unnatural parity exchanges to, (T), 26:54270
interactions $\gamma + p \to \pi^+(\pi^-)$ + anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
interactions $\gamma + p$ in $\Delta(1236)$ resonance region, differential cross sections for elastic Compton, (E), 26:54180
interactions $\gamma + p$, proposed experiment using multiwire proportional chambers and wide-gap spark chambers for charged-particle multiplicity and angular correlations in, (E), 26:54192 (BNL-17141)
interactions $K + p$, interference term effects in multiperipheral model for cross section energy dependence, pion multiplicities, and structures in correlation functions for, (T), 26:54329 (NYO-3533-265)
interactions $K^+ + n \to K^0 + p$, Regge pole--cut model for, (E/T), 26:54230
interactions $K^- + p \to$ anti $K^0 + n$ at 1 to 3 GeV/c, scintillation counter study of cross sections and resonance production in, (E/T), 26:54210 (NP-19419)
interactions $K^- + p \to$ anti $K^0 + n$ at 1700 to 2100 MeV, cross sections, polarizations, and angular distributions for, (E), 26:54215
interactions $K^- + p \to$ anti $K^0 + n$, Regge pole--cut model for, (E/T), 26:54230
interactions $K^- + p \to \Delta^{++} + K^{*-} + \pi^-$ at 10 GeV/c, Veneziano model analysis of, (E/T), 26:54225
interactions $K^+ + p \to K^0 + \pi^0 + \pi^+ + p$ at 5 to 12.7 GeV/c, longitudinal phase space analysis of, (E/T), 26:54226
interactions $K^+ + p \to K^+ + \pi^- + \pi^+ + p$ at 5 to 12.7 GeV/c, longitudinal phase space analysis of, (E/T), 26:54226
interactions $K^- + p \to \Lambda + \pi^0$ at 1700 to 2100 MeV, cross sections, polarizations, and angular distributions for, (E), 26:54215
interactions $K^- + p \to p +$ anti $K^0 + \pi^+ + \pi^- + \pi^- + \pi^0$ at 10 GeV/c, analysis of $K^{*-}(890)$, $\Delta^{++}(1236)$, and ω^0 production in, (E), 26:54225
interactions $K^- + p \to p +$ anti $K^0 + \pi^+ + \pi^- + \pi^-$ at 10 GeV/c, analysis of $K^{*-}(890)$, $\Delta^{++}(1236)$, and rho^0 production in, (E), 26:54225
interactions $K^+ + p \to p + K^0 + \pi^+$ at 1.37 to 2.17 GeV/c, cross sections for, (E), 26:54231
interactions $K^+ + p \to p + K^+ + \pi^+ + \pi^-$ at 1.37 to 2.17 GeV/c, cross sections for, (E), 26:54231
interactions $K^+ + p \to \pi^-$ + anything at 12.6 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $K^- + p \to \pi^- + \Sigma^+$, new Regge absorption model for cross sections of, (T), 26:54336
interactions $K^- + p \to \pi^+(\pi^-)$ + anything at 10 GeV/c, differential cross sections and symmetry of π emission in, (E), 26:54222
interactions $K^+ + p$ at 0.909 to 1.907 GeV/c, differential and total cross sections for elastic, (E), 26:54211 (RPP/H-95)
interactions $K^+ + p$ at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
interactions $K^- + p$ at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
interactions $\mu + p \to \mu^+ + \mu^- + e + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
interactions $\mu^- + p \to \mu^-$ + anything in scaling region, differential cross sections and detection and isolation of neutral weak currents for, (T), 26:54288 (RPP/T-26)
interactions $\mu^+ + p \to \mu^+ + \mu^- + \mu^+ + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
interactions $\mu^- + p \to \mu^+ + \mu^- + \mu^- + p$ at 30 GeV, angular distributions, mass spectra, and total cross sections for, (T), 26:54263
interactions $n + p \to p + n$, contribution of unnatural parity exchanges to charge-exchange, (T), 26:54270
interactions $n + p$, effects on low-momentum transfer cross sections for anti $p + d \to$ anti $p + p + n$ interactions from final-state, (E), 26:54347 (UM-P-72-6)
interactions $p + d \to p + d$ at 10 to 70 GeV, tables of absolute differential cross sections and amplitudes for, (E), 26:54194 (JINR-E1-6615)
interactions $p + d$ at 10 to 70 GeV, slope parameter of diffraction cone and ratio of real to imaginary parts of amplitude of elastic, (E), 26:54197
interactions $p + d$ at 800 MeV, calculation of relative neutron and pion yields in, (T), 26:54467(R) (ORO-2972-204)
interactions $p + p \to e^+(e^-) + \nu$ + anything in colliding beams, test of Fermi theory of weak intractions in parton model for cross sections and counting rates for, (T), 26:54284 (BNL-16978)
interactions $p + p \to e^+(\mu^+) + \nu$ + anything, resolution in mass-squared for lepton pair in, (E/T), 26:54182 (BNL-17092)
interactions $p + p \to K$ + anti K at 10 to 40 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $p + p \to \Lambda + K$ at 10 to 40 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $p + p \to \mu^+ + \mu^-$ + anything, neutral weak currents in, (E/T), 26:54182 (BNL-17092)
interactions $p + p \to p$ + anything, triple-Regge formalism for analysis of, (T), 26:54332
interactions $p + p \to p + p + \gamma$ at 15 to 280 MeV, effects of relativistic spin corrections for angular distributions and excitation functions for, (T), 26:54267
interactions $p + p \to p + p$ at 8 to 70 GeV, tables for absolute differential cross sections and slope and real part parameters for, (E), 26:54193 (JINR-E1-6613)
interactions $p + p \to p + p$ at high energies and large angles, anomalous dimensions for relation of proton electromagnetic form factors with, (T), 26:54343 (DESY-72/35)
interactions $p + p \to \pi(K)$ + anything at 12 to 30 GeV/c, Bose distribution and scaling law for inclusive, (T), 26:54349
interactions $p + p \to \pi^-$ + anything at 28.5 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $p + p \to \pi^-$ + anything with and without strange particle production at 19 GeV/c, comparison of π momentum distributions in, (E), 26:54198
interactions $p + p \to \pi^+ + d + \gamma$, amplitudes of, (T), 26:54250
interactions $p + p \to \pi^+(\pi^-)$ + anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
interactions $p + p$ at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
interactions $p + p$ at extremely high energies, fixed-pole Pomeron and shielding branch cuts for, (T), 26:54353
interactions $p + p$ at high energies, Feynman--Wilson two-component theory and independent model for integral and differential data for two-particle correlations between negative pions for diffractive and nondiffractive, (T), 26:54346 (RPP/T-28)
interactions $p + p$ in colliding beams at ISABELLE, forward production of muons and muon pairs in, (E/T), 26:54181 (BNL-16977)
interactions $p + p$ in colliding beams, proposed method for total cross section determination for, (E/T), 26:54191 (BNL-17065)
interactions $p + p$ in thermodynamic model, limiting temperature for production of massive hadron pairs in, 26:54305
interactions $p + p$, identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
interactions $p + p$, proposed experiment using multiwire proportional chambers and wide-gap spark chambers for cross sections, charged particle multiplicity, and angular correlations in, (E), 26:54192 (BNL-17141)
interactions $p + p$, scattering length from final state, (E/T), 26:54503 (UCRL-74069)
interactions $\pi + p$ at high energies with polarized target, design of equipment for measuring polarization of recoil protons in elastic, 26:54232
interactions $\pi + p$ in colliding beams at ISABELLE, feasibility of, (E), 26:54200 (BNL-17069)
interactions $\pi + p$, interference term effects in multiperipheral model for cross section energy dependence, pion multiplicities, and structures in correlation functions for, (T), 26:54329 (NYO-3533-265)
interactions $\pi^- + p \to$ eta $+ n$, Regge pole--cut model for, (E/T), 26:54230
interactions $\pi^- + p \to K$ + anti K at 4 to 40 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $\pi^+ + p \to K^+ + \Sigma^+$, new Regge absorption model for cross sections of, (T), 26:54336
interactions $\pi^- + p \to \Lambda + K$ at 4 to 40 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $\pi^- + p \to \Lambda + K^*(1420)$ at 4.5 and 6 GeV/c, differential cross sections, Λ polarization, and $K^*(1420)$ density matrix elements for, (E), 26:54217
interactions $\pi^- + p \to \Lambda(1405) + K^0$ at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
interactions $\pi^- + p \to \Lambda(1520) + K^0$ at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
interactions $\pi^- + p \to \Lambda(\Sigma^0) + K^*(890)$ at 4.5 and 6 GeV/c, differential cross sections, $\Lambda(\Sigma)$ polarization, and $K^*(890)$ density matrix elements from, (E), 26:54217
interactions $\pi^- + p \to \Lambda(\Sigma^0) + K^0$ at 4.5 and 6 GeV/c, differential cross sections and $\Lambda(\Sigma)$ polarization for, (E), 26:54217
interactions $\pi^- + p \to N + 2\pi$ at 1.6 to 2.0 GeV, energy-independent partial-wave analysis of baryon resonance production in, (T), 26:54328 (LBL-544)
interactions $\pi^+ + p \to N + 2\pi$ at 1.6 to 2.0 GeV, energy-independent partial-wave analysis of baryon resonance production in, (E), 26:54328 (LBL-544)

interactions $\pi^- + p \to n +$ anything at 2.4 GeV/c, scintillation counter study of $M^0(1033)$ production in, (E), 26:54205 (COO-1428-311)
interactions $\pi^- + p \to n + \pi^+ + \pi^- + m\pi^0 (m = 1$ to $5)$ at 5 GeV/c in propane bubble chamber, resonance production and partial cross sections for, (E), 26:54220
interactions $\pi^- + p \to n + \pi^+ + \pi^-$ at 2.77 GeV/c, parametrization of nonevasive exchange processes and background contributions in, (E/T), 26:54214
interactions $\pi^- + p \to p +$ anything at 25 and 40 GeV/c, triple-Pomeranchuk coupling and scaling in inclusive, (E/T), 26:54221
interactions $\pi^- + p \to p +$ anything, triple-Regge formalism for analysis of, (T), 26:54332
interactions $\pi^- + p \to p + \pi^+ + 2\pi^- + \pi^0$ at 20 GeV/c in hydrogen bubble chamber, cross sections for resonance production in, (E), 26:54207 (COO-3064-3)
interactions $\pi^- + p \to p + \pi^-$ at 5.91 to 13.73 GeV/c, extrapolation of asymptotic cross section for baryon-pole coupling in backward, (E/T), 26:54331
interactions $\pi^+ + p \to p + \pi^+$ at 5.91 to 13.73 GeV/c, extrapolation of asymptotic cross section for baryon-pole coupling in backward, (E/T), 26:54331
interactions $\pi^- + p \to \pi^0 + n$, new Regge absorption model for cross sections and polarization in, (T), 26:54336
interactions $\pi^- + p \to \pi^0 + n$, Regge pole--cut model for, (E/T), 26:54230
interactions $\pi^- + p \to \pi^0$(eta) + n with small momentum transfer, method for determining differential cross sections for, 26:54209 (JINR-P1-6414)
interactions $\pi^+ + p \to \pi^- +$ anything at 7 GeV/c, multiperipheral-model calculations of cross sections for, (T), 26:54325 (COO-3533-2)
interactions $\pi^+ + p \to \pi^- +$ anything at 8 and 16 GeV/c, differential cross sections and symmetry of π emission for, (E), 26:54222
interactions $\pi^+ + p \to \pi^+ + p + \pi^+ + \pi^-$ at 5.45 GeV/c, production properties of $A_1{}^+$ in, (E), 26:54227
interactions $\pi^- + p \to \pi^- + p$ at 0.875 to 1.580 GeV/c, differential cross sections for forward, (E/T), 26:54224
interactions $\pi^+ + p \to \pi^+ + \pi^- + \Delta^{++}$ at 13 GeV/c, phase shift analysis of $\pi^+\pi^-$ scattering from, (E), 26:54223
interactions $\pi^- + p \to \pi^- + \pi^+ + n$ at 8 GeV/c, production and decay angular distributions of rho^0, f^0, and g^0 in, (E), 26:54216
interactions $\pi^- + p \to \pi^+(\pi^-) +$ anything at 16 GeV/c, differential cross sections and symmetry of π emission for, (E), 26:54222
interactions $\pi^- + p \to \pi^+(\pi^-) +$ anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
interactions $\pi^+ + p \to \pi^+(\pi^-) +$ anything at very high energies, limiting distributions for, (T), 26:54326 (DESY-72/40)
interactions $\pi^- + p \to$ rho^0 + n, contribution of unnatural parity exchanges to, (T), 26:54270
interactions $\pi^- + p \to \Sigma(1385) + K^+$ at 4.5 and 6 GeV/c, differential cross sections for, (E), 26:54217
interactions $\pi^+ + p$ at 0.4 to 0.90 GeV/c, total cross sections for, (E), 26:54213
interactions $\pi^- + p$ at 0.4 to 0.90 GeV/c, total cross sections for, (E), 26:54213
interactions $\pi^- + p$ at 40 GeV/c, average number of produced π^+--π^- pairs, coefficient of nucleon charge exchange, and identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
interactions $\pi^+ + p$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
interactions $\pi^- + p$, compilation of cross sections for, 26:54201 (CERN/HERA-72-1)
interactions $\pi^+ + p$, identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
interactions virtual $\gamma + p$ in inelastic e + p interactions at $q^2 = 1(\text{GeV}/c)^2$ in resonance region, separation of longitudinal contribution from total cross sections of, (E), 26:54168 (DESY-72/38)
interactions virtual $\gamma + p$ in inelastic e + p interactions at $q^2 = 1(\text{GeV}/c)^2$ in resonance region, separation of longitudinal contribution from total cross sections of, (E), 26:54168 (DESY-72/38)
interactions with neutrons in nuclei, mass number dependence of residual, (T), 26:54739
interactions with particles at high energies using deuterium targets, proposed experiment using spectator neutrons for determining total cross sections for, (E), 26:54163 (NP-19421)
magnetic moment of, Markoffian model for, 26:54308
mass difference (n - p), deep inelastic contribution to electromagnetic, (T), 26:54257
measurements in extended magnetotail at approximately 1000 R/sub E/, number density and velocity, (E), 26:54074
measurements with energies down to 12.4 keV over polar caps following Mar. 21, 1969 solar-particle event, solar-flare, (E), 26:54071
polarization of recoil, in $\gamma + p \to \pi^0(\gamma) + p$ interactions at 3 to 7 GeV, (E), 26:54167 (COO-3069-71)
production in inclusive $e + p \to e + p +$ anything interactions at 6.5 GeV, momentum spectra of, (E), 26:54178
production of anti p--p pairs in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
production of more than or equal to 10 MeV solar-flare, short-term prediction of, 26:53931 (NASA-TM-X-2440, pp 356-61)
propagation of primary cosmic, in interstellar space, (E), 26:53828
propagation of solar-flare, Fokker--Planck equation for, (E/T), 26:53932
reactions (p,2n) with thallium-205 at 14 MeV, gamma spectra from, (E), 26:54647
reactions (p,2p) and (p,pn) with deuterium at small momentum transfer, polar graph interpretation of differences in cross sections for, (T), 26:54510
reactions (p,2p) with deuterium at 155 MeV, analysis of angular distributions for off-energy-shell effects, (E), 26:54522
reactions (p,2p) with deuterium at 51.8 MeV, analysis of cross sections and spectra from, (E/T), 26:54505
reactions (p,2p) with heavy nuclei, various potentials for, (T), 26:54699 (ORO-4317-11)
reactions (p,α) with zirconium-92 at 28 MeV, DWBA calculation of form factors for, (T), 26:54467(R) (ORO-2972-204)
reactions (p,d) with helium-4 at 65 MeV, cross sections and energy spectra from, (E), 26:54515
reactions (p,d) with tritium at 6.7 to 14.7 MeV, analyzing power for polarized, (E), 26:54517
reactions (p,γ) and (p,n) with calcium-48 at 1 to 2 MeV, cross sections for, (E), 26:54567 (INR-1407)
reactions (p,γ) with calcium-42 at 1 to 2 MeV, cross sections for, (E), 26:54567 (INR-1407)
reactions (p,γ) with calcium-43 at 1 to 2 MeV, isomeric cross section ratios for, (E), 26:54567 (INR-1407)
reactions (p,γ) with nitrogen-15 at 7.4 to 15.0 MeV, analyzing power angular distributions and T-matrix elements for polarized, (T), 26:54531
reactions (p,γ) with silicon-28 at 0.3 to 3 MeV, γ-ray angular distributions and correlations for, (E), 26:54552 (FRNC-TH-227)
reactions (p,He-3) and (p,t) with iron-57 at 27 MeV, angular distributions for, (E), 26:54584
reactions (p,n) with deuterium at 16 to 26 MeV, analysis of p - p final state interaction in, (E/T), 26:54503 (UCRL-74069)
reactions (p,n) with tellurium-125, iodine-125 production by, 26:53056 (AREAEE-129)
reactions (p,n) with zirconium-90 at 6.9 to 9.5 MeV, gamma spectra and excitation functions for, (E), 26:54613
reactions (p,pn) and (p,2p) with deuterium at 20 to 60 MeV, 26:54511
reactions (p,π^-) and (p,π^+) with beryllium-9 at 600 MeV, cross sections and spectra from, (E), 26:54535
reactions (p,t) and (p,He-3) with aluminum-27 at 27 MeV, angular distributions for, (E), 26:54551 (COO-535-673)
reactions (p,t) with magnesium-26 at 26 MeV, Hauser--Feshback calculation of angular distributions for, (T), 26:54556
reactions (p,t) with molybdenum-95 at 31 MeV, DWBA analysis of differential cross sections for, (E), 26:54612
reactions (p,t) with praseodymium-141 at 40 MeV, analysis of angular distributions for collective effects, (E), 26:54615
reactions (p,t) with terbium-159 at 30 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 26:54645
reactions with aluminum, carbon, cobalt, and platinum at 3 GeV, time-of-flight measurements of neutron spectra from, (E), 26:54528 (NASA-TM-X-2440, pp 523-6)
reactions with emulsion nuclei at 22.6 GeV/c, velocity distribution of secondary π production from, (E), 26:54196
reactions with nickel isotopes at 5 to 56 MeV, cross sections for, (E), 26:54591
reactions with nuclei of primary cosmic, cross sections for, (T), 26:53845
reactions with potassium sodium tartrate at 660 MeV, properties of Cherenkov radiation from, (E), 26:54875 (JINR-P1-6552)
reactions with thorium-232 and uranium-235 at 0.7 GeV, calculation of spallation--fission competition using intranuclear-cascade model, (T), 26:54666
reactions with tungsten at 28 GeV, yields of actinides and transactinides from secondary reactions following, (E), 26:54672
reactions with uranium at 2.25 MeV, x-ray fluorescence spectrum from, (E), 26:53803
reactions with uranium-238 at 0.15 to 3 GeV, calculation of spallation-fission competition using intranuclear-cascade model, (T), 26:54666
reactions with uranium-238 at 12 and 28 GeV, yields of actinides and transactinides from secondary reactions following, (E), 26:54672
scattering by beryllium-9, boron-10, and aluminium-27 at 15.1 to 22.9 MeV, cross sections and depolarization parameters for elastic, (E), 26:54525 (FRNC-TH-191)
scattering by beryllium-9, carbon-12, and aluminum-27 at

    20 GeV, analysis using Steenberg model, (T), 26:54530
  scattering by calcium-48 at 25.11 to 40.21 MeV, differential cross sections for inelastic, (E), 26:54582
  scattering by cerium-142 at 9.5 to 12 MeV with isobaric analog excitation, excitation functions for elastic and inelastic, (E), 26:54618
  scattering by deuterium at 3.6 to 9.1 MeV, vector to tensor polarization transfer in elastic, (E), 26:54499 (LA-DC-72-905)
  scattering by erbium-168 at 15 MeV, proton spectra from inelastic, (E), 26:54467(R) (ORO-2972-204)
  scattering by helium-3 at 30 MeV using polarized beam, analyzing power for, (E), 26:54521
  scattering by helium-4 at 0 to 50 MeV, forward dispersion relation including Coulomb interaction for elastic, (T), 26:54711
  scattering by holmium-165 and erbium-167 at 4 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following inelastic, (E/T), 26:54646
  scattering by hydrogen, deuterium, helium-3, and helium-4 at 600 MeV, differential cross sections for elastic, (E), 26:54512
  scattering by krypton-86 at 4.8 to 10.1 MeV, excitation functions for elastic and inelastic, (E), 26:54467(R) (ORO-2972-204)
  scattering by lutetium-175 at 3 MeV with Coulomb excitation, heat-flow analysis of temperature spikes following inelastic, (E/T), 26:54646
  scattering by magnesium-24 at 9.7 MeV, polarization in elastic and inelastic, (E), 26:54467(R) (ORO-2972-204)
  scattering by molybdenum-92 and zirconium-94 at 11.2 to 12.4 MeV, excitation functions for elastic, (E), 26:54467(R) (ORO-2972-204)
  scattering by molybdenum-92, -94, -96, and -100 at 12.0 MeV, differential cross sections for elastic and inelastic, (E), 26:54606 (ORNL-TM-3913)
  scattering by neon-20 and magnesium-24, coupled-channel treatment with projected Hartree--Fock wave functions for inelastic, (T), 26:54565
  scattering by nickel-58, -60, -62, and -64 at 12 MeV, proton angular distributions and γ spectra from inelastic, (E), 26:54587 (FRNC-TH-240)
  scattering by nickel-64 at 3.1 to 5.3 MeV, angular distributions and excitation functions for inelastic, (E), 26:54590
  scattering by tritium at 19 and 30 MeV using polarized beam, differential cross sections and analyzing power for, (E), 26:54521
  scattering by tritium at 6.7 to 14.7 MeV, differential analyzing power and phase-shift analysis of polarized elastic, (E), 26:54518
  track size in sodium chloride monocrystals, (E), 26:55016
  trajectories of Crab Nebula, arriving at the Earth, (E/T), 26:53856
PROTONS (anti p)
  interactions anti p + d → anti p + p + n, Fermi motion and n + p final-state interaction effects on low-momentum transfer cross sections for, (T), 26:54347 (UM-P-72-6)
  interactions anti p + d → p + anything, nonzero orbital momenta of anti pn bound states from recoil proton momentum spectrum in, (T), 26:54334
  interactions anti p + n → $\pi^+ + \pi^- + \pi^-$ at 1.2 GeV, Veneziano model with satellites and dual amplitude with Mandelstam analyticity for, (T), 26:54320
  interactions anti p + p → π^- + anything at 5.6 to 70 GeV/c, uncorrelated jet model predictions for pion multiplicity distribution in annihilation, (T), 26:54316 (RPP/T-24)
  interactions anti p + p at 1.2 GeV/c, analysis of K anti K and K anti Kπ resonances in annihilation, (E), 26:54199
  interactions anti p + p at 6 to 14 GeV/c, evidence for interaction radius scaling from analysis of polarization in, (T), 26:54354
  interactions anti p + p at 7 GeV/c in deuterium bubble chamber, anti p--p and K^+--K^- pair and resonance production, f^0--$A_2{}^0$ interference, and cross sections for three- and four-prong, (E), 26:54218
  interactions anti p + p at very low energy, research proposal for ISABELLE for, 26:53766 (BNL-16818)
  interactions anti p + p, description of annihilation spectrometer for measuring cross sections for, 26:53279
  interactions anti p + p, identical distribution over charged particle multiplicity for, (T), 26:54327 (JINR-E2-6596)
  orbital momenta of, of anti pn bound states, recoil proton momentum spectrum in anti p + d → p + anything interactions for nonzero, 26:54334
  production of anti p--p pairs in three- and four-prong anti p + p interactions at 7 GeV/c in deuterium bubble chamber, (E), 26:54218
PROTOTYPE FAST REACTOR
  heat exchangers for, description of, 26:55158 (CONF-710548-, pp 187-205)
PROTOZOA
  bioluminescence in marine dinoflagellates, action spectrum for photoinhibition of mechanically stimulable, 26:55521 (COO-3277-14)
  Tintinnopsis beroidea, growth characteristics of, in continuous culture, 26:55522 (COO-3390-2)
PUBLIC HEALTH
  book: Radiation and Health, 26:53157
  effects of radioisotope release to environment during accidents on, 26:53523
PUERTO RICO
  cesium-137 distribution in soils and vegetation in, 26:53162 (ANL-7860(Pt.3), pp 1-13)
  control of fascioliasis in, using radiation vaccines, 26:53498(R) (PRNC-156)
PULSARS
  cosmic nuclei acceleration by, (T), 26:53857
  cosmic particle acceleration by, (T), 26:53858
  cosmic-ray acceleration in, energy cutoff in, (T), 26:53869
  formation in supernovae, (T), 26:53912
  gamma emission from NP 0532, (E), 26:53923
  identification of CP0950 with x-ray source Leo XR-1, (E/T), 26:53907
  radiation emission mechanism for, (T), 26:53925
  scintillation pattern of PSR 0329 + 54, interstellar, (E), 26:53915
  surface density of, calculation using Thomas--Fermi-like model of crushed atoms, 26:54144
  x-ray pulses from NP 0532, (E), 26:53919
PULSE ANALYZERS
  baseband distortion equalization in input channel of, 26:55630 (UCRL-73943)
PULSE CONVERTERS
  design of ultra-linear 16-bit digital-to-analog, engineering drawings for, 26:53278
PULSE GENERATORS (ELECTRONICS)
  design of dual, for high-resolution Ge(Li) gamma spectrometer, engineering drawings for, 26:53262
  design of transistorized, for testing nuclear counting equipment, 26:53295 (AREAEE-132)
PULSE SHAPERS
  design and performance with universal logic for 100 MHz count rates, 26:53320
PUMICE
  age of volcanic, thermoluminescent method for estimation of, 26:53177
PUMPS
  design criteria for nuclear service, development program for, 26:55207(R) (ORNL-TM-3900)
  dismantling of sodium cooled reactor, removal of sodium and decontamination during, 26:55147 (AI-AEC-Memo-12736)
PYROMETERS
  characteristics of germanium resistance, interpolation of, 26:55542 (KFK-1601)

Q

Q DEVICES
  plasma collision frequency during rf heating, (E), 26:54750 (CONF-720705-2)
QUAD CITIES POWER REACTOR, UNIT 1
  core isolation cooling system for, failure of valves for, 26:55250 (DOCKET-50254-117)
  effluents from, effects on environment of chemical, radioactive, and thermal, 26:55285 (DOCKET-50254-120)
  operation of, cost-benefit analysis for, 26:55285 (DOCKET-50254-120)
  pump room for, requested information on possible flooding of condensate, 26:55284 (DOCKET-50254-119)
  site for, ecology, hydrology, and meteorology of, 26:55285 (DOCKET-50254-120)
  technical specifications for, requested data on, 26:55283 (DOCKET-50254-118)
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
QUAD CITIES POWER REACTOR, UNIT 2
  containment structure, failure of suppression chamber to drywell vacuum breaker valves for, 26:55254 (DOCKET-50265-115)
  effluents from, effects on environment of chemical, radioactive, and thermal, 26:55285 (DOCKET-50254-120)
  operation of, cost-benefit analysis for, 26:55285 (DOCKET-50254-120)
  pump room for, requested information on possible flooding of condensate, 26:55284 (DOCKET-50254-119)
  site for, ecology, hydrology, and meteorology of, 26:55285 (DOCKET-50254-120)
  technical specifications for, requested data on, 26:55283 (DOCKET-50254-118)
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
QUALITY CONTROL
  design criteria for confidence and reliability based on small samples, 26:55618 (UCID-16099)
QUANTUM ELECTRODYNAMICS
  test from Lamb shift in $^{16}O^{7+}$, (E), 26:54375(R) (COO-1811-3)
QUANTUM FIELD THEORY
  Bethe--Salpeter equation for scalar particle interactions in ladder approximation, variational Pade solution of, 26:54380
  boson pair production in threshold region by square-well

  potential with smooth sides in, probability for scalar, 26:54384
  current matrix elements in, physical symmetries from one-particle, 26:54356
  dispersion sum rules in axiomatic, spectral Jost--Lehman--Dyson representation for structure of, 26:54377 (ITF-72-54-P)
  dual resonance model relation with, zero-slope limit for, 26:54388
  formalism of generalized, for nuclear and atomic theory, 26:54382
  gauge fields with dual diagram topology in, Feynman rules for massive, 26:54381
  Green's functions of Euclidean, solvability of Schwinger equations for, (T), 26:55070 (ITF-72-45-P)
  interactions of massive scalar with massless spinor fields in, classical and quantum two-dimensional classically solvable model with nontrivial scattering for, 26:54385
  particle interactions with external fields in, Bogoliubov transformation in strong coupling theory for mass squared spectrum for classical relativistic, 26:54383
  renormalization constants for three-particle bound state, vanishing of vertex-function, 26:54379
  S matrix in g(:phi*:)$_2$, equations for elements of, in Euclidean domain, 26:54376 (ITF-72-15-E)
  S-matrix unitarity in nonlocal, 26:54413 (JINR-P2-6586)
  scalar field interactions with fixed source, Hamiltonian as graph limit with infinite renormalization for, 26:54386
  symmetry breaking and gauge invariance in, spontaneous, 26:54387
  Ward identities in axiomatic, spectral Jost--Lehman--Dyson representation for structure of, 26:54377 (ITF-72-54-P)
  Wightman axiomatic approach for concentratable field, global field properties in, 26:54378 (ITF-72-62-E)
QUANTUM MECHANICS
  Bogolyubov kinetic equations in, method for solution in Banach space, (T), 26:55067 (ITF-72-9-E)
  constants of, relations between cosmological constants and, 26:54392 (ITF-72-3-P)
  Feynman path-integral formulation of, 26:55080
  perturbation theory for Mathieu equation and anharmonic-oscillator equation in, continued-fraction method for, 26:55078
  perturbation theory for systems in, time-dependent, 26:55073
  Schroedinger equation for stability of many-body systems with singular attractive potentials in, self-consistent Hartree field as limit for, 26:54408 (ITF-72-14-E)
  Schroedinger equation with singular potential in, approximate methods for solving, 26:55074
  Schroedinger equation with singular potentials in nonrelativistic, total Hamiltonian and semigroup product formula for, 26:55069 (ITF-72-36-E)
  systems with singular attractive potentials in, Hartree one-particle asymtotically exact solutions for, 26:55068 (ITF-72-31-P)
  wave functions in, spin-dependent operators in occupation-branching number representation for open-shell, (T), 26:55077
QUARKS
  mass of, bare, (T), 26:54282
  search for 4e/3 charged di-, in cosmic radiation at 2750-m altitude, 26:54177
  search for e/3 and 2e/3 charged, in cosmic radiation at 2750-m altitude, (E), 26:54164
  search for mass 2 to 7 GeV/c^2, at IHEP 70-GeV accelerator, sensitivity of, 26:54165
  search for, analysis of experiments on, 26:54165
  theory as shadow states in Bjorken limit of deep inelastic e + N interactions, 26:54248 (ORO-3992-106)
QUARTZ
  fission fragment tracks from heavier transuranium elements in natural, study of spontaneous, 26:54670
  radiation damage in, electron microscopic study of 650-kV electron, 26:54972 (COO-2119-2)
  toxicity of particles of, bibliography on, 26:55585 (ORNL-TIP/TIRC-72-62)
QUASARS
  distribution of, space, (E/T), 26:53994
  evolution of, (E/T), 26:53994
  luminosities of, (E/T), 26:53994
  luminosity functions for, optical and radio, (T), 26:53996
  optical positions of, (E), 26:53913
  radio source counts on the basis of evolution models for, (T), 26:53996
  redshift--magnitude relation for, (T), 26:53998
  resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53879
  resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53878
  rotation measures of, effects of galactic field on, (E), 26:53911
  spectral indices for 3C2, 3C245, and 3C279, (E), 26:53914
QUINOLINE
  complexes with oxyfluorouranate ions, thermogravimetric studies on, 26:53043

R

RABBITS
  arsenic-74 distribution and metabolism in tissues of, following oral administration, time dependence of, 26:53538
  cesium-137 distribution and retention in, following intravenous injection, effects of peritoneal dialysis on, 26:53533
  radiation effects on serotonin uptake by blood platelets in, in relation to content during acute radiation syndrome, γ, 26:53486
  radioisotope distribution and retention in, following intravenous injection, kinetics of barium-133 and strontium-90, 26:53534
RADAR
  signal propagation retardation for, comparison of experiment with general relativistic predictions for, (E/T), 26:54403
RADIATION
  applications in agricultural research in Euratom Community, 26:53459(R) (NP-19403)
  bibliography of publications and reports issued by BNL Radiation Division, July 1968 through June 1971, 26:53325 (BNL-50335)
  book: Radiation and Health, 26:53157
  conference on natural and manmade, in space, Las Vegas, Nev., 3/71, 26:54870 (NASA-TM-X-2440)
  dose distribution in man following whole-body exposure, role of quality factors and fluence in calculating, 26:53404 (NASA-TM-X-2440, pp 424-34)
  dose from geomagnetically trapped radiation belts, review of, 26:54952 (NASA-TM-X-2440, pp 170-7)
  dose measurements on Apollo missions, 26:54953 (NASA-TM-X-2440, pp 215-19)
  dose rate measurements at SST altitudes during solar flares, 26:54889 (NASA-TM-X-2440, pp 902-7)
  effect on crystalline solids, atomistic computer simulation of, (E), 26:54970 (CEA-CONF-1890)
  effects of pile, on sintered aluminum oxide, ESR spectral studies on, 26:53699 (RT/FI-(72)10)
  effects on acetylenedicarboxylic acid dihydrate monocrystals, ESR studies on, 26:53005
  effects on animals following traumatic injuries, effects on recovery rate of, whole-body, 26:53419
  effects on aqueous solutions of indole-3-acetic acid and other plant hormones, 26:53015
  effects on behavior of animals, review of literature on, 26:53448 (COO-1332-78)
  effects on biological materials, 26:53396
  effects on blood pressure in rats following renal exposure, sodium-22 tracer study of sodium kinetics during development of pathological, 26:53463
  effects on bone marrow in mice, dose response of ratio of erythrocytes to leukocytes, use as biological dosimeter, 26:53473
  effects on brain of mice and rats following prenatal exposure, effects of developmental stage at exposure on teratogenic, 26:53437
  effects on chromosomes in lymphocytes of man exposed to residual fallout from atomic bombing of Nagasaki, aberrant, 26:53414
  effects on crystals, correlated recovery kinetics of anisotropic damage, (T), 26:55005
  effects on DNA in organisms, comparison of RBE for high with low LET, 26:53345 (NASA-TM-X-2440, pp 222-8)
  effects on DNA replication in bacteria and bacteriophages, role in molecular repair mechanisms, 26:53348
  effects on Drosophila, effects of low-dose on metabolism in bar gene mutants of, stimulatory, 26:53500
  effects on human children following exposure in utero, review of epidemiological studies on carcinogenic and leukemogenic, 26:53435
  effects on human leukocyte count following whole-body exposure for therapy of leukemias and lymphosarcomas, multifactorial analysis of dependence of dose and time, 26:53400 (NASA-TM-X-2440, pp 233-7)
  effects on human lymphocyte count following extracorporeal exposure of blood, effects of dose on, 26:53440
  effects on human skin, dose-response relationships for pathological, 26:53431
  effects on human survivors of atomic bombing of Nagasaki 10 to 25 years following exposure as children, effects of dose on incidence of carcinogenic, 26:53442
  effects on human tissues following therapy of neoplasms, surgical treatment of local pathological, 26:53438
  effects on immune reactions in guinea pigs, lethal dose, 26:53474
  effects on L-arginine aminohydrolase activity in liver of rats, dose dependence of, 26:53491
  effects on man following traumatic injuries, effects on recovery rate of, whole-body, 26:53419
  effects on man, clinical aspects of pathogenesis and recovery from, relevance of animal studies to, 26:53411
  effects on mice following fractionated sublethal whole-

body exposure, protective effects of cysteamine against late leukemogenic, 26:53475
  effects on mice for determining origin of alveolar macrophages in chimeras, 26:53492
  effects on oral tissues of patients during tumor therapy in head and neck region, construction of prosthesis shield for protection against, 26:53410
  effects on oranges following exposure for sterilization, effects on organoleptic properties and wholesomeness of, 26:53347
  effects on oranges following exposure for sterilization, effects on metabolism and respiration in, 26:53347
  effects on salivary glands in man following therapy, inflammation induced by, 26:53423
  effects on silica, valence-bond model of x-ray spectra, bond breaking, and point-defect production in, (T), 26:55018
  effects on space vehicles, design considerations for thermoelectric generators for simulated in-flight testing of, 26:53095 (NASA-TM-X-2440, pp 844-9)
  effects on spherical void growth in metals, relation of triaxial stress to, (T), 26:53702 (TID-26150)
  effects on sulfoxidation of alkanes, effects of purity of compounds, dose, and pressure on kinetics of, 26:53012
  effects on thermodynamic and transport properties of frozen and reacting orthohydrogen--parahydrogen mixtures, 26:53715 (NASA-TM-X-2440, pp 476-80)
  hazards to man during space flight, extrapolation of clinical data on dose-response-time relations to estimate, 26:53402 (NASA-TM-X-2440, pp 398-415)
  hazards to space missions from solar proton events, probability analysis of, 26:54955 (NASA-TM-X-2440, pp 310-23)
  hazards to space travel from solar cosmic-ray protons, statistical treatment of, 26:53930 (NASA-TM-X-2440, pp 345-55)
  uses in medicine, IAEA-WHO survey on world-wide, 26:53413

RADIATION CHEMISTRY
  book: Advances in Radiation Chemistry. Vol. 3, 26:53021
  electron spin resonance studies in, 26:52993(R) (RRL-3238-398)
  mechanisms in radiobiology, review on, 26:53024
  research program on ionic and free radical reactions in, 26:52987(R) (ORO-2968-78)
  search for H_3O radical, 26:53026
  short-lived transients in, review on identification and kinetic measurements of, 26:53022
  synthesis of organic compounds in, review on, 26:53023

RADIATION DETECTORS
  advances in, review of impact on nuclear measurements, 26:53263
  book: Measurement of Radiation in Space, 26:53276
  book: Particle Detectors, 26:53208
  circuits for computer controlled in-line monitoring of radioisotope in chemical process streams, engineering drawings for, 26:53220
  design of solenoid--quantameter--hadrometer (calorimeter), for electron detection at ISABELLE and PEP, 26:53268 (BNL-17066)
  development for heavy-ion dosimetry based on damage tracks in silver halide single crystals, 26:53230 (NASA-TM-X-2440, pp 138-41)
  pulse counting statistics for, 26:53207
  time response of L-125A Compton diode, time domain reflectometry measurement of, (E/T), 26:53197 (EGG-1183-2277)

RADIATION DETECTORS, ACTIVATION
  description for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
  description for space radiation dosimetry, 26:53235 (NASA-TM-X-2440, pp 944-56)

RADIATION DETECTORS, BUBBLE CHAMBER
  particle tracks in, data processing program for HPD analysis of, 26:53274 (RHEL/R-241)
  particle tracks in, digital-to-analog converter for DOLLY CRT flying spot scanner for measuring, 26:53278

RADIATION DETECTORS, CHERENKOV
  operation and performance for beta counting of radioisotopes in solution with radiator, 26:53209

RADIATION DETECTORS, DIELECTRIC TRACK
  description for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
  description for high-Z particle dosimetry during Apollo missions, 26:53231 (NASA-TM-X-2440, pp 149-56)

RADIATION DETECTORS, FISSION FOIL
  development for monitoring of fast neutron flux for preventing radiation damage to Ge(Li) detectors, 26:53223

RADIATION DETECTORS, GEIGER-MUELLER
  design and performance of, for counting beta activities retained in resin columns, 26:53212

RADIATION DETECTORS, HODOSCOPE
  description for investigation of heavy meson spectra from antiproton annihilation, 26:53279

RADIATION DETECTORS, IONIZATION CHAMBER
  calibration of current from, for measuring radon-220 content in atmosphere, 26:53227
  correction factors for x-ray dosimetry, 26:53247
  description for measuring isodose curves in water phantom, 26:53243
  description of open window, for detection below 1 keV, 26:53210(P)
  description of quartz fiber, for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
  description of tissue-equivalent, for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
  description of tissue-equivalent, for space radiation dosimetry, 26:53241(P)
  design as electronic switch for controlling and recording irradiation times of samples in reactors, 26:53224
  design for monitoring normal gamma environmental levels, engineering drawings for, 26:53218
  development for environmental radiation, 26:53196(R) (COO-323-28)
  development of hybrid, for radiation monitoring on the SST Concorde, 26:53203 (NASA-TM-X-2440, pp 874-83)
  development of macro-subsystem and micro-subsystem of, for dosimetry in tissues, 26:53232 (NASA-TM-X-2440, pp 435-7)
  development of small 0.5-cc air-equivalent, muscle-equivalent, and magnesium, 26:53196(R) (COO-323-28)
  operation and performance of tissue-equivalent plastic, for neutron or gamma plus neutron absorbed dose measurements, 26:53234 (NASA-TM-X-2440, pp 609-13)
  W values for, compared to G values for chemical dosimeters, (T), 26:53244

RADIATION DETECTORS, PROPORTIONAL
  description for muon detection and discrimination from pions, 26:53282
  description of multiwire, for neutron radiography, 26:53200 (LBL-707(Summ.))
  design and performance of bifilar helical multiwire, with delay-line readout for position-sensitive detecton of minimum ionizing particles, 26:53273 (LA-4968)
  design and performance of multiwire, with intermediate high-voltage planes, 26:53213
  design and performance of position-sensitive, for ionizing radiation, 26:53221
  design of 4π multiwire, for high-multiplicity interactions, 26:53267 (BNL-17064)
  design of 4π Porcupine, with 47000 elements for detecting products from high-mulitplicity interactions, 26:53266 (BNL-17020)
  design of gamma compensated flowthrough, for tritium monitoring, engineering drawings for, 26:53216
  development of hybrid moderated, for radiation monitoring on the SST Concorde, 26:53203 (NASA-TM-X-2440, pp 874-83)
  development of rocket-borne thin polypropylene window, for detecting soft cosmic x rays, 26:53206
  gas amplification in low pressure cylindrical, 26:53198 (FRNC-TH-189)
  performance of BF_3, for neutron detection in gamma fluxes, standard for, 26:53204 (RDT-C-15-11-T(8-72))

RADIATION DETECTORS, SCINTILLATION (LIQUID)
  development of total absorption argon, for detecting high energy hadrons, 26:53269 (BNL-17070)
  solvent composition for, quaternary ammonium base, 26:53211(P)

RADIATION DETECTORS, SCINTILLATION (SOLID)
  attenuation coefficients for NaI(Tl), of arbitrary geometry, method for rapid comparison of angular-distribution, 26:53225
  description of Airborne Radiac gamma spectrometer for measuring ground level radiation dose, 26:53195(R) (AD-737993)
  design and operation of stilbene, for neutron spectroscopy with gamma discrimination, 26:53251 (AREAEE-137)
  design for neutron interrogation determination of U-235 in containers, engineering drawings for, 26:53217
  design of NaI, for spent fuel age determination, engineering drawings for, 26:53261
  scintillator materials for alpha detection, properties of thin films of organic fluorescent, 26:53265

RADIATION DETECTORS, SEMICONDUCTOR
  description of telescope, for measuring LET spectrum of space radiation, 26:53241(P)
  performance of high-resolution particle identifier for particles in Van Allen belt, (T), 26:53280

RADIATION DETECTORS, SEMICONDUCTOR (GERMANIUM)
  attenuation coefficients for Ge(Li), of arbitrary geometry, method for rapid comparison of angular-distribution, 26:53225
  fabrication of germanium--silicon alloy, 26:53202 (NASA-TM-X-2440, pp 723-8)
  operation and performance of germanium--silicon alloy, 26:53202 (NASA-TM-X-2440, pp 723-8)
  preamplifier for Ge(Li), high-rate direct-coupled, 26:53219
  radiation damage to Ge(Li), fission foil detector for monitoring fast neutron flux for preventing, 26:53223
  spectra from Ge(Li), computer program for automatic peak identification in analysis of gamma, 26:53257 (RT/FI-(72)14)

RADIATION DETECTORS, SEMICONDUCTOR (SILICON)
  description of telescope counter of Si(Li), for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
  fabrication of germanium--silicon alloy, 26:53202 (NASA-TM-X-2440, pp 723-8)
  operation and performance of germanium--silicon alloy,

26:53202 (NASA-TM-X-2440, pp 723-8)
response to monoenergetic neutrons from radioisotope thermoelectric generator, Monte Carlo calculation of, 26:53291 (NASA-TM-X-2440, pp 708-13)
RADIATION DETECTORS, SHOWER
design and operation of total absorption, for hadron detection, 26:53270 (BNL-17071)
fabrication of total-absorption, using condensed xenon for measuring high-energy electrons and photons, 26:53272 (JINR-P13-6541)
light attenuation in large, method for correcting, 26:53285
RADIATION DETECTORS, SPARK CHAMBER
characteristics of current-limited, with electrodes sealed in glass, 26:53283
design and performance of wire, with ferrite core memory, 26:53271 (JINR-P13-6522)
power supply for high pulse rate, 26:53275 (RPP/H-101)
readout system for wire, study of output pulses of sparkostrictive, 26:53222
RADIATION DETECTORS, TELESCOPE
description of multiple detector, for charged particle spectroscopy in space, 26:53235 (NASA-TM-X-2440, pp 944-56)
description of semiconductor, for measuring LET spectrum of space radiation, 26:53241(P)
description of Si(Li), for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
performance of high-resolution solid state particle identifier for particles in Van Allen belt, (T), 26:53280
RADIATION DETECTORS, TRANSITION
design and performance for ultrarelativistic charged particles, 26:53277
RADIATION DOSE
calculation for secondary particles produced by heavy galactic cosmic primaries, 26:54878 (NASA-TM-X-2440, pp 104-7)
calculation of human, from domestic uses of nuclearly stimulated natural gas, 26:53134
calculation of integral absorbed, 26:54910
calculation of, and treatment planning in pion therapy, 26:54876 (LA-4874, pp 145-52)
calculations for manned space missions, methods for, 26:54951 (NASA-TM-X-2440, pp 108-16)
calculations of solar-flare, inside space vehicles during interplanetary voyage, 26:54956 (NASA-TM-X-2440, pp 324-8)
isodose curves for, automatic system for producing, 26:53243
maximum permissible, criteria for personnel, 26:53436
maximum permissible, for human population following release of radioisotopes to environment, criteria for, 26:53523
maximum permissible, for thyroid of children following uptake of iodine-131 from milk, 26:53506(T) (ORNL-tr-2629)
maximum permissible, from plutonium-239 oxide aerosol inhalation, guidelines for estimation for human populations, 26:53511 (TID-26142)
tables for californium-252 implants, (T), 26:54906
RADIATION DOSIMETERS
design of, human engineering standards for, 26:53246
development for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
development for heavy-ion dosimetry based on damage tracks in silver halide single crystals, 26:53230 (NASA-TM-X-2440, pp 138-41)
development for radiation monitoring in space shuttles and space stations, 26:53235 (NASA-TM-X-2440, pp 944-56)
testing of personnel, critique of standard methods for, 26:53247
RADIATION DOSIMETERS, BIOLOGICAL
evaluation of chromosome aberrations in human lymphocytes for use as, 26:53420
evaluation of chromosome aberrations in leukocytes as, for use for civilian population following nuclear explosion, 26:53397 (FOA-4-4500-A-3)
evaluation of ratio of erythrocytes to leukocytes in bone marrow for use as, 26:53473
RADIATION DOSIMETERS, CALORIMETRIC
design and operation for pulsed electron beam energy measurements, 26:53258 (SC-DR-720630)
design of tissue-equivalent micro-, for fast neutrons, engineering drawings for, 26:53250
RADIATION DOSIMETERS, CHEMICAL
development of, paramagnetic resonance studies for, 26:52979 (COO-1105-179)
G values for, compared to W values for ionization chambers, (T), 26:53244
RADIATION DOSIMETERS, PHOTOGRAPHIC FILM
correction factors for x-ray dosimetry, 26:53247
performance for medical personnel dosimetry, comparison with thermoluminescent dosimeters, 26:53239
RADIATION DOSIMETERS, PHOTOLUMINESCENT
development possibilities of crystalline anthracene, for fast neutron dosimetry, 26:53229 (COO-1105-172)
properties of silver-activated fluoride-based glass, for gamma detection, 26:53242
RADIATION DOSIMETERS, THERMOLUMINESCENT
correction factors for x-ray dosimetry, 26:53247
description for dosimetry in Skylab space station, 26:53236 (NASA-TM-X-2440, pp 958-73)
description for space radiation dosimetry, 26:53235 (NASA-TM-X-2440, pp 944-56)
design of ^{7}LiF, for personnel beta and gamma dosimetry, engineering drawings for, 26:53249
development for long term intrauterine dosimetry, 26:53238
performance for measurement of dose to man during high-energy electron therapy, 26:53415
performance for medical personnel dosimetry, comparison with photographic film dosimeters, 26:53239
performance of LiF, in human phantom for measurement of dose to bone marrow during whole-body exposure, 26:53406 (NASA-TM-X-2440, pp 974-80)
performance testing for high-precision NERVA shielding measurements, reproducibility and spatial resolution, 26:53233 (NASA-TM-X-2440, pp 466-70)
properties of LiF(Mg,Ti) and CaF$_2$:Mn, response and fading, 26:53245
sensitivity to mixed gamma and neutrons of mixture of natural fluorite and LiF, effects of ^{6}Li content on, 26:53240
use for average temperature measurements of aquatic thermal discharges based on fading, 26:53187 (ANL-7860(Pt.3), pp 131-40)
RADIATION DOSIMETRY
calculation of dose distributions of ^{60}Co ophthalmic applicators, computerized, 26:54900
energy deposition theory in, distribution of energy losses in, 26:54879 (NASA-TM-X-2440, pp 157-61)
microdosimetry of beta particles, and γ and x radiation using grid-walled proportional counter, 26:54895
principles of, review of, 26:54891 (SLAC-153)
RADIATION MONITORING
equipment for environmental, at Lawrence Berkeley Lab, 26:53199 (LBL-585)
programs for control of nuclear power plant effluents in India, 26:53154 (INIS-mf-160, pp 22-52)
RADIATION PROTECTION
book: Radiation Protection at High-Energy Accelerators, 26:53742
calculations for crew of high-impulse gas-core nuclear rocket, 26:54967
conference on natural and manmade radiation in space, Las Vegas, Nev., 3/71, 26:54870 (NASA-TM-X-2440)
conference on radiation protection standards, Richland, Wash., 11/71, 26:54914
conference on radiation protection standards, Richland, Wash., 11/71, 26:54922
guides and constraints for space-mission and vehicle-design studies involving nuclear systems, 26:54913
guides for surface contamination by radioactive materials, survey of, 26:54920
lectures at Physics Laboratory of Istituto Superiore di Sanita, Rome, July--Dec. 1970, 26:54162 (ISS-71/31)
legislation in Japan during 1970, enforcement of, 26:55458
methods for reducing x-ray dose to children during diagnostic radiography, 26:53417
programs for personnel in German Federal Republic, 26:55456 (SZS-136)
programs in New South Wales during 1971, 26:55454(R) (NP-19412)
research in India, 1971--1972, 26:55452(R) (NP-19407)
risk versus benefit analysis, broader perspective of, 26:54930
risk versus benefit analysis, criteria for, 26:54932
risk versus benefit analysis, fallacy of ''maximum credible incident'' concept in, 26:54929
risk versus benefits ratios for, control of, 26:54931
Safety and Health Act of 1970, description of Occupational, 26:54926
safety criteria for nuclear power in space, 26:54921
standards for AEC contractor program, application of, 26:54923
standards for electronic products, development of, 26:54925
standards for surface contamination by radioactive materials, criteria for, 26:54919
standards for, AEC regulatory program for, 26:54924
standards for, description of American Nuclear Society's information center on, 26:54917
standards for, development of, 26:55220 (BNL-16965)
standards for, industry's thoughts on, 26:54933
standards for, problems of enforcing state regulatory control programs for, 26:54928
standards for, role of Environmental Protection Agency in developing, 26:54927
standards for, role of Health Physics Society in development of, 26:54918
standards for, use and abuse of, 26:54934
standards in USA for, role of American National Standards Institute in development of, 26:54916
standards in USA for, role of National Council on Radiation Protection and Measurements in development of, 26:54915
RADIATION-SCATTERING ANALYSIS
methods and uses of backscattering spectrometry, review on, 26:52939

RADIATION SOURCES
- preparation of americium-241 alpha--photon, development of sputtering methods for, 26:53330(R) (BNWL-1308-10)
- survey of natural and man-made, 26:53396
- uses in medicine, industry, and research in Japan during 1970, status of, 26:55458

RADIATION STANDARDS AND UNITS
- definition of x-ray exposure rate, variance from ICRU, 26:54935

RADIATION SYNDROME
- serotonin content of blood during acute, in rabbits, relation between reduced uptake by blood platelets following exposure and, 26:53486

RADIATION TARGET CHAMBERS
- description for charged particle-induced x-ray fluorescence studies, 26:53803

RADIO ASTRONOMY
- book: Galactic Astronomy, Vol. I, 26:53981

RADIO GALAXIES
- distribution of, (E/T), 26:53995
- evolution of, statistical studies of, (E/T), 26:53995
- luminosity functions for, optical and radio, (T), 26:53996
- optical positions of, (E), 26:53913
- radio source counts on the basis of evolution models for, (T), 26:53996
- redshifts of 20, (E), 26:53991
- resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53878
- resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53879
- rotation measures of, effects of galactic field on, (E), 26:53911
- spectra of Cyg A, emission, (E), 26:53990

RADIO WAVES
- deflection of, comparison of experiment with general relativistic predictions for, (E/T), 26:54403

RADIOACTIVE CONTAMINATION
- book: Radiation and Health, 26:53157
- control at nuclear power plants in India, micrometeorological studies for, 26:53154 (INIS-mf-160, pp 22-52)
- guides for surface, survey of, 26:54920
- standards for surface, criteria for, 26:54919

RADIOACTIVE MATERIALS
- criticality calculations for, reliability of Monte Carlo computer programs for, 26:55445 (Y-KC-96)

RADIOACTIVE MINERALS
- mineralogy of southwest Aswan syenite rock, 26:53142 (AREAEE-138)

RADIOACTIVE WASTE
- book: Radiation and Health, 26:53157
- combustion of plutonium-bearing solid, 26:53063 (ORNL-4794, pp 33-5)
- decontamination of off-gas, from HTGR fuel reprocessing, 26:53059 (CONF-720823-12)
- dilution of gaseous, from combustion of HTGR graphite fuels, calculation of air required for, 26:53060 (CONF-720823-14)
- disposal in salt beds, research progress on, 26:53063 (ORNL-4794, pp 33-5)
- disposal of tritiated water, generated in natural gas reservoirs produced by nuclear explosions, 26:53128 (ORNL-4794, pp 63-4)
- disposal system for reactor off-gas, efficiency of filters for, 26:55146
- fixation in glass or ceramic substances, suitability of vulcanites for, 26:53057(T) (BNWL-tr-75)
- limits for water cooled power reactor, development of reasonable legal, 26:55220 (BNL-16965)
- processing of liquid, estimation of cost of, 26:53065
- processing of uranium-containing, from fuel reprocessing, 26:53079 (EUR-4812)
- processing of, research progress on, 26:53063 (ORNL-4794, pp 33-5)
- separation of iodine and methyl iodide from off-gas, by sorption on charcoal, 26:53058 (CONF-720823-10)
- separation of iodine and methyl iodide from off-gas, by sorption on silver-containing adsorbents, 26:53077 (CONF-720823-9)
- storage in salt mines, gas flow through dry crushed salt during, (E), 26:53724 (ORNL-TM-3815)
- storage of high-level solidified, in Carey salt mine, effects of adjacent American Salt Corp. mining activities on, 26:53725 (ORNL-TM-3903)
- storage sites for, development of European community-type, 26:53726
- thermal stability of alpha, 26:53063 (ORNL-4794, pp 33-5)

RADIOACTIVITY
- book: Atomic Nucleus, 26:54738
- monitoring in Hungarian foodstuffs, from 1959 to 1971, 26:53172
- monitoring in Sweden from March 23, 1971 USSR underground nuclear explosion, 26:53158 (FOA-4-4502-A-1)

RADIOAPPLICATORS
- gamma dose distributions of ^{60}Co ophthalmic, computer-calculated, 26:54900

RADIOBIOLOGY
- book: Advances in Radiation Chemistry. Vol. 3, 26:53021
- energy deposition theory in, distribution of energy losses in, 26:54879 (NASA-TM-X-2440, pp 157-61)
- radioinduced chemical processes in, review on, 26:53024

RADIOCHEMICAL PROCESSING PLANTS
- development of MILLI, in Federal Republic of Germany, 26:53087
- effluent control from, pp. 24-5, 26:53082 (ORNL-4794, pp 15-25)
- radioactive waste from, trapping of iodine from off-gas, 26:53077 (CONF-720823-9)

RADIOCHEMISTRY
- hot atom reactions in, computer simulation of scavenger competition, 26:53030
- hot atom reactions in, effects of scavenger competition on kinetic theory of, 26:53031
- research in India, 1971--1972, 26:55452(R) (NP-19407)

RADIOGRAPHY, BIOMEDICAL
- dose calculation in x and γ, integral absorbed, 26:54910
- facilities for, IAEA-WHO survey on world-wide, 26:53413
- radiation dose to bone marrow and eyes of medical personnel during arteriography, x, 26:53443
- radiation dose to children during, methods for reducing x, 26:53417
- radiation dose to gonads and stomach wall of man during diagnostic, of stomach, relation to chromosome aberration induction in peripheral blood leukocytes, x, 26:53427
- radiation dose to man during diagnostic, phantom measurements in bone marrow, gonads, and skin, x, 26:53434
- radiation dose to man during, phantom studies for predetermination of absorbed x, 26:53416
- radiation hazards to man during fluoroscopy, effects of image intensifier performance on, 26:53421

RADIOGRAPHY, INDUSTRIAL
- equipment and methods for neutron, using californium-252 sources, 26:53330(R) (BNWL-1308-10)
- performance of neutron, with multiwire proportional counter, 26:53200 (LBL-707(Summ.))

RADIOISOTOPE SCANNING
- data from, computer programs for processing, 26:53228
- development of digital computer data processing system for analysis of gamma camera data, 26:55457 (TID-26141)
- training course manual, 26:53541 (TID-26128)
- uses of radiation and radioisotopes in, IAEA-WHO survey on world-wide, 26:53413

RADIOISOTOPES
- content and distribution of, in Savannah River swamp forest ecosystem, (E), 26:53171(R) (SRO-708-1)
- determination in mixtures, data reduction for Ge(Li) gamma spectrometers using small computers for, 26:53256 (NASA-TM-X-2440, pp 744-6)
- development and research in South Africa, 1971, 26:55453(R) (NP-19410)
- distribution and metabolism in biological systems, development of kinetic models for multi-parameter analysis of, 26:53519
- release to environment during accidents, relation to public health, 26:53523
- research in India, 1971--1972, 26:55452(R) (NP-19407)
- separation from spent ion exchange resins, method for, 26:53072(P)
- sorption by soils near Baguio City, Philippines, (E), 26:53175
- transport through ecosystems, bibliography on, 26:53530 (TID-3915(Suppl.1))
- transport to man following release to environment, 26:53522
- uptake by cattle following deposition of fallout on pasture grass, tracer study using lanthanum-140 as simulant, 26:53527 (FOA-4-4503-A-3)
- uptake by man following release to environment, 26:53521
- uses in analytical chemistry, 26:52942
- uses in hydrology in Latin America, 26:53168
- uses in medicine, IAEA-WHO survey on world-wide, 26:53413
- uses in medicine, industry, and research in Japan during 1970, status of, 26:55458
- uses in medicine, training course manual, 26:53541 (TID-26128)

RADIOMETRIC ANALYSIS
- book: Radiometric Methods of Analysis, in Romanian, 26:52942

RADIOPROTECTIVE COMPOUNDS
- bibliography on chemical, 26:53460 (SZS-132)

RADIOSTERILIZATION
- dose during, production and testing of homogeneous sterilization, 26:53340

RADIOTHERAPY
- dose calculation during interstitial radium, integral absorbed, 26:54910
- dose computations and treatment planning in pion, 26:54876 (LA-4874, pp 145-52)
- dose distributions for fast neutron, 26:54893
- dose rate tables for californium-252 implants, neutron and gamma, (T), 26:54906
- effectiveness of radiosensitizers during fractionated dose, of human neoplasms, relation of anoxia to cellular response to, 26:53430
- effects on immune reactions in patients, 26:53432
- equipment for skin cancer, description of, 26:53341
- injuries of human spinal cord exposed during, etiology

  of, 26:53429
  necrosis of jaw bones induced by exposure during head and neck neoplasm, 26:53418
  protection of oral tissues during head and neck, in patients, construction of prosthesis shield for, 26:53410
  treatment planning using pi mesons, 26:54877 (LA-4874, pp 153-61)
  use of sealed radium-226 gamma sources for implant, isodose curves for, 26:53409 (STI/PUB-295(Vol.4))
  uses of radiation and radioisotopes in, IAEA-WHO survey on world-wide, 26:53413
RADIUM
  determination of, radiometric, 26:52942
  effects on children following use for maternal therapy during pregnancy, pathological and teratological, 26:53437
RADIUM ISOTOPES Ra-216
  alpha decay of, half-life and width for, (E), 26:54651
RADIUM ISOTOPES Ra-223
  energy levels from thorium-227 decay, spin-parity assignments for, (E), 26:54673
RADIUM ISOTOPES Ra-226
  content in corals, determination of coral growth rates from measurements of, 26:53179
  content of foods, human diet, and urine in Poland, relation between, 26:53525
  content ratio to lead-210 in corals, determination of coral growth rates from measurements of, 26:53179
  content ratio to radium-228 in corals, determination of coral growth rates from measurements of, 26:53179
  decay of, γ-ray energies and intensities from, (E), 26:54652 (ANCR-1069)
  use as sealed gamma source for implant therapy, 26:53409 (STI/PUB-295(Vol.4))
RADIUM ISOTOPES Ra-228
  content ratio to radium-226 in corals, determination of coral growth rates from measurements of, 26:53179
RADON
  content of mine air, relation to mortality of miners, 26:53412
  effects on circadian changes in mitotic index and DNA synthesis in cells of rat gastric glands following oral administration of, in water, effects of dose on, 26:53514
RADON ISOTOPES Rn-220
  content in atmosphere of Nagoya, Japan in Nov. 1968, 26:53227
  radiation dose to human respiratory tract tissues following inhalation as aerosols, method for estimation of alpha, 26:53508
RADON ISOTOPES Rn-222
  decay products of, content in uranium mine air, α-spectrometric method for determining, 26:53226
  radiation dose to human respiratory tract tissues following inhalation as aerosols, method for estimation of alpha, 26:53508
RAINWATER
  radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
RANCHO SECO POWER REACTOR
  auxiliary systems for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  containment system for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  cooling system for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  electrical cables for, requested information on quality assurance procedures for installation of, 26:55314 (DOCKET-50312-50)
  engineered safeguards for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  instrumentation for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  owners of, financial data on, 26:55315 (DOCKET-50312-51)
  piping system for, additional data on imperfections in welds for, 26:55316 (DOCKET-50312-52)
  power conversion system for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  quality assurance program for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  radioactive waste disposal system for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  safety analysis for, requested and revised data on, 26:55315 (DOCKET-50312-51)
  testing program for, requested and revised data on, 26:55315 (DOCKET-50312-51)
RAPP POWER REACTOR
  description of, 26:55215
RARE EARTH ALLOYS AND SYSTEMS
  Co--rare earth, magnetic properties of R_3Co, pulsed-field magnetometer measurements of, 26:55050
  Ni--rare earth, magnetic properties of R_3Ni, pulsed-field magnetometer measurements of, 26:55050
  rare earths--Th, solubility in liquid bismuth, pp. 4-5, 26:53081 (ORNL-4794, pp 1-14)
RARE EARTH HYDRIDES
  properties of ternary, literature review on, 26:53558 (UCRL-51244)
RARE EARTH IONS
  magnetic properties of, diamagnetic susceptibility and nuclear magnetic shielding constants, (T), 26:55025
RARE EARTH OXIDES
  magnetic moment direction in perovskites, crystal-field calculation of, 26:55054
  spectra of R_2O_3, 4.2°K far-infrared, (E/T), 26:55032
RARE EARTHS
  abundance in γ Cap, (E), 26:53888
  magnetic properties of, diamagnetic susceptibility and nuclear magnetic shielding constants, (T), 26:55025
  separation by pressurized ion exchange, p. 37, 26:53084 (ORNL-4794, pp 54-62)
  separation from MSBR fuel salt by metal transfer process, contactor studies for, pp. 8-9, 26:53081 (ORNL-4794, pp 1-14)
  separation from MSBR fuel salt by metal transfer process, pp. 7-8, 26:53081 (ORNL-4794, pp 1-14)
  separation from spent molten salt fuel by reductive extraction, 26:53086(P)
  separation from uranium by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)
  separation from uranium by ion exchange using diethylaminoethylcellulose, 26:52951
  spin-wave energy fitting to interatomic exchange parameters in ferromagnetic, (T), 26:55053
RARE GASES
  chemistry of, 26:55562 (LBL-416)
  proton reactions at 500 to 3000 eV with, atomic-number dependence of charge exchange and excitation in, (E/T), 26:54122
  separation of fission product, from combustion off-gases by scrubbing with liquid carbon dioxide, 26:53064(T) (ORNL-tr-2621)
  transport in reactor core, tracer method for determining, 26:55185 (CONF-710959-, Paper 1)
RATS
  americium-241 distribution, retention in skeleton and excretion in urine of, following inhalation, time dependence of, 26:53531(T) (UCRL-Trans-1477)
  americium-241 removal from skeleton of, effectiveness of DTPA for, 26:53531(T) (UCRL-Trans-1477)
  arsenic-74 distribution and metabolism in tissues of, following oral administration, time dependence of, 26:53538
  radiation effects of L-arginine aminohydrolase activity in liver of, dose dependence of, 26:53491
  radiation effects on blood cells and protein content of blood of, following intratracheal administration of cerium-144, 26:53516
  radiation effects on bone marrow of, role of thymus gland in recovery from γ, 26:53479
  radiation effects on brain of neonatal, relation of acetylcholine metabolism to pathological, x, 26:53461(R) (UCB-34-P-82-13)
  radiation effects on brain of, relation of glycogen content to pathological, γ, 26:53487
  radiation effects on circadian changes in mitotic index and DNA synthesis in cells of gastric glands, following oral administration of radon water, effects of dose on α, 26:53514
  radiation effects on DNA synthesis and degradation in liver, spleen, and thymus of, x, 26:53489
  radiation effects on leukocyte count in peripheral blood of, following whole-body exposure, dose and time dependence of γ, 26:53483
  radiation effects on motor activity of, following exposure of embryos, dose dependence of x, 26:53488
  radiation effects on regeneration of thyroid gland in, following whole-body exposure, effects of prior implantation of sarcoma on x, 26:53494
  radiation effects on respiration and ultrastructure of mitochondria in intestinal epithelial cells of, during amino acid absorption, whole-body x, 26:53493
  radiation effects on survival of, following acute whole-body exposure, comparison of γ and proton, 26:53455 (NASA-TM-X-2440, pp 647-51)
  radiation effects on uptake of selenium-75-labeled selenomethionine by erythrocytes of, following whole-body exposure, dose dependence of γ, 26:53482
  radioinduced carcinomas in kidneys of parabiosed, whole-body x, 26:53449 (COO-3017-4)
  radioinduced chromosome aberrations in embryos of, following exposure in utero, time dependence of fast neutron, 26:53470
  radioinduced hypertension in, effects on distribution and excretion of exchangeable sodium, sodium-22 tracer study of, 26:53463
  radioinduced malformations in developing embryos of, following in utero exposure, role of chromosome damage and repair errors in incidence of fast neutron, 26:53470
  radioinduced malformations of brain of, following prenatal exposure, effects of developmental stage at exposure on, 26:53437
  radioinduced mammary neoplasms in, following acute whole-body exposure, comparison of γ and proton, 26:53455 (NASA-TM-X-2440, pp 647-51)
  radioisotope content of hair of, following intravenous injection, correlation with body burden, 26:53529 (NASA-TM-X-2440, pp 982-8)
  uptake of organic bases by kidneys of, effects of uranyl nitrate on, 26:53537

- REACTIVITY
  - effects of plutonium oxide (PuO_2) grain size in mixed oxide fuel elements with respect to homogeneity, 26:55416(R) (BNWL-1522-5)
  - measurements in sodium of fuel plates vs. fuel pins, comparison of, 26:55395 (CONF-720901-12)
- REACTOR CONTAINMENT STRUCTURES
  - deformation of fast sodium cooled, effects of excursion pressure loading on, (E/T), 26:55139 (ANL-7911(Suppl.1))

  - radiation testing in swimming pool reactors, device for control of, 26:55380 (CEA-N-1211)
  - reprocessing in India, 1971--1972, 26:55452(R) (NP-19407)
  - reprocessing of HTGR graphite, air required for dilution of off-gases from combustion in, 26:53060 (CONF-720823-14)
  - reprocessing of HTGR graphite, decontamination of off-gases from, 26:53059 (CONF-720823-12)
  - reprocessing of LMFBR, development of aqueous methods for, 26:53082 (ORNL-4794, pp 15-25)
  - reprocessing of LMFBR, trapping of iodine in off-gases from, 26:53077 (CONF-720823-9)
  - reprocessing of molten salt, axial dispersion in simulated continuous fluorinator for, pp. 9-10, 26:53081 (ORNL-4794, pp 1-14)
  - reprocessing of molten salt, by fluorination and reductive extraction methods, 26:53086(P)
  - reprocessing of molten salt, development of frozen-wall continuous fluorinator for, pp. 10-11, 26:53081 (ORNL-4794, pp 1-14)
  - reprocessing of MSBR, chemistry of fuel reconstitution in, p. 6, 26:53081 (ORNL-4794, pp 1-14)
  - reprocessing of MSBR, research progress on, 26:53081 (ORNL-4794, pp 1-14)
  - reprocessing of, contactor studies for rare earth removal by metal transfer process in, pp. 8-9, 26:53081 (ORNL-4794, pp 1-14)
  - reprocessing of, development of methods for, 26:53088

reprocessing of, engineering studies of burner off-gas decontamination for, pp. 29-32, 26:53083 (ORNL-4794, pp 26-32)
reprocessing of, research progress on solvent extraction of plutonium using amines in, p. 55, 26:53084 (ORNL-4794, pp 54-62)
reprocessing of, review on methods for, 26:52977
reprocessing of, use of modified Purex Process in MILLI laboratory for, 26:53087
requirements for power reactor development during 1972 to 1985, 26:55267 (WASH-1139(Rev.1))
requirements in power production 1980 to 2000, calculations of, 26:55093
thermal conductivity of sheared prototype LMFBR, p. 16, 26:53082 (ORNL-4794, pp 15-25)
uranium dioxide content in, during fuel fabrication, automatic on-line system for weighing and recording, 26:53723

REACTOR SAFETY
development activities during May and June 1972, 26:55207(R) (ORNL-TM-3900)
effects of minicomputerized control systems on, analysis of, 26:55136 (DUN-SA-186)
research program on, review of Japanese, 26:55204 (JAERI-M-4535)
research projects in West Germany, summaries of current, 26:55202(R) (IPP-F-14)

REACTOR SAFETY EXPERIMENTS
coolant loss accident simulation in, instrumentation for, 26:55205 (JAERI-Memo-4041)

REACTOR SIMULATORS
development of analog and digital, for sodium--water reactions, 26:55150 (CONF-710548-, pp 1-16)
performance of hybrid computer, for fast breeder reactor lattice parameter identification, 26:55099 (AD-738874)

REACTORS
burnout in, description of bridge-type detector for detecting, 26:53304(T) (LIB/Trans-431)
components for, standards for hoisting and rigging equipment for, 26:53112 (RDT-F-8-6-T(8-72))
components for, supplement to standards for high temperature requirements of Class 1, 26:55208 (RDT-F-9-1-T(8-72))
cooling system, standards for valves for, 26:53111 (RDT-E-1-13-T(8-72))
core-supporting structure in, equipment for observing position of, 26:55128(P)
cores for, effects of thermal neutron capture γ spectra on, (T), 26:55444 (TRG-2189)
criticality calculations for, reliability of Monte Carlo computer programs for, 26:55445 (Y-KC-96)
criticality calculations for, zero variance estimator for Monte Carlo, 26:55431 (CONF-720901-(Bks.1 and 2), pp 229-39)
description of, for space power systems, (T), 25:54950 (NASA-TM-X-2440, pp 98-102)
development and research in South Africa, 1971, 26:55453(R) (NP-19410)
development in India, 1971--1972, 26:55452(R) (NP-19407)
instrumentation systems for, RELY 4 code for reliability analysis of, 26:55209 (RISO-M-1506)
maintenance standards for, development of equipment, 26:55201 (DUN-SA-168)
neutron diffusion equation for hexagonal lattices, simultaneous line over-relaxation method for solution of, 26:55433 (CONF-720901-(Bks.1 and 2), pp 253-65)
neutron diffusion equations for cylindrical, variational synthesis analysis of two-group, 26:55422 (CISE-R-243)
neutron diffusion equations for finite cylindrical, iterative solution of, 26:55423 (CISE-R-273)
neutron energy spectra in, many-resonance approximation of, 26:55429 (CONF-720901-(Bks.1 and 2), pp 195-206)
neutron flux at cooling system of, standard for BF_3 proportional counter for measuring, 26:53204 (RDT-C-15-11-T(8-72))
neutron multiplication factors for, use of optimal control theory for determination of burnup dependence of infinite, 26:55432 (CONF-720901-(Bks.1 and 2), pp 240-51)
neutron transport calculations for, optimum angular segmentations in, 26:55434 (CONF-720901-(Bks.1 and 2), pp 266-74)
neutron transport equations for, improved S/sub N/ inner iteration convergence criterion for, 26:55435 (CONF-720901-(Bks.1 and 2), pp 275-92)
noise analysis for, bibliography on, 26:55443 (RT/FI-(72)13)
noise analysis in, state of the art in 1971 of, 25:55442 (RT/FI-(72)11)
physics calculations for, use of variational and perturbation methods in, 26:55426 (CONF-720901-(Bks.1 and 2), pp 162-7)
physics of, conference on new developments in, 25:55424 (CONF-720901-(Bks.1 and 2))
power transients in, use of PAD code for calculation of explosive, (T), 26:55441 (LA-DC-72-660)
radioactive waste system for, efficiency of filters for removal of radioactive iodine from off-gas, 25:55146
refueling of, MOBIDIC code for analysis of continuous axial, 26:55196 (CISE-R-241)
shielding calculations for, development of ENDF/B library for, 26:55141 (CONF-720901-(Bks.1 and 2), pp 315-24)
shielding calculations for, measurement and evaluation of neutron cross sections for, 26:55140 (CONF-720901-(Bks.1 and 2), pp 295-315)
shielding of, conference on new developments in, 26:55424 (CONF-720901-(Bks.1 and 2))

REACTORS, AIRCRAFT
shield for, thermal displacements of front island, (T), 26:55374 (CERN-HERA-72-1)

REACTORS, BOILING
cooling systems of, rupture studies on pipes in, 26:55175(R) (GEAP-10207-26)
decay heat from fission products in, REST-1, REST-2, and REST-3 codes for, 26:55127 (KFK-1579)
effluents from, development of legal limits for radioactive, 26:55220 (BNL-16965)
excursions in large, rod drop analysis of super prompt critical, 26:55353 (NEDO-10527)
physics of, review of developments in, 26:55112 (CONF-720901-(Bks.1 and 2), pp 114-40)

REACTORS, BREEDER
cooling systems of sodium cooled, fission and corrosion product behavior in, 26:55166 (CONF-710959-, Paper 10)
cooling systems of, conference on corrosion products in, 26:55417 (CONF-710959)
core design of fast, for decreased coolant void coefficient, 26:55129(P)
cover gas of, economic feasibility of cleanup system for, 26:55226 (CONF-710959-, Paper 5)
design of light-water seed--blanket, 26:55130(P)
design of molten chloride salt fast, (T), 26:55082 (EIR-215)
development for electric power generation, 26:55086
fuel burnup in, program for measurement of, 26:55119 (CONF-720901-(Bks.1 and 2), pp 888-904)
fuels for light-water, preparation of uranium-233 dioxide, 26:53553 (ORNL-4794, pp 52-3)
fuels for, preparation of particulate oxide, 26:53566(P)
lattice parameter identification in, performance of hybrid computer simulator for, 26:55099 (AD-738874)
neutron diffusion in gas cooled fast, calculation of anisotropic, (T), 26:55126 (KFK-1577)
physics of fast, review of, 26:55115 (CONF-720901-(Bks.1 and 2), pp 771-88)
physics parameters of sodium cooled, MASURCA measurements of, 26:55118 (CONF-720901-(Bks.1 and 2), pp 822-38)
physics parameters of, use of integral measurements in analysis of, 26:55121 (CONF-720901-(Bks.1 and 2), pp 928-39)

REACTORS, CANDU-TYPE
cooling systems for, economic effects of valve performance in, 26:55181
development of, status of, 26:55195 (AECL-4254)

REACTORS, FAST
containment structures for sodium cooled, effects of excursion pressure waves on deformation of, (E/T), 26:55139 (ANL-7911(Suppl.1))
coolant for liquid metal cooled, combustion characteristics of liquid sodium and sodium peroxide mixtures, (E), 26:55178 (RD/B/N-2364)
coolant loss accidents in, temperatures during, 26:55083(R) (EURFNR-1001)
cooling systems for sodium cooled, testing of components for secondary, 26:55182
cooling systems for, heat transfer studies in liquid sodium, 26:55083(R) (EURFNR-1001)
cooling systems of sodium cooled, fission and corrosion product behavior in, 26:55166 (CONF-710959-, Paper 10)
cooling systems of, conference on corrosion products in, 26:55417 (CONF-710959)
core design of breeder, for decreased coolant void coefficient, 26:55129(P)
core physics of, effects of fission products on, 25:55083(R) (EURFNR-1001)
cover gas of, economic feasibility of cleanup system for, 26:55226 (CONF-710959-, Paper 5)
design of molten chloride salt breeder, (T), 26:55082 (EIR-215)
development in Netherlands, progress on, 26:55083(R) (EURFNR-1001)
Doppler reactivity effects in, pulsed activation techniques for measurement of, 26:55124 (CONF-720901-(Bks.1 and 2), pp 1016-32)
fuel burnup in, program for measurement of, 26:55119 (CONF-720901-(Bks.1 and 2), pp 888-904)
fuel elements for gas cooled, calculation of friction factors and flow distribution in bundle arranged roughened rods, (T), 26:55168 (EURFNR-1020)
fuel elements for, SATURN-1 code for calculation of time history of pin, 26:55186(T) (EURFNR-986)
kinetics analysis of, survey of developments in, 26:55427 (CONF-720901-(Bks.1 and 2), pp 166-78)
lattice parameter identification in, performance of hybrid computer simulator for, 26:55099 (AD-738874)
neutron diffusion in gas cooled breeder, calculation of anisotropic, (T), 26:55126 (KFK-1577)
neutron generation time in subcritical, transfer and scattering kinetics scheme for determination of, 26:55437 (CONF-720901-(Bks.1 and 2), pp 713-23)
neutron spectra measurements in, proton-recoil spectrometry methods for, 26:55122 (CONF-720901-(Bks.1 and 2), pp 959-72)

neutron spectra measurements in, review of fast, 26:55438 (CONF-720901-(Bks.1 and 2), pp 943-58)
physics calculations for zero power, KFKINR set of group constants for, 26:55397 (EURFNR-1016)
physics calculations for zero power, VIM-1 computer program for, 26:55378 (AI-AEC-12951)
physics measurements for liquid sodium cooled, (E/T), 26:55398 (EURFNR-1029)
physics measurements in, adjustments of neutron cross section data from, 26:55436 (CONF-720901-(Bks.1 and 2), pp 599-612)
physics of breeder, review of, 26:55115 (CONF-720901-(Bks.1 and 2), pp 771-88)
physics parameters of sodium cooled, MASURCA measurements of, 26:55118 (CONF-720901-(Bks.1 and 2), pp 822-38)
physics parameters of, ENDF/B data evaluation for benchmark measurements of, 26:55125 (CONF-720901-(Bks.1 and 2), pp 1033-47)
physics parameters of, use of integral measurements in analysis of, 26:55121 (CONF-720901-(Bks.1 and 2), pp 928-39)
plutonium-239 release to environment as oxide aerosols during accidents involving, hazards to human population from, 26:53511 (TID-26142)
safety of, effects of fuel element cladding rupture and coolant loss accidents on, 26:55083(R) (EURFNR-1001)
shielding calculations for, methods development for, 26:55144 (CONF-720901-(Bks.1 and 2), pp 480-98)
shielding design for, diffusion theory analyses for, 26:55143 (CONF-720901-(Bks.1 and 2), pp 459-70)
REACTORS, FLUID-FUELED
propellant pumping in gas core, performance of bleed-cycle, (T), 26:55358 (N-72-18051)
REACTORS, GAS-COOLED
coolant flow through 16 tube fuel assemblies, measurements of heat transfer and pressure drop in, 26:55227(T) (EURFNR-1000)
fuel elements for fast, calculation of friction factors and flow distribution in bundle arranged roughened rods, (T), 26:55188 (EURFNR-1020)
fuel management in high temperature, methods for three-dimensional, 26:55111 (CONF-720901-(Bks.1 and 2), pp 68-80)
fuel reprocessing for, decontamination factors for gaseous effluents from combustion process in, 26:53060 (CONF-720823-14)
fuel reprocessing for, development of methods for, 26:53083 (ORNL-4794, pp 26-32)
fuels for, preparation of oxide, 26:53552 (ORNL-4794, pp 45-51)
neutron diffusion in fast breeder, calculation of anisotropic, (T), 26:55126 (KFK-1577)
physics of high temperature, review of French studies on, 26:55109 (CONF-720901-(Bks.1 and 2), pp 33-54)
physics of high temperature, review of U.K. studies on, 26:55110 (CONF-720901-(Bks.1 and 2), pp 55-67)
reactivity temperature coefficient of high temperature, determination of, (E/T), 26:55108 (CONF-720901-(Bks.1 and 2), pp 23-32)
REACTORS, HEAVY WATER-MODERATED
physics of, lectures on, 26:55100 (BARC/I-148)
physics parameters of natural uranium fueled, (E), 26:55101 (CISE-R-203)
REACTORS, HETEROGENEOUS
physics parameters of, dipolar formulation of, 26:55447
physics parameters of, dipolar formulation of, 26:55446
REACTORS, LIQUID METAL-COOLED
containment structures for sodium cooled, effects of excursion pressure waves on deformation of, (E/T), 26:55139 (ANL-7911(Suppl.1))
coolant for fast, combustion characteristics of liquid sodium and sodium peroxide mixtures, (E), 26:55178 (RD/B/N-2364)
coolant voids in, effects on core physics of sodium, 26:55395 (CONF-720901-12)
cooling systems for sodium cooled, testing of components for secondary, 26:55182
cooling systems for sodium, problems of impurities in cover gas systems for, 26:55171 (CONF-710959-, Paper 15)
cooling systems for, heat transfer studies in liquid sodium, 26:55083(R) (EURFNR-1001)
cooling systems of sodium, fission and corrosion product behavior in, 26:55166 (CONF-710959-, Paper 10)
cooling systems of, conference on corrosion products in, 26:55417 (CONF-710959)
cooling systems of, corrosion product release, transport, and deposition in, (E), 26:55164 (CONF-710959-, Paper 8)
cooling systems of, effects of corrosion on radioactivity levels in, 26:55172 (CONF-710959-, Paper 16)
core design of fast breeder, for decreased void coefficient, 26:55129(P)
core supporting structure in, equipment for observing position of, 26:55128(P)
cover gas of, economic feasibility of cleanup system for, 26:55226 (CONF-710959-, Paper 5)
fuel element failures in sodium, methods for detection of, 26:55218(T) (EURFNR-976)
physics measurements for fast, (E/T), 26:55398 (EURFNR-1029)
physics parameters of sodium cooled, MASURCA measurements of, 26:55118 (CONF-720901-(Bks.1 and 2), pp 822-38)
standards for, development of engineering, 26:55207(R) (ORNL-TM-3900)
thermowell system for, standards for design and fabrication of, 26:55219 (RDT-C-7-18-T(8-72))
REACTORS, MARINE
development in Japan, status of, 26:55089
REACTORS, MOLTEN-SALT
design of fast breeder, with molten chlorides for fuel and coolant, (T), 26:55082 (EIR-215)
fuel reprocessing for, by fluorination and reductive extraction methods, 26:53086(P)
fuel reprocessing for, chemical engineering studies related to, p. 94-5, 26:53085 (ORNL-4794, pp 91-5)
REACTORS, PEBBLE-BED
coolant flow at high Reynolds numbers in, aerodynamics of, 26:55180
core of, spherical arrangement for optimum heat transfer in, 26:55131(P)
fuel sphere transfer into, design of conveying tube for pneumatic, 26:55194(P)
REACTORS, POWER
accidents in, classification of types of, 26:55211
condenser cooling water distribution at planned Swedish, scale model measurements on, 26:55352 (INIS-mf-205)
control rod drives for pressurized water, analysis of discontinuities in motor tube extensions of, 26:55217 (BAW-10047(Rev.1))
coolant loss accident for 2568 MW(t) pressurized water, safety analysis for, 26:55271 (BAW-10034(Suppl.1))
coolant loss accident for 2762 MW(t) pressurized water, safety analysis for, 26:55272 (BAW-10048(Suppl.1))
coolant loss accidents in pressurized water, model accuracy for safety analysis of, 26:55199(T) (AEC-tr-7319)
cooling systems of sodium cooled, fission and corrosion product behavior in, 26:55166 (CONF-710959-, Paper 10)
cooling systems of, rupture studies on pipes in, 26:55175(R) (GEAP-10207-26)
core of, effect of fuel rod configuration and spacing on coolant pressure drop in, 26:55174(T) (EURFNR-986)
cover gas of, economic feasibility of cleanup system for, 26:55226 (CONF-710959-, Paper 5)
development during 1972 to 1985, 26:55267 (WASH-1139(Rev.1))
development in Canada during April 1971 to March 1972, 26:55081(R) (AECL-4162)
development in Japan, status of, 26:55089
development in U.K., economic and technical problems in, 26:55087
development of fast breeder, 26:55086
economics of dual purpose, for electricity production and district heating in Czechoslovakia, (T), 26:55376 (INIS-mf-172, pp 7-13)
effluents from, development of legal limits for radioactive, 26:55220 (BNL-16965)
energy conversion in, efficiency of, (T), 26:53107
excursions in large, rod drop analysis of super prompt critical, 26:55353 (NEDO-10527)
fuel cycle requirements for, calculations of, 26:55093
fuel element failures in water cooled and sodium cooled, methods for detection of, 26:55218(T) (EURFNR-976)
licensing of U. S., legislative changes and proposals for, 26:55355
plutonium-239 release to environment as oxide aerosols during accidents involving, hazards to human population from, 26:53511 (TID-26142)
pressure vessels for 1200 MW(e) water moderated, survey of design and fabrication of steel, 26:55224
pressure vessels for, development of methods for in-service inspection of, 26:55221 (NP-19338(Vol.1))
pressure vessels for, development of methods for in-service inspection of, 26:55222(R) (NP-19338(Vol.2))
siting requirements for dual purpose, for electricity production and district heating in Czechoslovakia, (T), 26:55375 (INIS-mf-172)
REACTORS, PRESSURIZED-WATER
control rod drives for power, analysis of discontinuities in motor tube extensions of, 26:55217 (BAW-10047(Rev.1))
coolant loss accident for 2568 MW(t), safety analysis for, 26:55271 (BAW-10034(Suppl.1))
coolant loss accident for 2762 MW(t), safety analysis for, 26:55272 (BAW-10048(Suppl.1))
coolant loss accidents in power, model accuracy for safety analysis of, 26:55199(T) (AEC-tr-7319)
coolant loss accidents in, fuel assembly heat transfer characteristics during, (E/T), 26:55207(R) (ORNL-TM-3900)
effluents from, development of legal limits for radioactive, 26:55220 (BNL-16965)
fuel elements for, performance of filament type electric heater simulation of uranium oxide (UO_2) rod, (E), 26:55183 (ANCR-1038)
lattice cells of, group constant generation for resolved resonance region in, 26:55439 (CONF-720901-(Bks.1 and 2), pp 1183-91)
physics of, review of, 26:55107 (CONF-720901-(Bks.1 and 2), pp 3-22)
thermal shielding for, design and evaluation study for replacement with neutron shielding pads of, 26:55223

(WCAP-7870)
  transients without scram in, probability and consequences of, 26:55193 (BAW-10016)
REACTORS, PROCESS HEAT
  economics of dual purpose, for electricity production and district heating in Czechoslovakia, (T), 26:55376 (INIS-mf-172, pp 7-13)
  siting requirements for dual purpose, for electricity production and district heating in Czechoslovakia, (T), 26:55375 (INIS-mf-172)
  use for conversion of fossil fuels, engineering problems in, 26:55377
REACTORS, RESEARCH
  construction of, review of, 26:55402 (JAERI-Memo-4002)
  containment structures for Grenoble HFR, design and construction of, 26:55410
  coolant for Grenoble HFR, tritium removal from, 26:55415
  cooling system for Grenoble HFR, design of, 26:55415
  development in Japan, status of, 26:55089
  development of Berkeley zero energy facility, program for, 26:55409 (RD/B/N-2272)
  experimental facilities in JRR-2, description of, 26:55404 (JAERI-Memo-4052)
  inpile loop for JRR-1, inpile and out-of-pile performance testing of, 26:55381 (CONF-710959-, Paper 6)
  irradiation experiments in JRR-2, summary of, 26:55404 (JAERI-Memo-4052)
  moderator loss from Frankfurt University FRF-2, γ dose rates from water, (T), 26:55399 (IKF-27)
  neutron buckling in ECO uranium oxide (UO_2) fueled heavy water moderated lattices, (E), 26:55106 (CISE-R-283)
  neutron flux measurements on CIRENE fuel element in, 26:55105 (CISE-R-258)
  neutron source in Grenoble HFR, design of liquid deuterium cold, 26:55414
  operation of SAFARI-I, 1971, 26:55453(R) (NP-19410)
  performance of Grenoble HFR, survey of, 26:55412
  physics measurements in CFRMF, evaluation of neutron cross sections from, 26:55384 (CONF-720901-(Bks.1 and 2), pp 613-22)
  physics measurements on uranium oxide (UO_2) fueled heavy water moderated lattices in RB-1, 26:55102 (CISE-R-239)
  safety of Grenoble HFR, design of systems and components for, 26:55411
  shield plug of Frankfurt University FRF-2, γ dose rates from open, (T), 26:55399 (IKF-27)
REACTORS, ROCKET
  propellant pumping in gas core, performance of bleed-cycle, (T), 26:55358 (N-72-18051)
  radiation from, hardening of Saturn 5 components and systems to, 26:55370 (NASA-TM-X-2440, pp 471-5)
  shield weight optimizations for 375- and 600-MW, FASTER-III Monte Carlo program for, 26:54962 (NASA-TM-X-2440, pp 697-705)
  shields for, effects of ducts on effectiveness of, (E/T), 26:54958 (NASA-TM-X-2440, pp 375-82)
REACTORS, SUPERHEATING
  core design of fast breeder, for decreased void coefficient, 26:55129(P)
REACTORS, SWIMMING-POOL
  fuel irradiation in, device for control of, 26:55380 (CEA-N-1211)
  irradiation tubes in, system for signaling sample arrival in pneumatic, 26:55413(P)
REACTORS, THERMAL
  physics calculations for, DASQHE computer program for, 26:55421 (BNWL-CC-2274)
REACTORS, THERMIONIC
  core for, venting of gaseous fission products from, (T), 26:55373 (NASA-TM-X-2440, pp 1016-20)
  physics calculations for in-core, MORSE-K code for Monte Carlo, 26:55386 (CONF-720901-(Bks.1 and 2), pp 636-44)
  shielding of 40 kW(e), for integration with manned space station, (T), 26:55365 (NASA-TM-X-2440, pp 299-306)
  shielding requirements of, for unmanned ion propulsion space vehicles, (T), 26:55364 (NASA-TM-X-2440, pp 292-8)
REACTORS, WATER-COOLED
  coolant loss accidents in, effects of fission product escape on fuel element heating following, (T), 26:55206 (KFK-1580)
  coolant loss accidents in, instrumentation for simulation of, 26:55205 (JAERI-Memo-4041)
  coolant loss accidents in, pressure drops and heat transfer coefficients for, (E/T), 26:55200(R) (COO-2152-4)
  cooling system of, critical review on boiling crisis and critical heat flux in, 26:55179 (TID-25887)
  cooling systems for, pressure wave propagation from pipe ruptures in, (T), 26:55203 (JAERI-M-4473)
  design of breeder seed--blanket, 26:55130(P)
  fuel element failures in, methods for detection of, 26:55218(T) (EURFNR-976)
  neutron flux calculations for fog cooled, MOICANO-1 code for, 26:55103 (CISE-R-242)
  pressure vessels for 1200-MW(e) survey of design and fabrication of steel, 26:55224
  reactivity calculations for fog cooled, MOICANO-1 code for, 26:55103 (CISE-R-242)
  standards for, development of engineering, 26:55207(R) (ORNL-TM-3900)
REACTORS, WATER-MODERATED
  design of breeder seed--blanket, 26:55130(P)
  physics calculations for, PIBIMUG code for, 26:55420 (AREAEE-141)
RECOILS
  reactions of, computer simulation of effect of scavenger competition on, 26:53030
  reactions of, effects of scavenger competition in kinetic theory of, 26:53031
REFRACTORY MATERIALS
  friction coefficients for, 26:53617
  powder metallurgy of, electronic mechanism of basic processes in, 26:53632
  properties at high temperatures for use in areospace, 26:53581
REGGE POLE THEORY
  absorption model in, generalization of weak-cut Regge, 26:54336
  cuts in pole--cut model for π + N charge exchange interactions at 4.8 to 20 GeV, double, 26:54324 (COO-1428-309)
  formalism for inclusive cross sections, triple-Regge, 26:54332
  trajectories in Veneziano-like representations, behavior of, 26:54423
  trajectories of baryon resonances, correlations among, 26:54338
RELATIVITY THEORY, GENERAL
  constants of, relations between quantum constants and, 26:54392 (ITF-72-3-P)
  coordinate transformation from Schwarzchild system to that of local pseudodecart in, 26:54401 (ITF-72-60-P)
  coordinate transformations conserving test-body trajectories in, use of group methods for infinitesimal, 26:54389 (ITF-71-85-P)
  geometry of state space of free particle in gravitational field, 26:54391 (ITF-71-132-P)
  mechanical vibrations in, effects of earth rotation on, 26:54400 (ITF-72-59-P)
  potentials in collapsing systems in, nonlinear generalization of Maxwell equations for static repulsive, 26:54404
  predictions for radar signal propagation retardation, radio wave deflection, and Mercury perihelion advance, comparison with experimental data, 26:54403
  Riessner--Nordstroem problem in presence of scalar field, exact static central-symmetric solution for, 26:54394 (ITF-72-20-P)
  Schwarzchild field in, effects of Einstein theory of gravitation for two-particle vibrations in, 26:54401 (ITF-72-60-P)
RELATIVITY THEORY, SPECIAL
  experimental test of, Trouton--Noble, 26:55540 (JINR-P2-6532)
RELAYS
  book: Radioisotopic Relays, 26:53288
REMOTE-CONTROL EQUIPMENT
  design and objectives of teleoperator, for NERVA, 26:53730 (NASA-TM-X-2440, pp 277-9)
  developments in teleoperator systems for manned space flights, 26:53731 (NASA-TM-X-2440, pp 280-90)
REMOTE-HANDLING EQUIPMENT
  development and uses of, review on, 26:53734
REMOTE-VIEWING EQUIPMENT
  design for positioning core-supporting structure inside reactor, 26:55128(P)
RESPIRATORY TRACT
  radiation dose distribution in, of dogs and monkeys following inhalation of strontium-90 as fused clay aerosols, β, 26:53536
  radiation dose to human, following inhalation of radon-222 and radon-220 daughter products as aerosols, use of ICRP lung model for estimation of alpha, 26:53508
RETICULO-ENDOTHELIAL SYSTEM
  radiation effects on phagocytic activity of cells of, in mice following whole-body exposure, effects of dose on x, 26:53468
RHENIUM
  compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
  separation from scrubber solutions from roasting of molybdenite by solvent extraction, 26:52950(P)
  solvent properties for nitrogen, effects of temperature and pressure on, 26:53580
RHENIUM ALLOYS AND SYSTEMS
  Mo-base--Re, compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
  N--Re, degassing at 1200 to 3000°C in, equilibria and kinetics of, 26:53580
  Re--ThO_2--W-base, creep properties of, at 1800 to 2200°C, 26:53678
  Re--W-base, compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
RHENIUM ISOTOPES Re-185
  energy-level transitions from osmium-185 decay, multipole mixing ratios for, (E), 26:54644
RHENIUM ISOTOPES Re-187
  deuteron reactions (d,p) at 12 MeV, proton spectra and cross sections for, (E), 26:54637
  neutron capture by, γ singles and coincidence spectra

- from thermal, (E), 26:54637
- RHENIUM ISOTOPES Re-188
  - energy-level scheme for, (E), 26:54637
- RHENIUM OXIDES
  - magnetic susceptibility of ReO$_3$ at 77 to 300°K, comparison with sodium tungsten bronze, 26:55046
- RHODIUM
  - recovery of fission product, for commercial uses, feasibility of, 26:53330(R) (BNWL-1308-10)
- RHODIUM ISOTOPES Rh-103
  - neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589
- RHODIUM ISOTOPES Rh-108
  - beta decay of ground-state and isomeric, β and γ singles and coincidence spectra from, (E/T), 26:54596 (CEA-R-4286)
- RHODIUM ISOTOPES Rh-110
  - beta decay of ground-state and isomeric, β and γ singles and coincidence spectra from, (E/T), 26:54596 (CEA-R-4286)
- RHODOPSIN
  - light flashes induced by Cherenkov radiation from heavy cosmic nuclei, calculation of frequency of, 26:54882 (NASA-TM-X-2440, pp 757-66)
- RICHLAND AREA (WASH.)
  - climatography of, 26:55478 (BNWL-1605)
- RICKETTSIA
  - Rickettsia akari, radiation effects on metabolism of, in L cells, gamma, 26:53360
  - Rickettsia typhi, radiation effects on metabolism of, in L cells, gamma, 26:53360
- RING CURRENT
  - decay of, electric-field induction in magnetosphere from slow, (T), 26:54063
  - relation of partial, with space--time morphology of polar magnetic substorms in evening high latitudes, (E), 26:54023
- ROBERT E. GINNA POWER REACTOR, UNIT 1
  - radioactive effluents from, measurements during July 26 to August 25, 1972, 26:55245 (DOCKET-50244-118)
- ROCKET REACTORS (KIWI)
  - radiation environment from B4D and B4E, external gamma, (E), 26:55367 (NASA-TM-X-2440, pp 440-8)
- ROCKET REACTORS (NERVA)
  - development of, summary of program for, 26:55359 (NASA-TM-X-2440, pp 2-12)
  - engine components for, radiation heating in, (T), 26:55369 (NASA-TM-X-2440, pp 460-5)
  - radiation dose rates from flight module, coupling of discrete ordinates and Monte Carlo analyses of, 26:55371 (NASA-TM-X-2440, pp 681-6)
  - radiation dose rates from flight module, MORSE code analysis of, 26:55372 (NASA-TM-X-2440, pp 692-6)
  - radiation environment for rendezvous and docking with space stations, 26:55361 (NASA-TM-X-2440, pp 257-63)
  - radiation environment from reusable nuclear shuttle to orbiting lunar station and lunar surface, (T), 26:55362 (NASA-TM-X-2440, pp 264-9)
  - radiation levels on crew in Reusable Nuclear Shuttle, (T), 26:54945 (NASA-TM-X-2440, pp 40-7)
  - shielding design for, in Reusable Nuclear Shuttle, (E), 26:54954 (NASA-TM-X-2440, pp 251-6)
  - shielding measurements for, selection and use of thermoluminescent dosimeters for, 26:53233 (NASA-TM-X-2440, pp 466-70)
  - shielding of Reusable Nuclear Shuttle from, (T), 26:54946 (NASA-TM-X-2440, pp 48-56)
  - shields for, discrete ordinates analysis of minimum weight shadow, (E/T), 26:55368 (NASA-TM-X-2440, pp 449-59)
  - teleoperator design and objectives for, 26:53730 (NASA-TM-X-2440, pp 277-9)
- ROCKET REACTORS (PHOEBUS)
  - radiation environment from 1B and 2A, external gamma, (E), 26:55367 (NASA-TM-X-2440, pp 440-8)
- ROCKETS
  - components for Saturn 5, radiation hardening of, 26:55370 (NASA-TM-X-2440, pp 471-5)
- ROCKS
  - age of, thermoluminescent method for estimation of, 26:53177
  - analysis for alkaline earth metals and refractory oxides by atomic absorption spectroscopy, 26:52921
  - analysis for iodine and six metals by neutron activation and separation processes, 26:52906
  - barium, iron, lead, and molybdenum content in, γ--γ selective method for determination of equivalence between, 26:52943
  - uranium content of upper Jurassic black bituminous argillite, of West Siberian plate, (E), 26:53146
- ROVER REACTORS
  - radiation environment from Pewee 1, external gamma, (E), 26:55367 (NASA-TM-X-2440, pp 440-8)
- RUBIDIUM
  - photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
- RUBIDIUM ISOTOPES Rb-85
  - neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589
- RUBIDIUM ISOTOPES Rb-87
  - energy levels from krypton-86 proton resonances, widths and weak coupling coefficients for isobaric analog, (E), 26:54467(R) (ORO-2972-204)
- RUBIDIUM ISOTOPES Rb-89
  - half-life of, (E), 26:54667
- RUBIDIUM ISOTOPES Rb-90
  - half-life of, (E), 26:54667
- RUBIDIUM ISOTOPES Rb-91
  - half-life of, (E), 26:54667
- RUTHENIUM
  - determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  - determination in residues from leaching of mattes by distillation and atomic absorption spectroscopy, 26:52919 (NIM-1432)
  - recovery of fission product, for commercial uses, feasibility of, 26:53330(R) (BNWL-1308-10)
- RUTHENIUM ALLOYS AND SYSTEMS
  - Ce--Gd--Ru, magnetic properties of Ce/sub 1-x/Gd/sub x/Ru$_2$, 26:55037
  - Ce--Pt--Ru, thermal capacity of CeRu/sub 2-x/Pt/sub x/ at 1.3 to 9°K, 26:55047
  - Ce--Ru, thermal capacity of CeRu$_2$ at 1.3 to 9°K, 26:55047

- RUTHENIUM ISOTOPES Ru-94
  - energy-level transitions in, shell-model calculations of, (T), 26:54611
- RUTHENIUM ISOTOPES Ru-96
  - chlorine-35 reactions up to 250 MeV, delayed proton spectra from, (E), 26:54608(T) (UCRL-Trans-1473)
  - sulfur-32 reactions up to 270 MeV, delayed proton spectra from, (E), 26:54608(T) (UCRL-Trans-1473)
- RUTHENIUM ISOTOPES Ru-102
  - energy levels from technetium-102 decay, collective model analysis of, (E/T), 26:54596 (CEA-R-4286)
- RUTHENIUM ISOTOPES Ru-103
  - content in atmosphere, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- RUTHENIUM ISOTOPES Ru-104
  - energy levels from technetium-104 decay, collective model analysis of, (E/T), 26:54596 (CEA-R-4286)
- RUTHENIUM ISOTOPES Ru-106
  - content in atmosphere, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)

S

- S-MATRIX
  - elements in g(:phi*:)$_2$ theory in Euclidean domain, equations for, 26:54376 (ITF-72-15-E)
  - formulation for Glauber multiple scattering theory, 26:54416
  - meromorphic continuation for elliptic partial differential operators in unbounded domains, method for, 26:54407 (BNL-16752)
  - unitarity in nonlocal quantum field theory, 26:54413 (JINR-P2-6586)
- SACLAY PROTON SYNCHROTRON (SATURNE)
  - beam polarization in, method for preserving, during acceleration, 26:53762
- SAINT LAURENT-DES-EAUX REACTOR (EDF-4)
  - fuel element failure detection system for, modification of, 26:55230
  - fuel meltdown in, radiation protection measures during repair following, 26:55354
- SALEM POWER REACTOR, UNIT 1
  - auxiliary systems for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - containment system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - emergency systems for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - engineered safeguards for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - power conversion system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - quality assurance program for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - radiation protection system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - radioactive waste disposal system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - safety analysis for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - site for, requested and revised data on, 26:55291 (DOCKET-50272-35)
- SALEM POWER REACTOR, UNIT 2
  - auxiliary systems for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - containment system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - emergency systems for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - engineered safeguards for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  - power conversion system for, requested and revised data on, 26:55291 (DOCKET-50272-35)

  quality assurance program for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  radiation protection system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  radioactive waste disposal system for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  safety analysis for, requested and revised data on, 26:55291 (DOCKET-50272-35)
  site for, requested and revised data on, 26:55291 (DOCKET-50272-35)
SALIVARY GLANDS
  radioinduced inflammation of, in man following therapy, 26:53423
SALT DEPOSITS
  cavity construction by leaching in, for natural gas storage, 26:53115
SALTS
  radioisotope diffusion in crushed, 26:53063 (ORNL-4794, pp 33-5)
SAMARIUM
  phase transitions in, at 77 to 300°K, x-ray diffraction technique for study of, (E), 26:55051
  photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
SAMARIUM ISOTOPES Sm-144
  energy-level scheme from γ resonance scattering, (E), 26:54619
SAMARIUM ISOTOPES Sm-152
  chlorine-35 inelastic scattering at 100 MeV with Coulomb excitation, gamma spectra from, (E), 26:54642
  energy levels from Coulomb excitation, Doppler-shift recoil measurements of lifetimes and transition probabilities for, (E), 26:54642
SAMPLING
  design criteria for confidence and reliability based on small samples, 26:55618 (UCID-16099)
SAN ONOFRE POWER REACTOR, UNIT 1
  safety injection system for, thermal stresses from actuation of, 26:55239 (DOCKET-50206-167)
SAN ONOFRE POWER REACTOR, UNIT 2
  effluents from, effects on environment of radioactive and thermal, 26:55338 (DOCKET-50361-27)
  operation of, requested data on cost-benefit analysis for, 26:55338 (DOCKET-50361-27)
  site for, meteorology and radiation monitoring program for, 26:55338 (DOCKET-50361-27)
SAN ONOFRE POWER REACTOR, UNIT 3
  effluents from, effects on environment of radioactive and thermal, 26:55338 (DOCKET-50361-27)
  operation of, requested data on cost-benefit analysis for, 26:55338 (DOCKET-50361-27)
  site for, meteorology and radiation monitoring program for, 26:55338 (DOCKET-50361-27)
SANDSTONE DEPOSITS
  formation of Grants Region, N. Mex. uranium-bearing, trend orebody studies of, 26:53144 (GJO-936-2)
SATELLITES
  charged-particle flux measurements in ATS-5, at synchronous altitude, low-energy, 26:54045 (NASA-TM-X-2440, pp 530-8)
  effects of Io on Jovian decametric radiation, (T), 26:54004
  radiation dose and LET measurements on OV1-19, April--Dec. 1969, 26:54048 (NASA-TM-X-2440, pp 561-8)
  surface material of, effect of particle energy distribution in plasmasphere during solar eclipse on equilibrium potential of, (T), 26:54054
SAVANNAH RIVER
  ecosystems of swamp forest near, radioisotope content and distribution in, 26:53171(R) (SRO-708-1)
  radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
SAXTON POWER REACTOR
  decommissioning of, approved technical specifications for surveillance and staffing for, 26:55276 (DOCKET-50146-111)
SCALERS
  driver circuit for, 26:53298 (COO-3058-9)
SCANDIUM
  abundance in γ Cap, (E), 26:53888
SCANDIUM ALLOYS AND SYSTEMS
  H--Sc, properties of, structural and thermodynamic, 26:53556 (SC-CR-723158)
  In--Sc, magnetization and field dependence of sound velocity and thermal capacity of Sc_3In, low-temperature, 26:55045
SCANDIUM ISOTOPES Sc-42
  beta decay of, electromagnetic corrections to ft values for, (T), 26:54713
SCANDIUM ISOTOPES Sc-46
  distribution in Columbia River, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)
SCANDIUM ISOTOPES Sc-50
  energy levels of, calculations using separable nonlocal potential, (T), 26:54683 (FRNC-TH-180)
SCATTERING
  amplitudes free from kinematical singularities, four-fermion, 26:54417
  amplitudes in dual absorptive model, helicity-conserving and helicity-nonconserving pomeron-exchange, 26:54419
  amplitudes of self-energy graphs under analytic regularization, homogeneity violation of renormalized Feynman, 26:54411 (ITF-72-39-P)
  amplitudes of, behavior of Regge trajectories in Veneziano-like representations for, 26:54423
  amplitudes of, derivation of off-shell N-point dual resonance, 26:54420
  amplitudes of, parameter-dependent analytic regularization for renormalized Feynman, 26:54409 (ITF-72-37-P)
  amplitudes of, unitarity constraints on helicity, 26:54418
  amplitudes under scale transformations in scalar field theory, behavior of analytically renormalized Feynman, 26:54410 (ITF-72-38-P)
  amplitudes with Mandelstam analyticity, high-energy behavior of dual, 26:54412 (ITF-72-63-E)
  angular distribution of charged particles in diffraction, diagram for predicting gross structure in, (T), 26:54415
  bremsstrahlung production in potential, soft-photon theorem for, 26:54737
  diffraction, effects of Coulomb field on type of, (T), 26:54415
  Faddeev equations for two- and three-body, factorization of pair potential by Bateman modified method for behavior of approximated phases of, 26:54345 (JINR-P4-6505)
  Glauber theory of, S-matrix approach to, 26:54416
  N/D equations in, Newton--Kantorovich method for coupling constant and convergence conditions for sequence of iterations for Chew--Low, 26:54421
  operators in unbounded domains in, method for meromorphically continuing S-matrix and distorted plane waves associated with elliptic differential, 26:54407 (BNL-16752)
  potential, Hartree one-particle asymptotically exact solutions for quantum mechanical systems with singular attractive, 26:55068 (ITF-72-31-P)
  potential, self-consistent Hartree field as limit for many-body Schroedinger equation for stability of particle systems with singular attractive, 26:54408 (ITF-72-14-E)
  theory for identical-particle, unitarity in inhomogeneous equations method in, 26:54414
SEALS AND GLANDS
  surface flatness of mechanical face, broad source interference method for measuring, 26:55463 (AECL-4208)
SEAWATER
  effects on distribution of soluble-suspended radioisotopes in, 26:53166 (RLO-2227-T-12-28)
  radioisotope transport through, relation of uptake by animals and plants to strontium-90 and zinc-65, 26:53532
  radioisotope uptake from, by ocean sediments, measurements of cerium-144, cesium-137, and thorium-234, 26:53167
SEDIMENTARY DEPOSITS
  analysis of ocean-bed, neutron activation and instrumental methods for, 26:53330(R) (BNWL-1308-10)
SEED
  radiation effects on barley, combined effects of space flight environmental factors on rate of chromosome aberrations, mitosis, and germination of, gamma, 26:53384
SEISMIC WAVES
  propagation from underground nuclear explosions in granite, 26:53131(T) (UCRL-Trans-10616-5)
SELENIUM
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  determination of trace amounts of, in tobacco by neutron activation, nondestructive, 26:52907
SELENIUM ISOTOPES Se-75
  uptake of selenomethionine-incorporated, by erythrocytes in γ-irradiated rats, 26:53482
SELENIUM ISOTOPES Se-80
  neutron capture at 25 keV, model analysis of isomeric cross section ratio for, (E/T), 26:54589
SEMICONDUCTOR DEVICES
  radiation effects on, calculations of Jupiter-belt, 26:54002 (NASA-TM-X-2440, pp 781-4)
  radiation hardening of, neutron and gamma, 26:53289 (NASA-TM-X-2440, pp 481-6)
  testing of chips, using electron beam, 26:53315
SEMICONDUCTORS
  analysis for impurity profiles, using secondary ion emission, 26:52937
  exciton energy in crystals of, formulae for longitudinal, (E/T), 26:55065(T) (UCRL-Trans-10643)
  properties of, use of sweeping microscope for studying, 26:55482 (CEA-CONF-2000)
  superconductivity in polar degenerate, (T), 26:54449
  vacuum technique application to, conference at Versailles, France, Sept. 13, 1971, 26:53138
SEPARATION PROCESSES
  reagents for, search for new, pp. 54-5, 26:53084 (ORNL-4794, pp 54-62)
  research progress on, 26:53084 (ORNL-4794, pp 54-62)
SERINE
  radiation effects on single crystals of, at 77 to 340°K, electron nuclear double resonance and ESR studies on x,

  26:52996
  radiolysis of frozen aqueous solutions of, ESR study of free radicals from γ, 26:52995
  radiolysis of single crystals of, at 77 to 340°K, ESR and ENDOR studies on free radicals from x, 26:53004
SEROTONIN
  radiation effects on uptake of, by blood platelets in rabbits in relation to content during acute radiation syndrome, γ, 26:53486
  radioprotective effect on erythropoietic stem cells in mice, proton, 26:53454 (NASA-TM-X-2440, pp 642-6)
SEWAGE
  analysis of aqueous, for tritium by bremsstrahlung counting, 26:52934 (MLM-1368)
  heat sources for processing of, feasibility of use of power plant waste heat for, 26:55212 (CONF-720925-2)
SEYFERT GALAXIES
  resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53879
  resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53878
SHEARON HARRIS POWER REACTOR, UNIT 1
  owners of, financial data on, 26:55262 (DOCKET-50400-23)
SHEARON HARRIS POWER REACTOR, UNIT 2
  owners of, financial data on, 26:55262 (DOCKET-50400-23)
SHEARON HARRIS POWER REACTOR, UNIT 3
  owners of, financial data on, 26:55262 (DOCKET-50400-23)
SHEARON HARRIS POWER REACTOR, UNIT 4
  owners of, financial data on, 26:55262 (DOCKET-50400-23)
SHEEP
  radiation effects on, following various combinations of acute, chronic, continuous, and fractionated whole-body exposures, effects of dose and dose rate on γ and x, 26:53451 (NASA-TM-X-2440, pp 622-32)
SHELTERS
  effectiveness of quick-access civil defense, numerical model for, 26:53135 (ORNL-TM-3485(Vol.1))
SHIELDED CONTAINERS
  design and handling criteria for uranium hexafluoride shipping, description of USAEC, 26:53735 (ORO-651(Rev.3))
  design of steel-banded wooden, for shipping slightly enriched uranium metal, billets, ingots, and fuel cores, engineering drawings for, 26:53737
  development for shipping irradiated LMFBR fuel, pp. 15-16, 26:53082 (ORNL-4794, pp 15-25)
  testing of 6M, L-10, and SP5795, under severe environments for shipping plutonium, 26:53736 (SC-DR-720597)
SHIELDING
  calculation for complex space vehicles, SWORD computational techniques for optimal, 26:54957 (NASA-TM-X-2440, pp 368-74)
  calculations for fast reactors, methods development for, 26:55144 (CONF-720901-(Bks.1 and 2), pp 480-98)
  calculations for fast reactors, use of diffusion theory for, 26:55143 (CONF-720901-(Bks.1 and 2), pp 459-70)
  calculations for manned space missions, methods for, 26:54951 (NASA-TM-X-2440, pp 108-16)
  calculations for nuclear rocket internal, discrete ordinates techniques for, (E/T), 26:55368 (NASA-TM-X-2440, pp 449-59)
  calculations for reactors, development of ENDF/B library for, 26:55141 (CONF-720901-(Bks.1 and 2), pp 316-24)
  calculations for reactors, measurement and evaluation of neutron cross sections for, 26:55140 (CONF-720901-(Bks.1 and 2), pp 295-315)
  configuration for Reusable Nuclear Shuttle, (E), 26:54947 (NASA-TM-X-2440, pp 58-64)
  construction of prosthesis, for protection of oral tissues in patients during head and neck radiotherapy, 26:53410
  design for radiation protection, using railway rails, 26:53136(P)
  design for SNAP-8 power system, preliminary, 26:54948 (NASA-TM-X-2440, pp 78-83)
  duct effects on space nuclear, (E/T), 26:54958 (NASA-TM-X-2440, pp 375-82)
  effects on Reusable Nuclear Shuttle design, (E), 26:54954 (NASA-TM-X-2440, pp 251-6)
  electron transport data, parametric fits for spacecraft for 0.1 to 10-MeV, 26:54963 (NASA-TM-X-2440, pp 832-41)
  fabrication of lithium hydride space-reactor, facility for, 26:54949 (NASA-TM-X-2440, pp 92-7)
  gamma dose changes due to layer changes in, use of perturbation theory to determine, 26:54941 (CONF-720901-(Bks.1 and 2), pp 541-58)
  neutron cross-section sensitivity analysis for sodium/iron, 26:54940 (CONF-720901-(Bks.1 and 2), pp 512-23)
  neutron cross-section sensitivity analysis method for, 26:54943 (CONF-720901-6)
  neutron dose changes due to layer changes in, use of perturbation theory to determine, 26:54941 (CONF-720901-(Bks.1 and 2), pp 541-58)
  neutron transport in, developments in integral experiments for fast, 26:54938 (CONF-720901-(Bks.1 and 2), pp 385-96)
  neutron-capture gamma-ray yields of, cascade calculation of, 26:54961 (NASA-TM-X-2440, pp 527-8)
  optimization of, effective multiple-constraint technique for, 26:54942 (CONF-720901-(Bks.1 and 2), pp 574-6)
  optimization of, in design of Reusable Nuclear Shuttle, (T), 26:54946 (NASA-TM-X-2440, pp 48-56)
  radiation dose rate from geomagnetically trapped radiation, 26:54952 (NASA-TM-X-2440, pp 170-7)
  radiation levels on crew in Reusable Nuclear Shuttle, (T), 26:54945 (NASA-TM-X-2440, pp 40-7)
  radiation measurements for NERVA, selection and use of thermoluminescent dosimeters for, 26:53233 (NASA-TM-X-2440, pp 466-70)
  transport problems in, survey of ''benchmark'' integral experiments and reference calculations for, 26:54937 (CONF-720901-(Bks.1 and 2), pp 349-84)
  weight calculation and optimization for rocket reactors, theory used in FASTER-III Monte Carlo program for, 26:54962 (NASA-TM-X-2440, pp 697-705)
  weight requirements for Reusable Nuclear Shuttle, (E), 26:54947 (NASA-TM-X-2440, pp 58-64)
SHIELDING MATERIALS
  testing of beryllium hydride, 26:53714 (NAA-SR-8533)
SHIPPING
  containers and procedures for uranium hexafluoride, USAEC criteria for, 26:53735 (ORO-651(Rev.3))
  containers for plutonium, testing of 6M, L-10, and SP5795, 26:53736 (SC-DR-720597)
  equipment and methods for spent LMFBR fuel elements, pp. 15-16, 26:53082 (ORNL-4794, pp 15-25)
SHOCK WAVES
  interactions of interplanetary double-shock ensemble with Earth's bow shock, MHD theory for, 26:54073
  interactions with plasma, ion heating from collisionless, (E), 26:54766
  observations of Aug. 29, 1966 interplanetary, Pioneer-7 plasma and magnetic-field data for proposal of double-shock ensemble following, (E/T), 26:54068
  phenomena of, from simulated steady-flow interaction of charged particles with geomagnetic dipole field, (E), 26:54056
  production from July 7, 1966 solar flare, piston-driven, (E/T), 26:53970
  propagation in collisionless magnetized plasma, oblique, (T), 26:54852
  propagation in low-density discharge plasmas, turbulence in electrostatic, (E/T), 26:54855
  reflection of MHD, from boundary shock, (T), 26:54159
SILICATE ROCKS
  analysis for vanadium by paper chromatography, neutron activation, and γ spectrometry, 26:52909
SILICIDES
  oxidation resistance of coatings of, on tantalum and its alloys, 26:53613
SILICON
  abundance in 21 sharp-lined nonvariable cool peculiar A stars, (E), 26:53882
  boron content profile determination using secondary ion emission, 26:52937
  charged-particle dechanneling at 1.5 MeV, proton, deuteron, and helium-ion, 26:54988
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  dopant location in lattice of, helium-ion channeling study of diffused gold, 26:54987
  ion implantation damage in, electron microscopic observation of surface and depth distribution of, 26:55003
  ion implantation in, precipitation upon annealing of phosphorus-, 26:54994
  ion implantation layers in, computer calculations of sheet resistance of n- and p-type, 26:54986
  ion implantation profile in amorphous, secondary-ion mass spectrometric study of 22-keV boron, 26:55014
  ion implantation-induced expansion of, x-ray topographic study of, 26:55019
  ion implantations in, rod-like defects from 40-keV boron-, 26:54995
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
  neutron reactions up to 20 MeV, γ production cross sections for, (E), 26:54523 (CONF-720901-(Bks.1 and 2), pp 325-34)
  oxygen ion reactions at 30 MeV, Kα x-ray spectra from, (E), 26:54467(R) (ORO-2972-204)
  radiation damage in single crystals of, proton-channeling study of fast-neutron, 26:55004
  radiation damage in, neutron and electron, (E/T), 26:54968(R) (AD-737312)
  radiation effects on bulk and thin-film, subthreshold-energy electron, (E/T), 26:55017
  radiation effects on cathodoluminescence spectra of vibronic bands of, γ, 26:54999
  radioinduced defects in, EPR spectra of neutron-, 26:55006
  separation from uranium by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)
SILICON CARBIDES
  effects of fiber reinforcements of, on transverse tensile properties of aluminum composites, 26:53687
  fabrication by casting of thermoplastic masses, 26:53586
  Al--B--SiC, development of aluminum--Borsic composite blades for use in advanced composite engine, 26:53575
  Al--B--SiC, fracture properties of Al--Borsic composites,

- dynamic, 26:53557 (SC-DC-721080)
- B--SiC, effects of fiber reinforcements of Borsic on transverse tensile properties of aluminum composites, 26:53687

SILICON IONS
- spectral lines in zeta Oph due to interstellar, (E), 26:53875

SILICON ISOTOPES Si-28
- alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
- alpha inelastic scattering at 10, 12, 14, and 18 MeV, α--γ angular correlations from, (E), 26:54561
- energy levels of, projected Hartree--Fock and shell-model calculations of spins of, (T), 26:54553
- muon (μ^-) capture by, γ-ray yields from, (E), 26:54555
- muon (μ^-) capture by, polarization of emitted neutron in, (T), 26:54564
- neutron radius of, determination from α elastic scattering, (E), 26:54547
- nuclear ground-state deformation from α inelastic scattering, (E), 26:54561
- proton reactions (p,γ) at 0.3 to 3 MeV, γ-ray angular distributions and correlations for, (E), 26:54552 (FRNC-TH-227)

SILICON JUNCTIONS
- electrical parameters of ion-implanted diodes, photovoltaic-effect study of, 26:54975 (RT/EL-(72)2)

SILICON NITRIDES
- diffusion of niobium, tantalum, titanium, and vanadium in, 26:53677
- fabrication by casting of thermoplastic masses, 26:53586

SILICON OXIDES
- boron content profile determination using secondary ion emission, 26:52937
- ion implantation in layers of, for gate MOS structure fabrication, 100-keV gold, 26:53314
- oxygen-16/-18 ratio in biogenic, 26:53178
- radiation damage in, valence-bond model of x-ray spectra, bond breaking, and point-defect production in, (T), 26:55018
- radioinduced defects in, comparison of explosive shock-induced defects with, 26:54983
- spectral lines in xi Per due to interstellar, equivalent widths of, (E), 26:53890
- toxicity of particles of, bibliography on, 26:55585 (ORNL-TIP/TIRC-72-62)
- Al_2O_3--SiO_2, sorptive properties of silver salt-treated, for iodine and methyl iodide, 26:53077 (CONF-720823-9)
- Al_2O_3--SiO_2, viscosity of melts of, 26:55632(T) (UCRL-Trans-1479)
- K_2O--SiO_2--SrO, diffusion in, electrostatic effects and mobility in, 26:53598

SILICON SYSTEMS
- Al-base--Si, tensile properties of boron, Borsic, and silicon carbide fiber-reinforced composites of, transverse, 26:53687
- Mo--Si, diffusion of silicon in Mo_5Si_3 phase in, at high temperatures, 26:53583
- Nb--Si, diffusion of silicon in Nb_5Si_3 phase in, at high temperatures, 26:53583
- Si--Ta, diffusion of silicon in Ta_5Si_3 phase in, at high temperatures, 26:53583
- Si--W, diffusion of silicon in W_5Si_3 phase in, at high temperatures, 26:53583

SILOXANES
- poly(methylhydrogensiloxane), radioinduced oxidation of, and mixtures with cellulose, rate of, 26:52994

SILTS
- characterization of suspended, methods for, 26:55479 (BNWL-SA-4385)
- distribution, properties, and transport of Columbia River, in coastal northeast Pacific Ocean, 26:53165(R) (RLO-2225-T-25-6)
- radioisotope uptake by, from seawater, measurements of cerium-144, cesium-137, and thorium-134, 26:53167
- zinc-65 distribution and concentration in Oregon and Washington continental shelf, 26:53149 (RLO-2227-T-12-26)

SILVER
- determination in meteoritic and terrestrial materials by neutron activation following separation from other elements, 26:52906
- determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- determination in water, effects of large amounts of copper on spectrographic, 26:52927
- diffusion in, grain-boundary self-, 26:55514 (COO-3158-11)

SILVER ALLOYS AND SYSTEMS
- composition and physical properties of composite powders of, 26:53680
- preparation of composite powders of, by hydrogen reduction, 26:53680
- Ag--Cd, phase transformation interfaces in, properties of massive, 26:53644

SILVER BROMIDES
- AgBr--AgCl, positron annihilation in ion-implanted crystals of, measurement of Doppler broadening of photons from, using Ge(Li) detector, 26:54097

SILVER CHLORIDES
- positron annihilation in ion-implanted crystals of, measurement of Doppler broadening of photons from, using Ge(Li) detector, 26:54097
- AgBr--AgCl, positron annihilation in ion-implanted crystals of, measurement of Doppler broadening of photons from, using Ge(Li) detector, 26:54097

SILVER HALIDES
- radioinduced particle tracks in single crystals of, for heavy-ion dosimetry, 26:53230 (NASA-TM-X-2440, pp 138-41)

SILVER IONS
- scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139

SILVER ISOTOPES Ag-107
- neutron capture by, survey of cross section data for, 26:54657 (FEI-292)

SILVER ISOTOPES Ag-108
- meson (π) reactions at 100 to 260 MeV, Coulomb flux corrections to total cross sections for, (T), 26:54609

SILVER ISOTOPES Ag-109
- deuteron reactions (d,p) at 10 MeV, proton spectra from, (E), 26:54467(R) (ORO-2972-204)
- neutron capture by, survey of cross section data for, 26:54657 (FEI-292)

SINGLE CRYSTALS
- ion channeling and blocking experiments on, apparatus for, 26:54977

SINTERING
- methods for studying initial-stage, review of nonisothermal, 26:53595

SKELETON
- scintiscanning of human, for diagnosis of neoplasms, use of gamma camera in, 26:53214

SKIN
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- radiation effects on cell kinetics of swine, dose dependence of fission neutron, thermal neutron, x, and neutron activation of boron-10 in, 26:53450 (LA-4874, pp 126-44)
- radiation effects on survival of epidermal cells in mouse, following single local exposure, comparison of RBE for carbon, helium, and lithium charged particles with x radiation, 26:53456 (NASA-TM-X-2440, pp 652-8)
- radioinduced atrophy and dermatitis of human, following chronic therapeutic exposure, relation of DNA and RNA contents and ultrastructural changes in epidermis during x, 26:53441
- radioinduced dermatitis in human, following local exposure for therapy of underlying neoplasms, γ, 26:53433
- radioinduced injuries of human, dose-response relationships for, 26:53431
- radioinduced injuries to, of miniature swine, dose and time dependence of electron, 26:53458 (NASA-TM-X-2440, pp 665-71)
- radioinduced ulcers in human, following therapy of mammary carcinomas, surgical treatment of, 26:53438

SODIUM
- analysis of liquid, for copper by neutron activation, 26:52895 (CONF-710959-, Paper 18)
- boiling in, acoustic method for detection of, 26:55083(R) (EURFNR-1001)
- combustion characteristics of mixtures of sodium peroxide and liquid, (E), 26:55178 (RD/B/N-2364)
- compatibility with tantalum at 600°C, effects of oxygen on, 26:53688
- corrosion product release, transport, and deposition in flowing liquid, (E), 26:55164 (CONF-710959-, Paper 8)
- corrosive effects on austenitic stainless steel, effects of temperature on, (E/T), 26:55168 (CONF-710959-, Paper 12)
- corrosive effects on irradiated 300 series stainless steels of flowing liquid, 26:55165 (CONF-710959-, Paper 9)
- corrosive effects on stainless steels of flowing liquid, 26:55166 (CONF-710959-, Paper 10)
- corrosive effects on Type-316 stainless steel of liquid, measurement of, 26:55173 (CONF-710959-, Paper 17)
- cover gas systems for, problems of impurities in, 26:55171 (CONF-710959-, Paper 15)
- decontamination of coolant, procedures during reactor dismantling for, 26:55147 (AI-AEC-Memo-12736)
- determination in environmental samples by neutron activation, 26:52897 (CONF-721010-3)
- disposal of coolant, procedures during reactor dismantling for, 26:55147 (AI-AEC-Memo-12736)
- distribution and excretion of exchangeable, in rats during irradiation hypertension, sodium-22 tracer study of, 26:53463
- flow measurements of liquid, testing of transit time flowmeter for, 26:53305 (LMEC-72-4)
- flow through fuel element assemblies of liquid, effects of partial blockage on distribution of, 26:55176 (KFK-1548)
- impurities in liquid, vacuum distillation method for determination of carbon, chlorine, hydrogen, and oxygen, 26:55170 (CONF-710959-, Paper 14)
- mass transfer of activated material in, test loop for studies of, 26:53121 (CONF-710959-, Paper 7)
- neutron attenuation by slabs of, benchmark measurements of, (E/T), 26:55142 (CONF-720901-(Bks.1 and 2), pp

  418-30)
  neutron cross-section sensitivity analysis for sodium/iron shielding, 26:54940 (CONF-720901-(Bks.1 and 2), pp 512-23)
  neutron emission time in assembly of, 26:54656(R) (COO-3058-21)
  neutron transport in sodium/iron shield, effect of cross section sensitivity on 300-keV to thermal-range, (T), 26:54943 (CONF-720901-6)
  plugging temperature indicator for liquid, design of, 26:53116
  reactions with hydrogen from 300 to 450°C, 26:55154 (CONF-710548-, pp 105-28)
  reactions with sodium hydroxide from 300 to 450°C, 26:55154 (CONF-710548-, pp 105-28)
  reactions with water from 350 to 600°C, effects on rupture of austenitic steel of, 26:55161 (CONF-710548-, pp 221-42)
  reactions with water in steam generators, tube damage from, 26:55150 (CONF-710548-, pp 1-16)
  reactions with water of liquid, design of equipment for studying, 26:55153 (CONF-710548-, pp 57-104)
  reactions with water, brief summary of studies in Italy on, 26:55160 (CONF-710548-, pp 213-20)
  reactions with water, conference on, 26:55149 (CONF-710548)
  reactions with water, effects on temperature and pressure of, 26:55152 (CONF-710548-, pp 39-56)
  reactions with water, kinetics of, 26:55155 (CONF-710548-, pp 129-54)
  reactions with water, pressure wave from, 26:55157 (CONF-710548-, pp 171-86)
  reactions with water, summary of study of large-scale, 26:55158 (CONF-710548-, pp 187-205)
  reactions with water, use of hydrogen detector for detection of, 26:55156 (CONF-710548-, pp 155-70)
  shipping of irradiated, from Hallam Power Reactor, 26:55147 (AI-AEC-Memo-12736)
  solvent properties for cesium, copper, antimony, bromine, and iodine, tracer studies on, 26:52895 (CONF-710959-, Paper 18)
  solvent properties for hydrogen, oxygen, and sodium hydroxide, 26:55154 (CONF-710548-, pp 105-28)
SODIUM BORIDES
  chemical properties of NaB$_6$, 26:55560(T) (LA-tr-72-16)
SODIUM CHLORATES
  radiation effects on crystals of, studies on γ and x, 26:52984 (FRNC-TH-262)
SODIUM CHLORIDES
  charged-particle dechanneling at 1.5 MeV, proton, deuteron, and helium-ion, 26:54988
  corrosive effects of sprays of, on niobium--uranium-base alloys, protective effects of polyurethane-painted surface on stress, 26:53607 (RFP-1891)
  gas-flow properties of dry crushed, (E), 26:53724 (ORNL-TM-3815)
  ion emission by electron-bombarded, mass-spectral analysis of, 26:54084
  particle track sizes in monocrystals of, proton and alpha-, (E), 26:55016
  radiation effects on spectra of hexacyanocobaltate-doped, x, 26:55001
  radioinduced color centers in, by 10- to 50-keV electron beams, (E), 26:54973 (FRNC-TH-210)
  radioinduced fast recombination luminescence in, lifetime and temperature dependence of proton-pulse, 26:55000
SODIUM FLUORIDES
  performance of secondary coolant for molten salt fueled reactor, (E), 26:55177 (ORNL-TM-3344)
SODIUM FLUOROBORATES
  performance of secondary coolant for molten salt fueled reactor, (E), 26:55177 (ORNL-TM-3344)
SODIUM HYDRIDES
  NaH--Na$_2$O--NaOH, physical properties of, 26:55158 (CONF-710548-, pp 187-205)
SODIUM HYDROXIDES
  reactions with sodium from 300 to 450°C, 26:55154 (CONF-710548-, pp 105-28)
  solubility in sodium, 26:55154 (CONF-710548-, pp 105-28)
  NaH--Na$_2$O--NaOH, physical properties of, 26:55158 (CONF-710548-, pp 187-205)
SODIUM IONS
  reactions with lithium, two-state impact-parameter calculations of total cross sections for charge exchange in, 26:54127
  scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139
SODIUM ISOTOPES Na-20
  beta decay of, resolutions of apparent anomaly in superallowed, (E), 26:54550 (COO-535-671)
SODIUM ISOTOPES Na-22
  abundance in iron meteorites, (T), 26:53808(T) (ORNL-tr-2620)
  effects on electrophoretic behavior of sodium in sulfuric acid solution, 26:52967
  energy levels from resonances in neon-20 (d,α) reactions, (E), 26:54467(R) (ORO-2972-204)
SODIUM ISOTOPES Na-23
  neutron capture by, comparison of ENDF/B III and published data for thermal, 26:54501 (ORNL-TM-3910)
SODIUM ISOTOPES Na-24
  effects on electrophoretic behavior of sodium in sulfuric acid solution, 26:52967
  use as tracer for measuring catalyst circulation rates in catalytic cracking unit, 26:53343
SODIUM NIOBATES
  radiation effects on dielectric constants and crystal structure of, electron and γ, 26:55020
SODIUM NITRITES
  effects on hemopoietic and vascular system of mammal, 26:55577 (ORNL-TIP/TIRC-72-45)
SODIUM OXIDES
  NaH--Na$_2$O--NaOH, physical properties of, 26:55158 (CONF-710548-, pp 187-205)
SODIUM PEROXIDES
  combustion characteristics of mixtures of liquid sodium and, (E), 26:55178 (RD/B/N-2364)
SODIUM URANATES
  processing of crude, by fractional dissolution, production of uranyl nitrate by, 26:52976 (IEA-250)
SOILS
  analysis for plutonium, sample size for fusion method for, 26:52935(R) (MLM-1888)
  analysis for trace amounts of cobalt by instrumental neutron activation, 26:52904
  cesium-137 distribution in Puerto Rican, 26:53162 (ANL-7860(Pt.3), pp 1-13)
  movement of radioisotopes and water in, 26:53459(R) (NP-19403)
  radioisotope release to plants from continuously cropped uniformly contaminated, effects of clinoptilolite on cesium-137 and strontium-90, 26:53540
  radioisotope release to plants from surface contaminated, effects of clinoptilolite on cesium-137 and strontium-90, 26:53540
  sorptive properties for radioisotopes, near Baguio City, Philippines, (E), 26:53175
  tritium transport through, independent test of Argonne model for, 26:53163 (ANL-7860(Pt.3), pp 32-7)
SOL-GEL PROCESS
  microsphere production in, p. 93-4, 26:53085 (ORNL-4794, pp 91-5)
SOLAR CELLS
  radiation damage at synchronous altitudes by solar flares, 26:53927 (NASA-TM-X-2440, pp 193-208)
  radiation effects on silicon, near interface of materials of different atomic number, 26:53290 (NASA-TM-X-2440, pp 577-83)
SOLAR CORONA
  current dissipation in, (T), 26:53937
  dust density in, (T), 26:53938
  electron densities of, (E), 26:53958
  electron density in, (T), 26:53938
  electron density of enhanced region in, (E), 26:53957
  generation of Type III radio bursts in, (E/T), 26:53964
  heating of, Rayleigh--Taylor instability in composite medium, (T), 26:53940
  hydrodynamics of large streamer observed during eclipse of Mar. 7, 1970, (E), 26:53956
  magnetic fields in, atlas of, (E), 26:53955
  model for studying Type III bursts, (E/T), 26:53934
  radio emission sources in, positions of continuum, (E), 26:53935
  spectra of, Z dependence of level intervals in $2s^22p^2$, $2s^22p^3$, and $2s^22p^4$, (E), 26:53954
  temperature of enhanced region in, (E), 26:53957
  ultraviolet observations of holes in, extreme, (E), 26:53939
  x-ray photography of, (E), 26:53958
SOLAR FLARES
  current limitations in, (T), 26:53937
  development of, relation with ejection of keV electrons, (T), 26:53968
  effects on solar-wind disturbances, association with interplanetary magnetic field structure, (E/T), 26:54076
  electron production from, associated with sunspot groups that emit meter type-I noise storms, relativistic, (T), 26:53968
  energy releases from Oct. 4, 1965, Jan. 18 and July 7, 1966, comparison of analytical and numerical techniques for determination of mechanical, (E/T), 26:53970
  gamma flux during, solar, (E), 26:53967
  magnetosonic waves in, nonlinear, (T), 26:53941
  neutron flux during, solar, (E), 26:53967
  particle event of Mar. 21, 1969, polar-cap measurements of solar-flare protons with energies down to 12.4 keV following, (E), 26:54071
  particle flux from, time and distance dependence of, (T), 26:53929 (NASA-TM-X-2440, pp 336-44)
  particle propagation in, Fokker--Planck equation for, (E), 26:53932
  particle radiation from, review, 26:53927 (NASA-TM-X-2440, pp 193-208)
  proton fluxes from, short-term prediction of, 26:53931 (NASA-TM-X-2440, pp 356-61)
  proton-to-alpha ratio during, variations of, (E), 26:53966
  radiation dose and LET measurements on OV1-19 satellite, April--Dec. 1969, 26:54048 (NASA-TM-X-2440, pp 561-8)
  radiation dose rate measurements at SST altitudes, 26:54889 (NASA-TM-X-2440, pp 902-7)
  radiation doses inside space vehicle during

  interplanetary voyage, MCFLARE calculations, 26:54956 (NASA-TM-X-2440, pp 324-8)
  radio observations of, of Oct. 24, 1969, (E), 26:53959
  white-light continuum emission in, mechanism for, (E/T), 26:53961
  x-ray emission during, polarization of, (E), 26:53962
  x-ray observations of, Oct. 24, 1969, (E), 26:53959
SOLAR PARTICLES
  hazards to space missions from proton events, probability analysis of, 26:54955 (NASA-TM-X-2440, pp 310-23)
  hazards to space travel, statistical treatment of, 26:53930 (NASA-TM-X-2440, pp 345-55)
  proton events and doses in 19th and 20th cycles, 1964-70, 26:53928 (NASA-TM-X-2440, pp 329-35)
SOLAR PROMINENCES
  electric currents in quiescent, (T), 26:53950
  magnetic fields in quiescent, (T), 26:53950
  spectra of, ionized helium in, (T), 26:53949
SOLAR RADIATION
  doses to crew and passengers at SST altitudes, 26:54888 (NASA-TM-X-2440, pp 894-901)
  effects on earths heat balance, 26:53193
  monitoring in stratosphere for SST Concorde flight, hybrid detector system for, 26:53203 (NASA-TM-X-2440, pp 874-83)
SOLAR RADIO BURSTS
  acceleration mechanism in Type III, role in soft x-ray source volume, (E/T), 26:53963
  continua during initial stage of Type IV, time behavior of, (E/T), 26:53965
  distribution of Type III, as a function of heliocentric longitude, (E/T), 26:53934
  electron energy losses in, (E/T), 26:53961
  electron temperatures of small 3-cm, (E), 26:53960
  generation mechanism for Type III, (E/T), 26:53964
  observations of, associated with flare of Oct. 24, 1969, (E), 26:53959
  position measurements of Type III sources, (E), 26:53935
  relation of small 3-cm, to transient features on $H\alpha$ films, (E), 26:53960
  visibility of Type III, model for, (E/T), 26:53934
SOLAR SYSTEM
  formation of planets in, (T), 26:54005
SOLAR WIND
  cosmic-ray modulation by, anisotropy responsible for solar semidiurnal variations from, (T), 26:53812
  cosmic-ray modulation by, anisotropy responsible for solar semidiurnal, (T), 26:53813
  disturbances in, magnetic-field structure in solar-flare-associated, (E/T), 26:54076
  electron measurements on Apollo-15 subsatellite, high-energy, (E), 26:54072
  energy transport in, models for, (T), 26:53942
  measurements in extended magnetotail at approximately 1000 R/sub E/, (E), 26:54074
  parameters from analysis of three-station interplanetary scintillation measurements of small-diameter cosmic radio sources, (E/T), 26:54070
  particle shadowing by Moon, (T), 26:53943
  phenomena of, relation with creation of polar auroras, (E/T), 26:54043
  plasma torque on Earth ionosphere, upper limit of magnetospheric boundary-layer, (T), 26:54075
SOLAR X-RAY BURSTS
  electron energy losses in, (E/T), 26:53961
  observations of, associated with flare of Oct. 24, 1969, (E), 26:53959
  polarization of, (E), 26:53962
  source volume of, role of Type III acceleration mechanism in, (E/T), 26:53963
SOLID SOLUTIONS
  crystal structure of, field-ion microscope studies of, 26:53652
  microstructure of, studies of ion microscopy images from, 26:53655
SOLIDS
  analysis of surfaces of, by electron emission induced by low-energy ion bombardment, 26:52936 (RT/EL-(72)4)
  atom elastic scattering by surfaces of, model for, based on pairwise interaction potential, 26:54089
  conference on light scattering in, Paris, France, 7/71, 26:55041
  heating of small grains by electron and ion bombardment, collision processes in, (T), 26:54874 (EUR-CEA-FC-647)
  ion implantation facility at Orsay, France, 26:54976
  light dispersion in absorption region by impurity centers, 26:55539 (ITF-72-67-P)
  radiation damage profiles in, computer program for ion, 26:54969 (AECL-4130)
  radiation effects on, heat-flow analysis of temperature spikes following Coulomb excitation, (E/T), 26:54646
  radioinduced destruction of, pulse electron, 26:55012
  spectra of, surface effects on optical, 26:55537 (ITF-72-40-P)
  vibrational excitations in amorphous and crystalline, high pressure and infrared and Raman spectroscopy methods for studies of, 26:55502(R) (COO-2126-7)
SOLUTIONS
  photolysis of aqueous, search for H_3O radical from, 26:53026
  radiolysis of aqueous, reactions of hydrated electrons in pulse, 26:53006
SOLVENT EXTRACTION PROCESSES
  control of Eurex, mass spectrometric analysis of uranium for, 26:52918 (EUR-4765, pp 91-115)
SOUND
  propagation in nonisothermal fully ionized gas, dispersion relation for, (T), 26:54858
SOUTH AMERICA
  radioisotope uses in hydrology in, 26:53168
SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR
  Doppler reactivity feedback in, measurements of transient, 26:55123 (CONF-720901-(Bks.1 and 2), pp 986-1005
SPACE
  book: Measurement of Radiation in Space, 26:53276
  conference on natural and manmade radiation in space, Las Vegas, Nev., 3/71, 26:54870 (NASA-TM-X-2440)
  radiation dose analysis for manned missions, methods for, 26:54951 (NASA-TM-X-2440, pp 108-16)
  radiation protection criteria for nuclear power in, 26:54921
  research in India, 1971--1972, 26:55452(R) (NP-19407)
  shock waves in interplanetary, MHD theory for Earth's bow-shock interaction with double-shock ensemble of, 26:54073
  shock-wave observations in interplanetary, Aug. 29, 1966 Pioneer-7 plasma and magnetic-field data for proposal of double-shock ensemble, (E/T), 26:54068
  teleoperators for remote operation in, design and objectives for, 26:53730 (NASA-TM-X-2440, pp 277-9)
SPACE FLIGHT
  effects of environment during, on gamma sensitivity of barley seeds, 26:53384
  effects of environment during, on gamma-irradiated Tradescantia, cytologic and mutagenic, 26:53382 (N-72-20054)
  effects of environment during, on growth of γ-irradiated bacteria, 26:53364 (N-72-20063)
  effects of environment during, on organisms, combined effects of gamma on mutagenesis and survival of insects, microorganisms, and plants, 26:53365 (N-72-20065)
  proton dose calculations using USAF--NASA model man, 26:54883 (NASA-TM-X-2440, pp 773-80)
  radiation dose measurements on Apollo missions, 26:54953 (NASA-TM-X-2440, pp 215-19)
  radiation dosimetry during Apollo, plastic track detector measurements of high-Z particle, 26:53231 (NASA-TM-X-2440, pp 149-56)
  radiation hazards from solar cosmic-ray protons, statistical treatment of, 26:53930 (NASA-TM-X-2440, pp 345-55)
  radiation hazards from solar proton events, probability analysis of, 26:54955 (NASA-TM-X-2440, pp 310-23)
  radiation hazards to astronauts during prolonged, cosmic, 26:53408 (NASA-TM-X-2440, pp 1007-15)
  radiation hazards to man during, extrapolation of clinical data on dose-response-time relations to estimate, 26:53402 (NASA-TM-X-2440, pp 398-415)
  radiation protection guides for, involving nuclear systems, 26:54913
  radioinduced phosphene formation in eyes of astronauts during, cosmic, 26:53407 (NASA-TM-X-2440, pp 1002-6)
  teleoperator systems for manned, developments in, 26:53731 (NASA-TM-X-2440, pp 280-90)
SPACE VEHICLES
  attitude measurements for, radiation effects on photomultiplier star sensor system for, 26:53293 (NASA-TM-X-2440, pp 735-43)
  configuration of Reusable Nuclear Shuttle, impact of radiation dose on, (T), 26:54945 (NASA-TM-X-2440, pp 40-7)
  design of Reusable Nuclear Shuttle for maximum shielding, (E), 26:54954 (NASA-TM-X-2440, pp 251-6)
  electron shielding calculations, parametric, 26:54963 (NASA-TM-X-2440, pp 832-41)
  instruments for Grand Tour, protective design for radiation effects on, 26:53292 (NASA-TM-X-2440, pp 729-34)
  neutron production by ions in walls of, estimates of, 26:54881 (NASA-TM-X-2440, pp 520-2)
  power systems for manned, developments in nuclear, 26:53094 (NASA-TM-X-2440, pp 26-33)
  power systems for, developments in nuclear, 26:53093 (NASA-TM-X-2440, pp 13-25)
  radiation analysis of vehicle and payload configurations for Reusable Nuclear Shuttle, (T), 26:54947 (NASA-TM-X-2440, pp 58-64)
  radiation dose to, from radioisotope thermoelectric generator, environmental analysis of γ and neutron, 26:53338 (NASA-TM-X-2440, pp 862-5)
  radiation doses inside, during interplanetary voyage, MCFLARE calculations, 26:54956 (NASA-TM-X-2440, pp 324-8)
  radiation dosimetry at space stations, advanced dosimetry systems for, 26:53235 (NASA-TM-X-2440, pp 944-56)
  radiation dosimetry in Skylab space station, dosimeters for, 26:53236 (NASA-TM-X-2440, pp 958-73)
  radiation effects on components and subsystems of, design parameters and test facilities for testing, 26:53695 (NASA-TM-X-2440, pp 570-6)

- radiation effects on, calculations of Jupiter-belt, 26:54002 (NASA-TM-X-2440, pp 781-4)
- radiation effects on, design considerations for thermoelectric generator for simulated in-flight testing of, 26:53095 (NASA-TM-X-2440, pp 844-9)
- radiation environment effects on Reusable Nuclear Shuttle system, (T), 26:54946 (NASA-TM-X-2440, pp 48-56)
- radiation environment for rendezvous and docking with nuclear rockets, 26:55361 (NASA-TM-X-2440, pp 257-63)
- radiation environment from reusable nuclear shuttle to orbiting lunar station and lunar surface, (T), 26:55362 (NASA-TM-X-2440, pp 264-9)
- radiation protection for crew of, powered by gas-core nuclear rocket, (T), 26:54967
- radiation safety criteria for, 26:54921
- radiation shielding of experiments on Skylab, 26:54049 (NASA-TM-X-2440, pp 748-55)
- radiation sources on Apollo, identification and control of, 26:53255 (NASA-TM-X-2440, pp 714-22)
- reactor descriptions for, (T), 26:54950 (NASA-TM-X-2440, pp 98-102)
- roll control of, during reentry, fluidically actuated monopropellant hydrazine system for, 26:55600 (SC-DC-722244(RD))
- shielding analysis, SWORD computational techniques for, 26:54957 (NASA-TM-X-2440, pp 368-74)
- shielding calculations, methods for, 26:54951 (NASA-TM-X-2440, pp 108-16)
- shielding for reactor power systems in, (E), 26:54949 (NASA-TM-X-2440, pp 92-7)
- shielding requirements for unmanned, with thermionic reactor ion propulsion system, (T), 26:55364 (NASA-TM-X-2440, pp 292-8)
- shields for, effects of ducts on effectiveness of, (E/T), 26:54958 (NASA-TM-X-2440, pp 375-82)
- sterilization of bacteria and fungi on components of, research program on pre-flight, 26:53367(R) (SC-RR-720516)
- thermal insulation for nuclear powered, data plot for optimization of, (T), 26:55366 (NASA-TM-X-2440, pp 392-6)

SPECTROMETERS
- description of annihilation, for measuring cross sections for anti p + p interactions, 26:53279
- description of charged-particle, for space radiation, 26:53235 (NASA-TM-X-2440, pp 944-56)
- design and performance of helium recoil, for high-energy particles, 26:53281
- design of 2π-steradian magnetic, with low aberration for high-energy physics, 26:53284
- magnets for magnetic-lens, design and fabrication of high-performance window frame-type, 26:53296 (CEA-N-1539)

SPECTROSCOPY
- methods for analysis of very small samples, 26:52929
- principles of micro-emission, using solid-state lasers, 26:55589(T) (ORNL-tr-2603)
- sensitivity of localized, using lasers, 26:55590(T) (ORNL-tr-2613-A)

SPERM
- radioinduced chromosome aberrations in mature, of Drosophila melanogaster, inhibitory effects of dactinomycin on post-fertilization maternal repair of x, 26:53502
- radioinduced dominant and recessive lethal mutations in mature, of Drosophila melanogaster, effects of dactinomycin on post-fertilization expression of x, 26:53502

SPERMATOGENESIS
- radioinduced inhibition of, in man following exposure of testes, dose and time dependence of x, 26:53399 (NASA-TM-X-2440, pp 229-32)

SPHERES
- neutron reaction rates in homogeneous, calculation neglecting elastic scattering in fast, 26:54491

SPINAL CORD
- radioinduced injuries of human, following therapy, etiology of, 26:53429
- radioinduced myelopathy in human, following therapy, role of vascular changes in pathogenesis of γ, 26:53425

SPINELS
- preparation of polycrystalline, by freeze drying method, 26:55564 (LBL-876)

SPLEEN
- arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
- radioinduced suppression of antibody-forming cells in mouse, during response to antigen challenge, acute whole-body x, 26:53464
- scintiscanning of human, for diagnosis of neoplasms, use of gamma camera in, 26:53214

STAINLESS STEEL
- carbon activity and solubility in, 26:55480(T) (BNWL-tr-72)
- carbon activity and solubility in, 26:55481(T) (BNWL-tr-73)
- coating with carbon from carbon monoxide decomposition in argon coolant at 550 to 600°C, 26:53605(R) (DP-Report-522)
- corrosion by fission products, effects of burnup on, 26:55187 (EURFNR-989)
- corrosion by flowing liquid sodium, 26:55166 (CONF-710959-, Paper 10)
- corrosion by flowing sodium of irradiated 300 series, 26:55165 (CONF-710959-, Paper 9)
- corrosion by liquid sodium of austenitic, effects of temperature on, (E/T), 26:55168 (CONF-710959-, Paper 12)
- corrosion by liquid sodium of Type-316, measurement of, 26:55173 (CONF-710959-, Paper 17)
- corrosion of Type 304L, by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
- creep and stress relaxation properties of, interrelationship of, 26:53642 (STU-70-419/U-350(Pt.1.2))
- creep behavior and rupture of titanium-stabilized 1515, effects of thermomechanical treatments on, 26:53635(T) (EURFNR-998)
- creep rupture of Type 316, at 980°K, cyclic, 26:53690
- creep rupture of Type 316, effects of injected helium on, 26:53703
- deposition of irradiated 300 series, in flowing liquid sodium, 26:55165 (CONF-710959-, Paper 9)
- fabrication of capsules of Types 304 and 316, for cesium sources, 26:53330(R) (BNWL-1308-10)
- fatigue testing of pipes of Type-304 and Type-304L, failure rates from, 26:55175(R) (GEAP-10207-26)
- helium release in annealing of Type 316 and 18/8, 26:53709
- mass transfer by liquid sodium of Type-316, effects of stresses on, 26:55173 (CONF-710959-, Paper 17)
- mechanical properties of welds in Types 304 and 316, at 900 to 1300°F, literature review on, 26:53638 (ORNL-4781)
- neutron total cross sections at 1.2 to 11 MeV for, experimental check for, 26:54965 (ORNL-TM-3871(Rev.))
- preparation of molybdenum and tungsten fiber-reinforced, with precise alignment and uniform distribution, method for, 26:53629
- radiation damage in Type 304, electron microscopic study of 650-kV electron, 26:54972 (COO-2119-2)
- radiation effects in embrittlement of Type 304 and Type 316, fast neutron, 26:55083(R) (EURFNR-1001)
- radiation effects on fatigue crack propagation in Types 304 and 316, at 427 to 593°C, neutron, 26:53698 (NRL-7446)
- radiation effects on mechanical properties and structure of, neutron, 26:53701 (STU-70-419/U-350(Pt.1.1))
- radiation effects on swelling and mechanical properties of Type 316, Type 321, and Type 347, fast neutron, (E), 26:55189(R) (GEAP-10028-39)
- radiation effects on swelling and mechanical properties of Type-304, Type-316, Type-321, and Type-321-H, fast neutron, 26:55190(R) (GEAP-10028-42)
- radiation effects on tensile properties of Type 347, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)
- standards for forgings of, 26:53640 (RDT-M-2-2-T(8-72))
- testing of fuel jacket cladding tubing of Type 316, eddy current method of, 26:53125

STANDARDS
- BF_3 gamma-tolerant neutron detector tubes, 26:53204 (RDT-C-15-11-T(8-72))
- butterfly-type isolation valves, 26:53111 (RDT-E-1-13-T(8-72))
- conference on radiation protection standards, Richland, Wash., 11/71, 26:54922
- development and writing of, procedures for, 26:53248
- development of radiation, for tritium content in nuclear stimulated natural gas, 26:53134
- development of reactor engineering, during May and June 1972, 26:55207(R) (ORNL-TM-3900)
- development of reactor equipment maintenance, 26:55201 (DUN-SA-168)
- for evaluation of radiation dosimeters, critique of, 26:53247
- hoisting and rigging of critical components and related equipment, 26:53112 (RDT-F-8-6-T(8-72))
- manufacturing specification for high-temperature thermocouples for use in nuclear irradiation experiments, 26:53301 (EUR-4807)
- reactor Class 1 components, supplement to high temperature requirements of, 26:55208 (RDT-F-9-1-T(8-72))
- stainless and low-alloy steel forgings (ASME SA-182 with additional requirements), 26:53640 (RDT-M-2-2-T(8-72))
- thermowell systems for liquid metal service, 26:55219 (RDT-C-7-18-T(8-72))

STAR CLUSTERS
- age of NGC 6530, 26:53883
- distance of NGC 6530, (E), 26:53883
- dynamics of, (T), 26:53982
- membership in NGC 6530, (E), 26:53883
- pulsation of main-sequence stars in open, short-period, (E/T), 26:53872
- spectra of five globular, in M31, (E), 26:53880
- spectra of four globular, composite, (E), 26:53880
- variability of A and B stars in Pleiades, (E), 26:53871

STARCHES
- preparation of labeled, by tritium atom bombardment, 26:53028 (COO-584-50)

STARS
  atmospheres of, Rayleigh--Taylor instability in composite medium, (T), 26:53940
  carbon abundance in V553 Cen and RT TrA, (E), 26:53899
  collisions of, dynamics of, (T), 26:53982
  color indices of supergiant and OB, (E), 26:53884
  cosmic particle acceleration by white-dwarf, (T), 26:53854
  element abundances in 21 sharp-lined nonvariable cool peculiar A, (E), 26:53882
  energy loss by neutrino pair production in, Weinberg theory of weak and electromagnetic interactions for, (T), 26:53893
  envelopes of luminous red-giant, relaxation oscillations in, (T), 26:53874
  evolution from formation to main sequence, (T), 26:53903
  evolution from main sequence to death, (T), 26:53978
  evolution of 0.60 solar-mass horizontal-branch, effects of semiconvection on, (T), 26:53885
  evolution of helium, (E/T), 26:53896
  evolution of homogeneous model, (T), 26:53886
  helium abundance in subdwarf HD 49798, (E), 26:53900
  identification of EX Hydrae with x-ray source 2ASE 1253-28, (E), 26:53895
  interpretation of B subdwarf, in halo, (T), 26:53891
  iron abundance in 120 evolved, (E), 26:53898
  light curve of Am CVn, (E), 26:53902
  light variations in supergiant and OB, (E), 26:53884
  luminosity of o Cet B, (E), 26:53901
  magnetic-field variations in 78 Vir, βCBr, and 73 Dra, (E), 26:53876
  model for Am CVn, (E), 26:53902
  model for Sco X-1 featuring white-dwarf, (E), 26:53917
  models for extremely blue horizontal-branch, (T), 26:53891
  motions of, kinematics of, (T), 26:53982
  noble-gas abundances in extreme Population I, (T), 26:53892
  periodic variability of HD 111133, (E), 26:53877
  photometry of Am CVn, (E), 26:53902
  photometry of mira, ultraviolet, (E), 26:53901
  photometry of rapid blue variable EX Hydrae, (E), 26:53895
  photometry of RY Sgr, (E), 26:53905
  photometry of Wolf--Rayet, infrared, (E), 26:53889
  proper motions for 363, in vicinity of NGC 6530, (E), 26:53883
  properties of Cepheid variable, (E/T), 26:53986
  pulsation of main-sequence, in open clusters, (E/T), 26:53872
  pulsation periods for A and B, in Pleiades cluster, (E), 26:53871
  resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53878
  resonance-line radiation in differentially expanding atmospheres of, transfer of, (T), 26:53879
  spectra of 3 RCB, in LMC, (E), 26:53904
  spectra of homogeneous, secular, (T), 26:53886
  spectra of subdwarf HD 49798, non-LTE analysis of, (E), 26:53900
  spectra of Vega, ultraviolet absorption lines in, (E), 26:53887
  spectra of xi Per, equivalent widths of interstellar molecular lines in, (E), 26:53890
  spectra of zeta Oph, interstellar lines in uv, (E), 26:53875
  spectra of, study of unidentified interstellar diffuse features in, (E), 26:53881
  spectral analysis of γ Cap, (E), 26:53888
  spectroscopy of RY Sgr, (E), 26:53905
  structure of helium, (E/T), 26:53896
  variability of A and B, in Pleiades cluster, (E), 26:53871
STATISTICS
  binomial distribution and Gaussian distribution in radiation measurements, 26:53207
  Boltzmann distribution law for, derivation of, 26:55071 (LA-4868)
  design criteria for confidence and reliability based on small samples, 26:55618 (UCID-16099)
STEAM
  corrosive effects on H327 graphite, (E), 26:55207(R) (ORNL-TM-3900)
  H_2O--steam, flow in turbines, equipment and methods for studying, 26:53124
STEAM POWER PLANTS
  costs for, computer program for calculation of capital, 26:55265 (ORNL-TM-3743)
STEEL
  analysis for molybdenum by potentiometric titration, 26:52924
  analysis for tritium by bremsstrahlung counting, 26:52934 (MLM-1368)
  analysis for uranium by extraction--photometric method, 26:52922
  analysis for uranium by x-ray fluorescence method, photometric method for calibrating, 26:52922
  coating with carbon from carbon monoxide decomposition in argon coolant at 550 to 600°C, 26:53605(R) (DP-Report-522)
  crack tolerance of A533B, effects of strain gradients on gross strain, 26:53634 (CONF-720806-3)
  fabrication by hot isostatic pressing, 26:53578
  fatigue testing of pipes of carbon, failure rates from, 26:55175(R) (GEAP-10207-26)
  fracture toughness of ASTM A553-A, HP 9-4-20, PH 13-8Mo, and 18 Ni maraging, at room and subzero temperatures, measurement of plane strain, 26:53661
  grain structure of annealed, effects of austenite grain size on ferrite banded, 26:55593(T) (RFP-Trans-108)
  mechanical properties of welds in low-alloy, at 900 to 1300°F, literature review on, 26:53638 (ORNL-4781)
  properties of French Cor-Ten, for use in nuclear power plants, 26:53612
  radiation effects on strengthening of Type A302 pressure vessel, effects of copper and vanadium additions on, neutron, 26:53710
  reactions with hydrogen, literature review on, 26:53606 (MLM-1355)
  standards for forgings of low-alloy, 26:53640 (RDT-M-2-2-T(8-72))
  stress in hardened, x-ray methods of measuring residual, 26:55594(T) (RFP-Trans-110)
  Cr--Mo--steel, corrosion by products of sodium--water reactions, 26:55154 (CONF-710548-, pp 105-28)
  Mn--Mo--Ni--steel, mechanical properties of pressure vessel, effects of quenching, tempering, and heat treatment on, 26:53646
STEEL COUPLES
  Cu/steel, corrosion by water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
  steel/Zircaloy-2, corrosion by air, nitrogen, and water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
STELLAR FLARES
  contribution to primary cosmic radiation, (T), 26:53853
STELLARATORS
  magnetic configuration analysis for, space-periodic, 26:54824(T) (AEC-tr-7334)
STOMACH
  radiation effects on circadian changes in mitotic index and DNA synthesis in glandular cells of rat, following oral administration of radon water, effects of dose on α, 26:53514
STORAGE RINGS
  beam betatron oscillations in muon g - 2 experiment, 26:53763
  beam dynamics in ISABELLE, effects of random magnetic field errors in exciting nonlinear resonances in, 26:53774 (BNL-17056)
  beam dynamics in long insertions of ISABELLE, elimination of momentum mismatch in, 26:53773 (BNL-17051)
  beam dynamics in, variation of betatron frequency across beam due to image fields, 26:53770 (BNL-17016)
  beam luminosity for colliding beams, methods for measuring, 26:53771 (BNL-17019)
  beam luminosity for electron--proton colliding beams, calculation of, 26:53777 (BNL-17067)
  beam luminosity of ISABELLE, method for absolute calibration using $p + p \rightarrow p + \Delta^+(1236)$ interaction, 26:53772 (BNL-17021)
  beam luminosity of, method for determining, using intersection of high β section with low β section, 26:53769 (BNL-16996)
  beam luminosity, lifetime, and size of CERN ISR, 26:53782 (CERN-72-14)
  beam stability in, effects of low-periodicity insertions on, 26:53780 (BNL-17152)
  design of ISABELLE, need for rings of unequal energy in, 26:53778 (BNL-17068)
  design proposal for ISABELLE, incorporating large aperture spectrometer magnet, 26:53779 (BNL-17142)
  deuteron breakup in Coulomb field of ISABELLE, cross section for, (T), 26:53776 (BNL-17063)
  experimental program at ISABELLE, for studying hadron interactions and properties, 26:54298 (BNL-16997)
  experimental program at ISABELLE, muon and muon pair production and detection, 26:54181 (BNL-16977)
  experimental program at ISABELLE, $p + p \rightarrow e + \nu +$ anything interactions, 26:54284 (BNL-16978)
  experimental program at ISABELLE, p + p weak interaction, 26:54182 (BNL-17092)
  experimental program of ISABELLE, feasibility of $\pi + p$ interactions, 26:54200 (BNL-17069)
  importance of colliding beam, for high-energy physics studies, 26:53767 (BNL-16830)
  lectures on intersecting, 26:53782 (CERN-72-14)
  magnets for ISABELLE, method for fault protection for, 26:53765 (BNL-16816)
  operation of ISABELLE in Whiplash mode for producing polarized proton or monoenergetic neutron beams, feasibility of, 26:53775 (BNL-17057)
  research proposal for ISABELLE, for very low energy anti p + p experiments using beams moving in same direction, 26:53766 (BNL-16818)
  vacuum chamber of ISABELLE, eddy current losses in, 26:53781 (BNL-17153)
STRAIN
  design basis for allowable plastic, 26:55500 (COO-2048-7)
  measurement of, evaluation of split Hopkinson pressure bar technique for, 26:55626 (UCRL-73610)

- STRATOSPHERE
  - balloon flights in, history of use for scientific experiments, 26:54019
  - neutron spectra measurements on balloon in, 26:54066 (NASA-TM-X-2440, pp 922-5)
  - radiation dose rate measurements at SST altitudes during solar flares, 26:54889 (NASA-TM-X-2440, pp 902-7)
  - radiation doses to crew and passengers at SST altitudes from cosmic and solar rays, 26:54888 (NASA-TM-X-2440, pp 894-901)
- STRONTIUM
  - determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
  - electron reactions at 10 to 40 eV with, cross sections for formation of Sr^{2+} in, 26:54103 (FRNC-CONF-51)
  - oxidation of, uv photoemission studies of, 26:53611
  - photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
  - transport to plant roots by diffusion and mass flow, 26:55490 (COO-1495-17)
- STRONTIUM FLUORIDES
  - compatibility with fuel capsule materials, effects of impurities and radioactive decay on, 26:53330(R) (BNWL-1308-10)
- STRONTIUM ISOTOPES Sr-84
  - neutron reactions with, resonance activation integrals for, (E), 26:54585
- STRONTIUM ISOTOPES Sr-85
  - uptake by hair following intravenous injection in rats, correlation with body burden and, 26:53529 (NASA-TM-X-2440, pp 982-8)
- STRONTIUM ISOTOPES Sr-87
  - dosimetry of metastable, 26:54912
- STRONTIUM ISOTOPES Sr-88
  - alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  - deuteron reactions (d,np) and (d,p) at 7.5 to 10.0 MeV, coupled-channels Born-approximation calculations of excitation functions for, (E/T), 26:54588
  - neutron radius of, determination from elastic scattering, (E), 26:54547
- STRONTIUM ISOTOPES Sr-89
  - content in atmosphere, fish, rainwater, and Savannah River in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- STRONTIUM ISOTOPES Sr-90
  - content in agricultural products, atmosphere, fish, milk, rainwater, and Savannah River in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  - content in fallout in East Germany during 1970, (E), 26:53156 (SZS-128)
  - content in Norwegian milk during 1956 to 1970, 26:53161
  - content of human bone, samples collected in France during 1970, in relation to stable strontium content, 26:53520 (CEA-N-1535)
  - distribution and retention in rabbits following intravenous injection, kinetics of, 26:53534
  - distribution in tissues of respiratory tract of dogs and monkeys following inhalation as fused clay aerosols, 26:53536
  - effects on alkaline phosphatase activity and chromosomes of mice, 26:53496
  - effects on mice following intraperitoneal injection in comparison to effects of external x rays, incidence of leukemogenic, 26:53512
  - effects on mice, studies on transmission of leukemogenic, 26:53496
  - uptake by barley and bean plants from surface contaminated soils, effects of clinoptilolite on, 26:53540
  - uptake by clover plants from continuously cropped uniformly contaminated soils, effects of clinoptilolite on, 26:53540
  - uptake by marine animals and plants from seawater, relation of alginic acid to retention, 26:53532
- STRONTIUM ISOTOPES Sr-91
  - half-life of, (E), 26:54667
- STRONTIUM ISOTOPES Sr-93
  - half-life of, (E), 26:54667
- STRONTIUM OXIDES
  - K_2O--SiO_2--SrO, diffusion in, electrostatic effects and mobility in, 26:53598
- STRONTIUM TITANATES
  - radiation effects on dielectric constants and crystal structure of, electron and γ, 26:55020
- STRUCTURAL BEAMS
  - strength of composite, subjected to positive and negative bending, studies of ultimate, 26:55571(T) (NRC-TT-1557)
- STRUCTURES
  - damage to distant, from mechanical effects of underground nuclear explosions in granite, (E), 26:53129(T) (UCRL-Trans-10616-2)
  - damage to Glendale, Calif., from ground motion from San Fernando earthquake, 26:53137 (JAB-99-96)
  - heating of urban and industrial, feasibility of use of power plant waste heat for, 26:55212 (CONF-720925-2)
- STYRENE POLYMERS
  - radioinduced carriers in capacitors of, γ, (E), 26:54968(R) (AD-737312)
- SUCCINONITRILES
  - radiolysis of crystals of, ESR studies on, 26:52991 (ORO-2968-78, Paper 6)
  - radiolysis of plastic crystals of, transient absorption spectra from pulse, 26:53003
- SUGARS
  - accumulation by isolated intestinal epithelial cells, effects of trans-membrane potassium gradients on, 26:55635 (UR-3490-174)
- SULFATES
  - oxygen-18 content of marine, (E), 26:53180
- SULFIDES
  - analysis of residues from leaching of matte, for osmium and ruthenium, 26:52919 (NIM-1432)
- SULFUR
  - determination in thin layers of chalcogenide glasses by proton activation or x-ray fluorescence, 26:52900 (LYCEN-7236)
  - neutron reactions with, production of phosphorus-32 by, 26:53069
- SULFUR FLUORIDES
  - potassium-atom scattering at thermal energies by, effects of temperature and internal and translational energy on differential cross sections for nonreactive, 26:54136
- SULFUR IONS
  - effects of implanted, on Doppler broadening of positron annihilation photons in silver halide crystals, 26:54097
  - spectral lines in zeta Oph due to interstellar, (E), 26:53875
- SULFUR ISOTOPES S-32
  - alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  - energy levels of, projected Hartree--Fock and shell-model calculations of spins of, (T), 26:54553
  - muon (μ^-) capture by, polarization of emitted neutron in, (T), 26:54564
  - neutron radius of, determination from α elastic scattering, (E), 26:54547
  - reactions with ruthenium-96 and tin-112 up to 270 MeV, delayed proton spectra from, (E), 26:54608(T) (UCRL-Trans-1473)
- SULFUR ISOTOPES S-34
  - alpha reactions (α,γ) at 3.6 to 4.8 MeV, γ angular distributions and γ--γ angular correlations for, (E), 26:54560
- SULFUR ISOTOPES S-35
  - content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)
- SUN
  - atmosphere of, density dependent ionization balance of carbon, neon, and oxygen in, (E), 26:53969
  - atmosphere of, mean depth of line formation in, (T), 26:53944
  - gamma emission from, upper limits on, (E), 26:53967
  - gravitational field of, Einstein theory for modeling of, 26:54390 (ITF-71-130-P)
  - height in summer-winter 1964, correlation with ionospheric E-region electron density, (E/T), 26:54016
  - neutrino emission from, effects of resonance in $^3He + {}^3He$ system on, (T), 26:54508
  - neutron emission from, upper limits on, (E), 26:53967
  - noble-gas abundance in, (T), 26:53892
  - oblateness signal of, fluctuations of, (E), 26:53936
- SUNSPOTS
  - effects of cycle of, on narrow-angle cosmic-ray anisotropies, (T), 26:53868
  - magnetic fields of, Rayleigh--Taylor instability in composite medium, (T), 26:53940
  - spectra of, molecular carbon lines in, (E), 26:53952
  - spectra of, molecular carbon lines in, (E), 26:53953
  - spectra of, π-component splitting in, (T), 26:53951
- SUPERCONDUCTING JUNCTIONS
  - electric conductivity for tunnel, numerical calculation with depairing of zero bias, 26:54462 (LNF-72/27)
  - tunneling in, role of paramagnetic impurities in barrier region for, 26:54442
- SUPERCONDUCTIVITY
  - book: Superconductvity, 26:54460
  - model problems with positive pair interactions, asymptotic expression for, 26:54435 (ITF-72-56-E)
  - statistical mechanics of one-dimensional Ginzburg--Landau fields, (T), 26:54452
  - thermodynamic stability of nonideal Bose--Einstein gas, (T), 26:54432
- SUPERCONDUCTORS
  - acoustic interactions in, low-frequency, 26:54439
  - book: Superconductvity, 26:54460
  - Bose condensation and macroscopic coherence in, effect of dimensionality on, (T), 26:54436 (NP-19425)
  - Cooper pair structure in, 26:54459
  - critical anomalies in external fields in, nonperturbational calculation of, 26:54458
  - electron state densities for two-band, with nonmagnetic impurities, (T), 26:54454
  - energy gap parameter outside core of isolated flux line for T greater than or equal to T/sub c/, 26:54446
  - excitations in quantum condensated fermion gas, (T), 26:54443
  - magnetic flux penetration into thin-film, relaxation time--pick-up voltage frequency relation for, (T), 26:54453

  mixed-state structure near boundary of semi-infinite Type-II, 26:54448
  model of polar degenerate semiconductor, (T), 26:54449
  properties of two-band, effect of Fermi-surface topology change under pressure on, 26:54445
  thermal conductivity in dirty Type-II, near upper critical field, (T), 26:54451
  transition temperature in, effect of metal--dielectric phase transition in, (T), 26:54457
  vortex entropy in, 26:54441
SUPERFLUIDITY
  thermodynamic stability of nonideal Bose--Einstein gas, (T), 26:54432
SUPERNOVA REMNANTS
  contribution to galactic background of synchrotron radiation, (T), 26:53912
  formation of pulsars in, (T), 26:53912
  radio observations of galactic, (E), 26:53974
  rate of formation of, (T), 26:53912
SUPERNOVAE
  disruption of spiral structure in galaxies by super, (T), 26:53987
  nucleosynthesis in, harmonic oscillator-model calculations of termination of r process in, (T), 26:54663
  occurrence in Milky Way, rate of, (E), 26:53974
  spectra of Type II, absorption, (E), 26:53897
SURFACE WATERS
  temperature variations in, from heated effluents, use of temperature-induced fading of thermoluminescent dosimeter for measuring, 26:53187 (ANL-7860(Pt.3), pp 131-40)
SURFACES
  bibliography on surface and vacuum physics, 26:54085
  contamination by radioactive materials, criteria for radiation standards for, 26:54919
  contamination by radioactive materials, survey of guides for, 26:54920
  flatness of mechanical face seal, broad source interference method for measuring, 26:55463 (AECL-4208)
SURGERY
  effectiveness for treatment of local radiation injuries in man following radiotherapy, 26:53438
  effects of cardiac, on hypophosphatemia development in man, 26:55638 (UR-3490-187)
SURRY POWER REACTOR, UNIT 1
  decay heat removal system for, malfunction of steam vent system on, 26:55297 (DOCKET-50280-85)
  personnel for, revised organization of, 26:55295 (DOCKET-50280-82)
  site for, revised temperature monitoring requirements for, 26:55295 (DOCKET-50280-82)
  steam vent system for, malfunction of decay heat release system in, 26:55296 (DOCKET-50280-84)
SURRY POWER REACTOR, UNIT 2
  operation of, notice of return to power, 26:55257 (DOCKET-50280-83)
SWEDEN
  beta activity in atmosphere near ground at Marsta Observatory in, natural, 26:53159 (UUIM-26)
  power requirements in, comparison with UK, 26:53102
  radioactivity monitoring in, from March 23, 1971 USSR underground nuclear explosion, 26:53158 (FOA-4-4502-A-1)
SWINE
  radiation effects on epidermal cell kinetics of, dose dependence of fission neutron, thermal neutron, x, and neutron activation of boron-10 in, 26:53450 (LA-4874, pp 126-44)
  radiation effects on, following various combinations of acute, chronic, continuous, and fractionated whole-body exposures, effects of dose and dose rate on γ and x, 26:53451 (NASA-TM-X-2440, pp 622-32)
  radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  radioinduced injuries to skin of miniature, dose and time dependence of electron, 26:53458 (NASA-TM-X-2440, pp 665-71)
  radioinduced lesions in gastrointestinal tract of germ-free newborn, following lethal whole-body exposure, effects of artificial colonization with Escherichia coli on γ, 26:53495
SYMMETRY GROUPS
  breaking in relativistic quantum field theory with gauge fields, spontaneous, 26:54387
  irreducible representations of asymptotically flat space-time, for elementary particles, 26:54357
  orthogonal and unitary groups for orbital angular momentum of N identical particles, 26:55072
  physical symmetries from one-particle singularities of current matrix elements, 26:54356
  SL(2,C), formulation of dual model with, 26:54309
  SU(3) X SU(3) X U(1) X U(1) chiral, unified gauge weak-electromagnetic and weak-electromagnetic-strong interactions in, 26:54364 (NYO-3533-264)
  SU(3) x SU(3), tensors and axial charges for baryon-octet couplings in chiral, 26:54371
  SU(3) X U(1), unified gauge weak-electromagnetic and weak-electromagnetic-strong interactions in, 26:54364 (NYO-3533-264)
  W(3) Schwinger group for relativistic equation for four-particle composite structure of baryons, 26:54372
  W(3) Schwinger group, for relativistic equation for four-particle composite structure of baryons, 26:54368
SYNCHROTRON RADIATION
  emission in vacuum, faster-than-light, (T), 26:53916
  galactic background, contribution of supernova remnants to, (T), 26:53912
  polarization of, vertical angular distribution of intensities for linear, (T), 26:54249
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP)
  development and operating characteristics of radioisotope- and reactor-powered, 26:53093 (NASA-TM-X-2440, pp 13-25)
  heat sources for, preparation of metallic plutonium-238, 26:53332 (MLM-1150)
  heat sources for, properties of polonium-210, 26:53334 (MLM-1228)
  safety criteria for, 26:54921
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-8)
  shield design for, 26:54948 (NASA-TM-X-2440, pp 78-83)
  shutdown on space stations, fission product γ dose rates following, (T), 26:55360 (NASA-TM-X-2440, pp 84-91)
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-21)
  design, development, and testing of, for deep-sea applications, 26:53092(R) (MMM-3691-5(Rev.1))

T

T-111 (TANTALUM ALLOY)
  compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
TANKS
  dismantling of sodium cooled reactor, removal of sodium and decontamination during, 26:55147 (AI-AEC-Memo-12736)
TANTALUM
  analysis for carbon and oxygen by helium-3 activation, 26:52899 (LA-DC-72-809)
  book: Early Transition Metals, 26:52956
  compatibility with sodium at 600ºC, effects of oxygen on, 26:53688
  deformation and recrystallization of, produced by electron-induced fusion and sintering, 26:53623
  determination in alloys using Nile Blue, spectrophotometric, 26:52925
  determination in minerals by direct measurement of oxide ratios, spectroscopic, 26:52932
  diffusion in aluminum nitride, silicon nitride, and titanium dioxide, 26:53677
  fabrication by rolling at high temperature under vacuum, 26:53630
  ion reactions at 10.4-MeV/nucleon, neutron yield from, (E), 26:54881 (NASA-TM-X-2440, pp 520-2)
  muon stopping and diffusion in hot foils of, in vacuum, production of muonium by, (E), 26:54096
  oxidation of silicide-coated, to 1500ºC, 26:53613
  production by electron-induced fusion and sintering, deformation and recrystallization studies on, 26:53623
  separation from niobium, titanium, and zirconium by solvent extraction, hydrolysis, and extraction, 26:52947 (BM-RI-7671)
  superconducting transition in, use of acoustical measurements for, 26:54439
  tensile properties of single-crystal, effects of interstitial nitrogen on asymmetric, 26:53643
TANTALUM ALLOYS AND SYSTEMS
  oxidation of silicide-coated, to 1500ºC, 26:53613
  Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  Cr-base--Mo--Ta, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
  Si--Ta, diffusion of silicon in Ta_5Si_3 phase in, at high temperatures, 26:53583
TANTALUM CARBIDES
  growth on calcium fluoride, magnesium oxide, and sodium chloride substrates, electron beam evaporation method for epitaxial film, 26:53564
  sorptive properties of, effects of electronic structure on, 26:53593
TANTALUM ISOTOPES Ta-181
  neutron capture at 24.3 keV, TOF cross-section measurements using iron-filtered beam, (E), 26:54597 (CONF-720901-(Bks.1 and 2), pp 1107-14)
  neutron capture near 24.3 keV, pulse height spectra and relative cross section for, (E), 26:54656(R) (COO-3058-21)
  neutron reactions up to 20 MeV, γ production cross sections for, (E), 26:54523 (CONF-720901-(Bks.1 and 2), pp 325-34)
  photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
TANTALUM OXIDES
  films of, use of proton-excited x rays for thickness measurement on, 26:52945

TANTALUM SILICIDES
Ta$_5$Si$_3$--TiB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
Ta$_5$Si$_3$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
TaSi$_2$--TiB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
TaSi$_2$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
TD-NICKEL
production using poly(methylmethacrylate) as starter, Onera method for, 26:53626
TD-NICKEL CHROMIUM
production by chromium diffusion through halogen carrier in nickel--thorium dioxide grain, 26:53627
TECHNETIUM
recovery of fission product, for commercial uses, feasibility of, 26:53330(R) (BNWL-1308-10)
TECHNETIUM ISOTOPES Tc-93
energy level of, shell-model calculation of isomeric, (T), 26:54611
TECHNETIUM ISOTOPES Tc-99
activity of isomeric, calibration against cobalt-57 for determining, 26:52946
effectiveness of pertechnetate-incorporated metastable, for gamma camera visualization of normal and occluded arteries in human limbs, 26:53542
TECHNETIUM ISOTOPES Tc-102
beta decay of ground-state and isomeric, β and γ singles and coincidence spectra from, (E/T), 26:54596 (CEA-R-4286)
TECHNETIUM ISOTOPES Tc-104
beta decay of, β and γ singles and coincidence spectra from, (E), 26:54596 (CEA-R-4286)
TEETH
arsenic-74 uptake and retention by, of mice, rabbits, and rats following oral administration, time dependence of, 26:53538
TELLURIC ACID
neutron reactions with tellurium-130 in, production of carrier-free iodine-131 from, 26:53070
TELLURIUM
determination in meteoritic and terrestrial materials by neutron activation following separation from other elements, 26:52906
determination in thin layers of chalcogenide glasses by proton activation or x-ray fluorescence, 26:52900 (LYCEN-7236)
TELLURIUM ISOTOPES Te-125
proton reactions (p,n) with, iodine-125 production by, 26:53056 (AREAEE-129)
TELLUROBISMUTHITE
xenon-129, -130, and -131 contents in Swedish, measurement of, 26:53176
TEMPERATURE
effects on repair of sublethal x-radioinduced lesions in cultured Chinese hamster cells, 26:53358
effects on x-radiosensitivity of cultured Chinese hamster cells under conditions of low dose rate exposure, 26:53358
TERBIUM
magnetoelastic interaction for magnon--phonon mixing, (T), 26:55026
spin-wave energy fitting to interatomic exchange parameters in ferromagnetic, (T), 26:55053
TERBIUM ALLOYS AND SYSTEMS
Cu--Ni--Tb, magnetic structures in TbNi/sub 1-x/Cu/sub x/ below ordering temperature, stability of sinusoidal-wave, 26:55039
TERBIUM ISOTOPES Tb-149
alpha, beta, and electron-capture decay of, γ singles and coincidence spectra and α/β branching ratio for, (E), 26:54603 (JINR-P6-6511)
TERBIUM ISOTOPES Tb-153
energy levels from dysprosium-153 electron-capture decay, spin--parity assignments for, (E), 26:54643
TERBIUM ISOTOPES Tb-155
energy levels from dysprosium-155 decay, spin--parity assignments for, (E), 26:54643
energy-level transitions from dysprosium-155 decay, branching ratios and multipolarities for, (E), 26:54643
TERBIUM ISOTOPES Tb-157
energy levels from terbium-159 (p,t) reactions, spin--parity assignments for rotational, (E), 26:54645
TERBIUM ISOTOPES Tb-159
photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
proton reactions (p,t) at 30 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 26:54645
TERBIUM OXIDES
magnetic moment direction in, crystal-field calculation of, 26:55054
spectra of nonstoichiometric, 4.2°K far-infrared, (E/T), 26:55032
TETRACYCLINE
effects on repair of γ-radioinduced double-strand breaks in DNA of Micrococcus radiodurans, inhibitory, 26:53349
THALLIUM ISOTOPES Tl-205
proton reactions (p,2n) at 14 MeV, gamma spectra from, (E), 26:54647
THALLIUM ISOTOPES Tl-206
beta decay of, β spectra, half-life, and matrix elements for, (E), 26:54648
THERMAL CYCLING
effects on corrosion resistance of zirconium and zirconium alloys in high-temperature water, 26:53614
THERMAL DIFFUSION
column shape factors for, derivation of empirical, 26:53326 (AREAEE-131)
data analysis of pulsed laser-induced, computer-based real-time, 26:55639 (Y-1841)
THERMAL INSULATION
optimization for nuclear powered space vehicles, data plot for, (T), 26:55366 (NASA-TM-X-2440, pp 392-6)
THERMAL RADIATION SHIELDING
replacement in large pressurized water reactors with neutron shielding pads, design and evaluation study for, 26:55223 (WCAP-7870)
THERMOCOUPLES
arrangement for mockup liquid sodium cooled fuel rod bundles, 26:55207(R) (ORNL-TM-3900)
standard for manufacturing of high-temperature rhenium--tungsten, for use in nuclear irradiation experiments, 26:53301 (EUR-4807)
thermowell systems for liquid metal service, standards for design and fabrication of, 26:55219 (RDT-C-7-18-T(8-72))
THERMODYNAMICS
violation of second law of, in black-hole physics, (T), 26:53906
THERMOELECTRIC GENERATORS
design considerations for simulated radiation effects in-flight testing of space vehicles, 26:53095 (NASA-TM-X-2440, pp 844-9)
design, development, and testing of strontium-90-fueled, for SNAP-21, 26:53092(R) (MMM-3691-5(Rev.1))
development and performance of, for space vehicles, 26:53093 (NASA-TM-X-2440, pp 13-25)
gamma emission by, design of γ sources for simulation of, 26:53335 (NASA-TM-X-2440, pp 850-2)
radiation emission from Thermoelectric Outer Planet Spacecraft, environmental analysis of γ and neutron, 26:53338 (NASA-TM-X-2440, pp 862-5)
THERMOMETERS
design of plugging, for liquid sodium, engineering drawings for, 26:53116
THERMONUCLEAR REACTORS
bibliography on plasma physics and fusion reactors, 26:54748
coolants for blankets of, thermodynamic evaluation of lithium and flibe, 26:54827 (IPP-4/97)
coolants for toroidal, stress analysis for determining performance of liquid lithium, (T), 26:54825 (CLM-R-116)
developments in U.K. during 1970-71, survey of, 26:55084(R) (INIS-mf-212)
energy balance of deuterium--tritium-fueled, conditions for self-sustaining reactions in, (T), 26:54833
magnet design for, summary of conference on, 26:54829 (ORNL-TM-3953)
magnetic configuration analysis for, space-periodic, 26:54824(T) (AEC-tr-7334)
magnetic configuration of, toroidality effects on helical magnetic axis, (T), 26:54832
physics problems in D--T fueled low-β toroidal, neutron and γ, 26:54826 (CONF-720901-(Bks.1 and 2), pp 559-73)
plasma confinement in FM-1, anomalous and pseudoclassical, 26:54753 (CONF-720804-5)
plasma confinement in toroidal, effects of laminar flow on, (T), 26:54755
plasma equilibrium in configurations with helical magnetic axis and considering toroidality, (T), 26:54815
plasma heating in Tuman-2, microwave, (E), 26:54758
tritium recovery in blankets of, research on methods for, 26:53085 (ORNL-4794, pp 91-5)
THERMOSPHERE
electron energy deposition in water vapor in, (E/T), 26:54033
plasma variations between 3000 and 5700 km at L = 2 to 4, spatial and temporal thermal-, (E), 26:54037
THORITES
content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
THORIUM
content in alkali olivine basalt in USSR, (E), 26:53147
content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
determination in comparison with uranium content in standard samples by γ spectroscopy, 26:52941
determination in ores by neutron activation, anion exchange purification of protactinium for, 26:52903
determination of, radiometric, 26:52942
distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
ionization of surfaces of, 26:53033 (EUR-4765, pp 117-30)
separation from ores, review of, 26:52977
separation from uranium by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)

  separation of uranium-233 from, 26:52977
  solubility in bismuth--rare earth solutions, free energies of formation for compounds produced by, 26:53664
THORIUM ALLOYS AND SYSTEMS
  rare earths--Th, solubility in liquid bismuth, pp. 4-5, 26:53081 (ORNL-4794, pp 1-14)
THORIUM CARBIDES
  crushing and combustion of TRISO-coated, fission product release in, 26:53078 (CONF-720823-11)
THORIUM ISOTOPES Th-227
  alpha decay of, α-γ coincidence spectra and angular correlations for, (E), 26:54673
THORIUM ISOTOPES Th-230
  triton reactions (t,p) at 15 to 20 MeV, proton spectra and angular distributions for, (E), 26:54671
THORIUM ISOTOPES Th-232
  neutron capture by, survey of cross section data for, 26:54657 (FEI-292)
  neutron reactions (n,f) at 14.8 MeV, cadmium-115 isomer ratios in, (E), 26:54628
  proton reactions at 0.7 GeV, calculation of spallation--fission competition using intranuclear-cascade model, (T), 26:54666
  triton reactions (t,p) at 15 to 20 MeV, proton spectra and angular distributions for, (E), 26:54671
THORIUM ISOTOPES Th-234
  sorption by ocean sediments from seawater, (E), 26:53167
THORIUM METAPHOSPHATES
  preparation and structure of, 26:53045
THORIUM MINERALS
  content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
THORIUM NITRATES
  properties and structure of aqueous sols of, ir and light scattering studies on, 26:53048
  purification and concentration by anion exchange using small resins, p. 91-3, 26:53085 (ORNL-4794, pp 91-5)
THORIUM NITRIDES
  electric conductivity, thermal conductivity, and thermoelectric power of, (E), 26:55027
  ThN--UN, electric resistivity, thermal conductivity, and thermoelectric power of, (E), 26:55027
THORIUM ORES
  analysis of standard, for thorium and uranium by γ spectroscopy, 26:52941
  processing of, review on, 26:52977
THORIUM OXIDES
  preparation of aqueous solutions of sols of, for light scattering measurements, 26:53050
THORIUM OXIDES ThO$_2$
  dissolution solutions for, corrosion of Corronel 230, HAPO-20 alloy, and Type 304L stainless steel by fluoride-catalyzed nitric acid, 26:53604 (BNWL-CC-449)
  sintering of, nonisothermal method for studying initial-stage, 26:53595
  Co-base--Cr--Ni--ThO$_2$, mechanical properties and microstructure of dispersion-hardened, 26:53675
  Co-base--Ni--ThO$_2$--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675
  Co-base--ThO$_2$, mechanical properties and microstructure of dispersion-hardened, 26:53675
  Co-base--ThO$_2$--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675
  Re--ThO$_2$--W-base, creep properties of, at 1800 to 2200°C, 26:53678
  ThO$_2$--UO$_2$, crushing and combustion of BISO-coated, fission product release in, 26:53078 (CONF-720823-11)
THORIUM SILICATES
  crystal structure of, atomic positions in, 26:55038
THREE MILE ISLAND POWER REACTOR, UNIT 1
  auxiliary systems for, requested and revised data on, 26:55303 (DOCKET-50289-66)
  engineered safeguards for, requested and revised data on, 26:55303 (DOCKET-50289-66)
  instrumentation for, requested and revised data on, 26:55303 (DOCKET-50289-66)
  operations for, requested and revised data on, 26:55303 (DOCKET-50289-66)
  personnel for, requested and revised data on, 26:55303 (DOCKET-50289-66)
  radioactive waste disposal system for, requested and revised data on, 26:55303 (DOCKET-50289-66)
  site for, revised data on meteorology of, 26:55303 (DOCKET-50289-66)
  testing program for, requested and revised data on, 26:55303 (DOCKET-50289-66)
THYMINE
  radiolysis of single crystals of anhydrous and monohydrate, ESR studies on radicals from γ, 26:52999
THYMUS GLAND
  radioinduced leukemic transformations in, of mice following fractionated whole-body exposure, x, 26:53512
  role in recovery of bone marrow in γ-irradiated rats, 26:53479
THYROID GLAND
  radiation dose to, in children from iodine-131 ingestion in milk, maximum permissible, 26:53506(T) (ORNL-tr-2629)
  radiation effects on growth of goitrogen-stimulated, in mice, effects of dose rate on RBE for internal iodine-131 or iodine-132 β and γ and external x, 26:53472
  radiation effects on growth of, in fetal and goitrogen-stimulated adult mice following intravenous injection of iodine-131, β and γ, 26:53513
  radiation effects on morphology and physiology of, in birds following parenteral injection of iodine-131, dose-response relations for β and γ, 26:53515
  radiation effects on regeneration of rat, following whole-body exposure, effects of prior implantation of sarcoma on x, 26:53494
  radiation effects on, of dogs following whole-body exposure, relation of metabolic rate to carcinogenic and morphologic, x, 26:53462 (UR-3490-183)
  scintiscanning of human, for diagnosis of neoplasms, use of gamma camera in, 26:53214
TIN
  determination in meteoritic and terrestrial materials by neutron activation following separation from other elements, 26:52906
  determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  determination in water, effects of large amounts of copper on spectrographic, 26:52927
  Josephson effect in superconducting films, evidence for ac and dc, (E), 26:54455
  photon reactions (γ,xn) with, model analysis of giant dipole resonance in, (E/T), 26:54598 (FRNC-TH-242)
  separation from indium by ion exchange chromatography, 26:52949
  superconducting transition in, use of acoustical measurements for, 26:54439
TIN ALLOYS AND SYSTEMS
  Al--Mo--Sn--Ti-base--Zr, creep rupture of, at 755 and 865^{o}K, cyclic, 26:53690
  Al--Sn--Ti-base, radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)
TIN CHLORIDES
  potassium-atom scattering at thermal energies by, effects of temperature and internal and translational energy on differential cross sections for nonreactive, 26:54136
TIN ISOTOPES Sn-112
  chlorine-35 reactions up to 250 MeV, delayed proton spectra from, (E), 26:54608(T) (UCRL-Trans-1473)
  sulfur-32 reactions up to 270 MeV, delayed proton spectra from, (E), 26:54608(T) (UCRL-Trans-1473)
TIN ISOTOPES Sn-116
  alpha elastic and inelastic scattering at 166 MeV, angular distributions for, (E), 26:54616
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from elastic scattering, (E), 26:54547
  nuclear properties of, analysis using high-energy α scattering, (E), 26:54616
TIN ISOTOPES Sn-118
  alpha elastic and inelastic scattering at 166 MeV, angular distributions for, (E), 26:54616
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from elastic scattering, (E), 26:54547
  neutron reactions (n,α), isomer yield ratio for, (E), 26:54628
  nuclear properties of, analysis using high-energy α scattering, (E), 26:54616
TIN ISOTOPES Sn-119
  energy level at 89 keV, nuclear magnetic moment of, (E), 26:54624
TIN ISOTOPES Sn-120
  alpha elastic and inelastic scattering at 166 MeV, angular distributions for, (E), 26:54616
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from elastic scattering, (E), 26:54547
  nuclear properties of, analysis using high-energy α scattering, (E), 26:54616
TIN ISOTOPES Sn-124
  alpha elastic and inelastic scattering at 166 MeV, angular distributions for, (E), 26:54616
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from elastic scattering, (E), 26:54547
  nuclear properties of, analysis using high-energy α scattering, (E), 26:54616
TISSUE EQUIVALENT MATERIALS
  electron isodose distribution perturbation near cavities in, at 10 to 35 MeV, (E), 26:54903
  electron scattering by, Monte Carlo study with catastrophic collisions in, 26:54898
  neutron energy transfer to soft, microdosimetric studies of fast, 26:54873 (EUR-4787)
TISSUES
  gamma depth-dose distribution under lattice in, theoretical calculation of ^{60}Co, 26:54908
  neutron energy transfer to soft, microdosimetric studies of fast, 26:54873 (EUR-4787)

  neutron isodose curves in, normalized to kerma from small tissue volume in free space, 26:54902
  radiation dose distribution in orthogonal plane in, surrounding iridium-192 wires implanted for interstitial therapy, effects of arrangement, number, and size of implants on β and γ, 26:53422
  radiation dosimetry in, system of ionization chambers for, 26:53232 (NASA-TM-X-2440, pp 435-7)
  x-ray dose across plane interface with bone, contribution of photoelectrons to, (T), 26:54896
TITANIUM
  abundance in γ Cap, (E), 26:53888
  book: Early Transition Metals, 26:52956
  content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
  determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
  determination in water, effects of large amounts of copper on spectrographic, 26:52927
  diffusion in aluminum nitride, silicon nitride, and titanium dioxide, 26:53677
  diffusion of nickel-63 in polycrystalline α-, mechanism of, 26:53666
  effects on cohesion and structural stability of aluminum oxide composites with iron, 26:53589
  fabrication by rolling at high temperature under vacuum, 26:53630
  flow stress of, effects of impurities on strain rate sensitivity of, 26:53639(R) (ORO-3262-25)
  mechanical properties of, effects of impurities on, 26:53639(R) (ORO-3262-25)
  photon reactions (γ,n) at 12 to 23 MeV, neutron spectra from, (E), 26:54563
  reactions of ion-refined surfaces of, with hydrogen and oxygen, field-ion microscopy studies of, 26:53657
  separation from niobium, tantalum, and zirconium by solvent extraction, hydrolysis, and extraction, 26:52947 (BM-RI-7671)
  strain aging in, dynamic, 26:53639(R) (ORO-3262-25)
  strain rate sensitivity in, validity of Cottrell--Stokes Law in terms of variation of, 26:53639(R) (ORO-3262-25)
  strain rate sensitivity in, validity of Cottrell--Stokes Law in terms of variation of, 26:53639(R) (ORO-3262-25)
  tensile properties of, at room temperature, effects of prestraining at 77°K on, 26:53639(R) (ORO-3262-25)
TITANIUM ALLOYS AND SYSTEMS
  Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  Al--Co--Cr--Mo--Ni-base--Ti, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  Al--Mo--Sn--Ti-base--Zr, creep rupture of, at 755 and 865°K, cyclic, 26:53690
  Al--Mo--Ti-base--V, crack propagation and embrittlement by gaseous hydrogen, mechanism of, 26:53685
  Al--Sn--Ti-base, radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53697 (NASA-TM-X-2440, pp 603-8)
  Al--Ti, reactions of ion-refined surfaces of intermetallic Ti_3Al, with hydrogen and oxygen, field-ion microscopy, studies of, 26:53657
  Al--Ti-base--V, fracture toughness of $\alpha + \beta$ and β processed, at room and subzero temperatures, measurement of plane strain, 26:53661
  Cr--Cu--Fe--Mo--Ni-base--Ti, corrosion by thorium dioxide dissolvent solutions, 26:53604 (BNWL-CC-449)
  Cu-base--Ti, hardening of, mechanism of precipitation, 26:55615(R) (TID-26148)
  Nb--Ti, superconducting transition temperature and upper critical field, data on, 26:54464 (ORNL-TM-3921)
  Pd--Ti, diffusion measurements on, at 600 to 1000°C, 26:53677
TITANIUM BORIDES
  oxidation resistance and sinterability of, effects of metal silicide additions on, 26:53594
  Cr_5Si_3--TiB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  $CrSi_2$--TiB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  Ta_5Si_3--TiB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  $TaSi_2$--TiB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TiB_2--Ti_5Si_3, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TiB_2--$TiSi_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TiB_2--W_5Si_3, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TiB_2--WSi_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
TITANIUM CARBIDES
  fabrication by casting of thermoplastic masses, 26:53586
  mechanical properties and microstructure of, effects of hot working on, 26:53581
  sorptive properties of, effects of electronic structure on, 26:53593
TITANIUM CHLORIDES
  production of, separation of niobium, tantalum, titanium, and zirconium from wastes from, 26:52947 (BM-RI-7671)
TITANIUM HYDRIDES
  Al-base--B_4C--TiH_2, radiation effects on tensile properties of, at cryogenic temperatures for use in NERVA Program, fast neutron, 26:53696 (NASA-TM-X-2440, pp 595-602)
TITANIUM IONS
  phonon resonant scattering at, in alumina single crystals, 26:54978
TITANIUM ISOTOPES Ti-48
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  deuteron elastic scattering at 11.9 MeV, vector-polarized, (E), 26:54572
  neutron radius of, determination from α elastic scattering, (E), 26:54547
TITANIUM ISOTOPES Ti-49
  deuteron elastic scattering at 11.9 MeV, vector-polarized, (E), 26:54572
TITANIUM ISOTOPES Ti-50
  deuteron elastic scattering at 11.9 MeV, vector-polarized, (E), 26:54572
TITANIUM NITRIDES
  sorptive properties of, effects of electronic structure on, 26:53593
TITANIUM OXIDES
  diffusion of niobium, tantalum, titanium, and vanadium in, 26:53677
  reactions with alkali metal halides in carrier distillation process for uranium oxide (U_3O_8), 26:52955 (RT/CHI-(72)4)
  sorptive properties of, effects of electronic structure on, 26:53593
TITANIUM SILICIDES
  TiB_2--Ti_5Si_3, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TiB_2--$TiSi_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
TOBACCO (the commodity)
  analysis for arsenic, bromine, mercury, and selenium by neutron activation, 26:52907
TOKAMAK DEVICES
  plasma instabilities in, growth rates of MHD and tearing-mode, (T), 26:54813
  plasma MHD instabilities in, Toroidal effects on, (T), 26:54806 (CONF-720804-6)
TOKAMAK MODEL ST
  plasma heating by excited waves near ion cyclotron frequency, (E), 26:54752 (CONF-720804-4)
TOWER SHIELDING FACILITY
  neutron attenuation by sodium slabs at, benchmark measurements of, (E/T), 26:55142 (CONF-720901-(Bks.1 and 2), pp 418-30)
  pipe chase mockup in, neutron streaming in sodium filled, (E/T), 26:55394 (CONF-720901-3)
  pipe chase mockup in, neutron streaming in sodium filled, (E), 26:55382 (CONF-720901-(Bks.1 and 2), pp 431-41)
TRACER TECHNIQUES
  development for studies of nutrient cycling in forest floor-arthropod food chains, use of cesium-134 as tracer for potassium and strontium-85 as tracer for calcium, 26:53539(R) (SRO-641-4)
  development of computerized data processing systems for, using chromium-51 and iron-59 together, 26:53544
  facilities for medical, IAEA-WHO survey on world-wide, 26:53413
  method for measuring wear in Diesel engine piston rings and ring grooves using neutron activation, 26:53339 (KFK-1568)
  performance of sodium-24, for measuring catalyst circulation rates in catalytic cracking units, 26:53343
  uses in medicine, training course manual, 26:53541 (TID-26128)
TRANSACTINIDE ELEMENTS
  abundance in primary cosmic radiation, (T), 26:53867
  nuclear binding energies of superheavy, calculation using Hartree--Fock method, (T), 26:54726
  production of superheavy, by xenon reactions with heavy nuclei, 26:54658 (JINR-P7-6523)
  properties of, use of Mendeleev periodic law for prediction of, 26:53053
  search for superheavy, from secondary reactions following proton reactions in tungsten and uranium-238, (E), 26:54672
  synthesis in supernovae, harmonic oscillation-model calculations of termination of r-process, (T), 26:54663
  trapping of superheavy, in geomagnetic field, possible detection of, 26:54047 (NASA-TM-X-2440, pp 548-55)
TRANSDUCERS
  development of probe velocity, for measuring x-ray-produced blowoff impulse from nuclear explosions, 26:53303 (LA-4999)
TRANSFERASES
  isolation and purification of steroid glucuronyl-, from animals and man, 26:55472 (BMBW-FBK-72-9)
  ribonuclease, indium-111 PAC studies of, 26:55058
  role of DNA polymerase in repair of uv-irradiated DNA in microorganisms, 26:53351

TRANSISTORS
fabrication and electrical properties of multilayer gate IGFET, using ion implantation, 26:53314
radiation hardening of bipolar MIS and junction FET, NERVA neutron and gamma, 26:53289 (NASA-TM-X-2440, pp 481-6)
TRANSITION METAL ALLOYS AND SYSTEMS
magnetic properties of, Moessbauer measurements with nickel-61 of, 26:55617 (TID-26159)
TRANSITION METAL BORIDES
nuclear hyperfine interactions in, iron-57 Moessbauer-effect study of, 26:55055 (IS-T-529)
TRANSITION METAL CARBIDES
Co--transition metal carbides, erosion resistance of anodes of, 26:53568
Fe--transition metal carbides, erosion resistance of anodes of, 26:53568
Ni--transition metal carbides, erosion resistance of anodes of, 26:53568
TRANSITION METAL HYDRIDES
properties of ternary and quaternary, literature review on, 26:53558 (UCRL-51244)
TRANSITION METALS
atomic binding energy of 5d, relative to tungsten, 26:53656
compounds, nuclear quadrupole resonance study of halide, 26:55529 (IS-T-526)
crystal lattice deformation in, field-ion microscopy studies of tip--metal contact, 26:53651
magnetic properties of, Moessbauer measurements with nickel-61 of, 26:55617 (TID-26159)
thermal conductivity near upper critical field in dirty superconducting, (T), 26:54451
TRANSPORT THEORY
calculations for dose distributions of π^-, neutrons, and protons, use of computer codes for, 26:54890 (ORNL-TM-3816)
calculations in complex shielding problems, survey of ''benchmark'' needs and problems in, 26:54937 (CONF-720901-(Bks.1 and 2), pp 349-84)
calculations of radiation, discrete-ordinates-to-Monte-Carlo coupling code, DOMINO, for, 26:54872 (CONF-720901-(Bks.1 and 2), pp 499-511)
discrete ordinates method in, effect of singularities in, 26:54482 (INR-P-1405)
TRANSURANIUM ELEMENTS
abundance in primary cosmic radiation, (T), 26:53867
fission fragment tracks from, in natural minerals, study of spontaneous, 26:54670
flux in primary cosmic radiation, (E), 26:53844
phase diagrams of sesquioxides of, p. 42, 26:53066 (ORNL-4794, pp 36-44)
processing of, research on, 26:53066 (ORNL-4794, pp 36-44)
purification of TRU product, pp. 37-8, 26:53066 (ORNL-4794, pp 36-44)
TRANSURANIUM PROCESSING PLANT
operation of, pp. 36-7, 26:53066 (ORNL-4794, pp 36-44)
TRAUMA
radiation effects on recovery from accidental and surgical, in animals and man, whole-body, 26:53419
TRIOCTYLAMINE
effects on solvent extraction of trivalent cerium from hydrochloric acid solution by TTA, synergistic, 26:52952
TRITIUM
content in agricultural products, atmosphere, drinking water, milk, rainwater, and Savannah River in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
content in natural gas stored in underground nuclear cavities, 26:53132(T) (UCRL-Trans-10617-2)
content in nuclearly stimulated natural gas, development of radiation standard for, 26:53134
control, handling, and monitoring of, bibliography on, 26:53155 (MLM-1946)
determination by bremsstrahlung counting, polyethylene containers for, 26:52934 (MLM-1368)
determination by liquid scintillation counting, 26:52935(R) (MLM-1888)
deuteron reactions (d,n) at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)
effects on cells following incorporation into DNA, role of transmutation in lethal and mutagenic, 26:53505
effects on cells following incorporation into DNA, effects of carrier molecule efficiency on RBE in comparison with external x radiation for lethal and mutagenic, 26:53505
effects on Escherichia coli following uptake as labeled oleate, use of lethal, for selective enrichment of altered acyl CoA synthetase mutants, 26:53518
exchange between water and N,N'-bis(3-phenoxyhydroxypropyl)ethylenediamine hydrochloride, 26:53052
incorporation in N,N'-bis(3-phenoxyhydroxypropyl)-ethylenediamine hydrochloride, 26:53052
monitoring in air, gamma compensated flowthrough proportional counter, 26:53216
nuclear magnetic moment of, calculation using quark model, 26:54494 (COO-3001-15)
nuclear magnetic moment of, two-body OPE contributions to isovector, (T), 26:54506
production of, reactor irradiation method and apparatus for, 26:53075(P)
proton elastic scattering at 19 and 30 MeV using polarized beam, differential cross sections and analyzing power for, (E), 26:54521
proton elastic scattering at 6.7 to 14.7 MeV, differential analyzing power and phase-shift analysis of polarized, (E), 26:54518
proton reactions (p,d) at 6.7 to 14.7 MeV, analyzing power for polarized, (E), 26:54517
reactions of atoms of, with glucose and starch, 26:53028 (COO-584-50)
recovery from blankets of controlled thermonuclear reactors, research on methods for, p. 95, 26:53085 (ORNL-4794, pp 91-5)
release in head-end reprocessing of HTGR-type graphite fuel, 26:53078 (CONF-720823-11)
removal from gas streams, design of device for, 26:53313(P)
removal from natural gas stored in nuclear cavities, method for, 26:53128 (ORNL-4794, pp 63-4)
separation from off-gases in reprocessing of LMFBR fuel, pp. 21-2, 26:53082 (ORNL-4794, pp 15-25)
transport through soils, independent test of Argonne model for, 26:53163 (ANL-7860(Pt.3), pp 32-7)
TRITIUM SYSTEMS
D--T, laser beam reactions with solid targets of, fusion reactions from, 26:54830
D--T, thermonuclear reactions from spherical hot-spot in, (T), 26:54831
TRITONS
binding energy, charge radius, and D-state probability of, calculations using very-soft-core Riihimaki potential, (T), 26:54504
interactions ^{3}He + t at 1 to 200 MeV (cms), optical-potential description of phases for scattering, (T), 26:54532
reactions (t,n) with deuterium at 30 keV to 1.5 MeV, calculation of thick target yields for, (T), 26:54502 (SC-RR-720513)
reactions (t,p) with A = 230 to 238 nuclei at 15 to 20 MeV, proton spectra and angular distributions for, (E), 26:54671
reactions (t,p) with iron-57 at 12 MeV, angular distributions for, (E), 26:54592
scattering by iron-57 at 12 MeV, angular distributions and optical model parameters for elastic, (E), 26:54592
TRI-UNIVERSITY MESON FACILITY (TRIUMF)
development of, 1971, 26:53741(R) (NP-19416)
magnet for, history of design of, 26:53749
TROJAN POWER REACTOR, UNIT 1
inspection of, noncompliance activities from, 26:55334 (DOCKET-50344-31)
TRYPTOPHAN
radiation effects on free and bound, in wheat, dose dependence of gamma, 26:53395
TUBES
failure of austenitic steel, effects of sodium--water reactions on, 26:55161 (CONF-710548-, pp 221-42)
failures of sodium--water steam generator, performance and safety aspects of, 26:55159 (CONF-710548-, pp 206-12)
TUNGSTEN
book: Early Transition Metals, 26:52956
compaction of powders of, feasibility of explosive, 26:53619
compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
creep properties of fine wires of pure, doped, and thoriated, at 2450 to 3000°C, 26:53683
crystal structure of, effects of electric pulses on, 26:53668
deformation texture of polycrystalline, following drawing and swaging, 26:53670
deposition by hydrogen reduction of chloride or fluoride, method for chemical vapor, 26:53622
electron reactions with, Auger and direct ionization processes in, 26:54103 (FRNC-CONF-51)
fracture and structure of cast, effects of carbon on, 26:53681
grain structure of, effects of quench sintering on, 26:53662
growth and hardness of spherical agglomerates of, produced from powders, 26:53577
hydrogen dissociation on hot filaments of, ESR study of, 26:55036
incorporation of reinforcing fibers of, in stainless steel with precise alignment and uniform distribution, method for, 26:53629
ion channeling and blocking in single crystals of, 26:54977
ionization of surfaces of, 26:53033 (EUR-4765, pp 117-30)
muon stopping and diffusion in hot foils of, in vacuum, production of muonium by, (E), 26:54096
neutron capture at thermal to 100 keV, cross sections for gamma-ray production in, (E), 26:54960 (NASA-TM-X-2440, pp 500-11)
neutron distributions behind W/Al$_2$O$_3$/W barriers, spatial,

  angular, and energy, 26:54966
  photon reactions (γ,n) at 12 to 23 MeV, neutron spectra from, (E), 26:54563
  production of microspheres of, from powders in rotating container, 26:53577
  properties of sintered powders of, following hydrogen reduction of oxide at 750 to 1050°C, effects of nickel additions on mechanical and physical, 26:53579
  properties of, effects of porosity on bending resistance, elastic, and electric and thermal conductivity, 26:53684
  proton reactions at 28 GeV, yields of actinides and transactinides from secondary reactions following, (E), 26:54672
  radiation effects on recrystallized grain size and recrystallization temperature of ribbons of, α, 26:53711
  rare-gas-ion scattering at 150 to 1000 eV by polycrystalline surfaces of, angular and energy distributions and cross sections for, (E), 26:54083
  reactions of single atoms of, with atomically defined surfaces, 26:53656
  sintering of powders of, mechanism of material transport by dislocation motion in, 26:53620
  sintering of, reduced by hydrogen at 750 to 1050°C, effects of nickel additions on, 26:53579
  solvent properties for nitrogen, effects of temperature and pressure on, 26:53580
  sorptive properties for carbon monoxide, field-emission microscopic study of binding states of, 26:55023

TUNGSTEN ALLOYS AND SYSTEMS
  preparation of strengthened, by powder metallurgical internal oxidation, 26:53616
  Al--Co--Cr--Mo--Ni-base--Ta--Ti--W, sintering and stress-rupture properties of, effects of boron, carbon, and oxygen additions on, 26:53674
  Al--Cr--Mo--Nb--Ni-base--Ta--W, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  Al--Ni-base--W--Zr, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  Cr-base--W--Y, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
  Mo--Ni--W-base, mechanical properties of, effects of heat treatments following sintering on, 26:53679
  Mo--Ni--W-base, preparation and composition of, 26:53679
  Mo--W-base, compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
  N--W, degassing at 1200 to 3000°C in, equilibria and kinetics of, 26:53580
  $PdCl_2$--W, sintering of powders of, mechanism of material transport by dislocation motion in, 26:53620
  Re--ThO_2--W-base, creep properties of, at 1800 to 2200°C, 26:53678
  Re--W-base, compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
  Si--W, diffusion of silicon in W_5Si_3 phase in, at high temperatures, 26:53583
  UN--W, preparation of fuels of, method for, 26:53562(P)
  W--ZrC, evaporation rate at 2600 to 2970°K, effects of tungsten coating on, 26:55022

TUNGSTEN CARBIDES
  fabrication by hot isostatic pressing, 26:53578
  formation in field-ion microscope tubes, studies on, 26:53560
  growth and hardness of spherical agglomerates of, produced from powders, 26:53577
  production of microspheres of, from powders in rotating container, 26:53577
  production of powders of, from scrap, Coldstream process for, 26:53591
  sintering of, effects of annealing and ball milling on, 26:53576

TUNGSTEN ISOTOPES W-188
  beta decay of, γ spectra from, (E), 26:54637
  beta decay of, interpretation of forbidden $0^+ \to 0^+$, (E/T), 26:54641

TUNGSTEN OXIDES
  growth and hardness of spherical agglomerates of, produced from powders, 26:53577
  production of microspheres of, from powders in rotating container, 26:53577
  reduction by hydrogen at 750 to 1050°C, effects of nickel additions on, 26:53579

TUNGSTEN SILICIDES
  TiB_2--W_5Si_3, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TiB_2--WSi_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  W_5Si_3--ZrB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594
  WSi_2--ZrB_2, oxidation resistance and sinterability of, at high temperatures, 26:53594

TUNNELS
  development for utility installations, 26:55484 (CONF-720925-3)

TURBINES
  heat exchangers for nuclear-heated gas, computer program for performance analysis of, 26:53114
  steam--water flow in, equipment and methods for studying, 26:53124

TURKEY POINT POWER REACTOR, UNIT 3
  diesel generator for, failure of required test output for emergency, 26:55249 (DOCKET-50250-94)
  power tilt limits for, revised technical specifications for reduction of, 26:55282 (DOCKET-50250-93)
  pump for, failure of packing for charging, 26:55249 (DOCKET-50250-94)
  residual heat removal system for, failure of packing on gate valve in suction line from, 26:55248 (DOCKET-50250-92)
  safety injection systems for, unplanned simultaneous activation of, 26:55249 (DOCKET-50250-94)

TURKEY POINT POWER REACTOR, UNIT 4
  diesel generator for, failure of required test output for emergency, 26:55249 (DOCKET-50250-94)
  pump for, failure of packing for charging, 26:55249 (DOCKET-50250-94)
  residual heat removal system for, failure of packing on gate valve in suction line from, 26:55248 (DOCKET-50250-92)
  safety injection systems for, unplanned simultaneous activation of, 26:55249 (DOCKET-50250-94)

TZM (MOLYBDENUM ALLOY)
  compatibility of fuel capsules of, with plutonium-238 oxide fuels, 26:53551(R) (MDC G-3153)
  composition, microstructure, and physical properties of forged, 26:53673
  fabrication of 1300 kg powder metallurgy billets of, by forging, 26:53673
  fabrication of sintered, growth and recrystallization studies on, 26:53624
  properties and uses of, review on corrosion resistant, oxidation resistant, and physical, 26:53672

U

UDIMET 700
  production and properties of high-density powder metallurgy components of, for use at high temperatures, 26:53631

ULTRASONIC TESTING
  method for metallic welds, 26:53126(P)
  reliability for in-service inspection of reactor pressure vessels, improvement of conventional, 26:55222(R) (NP-19338(Vol.2))

ULTRAVIOLET RADIATION
  effects on Aspergillus niger, mutagenic for citric acid production, 26:53380
  effects on Aspergillus, mutagenic for antibiotic production, 26:53393
  effects on bacterial spores on space vehicle components, dose dependence of sterilizing, 26:53367(R) (SC-RR-720516)
  effects on cultured Chinese hamster cells in comparison to effects of chemical mutagens and x radiation, effects of dose and post-exposure culture medium on frequency of mutagenic, 26:53362
  effects on DNA in bacteriophages in relation to molecular structure, 26:53373
  effects on DNA in cultured mammalian cells and microorganisms, role of repair processes in recovery from lethal and mutagenic, review of, 26:53357
  effects on DNA in microorganisms, review of role of enzymes in repair of, 26:53351
  effects on DNA in microorganisms, role of enzymes in repair of, 26:53350
  effects on Eremothecium ashbyii (fungi) in relation to riboflavin production, mutagenic, 26:53374
  effects on Escherichia coli, comparison of dose-response kinetics and photoreactivation of 254 nm and 313 nm, 26:53370
  effects on Escherichia coli, effects of tryptophan starvation on mutagenic, 26:53379
  effects on mouse lymphoma cells in cultures, effects of dose on proliferation and survival of, 26:53356
  effects on Saccharomyces cerevisiae, effects of photoreactivation repair mechanism on frequency of mutagenic, 26:53375
  effects on Schizosaccharomyces pombe, correlation between induced mitotic recombination and repair mechanisms for, 26:53371
  effects on Schizosaccharomyces pombe, inhibitory effects of caffeine on recombinational repair mechanisms for, 26:53371
  effects on survival of Streptomyces coelicolor, method for genotypic classification of mutants sensitive to, 26:53378
  effects on wallaby cells in culture, effects of dose on chromosome aberration rate, DNA synthesis, mitosis rate, reproduction, and survival time, 26:53353 (UR-3490-194)
  emission during weak breakup of aurora, sounding-rocket observation on Feb. 18, 1970 of strong extreme, (E), 26:54030

UNITED KINGDOM
  nuclear power growth in, 26:55088
  nuclear power plant development in, 26:55087
  power developments during 1970-71, survey of nuclear and thermonuclear, 26:55084(R) (INIS-mf-212)

- power requirements in, comparison with Sweden, 26:53102

UNITED STATES
- electric power generation in, legal methods for controlling demand for increased, 26:53101
- energy production, sources, and uses in, graphic and tabulated data on, 26:53096 (UCRL-51221)
- energy technology in, assessments of, 26:55085
- nuclear power plants in, complete testing of, 26:55214 (WASH-1208(9-72))
- power reactor development during 1972 to 1985, 26:55267 (WASH-1139(Rev.1))
- radiation protection standards for, role of Health Physics Society in development of, 26:54918
- radiation protection standards in, role of American National Standards Institute in development of, 26:54916
- radiation protection standards in, role of National Council on Radiation Protection and Measurements in development of, 26:54915

UNIVERSE
- models in scalar--tensor gravitation theory for observable, 26:54396 (ITF-72-41-P)
- perturbations in expanding, of free particles, (T), 26:53997
- scalar--tensor field equations in matter, (T), 26:53998

URANIUM
- complexes of tetravalent, preparation of alkyl and aryl, 26:53047
- complexes, formation with nicotinic, picolinic, and α-quinolinecarboxylic acids in water and alcohol, 26:53054
- complexes, spectra of dioxobisbenzoatodiaquouranyl(VI), ir, 26:53042
- content in alkali olivine basalt in USSR, (E), 26:53147
- content in upper Jurassic black bituminous argillites of West Siberian plate, 26:53146
- critical control parameters for 6 percent or less enriched, 26:53733 (WCAP-2999)
- determination in comparison with thorium content in standard samples by γ spectroscopy, 26:52941
- determination in ores by x-ray fluorescence method, photometric method for calibrating, 26:52922
- determination in organometallic compounds using oxine method after combustion, gravimetric or titrimetric, 26:52930
- determination in steels by extraction--photometric method, 26:52922
- determination in water samples by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
- determination of hexavalent, in aqueous and nonaqueous solutions using 1,3-diphenyl-1,3-propanedione, standardization of spectrophotometric, 26:52920 (RT/CHI-(72)3)
- determination of, radiometric, 26:52942
- distribution between liquid bismuth and MSBR fuel salt, pp. 6-7, 26:53081 (ORNL-4794, pp 1-14)
- distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
- enrichment by gaseous diffusion process, method for calculation of flow rate in step cascades for, 26:53329
- enrichment of, review of centrifugation, electromagnetic, gaseous diffusion, and thermal diffusion methods of, 26:52977
- ionization of surfaces of, 26:53033 (EUR-4765, pp 117-30)
- neutron reactions with bare fast multiplying systems of, Storrer--Stievenart analysis of pulsed, (T), 26:54483 (JAERI-M-4652)
- neutron transmission and self-indication measurements in depleted, 26:54656(R) (COO-3058-21)
- neutron transmission and self-indication ratio measurements in depleted, temperature-dependent, (E), 26:54477 (CONF-720901-(Bks.1 and 2), pp 1115-26)
- proton reactions at 2.25 MeV, x-ray fluorescence spectrum from, (E), 26:53803
- reactions of tetravalent, with trivalent chlorine in presence of phenol in aqueous acid solution, kinetics and mechanism of oxidation--reduction, 26:53051
- reactions of tetravalent, with trivalent chlorine, in presence of phenol in aqueous acid solutions, mechanism and kinetics of oxidation--reduction, 26:53044
- separation from impurities by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)
- separation from molten fluoride salts by oxide precipitation, pp. 12-14, 26:53081 (ORNL-4794, pp 1-14)
- separation from ores in South Africa, 26:55453(R) (NP-19410)
- separation from ores, review on, 26:52977
- separation from phosphoric acid by solvent extraction using DEHPA and TOPO, pp. 55-7, 26:53084 (ORNL-4794, pp 54-62)
- separation from phosphoric acid by solvent extraction using mixture of mono- and dioctylphenyl phosphates, pp. 55-7, 26:53084 (ORNL-4794, pp 54-62)
- separation from plutonium, residue adsorption and anion exchange methods for, 26:52935(R) (MLM-1888)
- separation from spent molten salt fuel by fluorination and reductive extraction methods, 26:53086(P)
- separation from sulfuric acid solutions by solvent extraction using primary amine pp. 57-61, 26:53084 (ORNL-4794, pp 54-62)
- separation of hexavalent, by ion exchange using diethylaminoethylcellulose, 26:52951
- shipping of slightly enriched billets, ingots, and fuel cores of, design of wooden container for, 26:53737
- sorption of hexavalent, on diethylaminoethylcellulose in methanol--thiocyanate--hydrochloric acid media, 26:52951

URANIUM ALLOYS AND SYSTEMS
- Al--U, fission product release from irradiated foils of, mechanisms and measurement of recoil gaseous, 26:53694 (JAERI-Memo-3936)
- Mo--U-base, corrosion of wires of, ion microscopy studies of stress, 26:53610
- Nb--U-base, stress corrosion cracking by sodium chloride sprays, protective effects of epoxy-primed polyurethane-painted surface on, 26:53607 (RFP-1891)
- Nb--U-base, stress corrosion cracking of overaged and underaged, by aqueous chloride solutions, 26:53608 (RFP-1904)
- Nb--U-base--Zr, tensile properties of polycrystalline, as function of strain rate, 26:53691

URANIUM CARBIDES
- crushing and combustion of TRISO-coated, fission product release in, 26:53078 (CONF-720823-11)
- preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)
- PuC--UC, preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)

URANIUM CARBONITRIDES
- preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)
- PuCN--UCN, preparation by carbothermic method, research progress on, p. 86-7, 26:53554 (ORNL-4794, pp 84-7)

URANIUM CHLORIDES
- $LiCl--UCl_3--UCl_4$, melting point diagrams for, 26:53721

URANIUM CHLORIDES UCl_4
- complexes with nicotinic, picolinic, and α-quinolinecarboxylic acids in water and alcohol, spectrophotometric studies of, 26:53054

URANIUM DEPOSITS
- formation in Grants Region, N. Mex. sandstone, trend orebody studies of, 26:53144 (GJO-936-2)
- geology of Fay Mine, in Saskatchewan, 26:53145
- prospecting for south Texas, Conquista Project for, 26:53148
- roll formation and migration in Wyoming, physical and chemical factors responsible for, 26:53143 (GJO-936-1)

URANIUM FLUORIDES UF_4
- analysis for uranium-235, system for neutron interrogation, 26:53217
- reactions with uranium hexafluoride in molten beryllium fluoride--lithium fluoride--thorium fluoride, p. 6, 26:53081 (ORNL-4794, pp 1-14)

URANIUM FLUORIDES UF_6
- handling procedures and container criteria for, description of USAEC, 26:53735 (ORO-651(Rev.3))
- reactions with uranium tetrafluoride in molten beryllium fluoride--lithium fluoride--thorium fluoride, p. 6, 26:53081 (ORNL-4794, pp 1-14)
- uranium-235 concentration in, review of methods for, 26:53328

URANIUM ISOTOPES
- determination in Eurex process solutions by mass spectrometry, 26:52918 (EUR-4765, pp 91-115)

URANIUM ISOTOPES U-232
- determination in plutonium-238 and uranium-234 by hydrolysis, residue adsorption, and α spectroscopy, 26:52935(R) (MLM-1888)

URANIUM ISOTOPES U-233
- purification of, p. 51, 26:53552 (ORNL-4794, pp 45-51)
- separation from thorium,, 26:52977
- storage and distribution of, p. 51, 26:53552 (ORNL-4794, pp 45-51)

URANIUM ISOTOPES U-234
- content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- determination in plutonium-238 and uranium-232 by hydrolysis, residue adsorption, and α spectroscopy, 26:52935(R) (MLM-1888)
- energy levels from two-nucleon transfer reactions, calculation using quadrupole pairing correlations, 26:54731
- purification of, anion exchange method for, 26:52935(R) (MLM-1888)
- triton reactions (t,p) at 15 to 20 MeV, proton spectra and angular distributions for, (E), 26:54671

URANIUM ISOTOPES U-235
- alpha fission at 24.5 to 28.0 MeV, excitation function for, (E), 26:54665
- alpha reactions (α,3n) and (α,t) at 24.5 to 28.0 MeV, excitation function for, (E), 26:54665
- concentration in uranium hexafluoride, review of methods for, 26:53328
- content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
- determination in containers, system for neutron interrogation, 26:53217
- neutron fission at thermal and 14 MeV energies, delayed neutron spectra from, (T), 26:54655 (CONF-720901-(Bks.1 and 2), pp 687-99)

- neutron fission of, delayed neutron spectra from, (E), 26:54660(R) (RLO-2225-T-17-4)
- neutron fission of, independent yields of krypton and xenon isotopes in thermal, (E), 26:54667
- neutron fission of, survey on cross section data for, 26:54657 (FEI-292)
- neutron fission of, yields for thermal, (E), 26:54626
- neutron spectra from homogeneous sphere containing, benchmark calculations for, 26:54486 (RISO-M-1526)
- proton reactions at 0.7 GeV, calculation of spallation--fission competition using intranuclear-cascade model, (T), 26:54666

- URANIUM ISOTOPES U-236
  - triton reactions (t,p) at 15 to 20 MeV, proton spectra and angular distributions for, (E), 26:54671
- URANIUM ISOTOPES U-238
  - alpha reactions (α,2n) at 25 MeV, conversion-electron spectra from, (E), 26:54664
  - content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  - decay of, γ-ray energies and intensities from, (E), 26:54652 (ANCR-1069)
  - neutron absorption by, Doppler effect in fast, 26:54479 (CONF-720901-(Bks.1 and 2), pp 1152-65)
  - neutron capture at 24.3 keV, TOF cross-section measurements using iron-filtered beam, (E), 26:54597 (CONF-720901-(Bks.1 and 2), pp 1107-14)
  - neutron capture at thermal to 100 keV, cross sections for gamma-ray production in, (E), 26:54960 (NASA-TM-X-2440, pp 500-11)
  - neutron capture by, survey of cross section data for, 26:54657 (FEI-292)
  - neutron capture near 24.3 keV, pulse height spectra and relative cross section for, (E), 26:54656(R) (COO-3058-21)
  - neutron fission at 14 MeV, delayed neutron spectra from, (E), 26:54655 (CONF-720901-(Bks.1 and 2), pp 687-99)
  - neutron fission at 14 MeV, method for determining lifetime of compound nucleus in, (E), 26:54669
  - neutron reactions (n,f) at 14.8 MeV, cadmium-115 isomer ratios in, (E), 26:54628
  - proton reactions at 0.15 to 3 GeV, calculation of spallation--fission competition using intranuclear-cascade model, (T), 26:54666
  - proton reactions at 12 and 28 GeV, yields of actinides and transactinides from secondary reactions following, (E), 26:54672
  - reactivity worth measurements in ZPPR-2 on, effects of core configuration on Doppler, 26:55393 (CONF-720901-(Bks.1 and 2), pp 1006-15)
  - triton reactions (t,p) at 15 to 20 MeV, proton spectra and angular distributions for, (E), 26:54671
- URANIUM METAPHOSPHATES
  - preparation and structure of, 26:53045
- URANIUM NITRIDES
  - electric conductivity and thermoelectric power of, (E), 26:55027
  - fabrication of high-density, by sintering, 26:53581
  - ThN--UN, electric resistivity, thermal conductivity, and thermoelectric power of, (E), 26:55027
  - UN--W, preparation of fuels of, method for, 26:53562(P)
- URANIUM ORES
  - analysis of standard, for thorium and uranium by γ spectroscopy, 26:52941
  - mining and milling of south Texas, equipment and methods in Conquista Project for, 26:53148
  - processing of, review on, 26:52977
- URANIUM OXIDES UO_2
  - content in reactor fuels during fuel fabrication, automatic on-line system for weighing and recording, 26:53723
  - critical control parameters for 6 percent or less enriched, 26:53733 (WCAP-2999)
  - densification of, review on effects of chemical, physical, physicochemical, and process variables on, 26:53547 (AREAEE-135)
  - dissolution in aqueous solutions, potentiostatic studies on anodic, 26:53035 (NIM-1448)
  - fission gas bubble nucleations and migration in, mechanisms of, 26:53565
  - gamma scanning of irradiated pellets of, self-absorption corrections for, 26:53041 (UJV-2867-M,A)
  - oxidation of colloidal, 26:53067 (ORNL-4794, pp 88-90)
  - oxidation of fuel pellets of, during hydrogen sintering, 26:53563
  - pore migration in, effects of impurity additions on thermal gradient-induced lenticular, 26:53559
  - preparation of microspheres of, sol-gel process development for, p. 45, 26:53552 (ORNL-4794, pp 45-51)
  - preparation of microspheres of, using ion exchange resins, pp. 47-9, 26:53552 (ORNL-4794, pp 45-51)
  - preparation of sinterable powders of, conditions and method for, 26:53546 (AREAEE-134)
  - preparation of uranium-233-enriched, for light-water breeder reactors, research progress on, 26:53553 (ORNL-4794, pp 52-3)
  - production by reduction of uranium trioxide powders, 26:53548 (AREAEE-139)
  - radiation effects on fuel particles of, equipment and methods for studies of, 26:53555 (RD/B/N-2214)
  - sintering kinetics of, effects of green density on initial-stage, 26:53597
  - sintering of, nonisothermal method for studying initial-stage, 26:53595
  - sintering of, review on mechanism of activated, 26:53587
  - Mo--UO_2, fabrication of, review on methods for, 26:53592
  - PuO_2--UO_2, corrosive effects on stainless steel of fission products of, effects of burnup on, 26:55187 (EURFNR-989)
  - PuO_2--UO_2, oxidation of unirradiated fuels of, p. 84-5, 26:53554 (ORNL-4794, pp 84-7)
  - PuO_2--UO_2, preparation of by sol-gel process, research progress on, p. 85-6, 26:53554 (ORNL-4794, pp 84-7)
  - PuO_2--UO_2, properties of fuels of, mechanical, physical, and thermal, (E), 26:55189(R) (GEAP-10028-39)
  - PuO_2--UO_2, radiation effects testing of fuels of, 26:55189(R) (GEAP-10028-39)
  - PuO_2--UO_2, reactivity of fuel elements of, effects of grain size of plutonium oxide in, 26:55416(R) (BNWL-1522-5)
  - PuO_2--UO_2-base, deformation and fracture of, effects of temperature and strain rate on, 26:53545 (ANL-7945)
  - ThO_2--UO_2, crushing and combustion of BISO-coated, fission product release in, 26:53078 (CONF-720823-11)
- URANIUM OXIDES UO_3
  - analysis for uranium-235, system for neutron interrogation, 26:53217
  - reduction of powders of, by ammonia or hydrogen, factors affecting, 26:53548 (AREAEE-139)
- URANIUM OXIDES U_3O_8
  - analysis for uranium-235, system for neutron interrogation, 26:53217
  - purification by carrier distillation using alkaline halides, thermochemical reactions in, 26:53719
  - requirements in power production 1980 to 2000, calculations of, 26:55093
  - spectra of, reactions of alkali metal halides with oxide impurities in carrier distillation process for production of, 26:52955 (RT/CHI-(72)4)
- URANIUM RESERVES
  - estimates in South Africa, 26:55453(R) (NP-19410)
- URANYL COMPOUNDS
  - reactions with hydrofluoric acid and hydroxylamine, production of ammonium uranium pentafluoride by, 26:53049(P)
- URANYL NITRATES
  - analysis for uranium-235, system for neutron interrogation, 26:53217
  - effects on rat kidneys uptake of organic bases, 26:53537
  - preparation of clear solutions of, by fractional dissolution of crude sodium diuranate, 26:52976 (IEA-250)
- UREA, 1-METHYL-1-NITROSO-
  - effects on cultured Chinese hamster cells in comparison to effects of 5-bromodeoxyuridine, uv radiation, and x radiation, effects of dose and post-exposure culture medium on frequency of mutagenic, 26:53362
- URETHAN POLYMERS
  - protective properties of painted surfaces of, against stress corrosion cracking of niobium--uranium-base alloys, 26:53607 (RFP-1891)
- URIDINE, 5-BROMO-2'-DEOXY-
  - effects on cultured Chinese hamster cells in comparison to effects of N-nitrosomethylurea, uv radiation, and x radiation, effects of dose and post-exposure culture medium on frequency of mutagenic, 26:53362
- URINARY TRACT
  - radioinduced fistulas in human, following therapy of rectal and uterine neoplasms, surgical treatment of, 26:53438
- URINE
  - analysis for plutonium by radiochemical methods using ion exchanger filter, 26:52940
- UTERUS
  - radiation dosimetry in, thermoluminescent dosimeter for long term, 26:53238

V

- VACCINES
  - effectiveness of irradiated metacercariae as, for immunization of cattle against fascioliasis, 26:53498(R) (PRNC-156)
  - effectiveness of x-irradiated Dictyocaulus larvae as, for immunization of cattle, 26:53503
- VACUUM
  - bibliography on surface and vacuum physics, 26:54085
  - measurement of ultrahigh, equipment and methods for, 26:53140
  - production of ultrahigh, for industrial and scientific uses, equipment and methods for, 26:53140
- VACUUM GAGES
  - calibration of, methods for, 26:53300 (EUR-4797)
- VACUUM PUMPS
  - design and performance of improved ion-type, 26:53141(P)
  - performance of cryogenic, in ultrahigh vacuum unit for film deposition, 26:53139
- VACUUM SYSTEMS
  - controls for automatic, design of pneumatic logic, 26:55629 (UCRL-73921)
  - design of ultrahigh evaporation unit for deposition of thin films, 26:53139

VACUUM TECHNIQUES
  conference on application to semiconductors and electronics, Versailles, France, Sept. 13, 1971, 26:53138
VALVES
  design criteria for nuclear service, development program for, 26:55207(R) (ORNL-TM-3900)
  standards for butterfly-type isolation, 26:53111 (RDT-E-1-13-T(8-72))
VAN ALLEN RADIATION BELTS
  dose and dose rate from, for space vehicle design and mission planning, 26:54952 (NASA-TM-X-2440, pp 170-7)
  electron fluxes trapped in, temporal variations in, 26:54046 (NASA-TM-X-2440, pp 539-47)
  electron injection and effects from high-altitude nuclear explosions, 26:54044 (NASA-TM-X-2440, pp 178-92)
  particles in, performance of high-resolution particle identifier for detection and measurement of, (T), 26:53280
  radiation dose and LET measurements on OV1-19 satellite, April--Dec. 1969, 26:54048 (NASA-TM-X-2440, pp 561-8)
VAN DE GRAAFF ACCELERATORS
  experimental facilities for EN tandem, pulsed-beam neutron time-of-flight, 26:54467(R) (ORO-2972-204)
VANADIUM
  book: Early Transition Metals, 26:52956
  determination in geochemical standards by atomic absorption using nitrous oxide--acetylene flame, 26:52921
  determination in mineral oil by neutron activation, 26:52905
  determination in silicate rocks by paper chromatography, neutron activation, and γ spectrometry, 26:52909
  determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  determination in water, effects of large amounts of copper on spectrographic, 26:52927
  diffusion in aluminum nitride, silicon nitride, and titanium dioxide, 26:53677
  effects on neutron radioinduced strengthening of chromium--iron welds, iron, and pressure vessel steel, 26:53710
  fabrication by rolling at high temperature under vacuum, 26:53630
  superconducting transition in, use of acoustical measurements for, 26:54439
VANADIUM ALLOYS AND SYSTEMS
  Al--Mo--Ti-base--V, crack propagation and embrittlement by gaseous hydrogen, mechanism of, 26:53685
  Al--Ti-base--V, fracture toughness of $\alpha + \beta$ and β processed, at room and subzero temperatures, measurement of plane strain, 26:53661
  Co--V, vanadium-51 NMR quadrupole splitting in sigma-phase, effects of composition on intensity of, 26:55056
  Ni--V, ordering transformation in Ni_2V, 26:53659
  Pd--V, diffusion measurements on, at 608 to 1300°C, 26:53677
VANADIUM IONS
  phonon resonant scattering at, in alumina single crystals, 26:54978
VANADIUM ISOTOPES V-46
  beta decay of, electromagnetic corrections to ft values for, (T), 26:54713
VANADIUM ISOTOPES V-49
  abundance in iron meteorites, (T), 26:53808(T) (ORNL-tr-2620)
  energy level at 153 keV from titanium-48 (p,γ) reactions, g factor and lifetime of, (E), 26:54574
VANADIUM ISOTOPES V-51
  nuclear magnetic resonance quadrupole splitting in sigma-phase vanadium--cobalt alloys, 26:55056
VANADIUM OXIDES
  phase transition in VO_2 single crystals, Raman-scattering study of phonon spectrum in semiconductor--metal, (E), 26:55043
VEGETABLES
  analysis for mercury by neutron activation, 26:52911
VEHICLES
  exhaust emissions from transportation, computer and manual methods for calculating, 26:55467 (ANL/ES-15)
  propulsion of automotive, nonconventional two-cycle engines for, 26:53103
VELOCITY
  measurement of x-ray-produced blowoff, in nuclear explosions, development of probe velocity transducer for, 26:53303 (LA-4999)
VENUS (PLANET)
  dayglow emission from atmosphere of, relation with electron impact excitation cross sections and energy degradation in carbon monoxide, (E/T), 26:54008
VERMONT YANKEE POWER REACTOR
  operation of, temporary license for, 26:55256 (DOCKET-50271-101)
  site for, environmental radiation survey during January to June 1972, 26:55255 (DOCKET-50271-100)
VIBRATING REED ELECTROMETERS
  improvement of Shonka, 26:53196(R) (COO-323-28)
VIRGIL C. SUMMER POWER REACTOR, UNIT 1
  auxiliary system for, revised and additional data on, 26:55344 (DOCKET-50395-28)
  containment system for, revised and additional data on, 26:55344 (DOCKET-50395-28)
  engineered safeguards for, revised and additional data on, 26:55344 (DOCKET-50395-28)
  instrumentation for, revised and additional data on, 26:55344 (DOCKET-50395-28)
  power conversion system for, revised and additional data on, 26:55344 (DOCKET-50395-28)
  site for, revised and additional data on, 26:55344 (DOCKET-50395-28)
  structures for, revised and additional data on, 26:55344 (DOCKET-50395-28)
VISION
  diagnosis of visual fields, modeling of visual pathway for interactive, 26:55466 (ANL-7858)
  photoinitiated processes in, 26:55495(R) (COO-1627-22)
  photoinitiated processes in, 26:55496(R) (COO-1627-23)
  radiation effects on human visual response following retinal exposure, effects of particle flux density on charged helium ion, 26:53403 (NASA-TM-X-2440, pp 416-22)
  radiation effects on human, following therapy of nasal carcinomas, γ and x, 26:53444
VITAMIN B GROUP
  B_{12}, determination in blood by radiochemical method, 26:52938
  pantothenic acid, radioprotective effects of, in combination with AET on mice, whole-body x, 26:53481
VITAMINS
  radiation effects on content of, in wheat, wheat bread, and wheat flour, gamma, 26:53344

W

WASHINGTON
  zinc-65 distribution and concentration in benthic fauna from continental shelf of, 26:53149 (RLO-2227-T-12-26)
WASPALOY
  production and properties of high-density powder metallurgy components of, for use at high temperatures, 26:53631
WATER
  analysis for heavy metals, effects of large amounts of copper on spectrographic, 26:52927
  analysis for trace elements by spark-source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
  analysis of deuterium-depleted, for hydrogen isotopes using distillation column and mass spectroscopy, 26:52913(T) (AEC-tr-7345)
  chemical oxygen demand of, use of perchloratocerate reagent and fluorometric determination of cerium for measurement of, 26:52915 (CONF-720827-2)
  corrosive effects on copper/steel, Inconel/Zircaloy-2, steel/Zircaloy-2, and Zircaloy-2/Zircaloy-2 couples, fretting, 26:53609 (RT/ING-(72)7)
  corrosive effects on zirconium and zirconium alloys at high temperatures, factors controlling, 26:53614
  cosmic secondary particle dose calculations, heavy galactic, 26:54878 (NASA-TM-X-2440, pp 104-7)
  decontamination of radioactively contaminated, by coagulation, use of organic flocculants in, 26:53040 (SZS-129)
  electron energy spectrum in, irradiated with 10- to 20-MeV electron beams, 26:54894
  lectures at Physics Laboratory of Istituto Superiore di Sanita, Rome, July--Dec. 1970, 26:54162 (ISS-71/31)
  mass transfer from sol droplets, p. 93, 26:53085 (ORNL-4794, pp 91-5)
  muon (μ^-) depolarization in aqueous solutions and pure, effects of chemical reactions, hydrogen peroxide concentration, and temperature on, 26:54099
  radioactivity monitoring of, in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
  radiolytic reactions in, kinetic data on, 26:55416(R) (BNWL-1522-5)
  reactions with liquid sodium, design of equipment for studying, 26:55153 (CONF-710548-, pp 57-104)
  reactions with sodium from 350 to 600°C, effects on rupture of austenitic steel of, 26:55161 (CONF-710548-, pp 221-42)
  reactions with sodium in steam generators, tube damage from, 26:55150 (CONF-710548-, pp 1-16)
  reactions with sodium, brief summary of studies in Italy on, 26:55160 (CONF-710548-, pp 213-20)
  reactions with sodium, conference on, 26:55149 (CONF-710548)
  reactions with sodium, effects on temperature and pressure of, 26:55152 (CONF-710548-, pp 39-56)
  reactions with sodium, kinetics of, 26:55155 (CONF-710548-, pp 129-54)
  reactions with sodium, pressure wave from, 26:55157 (CONF-710548-, pp 171-86)
  reactions with sodium, summary of study of large scale, 26:55158 (CONF-710548-, pp 187-205)
  reactions with sodium, use of hydrogen detectors for detection of, 26:55156 (CONF-710548-, pp 155-70)
  H_2O--steam, flow in turbines, equipment and methods for studying, 26:53124
WATER-d_2
  production of, advantages of ammonia isotopic exchange process for, 26:53088

  requirements in power production 1980 to 2000, calculations of, 26:55093

WATER-t
  separation from environmental samples by freeze drying, equipment for, 26:53151 (ANL-7860(Pt.3), pp 45-50)

WATER-t$_2$
  disposal of, generated in natural gas reservoirs produced by nuclear explosions, 26:53128 (ORNL-4794, pp 63-4)

WATER VAPOR
  electron interaction with, atomic processes and energy deposition, applications in atmospheric sciences of, (E/T), 26:54033
  radioinduced ionization of undeuterated and deuterated, energy for ion pair formation in beta, 26:53196(R) (COO-323-28)
  reactions on chromium, iron, or nickel, hydrogen production by, 26:52975(P)

WATERFORD POWER REACTOR, UNIT 3
  owners of, financial data on, 26:55260 (DOCKET-50382-36)

WATTS BAR POWER REACTOR, UNIT 1
  auxiliary building crane for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  component cooling water system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  compressed air system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  containment purge supply and exhaust system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  cooling system for, design stress limits for, 26:55342 (DOCKET-50390-23)
  fire protection system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  flood level maximum for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  instrument room for, fire protection for cables in auxiliary, 26:55342 (DOCKET-50390-23)
  instrumentation display system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  protection system for, design seismic stresses on, 26:55343 (DOCKET-50390-24)
  safety analysis reports, index to, 26:55213 (FIND-50390(8-72))
  site for, revised and additional data on, 26:55342 (DOCKET-50390-23)

WATTS BAR POWER REACTOR, UNIT 2
  auxiliary building crane for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  component cooling water system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  compressed air system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  containment purge supply and exhaust system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  cooling system for, design stress limits for, 26:55342 (DOCKET-50390-23)
  core support structures for, design stress limits for, 26:55342 (DOCKET-50390-23)
  fire protection system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  flood level maximum for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  instrument room for, fire protection for cables in auxiliary, 26:55342 (DOCKET-50390-23)
  instrumentation display system for, revised and additional data on, 26:55342 (DOCKET-50390-23)
  protection system for, design seismic stresses on, 26:55343 (DOCKET-50390-24)
  safety analysis reports, index to, 26:55213 (FIND-50390(8-72))
  site for, revised and additional data on, 26:55342 (DOCKET-50390-23)

WEISWEILER POWER REACTOR
  coolant activation in, (T), 26:55169 (CONF-710959-, Paper 13)
  coolant flow in, effects of partial blockage in fuel element assemblies on distribution of, 26:55176 (KFK-1548)
  cooling systems of, corrosion problems in, (E/T), 26:55168 (CONF-710959-, Paper 12)
  cooling systems of, effects of temperature on corrosion product deposits in, (E/T), 26:55168 (CONF-710959-, Paper 12)
  cooling systems of, sources of radioactivity in, (T), 26:55169 (CONF-710959-, Paper 13)
  design basis accidents in, effects of fission product release on, (T), 26:55169 (CONF-710959-, Paper 13)
  design parameters of, summary of, 26:55096
  development of, program for, 26:55098
  development of, program for, 26:55097
  development program for, 26:55095
  fuel element cladding of, effects on coolant contamination of defects in, (T), 26:55169 (CONF-710959-, Paper 13)
  steam generators for, leak testing of straight tube models of, 26:55151 (CONF-710548-, pp 17-38)
  structural materials in, effects on coolant contamination of corrosion of, (T), 26:55169 (CONF-710959-, Paper 13)

WELDING
  equipment and methods for electron beam, of thick metal sheets, 26:53633

WELDS
  inspection of metallic, for defects, ultrasonic method for, 26:53126(P)
  mechanical properties of, in low-alloy steel at 900 to 1300°F, literature review on, 26:53638 (ORNL-4781)
  mechanical properties of, in Types 304 and 316 stainless steel at 900 to 1300°F, literature review on, 26:53638 (ORNL-4781)

WELL LOGGING
  interpretation of data from continuous gamma, differential, 26:53173 (INP-793)

WHISTLERS
  propagation of magnetospheric monochromatic vlf, effect of nonlinear phenomena on, (E/T), 26:54050
  refractive index and attenuation surfaces in vicinity of cross-over level, (T), 26:54015

WHITE OAK LAKE
  cesium-137 cycling in fish in, 26:53535

WILLIAM H. ZIMMER POWER REACTOR, UNIT 1
  effluents from, effects on environment of chemical, radioactive, and thermal, 26:55337 (DOCKET-50358-41)
  operation of, cost-benefit analysis for, 26:55337 (DOCKET-50358-41)
  site for, ecology, geology, hydrology, and meteorology of, 26:55337 (DOCKET-50358-41)

WIND TUNNELS
  Magnus force and moment measurements in NOL Supersonic, 26:55596 (SC-CR-723162)

WIRES
  sparkostriction in, laser-based study output pulses from, 26:53222

WOOD
  plastics--wood, preparation and properties of, produced by radioinduced polymerization, 26:53722

WYLFA REACTORS
  performance during first 18 months operation, summary of, 26:55269

X

X RADIATION
  absorbed dose and effective energy distribution under screen filter in tissue-equivalent phantom, (E), 26:54911
  attenuation by lead, 50- to 300-kVp broad-beam, (E), 26:54904
  cosmic background, intensities of lines in the 0.25- to 1-keV range, (E/T), 26:53815
  cosmic background, inverse Compton models for, (E/T), 26:54000
  detection of soft cosmic, thin polypropylene window proportional counters for, 26:53206
  detection of, design and performance of position-sensitive proportional counter for, 26:53221
  disintegration of high Z nuclei in pulsar environment, (T), 26:53857
  dose across plane bone--tissue interface, contribution of photoelectrons to, (T), 26:54896
  dose to bone marrow and eyes of medical personnel during arteriography, measurement of, 26:53443
  dose to children during diagnostic radiography, methods for reducing, 26:53417
  dose to human gonads and stomach wall during diagnostic radiography of stomach, x, 26:53427
  dose to man during diagnostic radiography, phantom studies for predetermination of absorbed, 26:53416
  dose to man during diagnostic radiography, phantom measurements in bone marrow, gonads, and skin, 26:53434
  dosimetry of 250- and 65-kVp, grid-walled proportional counter study of micro-, 26:54895
  dosimetry of, correction factors for dosimeters for, 26:53247
  effectiveness in combination with internal colloidal gold-198 for therapy of liver involvement in Hodgkin's disease, 26:53507
  effects on alkaline phosphatase activity and chromosomes of mice, 26:53496
  effects on ammonium perchlorate single crystals, electron microscopic studies of, 26:52985 (NASA-TM-X-2440, pp 584-94)
  effects on antibody-forming cells in mouse spleen during response to antigen challenge, acute whole-body, 26:53464
  effects on budding haploid yeast cells, sensitivity to lethal, 26:53368
  effects on carrots following exposure of seeds, dose dependence of growth and yield, 26:53391
  effects on cell volume and DNA content of parent strain and radioresistant mutant of Escherichia coli, 26:53363
  effects on cesium bromide at 4.2 and 77°K, color centers produced in, 26:54980
  effects on chickens, effects on lymphatic organs following acute sublethal exposure of young, 26:53457 (NASA-TM-X-2440, pp 659-64)
  effects on children following use for maternal therapy during pregnancy, pathological and teratological, 26:53437
  effects on chromosomes human lymphocytes in cultures, effects of dose on frequency of aberrant, 26:53355

effects on chromosomes in cultured rat-kangaroo cells, effects of cell phase on sensitivity to, 26:53359
effects on chromosomes in leukocytes of peripheral blood of man following stomach exposure during diagnostic radiography, aberrant, 26:53427
effects on chromosomes in mature oocytes of Drosophila melanogaster, effects of premeiotic breakage and interchanges on types of aberrant, 26:53501
effects on chromosomes in mature spermatozoa of Drosophila melanogaster, inhibitory effects of dactinomycin on post-fertilization maternal repair of aberrant, 26:53502
effects on chromosomes in peripheral leukocytes of medical radiography personnel, incidence of aberrant, 26:53428
effects on count of plaque-forming cells in spleen of antigen-stimulated mice following whole-body exposure, effects of dose on, 26:53469
effects on cultured Chinese hamster cells following low dose rate sublethal exposure, effects of temperature on repair of, 26:53358
effects on cultured Chinese hamster cells in comparison to effects of chemical mutagens and uv radiation, effects of dose and post-exposure culture medium on frequency of mutagenic, 26:53362
effects on cultured mouse lymphoma cells in comparison to effects of chemical mutagens, phenotypic method for determining frequency of mutagenic, 26:53361
effects on developing brain of rats, relation of acetylcholine metabolism to pathological, 26:53461(R) (UCB-34-P-82-13)
effects on Dictyocaulus larvae infectivity for vaccinating cattle, 26:53503
effects on diurnal rhythm of neurosecretory activity in mice following whole-body exposure, 26:53478
effects on DNA in cultured mammalian cells and microorganisms, role of repair processes in recovery from lethal and mutagenic, review of, 26:53357
effects on DNA synthesis and degradation in liver, spleen, and thymus of rats, 26:53489
effects on DNA, review of sensitizing effects of N-ethylmaleimide, N-oxyl radicals, nitric oxide, and oxygen, 26:53352
effects on Drosophila melanogaster following acute exposure of mature spermatozoa, dose dependence of genetic, 26:53497(R) (COO-1748-12)
effects on growth of goitrogen-stimulated thyroid gland of mice in comparison to effects of internal exposure from iodine-131 or iodine-132, effects of dose rate on inhibitory, 26:53472
effects on human heart following therapy of esophageal carcinomas, electrocardiogram studies of pathological, 26:53439
effects on human skin following chronic therapeutic exposure, changes in DNA and RNA contents and ultrastructure of epidermis resulting from pathological, 26:53441
effects on human spermatogenesis following exposure of testes, effects of dose on inhibitory, 26:53399 (NASA-TM-X-2440, pp 229-32)
effects on kidneys of parabiosed rats following whole-body exposure, carcinogenic, 26:53449 (COO-3017-4)
effects on lead acetate monocrystals and powders, ESR studies on, 26:53008
effects on mature spermatozoa of Drosophila melanogaster, effects of dactinomycin on post-fertilization expression of mutagenic, 26:53502
effects on mice following fractionated whole-body exposure in comparison to effects of internal strontium-90, effects of thymectomy on incidence of leukemogenic, 26:53512
effects on mice following lethal whole-body exposure, protective effects of combined AET and pantothenic acid against, 26:53481
effects on mice following whole-body exposure, incidence of leukemogenic, 26:53469
effects on mice, effects on hematopoiesis and immune reactions following high-intensity pulsed whole-body exposure, comparison of RBE with γ rays for pathological, 26:53469
effects on mice, relation to spleen colony formation by transplanted isogenic hemopoietic stem cells in, lethal dose, 26:53466
effects on mice, studies on transmission of leukemogenic, 26:53496
effects on motor activity of rats following exposure of embryos, dose dependence of γ, 26:53488
effects on mouse embryos following acute or fractionated exposure in utero, effects of dose on lethal, 26:53453 (NASA-TM-X-2440, pp 641)
effects on mouse embryos, inhibitory for gastrulation, 26:53476
effects on mouse lymphoma cells in cultures, effects of dose on proliferation and survival of, 26:53356
effects on p-dichlorobenzene and sodium chlorate crystals, 26:52984 (FRNC-TH-262)
effects on phagocytic activity of reticuloendothelial cells in mice following whole-body exposure, effects of dose on inhibitory, 26:53468
effects on pituitary gland in mice following partial- or whole-body exposure, relation of ultrastructural changes to secretory changes induced in, 26:53467
effects on radishes following seed exposure, dose dependence of growth and yield, 26:53391
effects on rats, effects on respiration and ultrastructure of mitochondria in intestinal epithelial cells during amino acid absorption, whole-body, 26:53493
effects on regeneration of thyroid gland in rats following whole-body exposure, effects of prior implantation of sarcoma on inhibitory, 26:53494
effects on serine single crystals at 77 to 340°K, ESR and ENDOR studies on free radicals from, 26:53004
effects on sheep following various combinations of acute, chronic, continuous, or fractionated dose whole-body exposures, effects of dose and dose rate on pathological, 26:53451 (NASA-TM-X-2440, pp 622-32)
effects on single crystals of DL-serine at 77 to 340°K, electron nuclear double resonance and ESR studies on, 26:52996
effects on skin of swine, dose dependence of reproductive kinetics of cells, 26:53450 (LA-4874, pp 126-44)
effects on spectra of hexacyanocobaltate-doped sodium chloride and potassium chloride, 26:55001
effects on sugar beets following seed exposure, effects of ploidy on seed germination and weight of beets, 26:53389
effects on survival of cultured Chinese hamster cells following low dose rate exposure, effects of temperature on sensitivity to, 26:53358
effects on survival of mice following transplantation of allogeneic bone marrow, relation of age and immune reactions to lethal, 26:53485
effects on survival of parent strain and radioresistant mutant of Escherichia coli, 26:53363
effects on survival of spores of Bacillus subtilis, effects of energy level on, 26:53376
effects on swine following various combinations of acute, chronic, continuous, or fractionated dose whole-body exposures, effects of dose and dose rate on pathological, 26:53451 (NASA-TM-X-2440, pp 622-32)
effects on thyroid gland in dogs following whole-body exposure, relation of metabolic rate to carcinogenic and morphologic, 26:53462 (UR-3490-183)
effects on vision, in relation to changes in human optic nerve and retina following therapy of nasal cavity and paranasal sinus carcinomas, dose and time dependence of pathological, 26:53444
effects on young chickens following acute whole-body exposure, lethal, 26:53457 (NASA-TM-X-2440, pp 659-64)
emission during stellar flares, (T), 26:53853
emission from intergalactic gas in neighborhood of galaxies, (T), 26:53988
emission from neutron stars, detection of, (E/T), 26:53907
emission from solar atmosphere, (E), 26:53958
galactic background, 6-keV line in, (E), 26:53918
galactic background, origin of, (E), 26:53973
hazards to man during fluoroscopic radiographic examination, effects of image intensifier performance on, 26:53421
reactions with materials, Monte Carlo POEM program for calculating electron emission in, 26:54884 (NASA-TM-X-2440, pp 786-91)
scattering by tissue-equivalent phantoms from 50 to 300 kVp, (E), 26:54905

X-RAY CAMERAS
design and performance of position-sensitive proportional counter for, 26:53221

X-RAY DIFFRACTOMETERS
crystal mount for, engineering drawings for, 26:53319

X-RAY EMISSION ANALYSIS
methods using excitation of x rays by protons, for thin film measurements, 26:52945

X-RAY EQUIPMENT
description for use in skin cancer thrapy, 26:53341

X-RAY FLUORESCENCE ANALYSIS
radioisotope uses as sources in, 26:52942

X-RAY SPECTROMETERS
background interference with Apollo, identification and control of onboard radiation sources causing, 26:53255 (NASA-TM-X-2440, pp 714-22)
development of high resolution Bragg--Soller, 26:54467(R) (ORO-2972-204)
performance for detection of multicharged ions, 26:54078 (CEA-CONF-2050)

XENON
effects on radiolysis of gaseous ethylene, 26:53000
effects on yields from γ radiolysis of gaseous hydrogen sulfide, 26:53011
helium-atom and -ion reactions at 100 to 5000 eV with, angular and energy distributions of electrons from ionization and autoionization in, (E), 26:54141
iron-57 charge states following cobalt-57 decay in solid, Moessbauer effect study of, 26:55057
plasma of, continuum spectra of shock-heated, (E), 26:54777 (BMBW-FBK-72-8)
plasma of, diffusion effects on electron temperature in afterglows, (E), 26:54786
proton reactions at 500 to 3000 eV with, differential cross sections for charge exchange, elastic scattering, excitation to autoionizing levels, and simple excitation in, (E/T), 26:54122

separation from iodine by liquid nitrogen cooling and distillation, 26:53068
uses of purified fission product, evaluation of large-scale, 26:53330(R) (BNWL-1308-10)
XENON IONS
reactions with nuclei, review of experiments on, 26:54658 (JINR-P7-6523)
XENON ISOTOPES
abundance in Mokoia and Allende chondrites, (E), 26:53810
radiation dose to human body and lungs following ingestion, inhalation, or immersion in cloud of, methods for estimation of, 26:53510
tagging of pin type fuel elements, procedures for, 26:55184 (ANL/EBR-57)
yields in uranium-235 thermal neutron fission, (E), 26:54667
XENON ISOTOPES Xe-124
energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)
XENON ISOTOPES Xe-126
energy levels of, quasi-band structure in, (E/T), 26:54600 (INSJ-130)
XENON ISOTOPES Xe-129
abundance in Mokoia and Allende chondrites, (E), 26:53810
content in tellurobismuthite from Boliden, Sweden, 26:53176
XENON ISOTOPES Xe-130
content in tellurobismuthite from Boliden, Sweden, 26:53176
XENON ISOTOPES Xe-131
content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
content in tellurobismuthite from Boliden, Sweden, 26:53176
XENON ISOTOPES Xe-133
content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
production of, reactor irradiation method and apparatus for, 26:53075(P)
XENON ISOTOPES Xe-135
content in atmosphere in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
XENON ISOTOPES Xe-136
yield in thermal fission of uranium-235, (E), 26:54626
XENON ISOTOPES Xe-137
energy levels of, calculation using core coupling, (T), 26:54467(R) (ORO-2972-204)
half-life of, (E), 26:54667
XENON ISOTOPES Xe-140
beta decay of, β endpoint energy and γ and conversion electron spectra from, (E), 26:54601 (IS-T-534)
XENON ISOTOPES Xe-141
beta decay endpoint energy of, (E), 26:54601 (IS-T-534)
XENON ISOTOPES Xe-142
beta decay endpoint energy of, (E), 26:54601 (IS-T-534)

Y

YANKEE POWER REACTOR
control rods for, measured drop times for, 26:55236 (DOCKET-50029-202)
engineered safeguards for, effects of circulating water system failure on flooding of, 26:55275 (DOCKET-50029-200)
inspection of, March 1972 inservice, 26:55235 (DOCKET-50029-201)
turbine for, effects of revised cooling system low flow trip level on trip requirements for, 26:55234 (DOCKET-50029-199)
YEASTS
Saccharomyces cerevisiae, radioinduced reversion mutations in, effects of photoreactivation repair mechanism on frequency of uv, 26:53375
Saccharomyces cerevisiae, radiosensitivity of budding cells of, effects of LET on heavy ion and x, 26:53368
Schizosaccharomyces pombe, radioinduced lesions in, correlation between induced mitotic recombination and repair mechanisms for uv, 26:53371
Schizosaccharomyces pombe, radioinduced lesions in, inhibitory effects of caffeine on recombinational repair mechanisms for uv, 26:53371
YTTERBIUM ISOTOPES Yb-162
electron-capture decay of, half-life and γ and x-ray spectra for, (E), 26:54639
YTTERBIUM ISOTOPES Yb-163
half-life of, 26:54639
YTTERBIUM ISOTOPES Yb-164
half-life of, 26:54639
YTTERBIUM ISOTOPES Yb-165
half-life of, 26:54639
YTTERBIUM ISOTOPES Yb-167
half-life of, 26:54639
YTTRIUM
abundance in γ Cap, (E), 26:53888
content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
deposition by pack cementation on chromium-base alloys for nitridation protection in air, effects of chromium, hafnium, and lanthanum additions on, 26:53689
electron band structure of, photoelectron spectral study of core level binding energies, 26:55024
YTTRIUM ALLOYS AND SYSTEMS
Cr-base--W--Y, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
Cr-base--Y, coatings for nitridation resistance of, in air, chromium, hafnium, lanthanum, and yttrium combination cementation, 26:53689
YTTRIUM BORIDES
preparation and thermoemission properties of, 26:53582
YTTRIUM ISOTOPES Y-89
alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
neutron radius of, determination from elastic scattering, (E), 26:54547
photon reactions (γ,2n) at 23 to 50 MeV, calculation of isomer ratio for, (T), 26:54725
photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
YTTRIUM ISOTOPES Y-93
half-life of, (E), 26:54667
YTTRIUM ISOTOPES Y-94
half-life of, (E), 26:54667

Z

ZINC
determination in organometallic compounds using oxine method after combustion, gravimetric or titrimetric, 26:52930
determination in presence of iron using EKCO mineral analyzer, 26:55568 (NIM-1430)
determination in water samples by spark source mass spectroscopy, 26:52914 (ANL-7860(Pt.3), pp 55-63)
distribution in cores from Green Bay, relations with depth, 26:53164 (ANL-7860(Pt.3), pp 64-76)
neutron inelastic scattering by phonons in, neutron groups from thermal, (E), 26:54487 (RT/FI-(71)37)
separation from indium by ion exchange chromatography, 26:52949
sorption on diethylaminoethylcellulose in methanol--thiocyanate--hydrochloric acid media, 26:52951
ZINC ALLOYS AND SYSTEMS
Cu--Ni--Zn, analysis of nickel silver for copper by amperometric titration, 26:52924
Cu--Zn, phase transformation interfaces in, properties of massive, 26:53644
Gd--Zn, hyperfine fields in GdZn diluted with yttrium or lanthanum, NMR study of, 26:55059
ZINC IONS
production in PIG source, 26:53752 (FRNC-CONF-54)
ZINC ISOTOPES Zn-62
energy levels from nickel-58 (Li-6,d) reactions, spin--parity assignments for, (E), 26:54586
ZINC ISOTOPES Zn-65
content in Lake Michigan fish, 26:53169 (ANL-7860(Pt.3), pp 141-50)
content in Savannah River, 1971, 26:53153(R) (DPSPU-72-30-1)
distribution in Columbia River, effects of seawater on soluble-suspended, 26:53166 (RLO-2227-T-12-28)
distribution in sedimentary environment and in benthic fauna on Oregon and Washington continental shelf, 26:53149 (RLO-2227-T-12-26)
uptake by hair following intravenous injection in rats, correlation with body burden and, 26:53529 (NASA-TM-X-2440, pp 982-8)
uptake by marine animals and plants from seawater, 26:53532
ZINC ISOTOPES Zn-67
nuclear magnetic resonance in GdZn diluted with yttrium or lanthanum, 26:55059
ZINC ISOTOPES Zn-68
alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
energy levels from nickel-64 (Li-6,d) reactions, spin--parity assignments for, (E), 26:54586
neutron radius of, determination from elastic scattering, (E), 26:54547
ZINC OXIDES
radioinduced defects in, comparison of explosive shock-induced defects with, 26:54983
ZINC TELLURIDES
ion implantation for fabrication of electroluminescent diodes, 26:54971 (CEA-R-4313)
ZION POWER REACTOR, UNIT 1
containment system for, revised data on, 26:55306 (DOCKET-50295-61)
electrical systems for, revised data on, 26:55306 (DOCKET-50295-61)
emergency core cooling system for, revised data on, 26:55306 (DOCKET-50295-61)
emergency plans for, 26:55306 (DOCKET-50295-61)
engineered safeguards for, revised data on, 26:55306 (DOCKET-50295-61)
instrumentation for, revised data on, 26:55306 (DOCKET-50295-61)
operation of, requested data on, 26:55306 (DOCKET-50295-61)

  personnel for, organization of, 26:55306 (DOCKET-50295-61)
  quality assurance program for, revised data on, 26:55306 (DOCKET-50295-61)
  radioactive effluents from, revised data on, 26:55306 (DOCKET-50295-61)
  safety aspects of, analysis of aircraft impact, 26:55306 (DOCKET-50295-61)
  testing program for, post criticality, 26:55306 (DOCKET-50295-61)
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
ZION POWER REACTOR, UNIT 2
  containment system for, revised data on, 26:55306 (DOCKET-50295-61)
  electrical systems for, revised data on, 26:55306 (DOCKET-50295-61)
  emergency core cooling system for, revised data on, 26:55306 (DOCKET-50295-61)
  emergency plans for, 26:55306 (DOCKET-50295-61)
  engineered safeguards for, revised data on, 26:55306 (DOCKET-50295-61)
  instrumentation for, revised data on, 26:55306 (DOCKET-50295-61)
  operation of, requested data on, 26:55306 (DOCKET-50295-61)
  personnel for, organization of, 26:55306 (DOCKET-50295-61)
  quality assurance program for, revised data on, 26:55306 (DOCKET-50295-61)
  radioactive effluents from, revised data on, 26:55306 (DOCKET-50295-61)
  safety aspects of, analysis of aircraft impact, 26:55306 (DOCKET-50295-61)
  testing program for, post criticality, 26:55306 (DOCKET-50295-61)
  valves for, verification of wall thicknesses for nuclear service, 26:55274 (DOCKET-50010-117)
ZIRCALOY
  hydrogen distribution in, effects of thermal gradients on calculation of, 26:53665
ZIRCALOY-2
  fabrication by hot isostatic pressing, 26:53578
ZIRCONIUM
  book: Early Transition Metals, 26:52956
  content in southwest Aswan syenite rock, 26:53142 (AREAEE-138)
  corrosion by water at high temperatures, effects of impurities, thermal cycling, and vibrations on, 26:53614
  crystal orientation and hardness of α, 26:53693
  determination in minerals by neutron activation and γ spectroscopy, nondestructive, 26:52901 (UJV-2851-F,Ch)
  diffusion of cobalt-60, iron-59, and nickel-63 in α-, mechanism of, 26:53666
  distribution between liquid bismuth and MSBR fuel salt, pp. 6-7, 26:53081 (ORNL-4794, pp 1-14)
  effects on ductility of copper, 26:53669
  effects on tensile properties of tungsten, 26:53616
  fabrication by rolling at high temperature under vacuum, 26:53630
  flow stress of, effects of impurities on strain rate sensitivity of, 26:53639(R) (ORO-3262-25)
  mechanical properties of, effects of impurities on, 26:53639(R) (ORO-3262-25)
  radiation damage in, calculated profiles of argon, 26:54969 (AECL-4130)
  separation from niobium, tantalum, and titanium by solvent extraction, hydrolysis, and extraction, 26:52947 (BM-RI-7671)
  strain aging in, dynamic, 26:53639(R) (ORO-3262-25)
  strain rate sensitivity in, validity of Cottrell--Stokes Law in terms of variation of, 26:53639(R) (ORO-3262-25)
ZIRCONIUM ALLOY COUPLES
  Inconel/Zircaloy-2, corrosion by air, nitrogen, and water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
  steel/Zircaloy-2, corrosion by air, nitrogen, and water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
  Zircaloy-2/Zircaloy-2, corrosion by air, nitrogen, and water at ambient temperature, fretting, 26:53609 (RT/ING-(72)7)
ZIRCONIUM ALLOYS AND SYSTEMS
  corrosion by water at high temperatures, effects of impurities, thermal cycling, and vibrations on, 26:53614
  Al--Mo--Sn--Ti-base--Zr, creep rupture of, at 755 and 865°K, cyclic, 26:53690
  Al--Ni-base--W--Zr, production and properties of powder metallurgy components of, for use at high temperatures, 26:53631
  Al-base--Zr, crystal structure of intermetallic metastable phase Al$_3$Zr in molten, produced by rapid solidification, 26:53686
  C--O--Zr, reactions in, stability of phases produced by, 26:53581
  Cd--Zr, phase diagrams for, 26:53663
  Cd--Zr, thermodynamic properties of, 26:53663
  Co-base--Ni--ThO$_2$--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675
  Co-base--ThO$_2$--Zr, mechanical properties and microstructure of dispersion-hardened, 26:53675
  N--Nb-base--Zr, internal friction of, effects of nitrogen content on, 26:53692
  Nb--U-base--Zr, tensile properties of polycrystalline, as function of strain rate, 26:53691
ZIRCONIUM BORIDES
  fabrication by casting of thermoplastic masses, 26:53586
  oxidation resistance and sinterability of, effects of metal silicide additions on, 26:53594
  Cr$_5$Si$_3$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  CrSi$_2$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  Mo$_5$Si$_3$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  MoSi$_2$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  Ta$_5$Si$_3$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  TaSi$_2$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  W$_5$Si$_3$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  WSi$_2$--ZrB$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  ZrB$_2$--Zr$_5$Si$_3$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  ZrB$_2$--ZrSi$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594
ZIRCONIUM BROMIDES
  fabrication by hot isostatic pressing, 26:53578
ZIRCONIUM CARBIDES
  sorptive properties of, effects of electronic structure on, 26:53593
  W--ZrC, evaporation rate at 2600 to 2970°K, effects of tungsten coating on, 26:55022
ZIRCONIUM IONS
  scattering by argon and neon at 8 to 25 keV, total cross sections and interatomic potentials for, (E), 26:54139
ZIRCONIUM ISOTOPES Zr-90
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  energy level at 1.761 MeV from yttrium-89 (He-3,d) reactions, effects of configuration mixing on lifetime of, (T), 26:54610
  energy-level transitions in, shell-model calculations of, (T), 26:54611
  neutron radius of, determination from elastic scattering, (E), 26:54547
  photon reactions (γ,xn) with, model analysis of giant resonance in, (E/T), 26:54598 (FRNC-TH-242)
  proton reactions (p,n) at 6.9 to 9.5 MeV, gamma spectra and excitation functions for, (E), 26:54613
ZIRCONIUM ISOTOPES Zr-92
  proton reactions (p,α) at 28 MeV, DWBA calculation of form factors for, (T), 26:54467(R) (ORO-2972-204)
ZIRCONIUM ISOTOPES Zr-94
  alpha elastic scattering at 166 MeV, angular distribution for, (E), 26:54547
  neutron radius of, determination from elastic scattering, (E), 26:54547
  proton elastic scattering at 11.2 to 12.4 MeV, excitation functions for, (E), 26:54467(R) (ORO-2972-204)
ZIRCONIUM ISOTOPES Zr-95
  content in agricultural products, atmosphere, rainwater, Savannah River, and vegetation in vicinity of Savannah River Plant, 1971, 26:53153(R) (DPSPU-72-30-1)
ZIRCONIUM ISOTOPES Zr-96
  energy level from proton inelastic scattering, lifetime of first-excited, (E), 26:54622
ZIRCONIUM NITRIDES
  sorptive properties of, effects of electronic structure on, 26:53593
ZIRCONIUM OXIDES
  effects on tensile properties of tungsten, 26:53616
  Mo--ZrO$_2$, oxidation of, effects of temperature on rate of, 26:53585
ZIRCONIUM SILICIDES
  ZrB$_2$--Zr$_5$Si$_3$, oxidation resistance and sinterability of, at high temperatures, 26:53594
  ZrB$_2$--ZrSi$_2$, oxidation resistance and sinterability of, at high temperatures, 26:53594

REPORT NUMBER INDEX

Reports, conference papers and proceedings, numbered translations, and patents are included in this index. Each item is listed by report number; this is followed by the abstract number and a brief notation regarding public availability. The index entries show which reports are on file in the institutions listed on the back of the front cover (Dep.), which reports have been published in open-literature journals (journal citation), and which reports can be purchased (source and price). Whenever a report is identified by more than one number, the availability is given under the primary number, and a cross reference is given under the secondary report number.

The report number codes apply to USAEC reports unless designated otherwise. Non-USAEC reports are identified by parenthetical notes after the report codes; e.g., (non-AEC), (British), (Canadian), (French). The note (Misc.) identifies the codes used for both USAEC and non-USAEC reports. Patents are listed under the heading "PATENTS"; the country of origin is included in parentheses.

A comprehensive list of both USAEC and non-USAEC report codes is contained in the latest revision of TID-85, *Report Number Series Used by the USAEC Technical Information Center in Cataloging Reports.* This information is also included in the Cumulative Report Number Index (issued annually).

Availability of USAEC Reports

All USAEC Reports abstracted in *Nuclear Science Abstracts* are available through one or more of the following sources:

(1) University and public libraries in the United States. A list of these organizations appears on the inside front cover of each issue of *NSA*.

(2) NCR Microcard Editions in Microcard and micronegative form. Orders and inquiries should be sent to: Order Processing Department, 365 South Oak Street, West Salem, Wisconsin 54669.

(3) National Technical Information Service, U. S. Department of Commerce, Springfield, Virginia 22151.

(4) Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

(5) Microsurance, Inc., P. O. Box 3522, Oak Ridge, Tenn. 37830, in micronegative form. Purchase details available on request.

Availability of Non-USAEC Reports

U. S. Reports. Reports of U. S. Government agencies are available to the public from the National Technical Information Service (NTIS). If specific availability is not shown, inquiries may be directed to NTIS.

Non-U. S. Reports. Reports of atomic energy organizations of other countries are available from NTIS for U. S. sale only. Specific availability in the country of origin is shown, when known, at the report number entry. Otherwise, inquiries should be made to the organizations listed below:

AUSTRALIA

Australian Atomic Energy Commission Research Establishment. Available upon request from the Library, Australian Atomic Research Establishment, Private Mail Bag, Sutherland, New South Wales, Australia.

BELGIUM

Centre d'Étude de l'Energie Nucléaire. Available upon request to individuals and organizations from the Centre d'Etude de l'Energie Nucléaire (C.E.N.), Studiecentrum voor Kernenergie (S.C.K.), Technical Information Dept., MOL-DONK (Belgium).

CERN

CERN European Organization for Nuclear Research. Available without charge from CERN European Organization for Nuclear Research, Geneva 23, Switzerland. Copies are deposited in libraries throughout the world.

FRANCE

Commissariat à l'Energie Atomique. Inquiries for reports numbered 1-2199 should be addressed to Service Central de Documentation du C.E.A., Centre d'Etudes Nucléaires de Saclay, Boîte postale n° 2, 91. GIF-sur-YVETTE, FRANCE. Reports numbered 2200 and above are available from La Documentation Française, 31 quai Voltaire, 75, PARIS (7e), FRANCE.

Service Central de Protection contre les Rayonnements Ionisants. Copies are available from Ministère de la Santé Publique, Service Central de Protection contre les Rayonnements Ionisants, B.P. n° 78 Le Vesinet (France) Telex 25667.

GERMANY

Deutsches Elektronen-Synchrotron DESY. Copies are available from Deutsches Elektronen-Synchrotron DESY, Dokumentation, 2000 Hamburg 52, Notkestieg 1, Germany.

Gesellschaft für Kernforschung mbH (KFK). Copies are available from Gesellschaft für Kernforschung mbH, 75 Karlsruhe, Postfach 947, Germany. Copies are also deposited in many national nuclear centers in the world.

Kernforschungsanlage. Copies may be ordered from Zentralbibliothek der Kernforschungsanlage Jülich, Jülich, Bundesrepublik Deutschland.

Hahn-Meitner-Institute für Kernforschung. Available without charge from Hahn-Meitner-Institute für Kernforschung Berlin, Bibliothek, Glienicker Strasse 100, 1 Berlin 39, Germany. Copies are deposited in many national nuclear centers in the world.

Johann-Wolfgang-Goethe Universität, Frankfurt Am Main, Institut für Kernphysik, (IKF). Copies are available from Gmelin Institut, 40–42 Varrentrappstrasse, Frankfurt (Main), West Germany.

ISRAEL

Israel Atomic Energy Commission. Available without charge from Israel Atomic Energy Commission, Soreq Nuclear Research Centre, Yavne, Israel.

ITALY

Centro Informazioni Studi Esperienze (CISE). For sale at CISE Press Office, Casella Postale 3986, Milano, Italy. Copies are deposited in the libraries of various nuclear centers in Italy and abroad.

Comitato Nazionale per l'Energia Nucleare. Copies are available from Comitato Nazionale per l'Energia Nucleare, Divisione Affari Internazionali e Studi Economici, Ufficio Pubblicazioni, Via Belisario, 15, Roma, Italy.

JAPAN

Japan Atomic Energy Research Institute (JAERI). Available from the Staff Supply Cooperative of Japan Atomic Energy Research Institute (JAERI), Tokai-mura, Naka-gun, Ibaraki-ken, Japan. Copies are deposited in depositories in Tokyo, Nagoya, and Osaka.

Nagoya University. Copies are available from Research Information Center, Institute of Plasma Physics, Nagoya University, Nagoya, Japan.

University of Tokyo. Available free of charge from Institute for Nuclear Study, University of Tokyo, Tanashi-Machi, Kitatama-gun, Tokyo, Japan.

NETHERLANDS

Reactor Centrum Nederland. For sale by Reactor Centrum Nederland, 112 Scheveningseweg, 's-Gravenhage, The Netherlands. Copies are deposited in university libraries in Holland and in many national nuclear centers in the world.

NEW ZEALAND

Institute of Nuclear Sciences. Copies are available from Librarian, N. Z. Institute of Nuclear Sciences, D.S.I.R., Private Bag, Lower Hutt, New Zealand. Copies are deposited in other countries.

PAKISTAN

Atomic Energy Center. Copies are available from Atomic Energy Center, P. O. Box 658, Lahore, (West Pakistan).

POLAND

Reports of the Polish nuclear institutes are published by the Nuclear Energy Information Center of the Government Commissioner for Use of Nuclear Energy. Copies are available free of charge from Nuclear Energy Information Center, Palace of Culture and Science, Warsaw, Poland.

SPAIN

Junta de Energia Nuclear. "JEN" reports are available without charge from Servicio de Documentation, Junta de Energia Nuclear, Ciudad Universitaria, Madrid (3), España.

SWITZERLAND

Eidgenössisches Institut für Reaktorforschung. "EIR" reports are available from Eidgenössisches Institut für Reaktorforschung, c/o Bibliothek, 5303 Würenlingen/Switzerland.

TURKEY

Turkish Atomic Energy Commission. Copies are available free of charge from T.A.E.C., Çekmece Nuclear Research Center, P. O. Box 1, Airport, Istanbul, Turkey.

Conferences

Published conference proceedings as well as individual unpublished papers from conferences are included in this index. A CONF number is assigned to the conference if published proceedings are received and also if only a single paper is received. The base number used is year-month-sequence. Thus, the number CONF-650101 indicates that the conference was held in 1965, in January, and that this was the first January 1965 conference so received. This number would be assigned to complete published proceedings. If individual papers are received, the base number is extended to include a paper number, e.g., CONF-650101-1. As additional papers are received, they will be assigned consecutive numbers in the series, CONF-650101-1, CONF-650101-2, etc. This numbering system ensures that all papers received from a conference will be associated with that conference in this index.

If published proceedings are received after the receipt of individual papers, the complete proceedings will be abstracted and the abstract number will appear in this index with the base CONF number.

Abbreviations Used in Availability Column

AECL	Reports of the Atomic Energy of Canada Limited are for sale by the Scientific Document Distribution Office, Atomic Energy of Canada Limited, Chalk River, Ontario, Canada.
CFSTI	See NTIS
DENM	Reports of the Atomic Energy Commission Research Establishment, Risö, are available on exchange from the Library, Danish Atomic Energy Commission, Risö, Roskilde, Denmark. Also for sale at the price shown from Jul. Gjellerup, Booksellers, 87 Sölvgade, Kobenhavn K., Denmark. Reports of Danatom are available on loan from Research Establishment, Risö, Roskilde, Denmark. Copies are available from Danatom, Aurehojvej 2, Hellerup, Denmark.
Dep.	AEC reports so designated are maintained in the organizations listed on the inside front cover of *NSA*. Prior to July 1, 1965, reports were deposited either in printed copy form or in microform. After that time, all reports have been in the form of micronegatives. Reports from other countries so designated are available in the United States at the organizations listed on the inside front cover of *NSA*.

DTIE	Available from the U. S. Atomic Energy Commission, USAEC Technical Information Center, P. O. Box 62, Oak Ridge, Tennessee 37830. (Conference papers are available on loan only.)
EM	Blueline prints of AEC engineering drawings are available from NTIS, U. S. Department of Commerce, Springfield, Virginia 22151. Current prices of the CAPE-packages may be obtained from this address. TID-4100, available from the USAEC Technical Information Center, P. O. Box 62, Oak Ridge, Tennessee 37830, contains information on all the CAPE-packages for sale.
EUR	For sale by Centrale de vente des publications des Communautés européennes 37, rue Glesener-Luxembourg.
GPO	For sale by the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.
IAEA	Available from the International Atomic Energy Agency, Vienna, Austria, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each STI/DOC and STI/PUB publication.
INIS	Available on microfiche at $0.65 per document from INIS Section, International Atomic Energy Agency, P. O. Box 590 A-1011, Vienna, Austria
LMEC	Available *only to requesters within the United States* from the Liquid Metal Engineering Center, P. O. Box 1449, Canoga Park, CA 91304
NORW	Reports from Forsvarets Forskningsinstitutt are available from Norwegian Defense Research Establishment, Library, P. O. Box 25, Kjeller, Norway. "KR" reports are available on an exchange basis from the Library, Institutt for Atomenergi, Box 40, Kjeller, Norway. Reports of the Norwegian Reactor School are available from the Library, Institutt for Atomenergi, P. O. Box 40, Kjeller, Norway.
NRC	For sale by the National Research Council of Canada, Ottawa, Ontario, Canada.
NTIS	For sale by the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22151 at the following prices for eye legible copy: 1–300 pages $3.00 301–600 pages $6.00 601–900 pages $9.00 Documents over 900 pages have special prices which may be obtained from NTIS. Microfiche copy of each separately bound document can be purchased for $0.95. Reports issued by organizations outside the United States will be sold by NTIS *only to purchasers within the United States.* Purchasers outside the United States may acquire such reports from the sources described elsewhere in these columns.
OECD	Available from O. E. C. D., Publications 2, rue, André-Pascal, 75 Paris 16^e, France, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each OECD publication.
RSO	Available *only to requesters within the United States* from the Reactor Standards Office, Oak Ridge National Laboratory, P. O. Box X, Oak Ridge, TN 37830
SWED	"AE" reports (full size or microcopies) are for sale from Aktiebolaget Atomenergi, Studsvik, Library, Fack, S-611 01 NYKÖPING 1, Sweden. Other series are not generally available to the public. Organizations in the Atomic Energy field may obtain copies from Aktiebolaget Atomenergi.
UK	United Kingdom Atomic Energy Authority reports generally may be purchased from Her Majesty's Stationery Office, P. O. Box 569, London S.E.1. Copies of many UKAEA reports (particularly earlier ones) may be purchased in microcopy form from Micro Methods Ltd., East Ardsley, Wakefield, Yorkshire, England. Copies of UKAEA reports are deposited with the National Lending Library for Science and Technology and 10 public libraries in England; with the USAEC and (through USAEC) with NTIS; and in most national nuclear centers throughout the world. In the USA, UKAEA reports are available on a subscription basis, by subject category, from UNIPUB, Inc., P. O. Box 433, New York, NY 10016, USA; and from Pendragon House, Inc., 1093 Charter Avenue, Redwood City, CA 94063, USA.
UN	Mail orders should be directed to the Sales Section, Room 1059, United Nations Headquarters, New York, New York 10017.
ZAED	Available from ZAED, Kernforschungszentrum, 7501 Leopoldshafen, West Germany

NUCLEAR SAFETY

A Bimonthly
Technical Progress Review

The United States Atomic Energy Commission publishes *Nuclear Safety* as a bimonthly technical progress review to meet the needs of industry and government for concise summaries of current developments. This journal digests and evaluates the latest findings in its area of nuclear technology and science.

Primary emphasis is on safety in reactor design, construction, and operation. However, safety considerations in reactor fuel fabrication, spent-fuel processing, nuclear waste disposal, handling of radioisotopes, and environmental effects of these operations are also treated.

Nuclear Safety is prepared by the Nuclear Safety Information Center at Oak Ridge National Laboratory for the United States Atomic Energy Commission.

Nuclear Safety may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402, at $3.50 per year (six issues) or $0.60 per issue.

Postpaid within the United States, Canada, Mexico, and all Central and South American countries except Argentina, Brazil, Guyana, French Guiana, Surinam, and British Honduras. For these Central and South American countries and all other countries: for each annual subscription, add $1.00; for single issues, add one-fourth of the single-issue price. Payment should be by check, money order, or document coupons, and MUST accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank payable to the Superintendent of Documents or by UNESCO book coupons.
